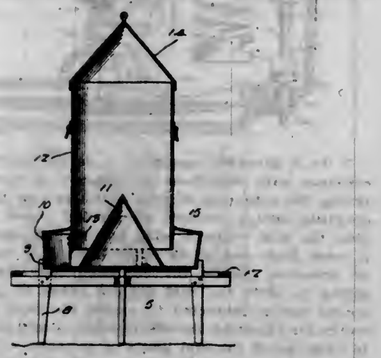
1. A sign exhibitor of the class described embodying a sign displaying reel, and means for operating said reel comprising a rotatably mounted spiral, said spiral including a circular drum having a spiral thread upon its periphery, said thread having its convolutions formed in circumferentially spaced seats and complemental shoulders, a shaft mounted for rotation and extending transversely across said thread, a toothed element slidable upon said shaft and keyed thereto for rotation therewith, the teeth of said element being adapted for successive coaction with said shoulders and seats, and spring means for constantly pressing said element into contact with said thread.

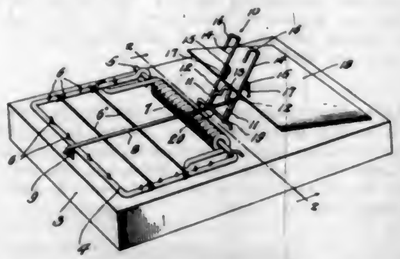
1,623,838. HAIR WAVER. BESSIE E. HAYNES, Washington, D. C. Filed Oct. 29, 1926. Serial No. 144,999. 4 Claims. (Cl. 132—41.)



1. A hair waver comprising a body portion shaped to provide a slot longitudinally thereof through which the hair may be crimped to form a wave, a bar attached to said body portion and movable through said slot for forming and maintaining the wave, and means for connecting said bar to the body portion so that said bar after passing through the slot may be moved laterally to one side of said slot.

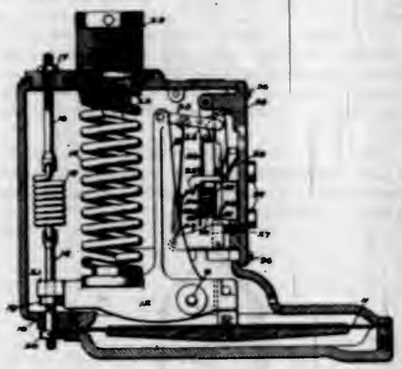
1,623,839. CONTROL OF CHOKE COIL WITH SWITCHING-IN TAP TRANSFORMER. ALBERT HUNDT, Karlshorst, Germany, assignor to General Electric Company, a Corporation of New York. Filed Aug. 22, 1925, Serial No. 51,886, and in Germany Sept. 4, 1924. 3 Claims. (Cl. 171—119.)

3. A control for a translating device supplied with a variable voltage through taps of a transformer in which the translating device is connected to a point between two substantially similar connected choke coils and the ends of such coils are connected to tap switches in such manner that a progressive operation of the switches first places one of the choke coils in series with the translating device, then the choke coils across taps of the transformer, then the other of the choke coils in series with the translating device, characterized by the provision of a movable magnetic element for each of said coils and means for alternately moving said elements into and out of intimate relation with their respective coils as the tap switches are progressively operated, for the purpose specified.



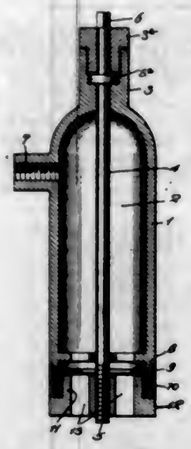
1,623,840. CHICKEN FEEDER. CHARLES KASSY, West Newton, Pa. Filed Jan. 13, 1926. Serial No. 80,991. 1 Claim. (Cl. 119—52.)

A chicken feeder of the class described comprising a stand including a pair of cross members, each of which includes a pair of spaced parallel bars, vertically ar-



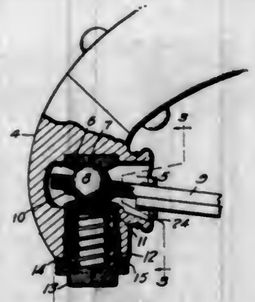
ranged supporting legs secured between the spaced bars of each cross member, the upper ends of said supporting legs extending above the cross bars and being rabbeted, a pan shaped trough supported on the rabbeted portions of said supporting legs, a feed distributor cone disposed vertically within the trough and extending upwardly therefrom, an open ended hopper disposed within the trough around the cone and spaced from the bottom wall of the trough, and a perch extending around the outer ends of the cross members and secured thereon.

1,623,841. DOUBLE-ACTING TRAP. CLIFFORD F. KING, New Orleans, La. Filed June 22, 1926. Serial No. 117,710. 3 Claims. (Cl. 43—81.)



3. A trap comprising a support, a barbed bail pivotally mounted thereon and adapted to be placed under tension, a bail shank adjacent the bail and having fasteners and further having bait holding means and reduced portions, a rod secured to the support and having a free end adapted to engage the reduced portions of the bail shank and a platform mounted on the support and having one end thereof engaging the fasteners.

1,623,842. AUTOMATIC PRESSURE REGULATOR. TERRY T. KING, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Mar. 18, 1924. Serial No. 700,187. 10 Claims. (Cl. 200—83.)

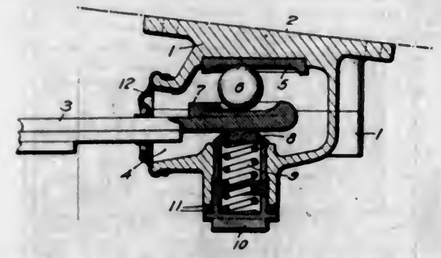


1. In a pressure regulator, a device operated in accordance with variations in pressure, a spring for opposing the actuation of said device in one direction, cooperating switch contacts opened and closed by said device, the said contacts being operated by said device at a lower limit and at an upper limit of a definite range of pressures, means for adjusting the strain of said spring to shift the said definite range of pressures, a second spring connected to oppose the said first spring, means for adjusting the effectiveness of said second spring to vary one of the said limits of pressure, a third spring cooperating with said contacts and said device for operating said contacts, and means for adjusting the said third spring to vary the other limit of said definite range of pressure.

1,623,843. PUDDLE PLUG. HARRY W. KLINCK, Logansport, Ind. Filed Jan. 16, 1926. Serial No. 81,751. 7 Claims. (Cl. 137—78.)

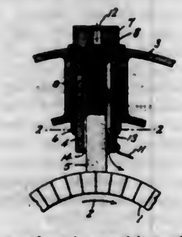
1. In a device of the character described, the combination with a water pipe, of a chambered plug for insertion horizontally into the open end of the water pipe, means for rendering the connection between the plug and pipe water tight, and a pipe in communication with the chamber of the plug for leading the water for a distance in the general direction of the water pipe.

1,623,844. END CONNECTION FOR VEHICLE SPRINGS. AXEL W. KOGSTROM, Upper Darby, Pa., assignor of one-half to Allison F. H. Scott, Philadelphia, Pa. Filed Feb. 4, 1925. Serial No. 6,830. 8 Claims. (Cl. 267—54.)



1. End connections for securing a spring to the frame of a vehicle comprising bail members mounted on the ends of the spring and socket bearings therefor mounted on the frame, the socket bearing at one end of the spring being rigidly fixed to the frame to prevent lateral movement of the end of the spring in any horizontal plane but permitting torsional movement thereof without imposing any stress upon the frame.

1,623,845. END CONNECTION FOR VEHICLE SPRINGS. AXEL W. KOGSTROM, Upper Darby, Pa., assignor of one-half to Allison F. H. Scott, Philadelphia, Pa. Filed Mar. 30, 1925. Serial No. 19,394. 10 Claims. (Cl. 267—56.)



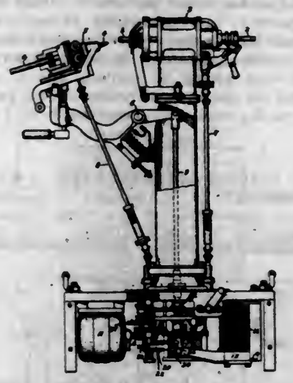
1. A shackle type of end connector for a vehicle spring comprising a bearing member carried by the vehicle frame

and a single hardened steel ball mounted to traverse said bearing and interposed between it and one end of the spring whereby the weight of the vehicle and its load is

transmitted to the spring through said ball and whereby the spring is capable of universal movement with respect to the bearing.

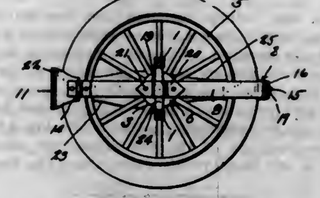
1,623,846. DYNAMO-ELECTRIC MACHINE. HENRY T. LANG, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed July 23, 1926. Serial No. 124,509. 6 Claims. (Cl. 171—324.)

1. In a dynamo-electric machine, the combination of a rotating part, a brush, a spring which biases the brush toward the rotating part, and means providing a conduit which extends down over the spring and terminates adjacent to the rotating part beyond the brush as regards the direction of rotation of the rotating part.



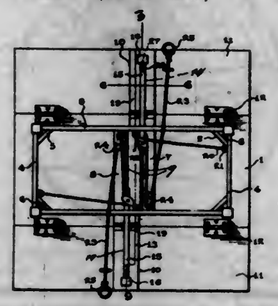
1,623,847. BUTTON. MATHILDE LIND and WERNER C. LIND, New Orleans, La. Filed June 22, 1926. Serial No. 117,738. 1 Claim. (Cl. 24—109.)

In a button, the combination of two separate members one of which is adapted to receive and engage the other in a removable manner; one of said members comprising a circular solid base portion, an integral tubular portion formed on the base portion, a nib interiorly arranged on the tubular portion, the other member comprising a circular base portion and having a solid shank portion arranged thereon; said shank portion being pointed on its free end and having a channel extending from a point slightly below the free end and terminating near the circular portion at an angle with respect to the shank.



1,623,848. ARC LAMP. EDWIN J. MURPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 6, 1925. Serial No. 20,927. 12 Claims. (Cl. 176—66.)

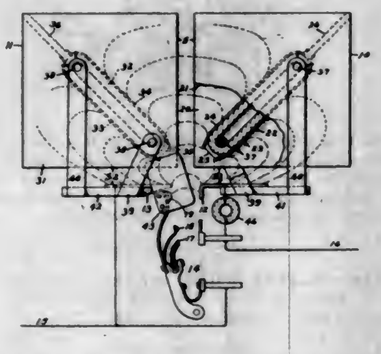
1. In an arc lamp an electrode feed mechanism, a driving element, means interposed between the driving element and the feed whereby the feed is operated by the drive at a rapid rate until the electrodes are brought into contact, and means comprising the electrodes of the lamp for causing the termination of said rapid feed when



the electrodes come into contact, and independent means interposed between the driving element and the feed whereby the feed is operated by the drive at a slow rate, said independent means comprising mechanical elements to render the feeding operation intermittent.

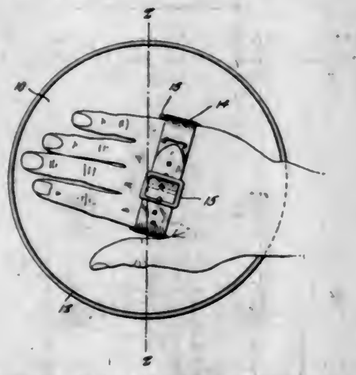
1,623,849. SAFETY WHEEL GUARD. CHARLES F. ORRICK, Mount Vernon, Ill. Filed Dec. 2, 1926. Serial No. 152,219. 3 Claims. (Cl. 293—57.)

1. In a device of the class described, a member, in the form of a closed loop, and means for holding a vehicle wheel for rotation within said member.



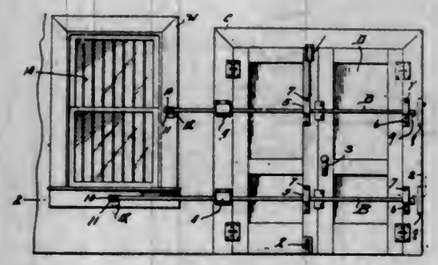
1,623,850. KITCHEN TABLE. JULIEN PATENAUDE, Waterbury, Conn. Filed Oct. 7, 1924. Serial No. 742,175. 1 Claim. (Cl. 45—118.)

A table comprising a frame and a main table top, a leaf hinged to the latter at the longitudinal edge of the same and foldable downwardly and provided on its under



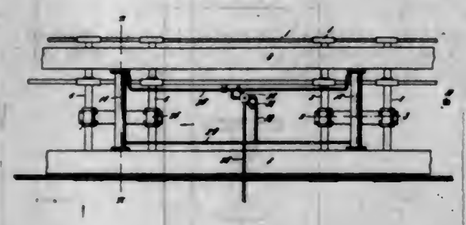
surface with a guideway, a guideway mounted on the under surface of the top in axial alignment with the guideway on the leaf when the latter is raised, a leg member slidably mounted in the guideway on the top and engageable with the guideway on the leaf when the leaf is raised to horizontal position, a tensile spring terminally secured to the leg member at the rear end of the same and having its remote terminal anchored to the top at a point lateral of the leg, a direction pulley over which said spring is trained, and a pull cord secured to the leg member and trained over a guide pulley for moving the leg member in opposition to said spring.

1,623,851. CIRCUIT-INTERRUPTER. WILLIAM E. PAUL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 23, 1926. Serial No. 124,506. 9 Claims. (Cl. 200—147.)



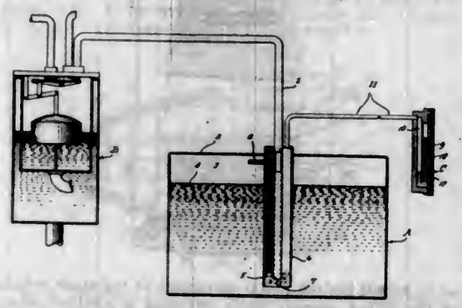
5. In a high voltage magnetic arc blowout for interrupting an electric circuit, the combination of a plurality of arc chutes grouped in spaced relation to form a restricted path for the arc with a gap between the adjacent edges of the chutes and a plurality of blowout coils each provided with arcing terminals to be included in the arc circuit as the arc lengthens and each forming a barrier in a corresponding one of the arc chutes for mechanically subdividing and magnetically attenuating the arc therein.

1,623,852. SWIMMING DEVICE. OSCAR G. PIKE, De Kalb, Ill. Filed May 26, 1926. Serial No. 111,834. 2 Claims. (Cl. 9—21.)



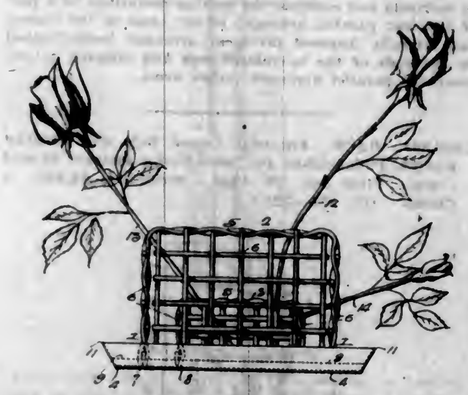
1. A swimming device comprising complementary disk members, said disks are interassociated in spaced relation to render the same buoyant, and one of the disk members is concave to provide for and facilitate the proper resistance against the water.

1,623,853. DOOR-LOCKING MECHANISM. ARNOLD N. RHODES, Rocky Point, N. C. Filed Sept. 1, 1925. Serial No. 53,885. 1 Claim. (Cl. 292—259.)



A locking device of the character described, including a stationary guide sleeve, a bracket secured to a movable door member and normally aligned with said guide member, a second bracket secured to a door frame in alignment to the first bracket and guide sleeve, an abutment plate carried by the door frame and arranged in close proximity to the second named bracket, a resilient bar slidably mounted in the guide sleeve and having one end adapted to be positioned within said brackets with the abutment plate limiting the sliding movement of the bar in one direction, a laterally extending lug on one end of the bar for engagement with one of the brackets when positioned therein to prevent sliding movement of the bar relative to the brackets and guide sleeve, locking pins retaining said bar against upward movement in the brackets, and means for securing the other end of the bar to a stationary object to prevent sliding movement of the same when in operative position.

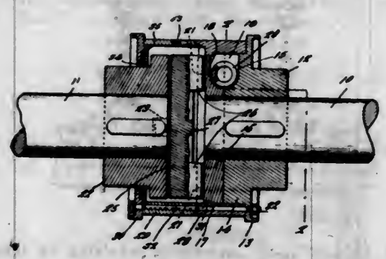
1,623,854. SAWMILL-CARRIAGE OFFSET. JOHN HARRY ROONEY, Susanville, Calif. Filed May 12, 1926. Serial No. 108,701. 1 Claim. (Cl. 143—109.)



The combination with track rails, wheels thereon, axles arranged in spaced pairs connecting the wheels and a carriage including side beams having bearings that receive the respective axles therethrough, of fluid cylinders secured to the side beams between the respective pairs of axles and each of said cylinders having central openings in the sides thereof, a pair of oppositely arranged pistons in each cylinder, a piston rod connecting the respective pairs of pistons, an arm centrally secured to each piston rod, extending through the mentioned openings in the cylinders and secured to the respective pairs of axles, pipe members communicating with the ends of the respective pairs of cylinders, a by-pass between said pipe members, a valve for controlling the passage through the by-pass for directing fluid into either of the mentioned pipes, a pipe for introducing fluid into the valve, a handle centrally secured to the valve core, and breakable trip members on the bed for the carriage in the path of contact with the respective ends of the handle.

1,623,855. LIQUID-LEVEL GAUGE. ALEXANDER K. SCHAAP, Jr., Brooklyn, N. Y., assignor to The Schaap-Durant Control Corporation, New York, N. Y., a Corporation of New York. Original application filed Feb. 21, 1923, Serial No. 620,430. Divided and this application filed Mar. 30, 1925, Serial No. 19,474. Renewed Feb. 24, 1927. 2 Claims. (Cl. 73—54.)

2. In a device of the class described, a liquid containing tank, a pressure tube entered through the top of the tank into the liquid therein, a liquid withdrawing tube extending down through the pressure tube into the liquid in the tank, an air inlet tube of restricted size extending through the side of the pressure tube and opening into the liquid withdrawal tube so that upon flow of liquid through the liquid tube in either direction air will be entrained in such liquid and upon flow through the tube into the tank such air will be released at the lower end of the same, the pressure tube having an open lower end surrounding the lower end of the liquid tube to thereby receive the air thus released from the liquid tube and a pressure gauge in communication with said pressure tube.

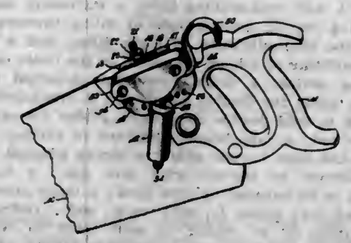


1,623,856. FLOWER HOLDER. ROBERT SHOCH, Philadelphia, Pa., assignor to M. Rice Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 3, 1925. Serial No. 54,317. 4 Claims. (Cl. 47—41.)

1. Apparatus comprising a plurality of nested cages having corresponding open sides, and a supporting member for closing said open sides.

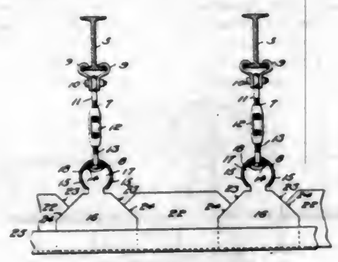
1,623,857. FLEXIBLE COUPLING. RAYMOND A. TEEL, East Bangor, Pa. Filed July 24, 1925. Serial No. 45,912. 1 Claim. (Cl. 64—96.)

In a coupling device of the character described, the combination with a pair of shafts arranged in spaced end to end relation, of a hub member mounted upon one shaft and formed with a plurality of radially extending pockets, a disk loosely mounted upon said same shaft in contacting relation to the hub member thereon, and formed with pockets corresponding to said first named pockets, coil springs located within said corresponding pockets and having their ends abutting against the opposed walls thereof, said hub member having its face toward the opposite shaft provided with a plurality of pairs of



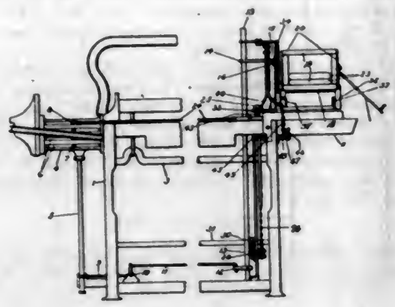
radially extending ribs, a hub member secured upon the other shaft and having its face toward the first mentioned shaft formed with a plurality of radially extending grooves, and a floating disk member located between the ends of said shaft and provided at one face with a plurality of radially extending ribs engaged between said pairs of first named ribs, said disk being provided at its other face with a plurality of ribs engaged within said grooves.

1,623,858. TREATMENT OF GUT. PAUL JOSEF WOHL, Frankfort-on-the-Main, Germany. Filed Oct. 14, 1925. Serial No. 62,457, and in the Netherlands Oct. 14, 1924. 4 Claims. (Cl. 99—8.)



2. A method of preserving uncleaned gut casings for shipping, comprising the steps of packing the casings, after having been sterilized, in an air-tight vessel under pressure to form a compact mass therein; closing the vessel, after having been filled; introducing melted neutral fat into the closed vessel to completely fill all spaces therein; cooling and solidifying the fat; and finally hermetically sealing the vessel.

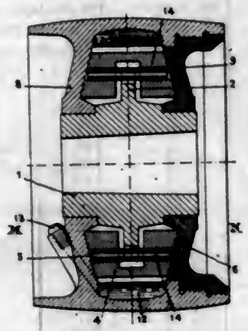
1,623,859. BLOWER FOR SAWS. CHARLES JEROME ABBEY, Skowhegan, Me. Filed May 5, 1926. Serial No. 106,911. 6 Claims. (Cl. 145—35.)



4. A sawdust blower for a hand saw comprising an air cylinder having a nozzle, means for adjustably supporting the air cylinder from the handle of the saw, a plunger arranged for movement in the cylinder, retracting means operable irrespective of the adjustment of the cylinder for retracting the plunger for the purpose of taking air into the cylinder between the plunger and the nozzle, and means which operates the plunger when the retracting means is released to eject the air from the cylinder through the nozzle in the form of a puff.

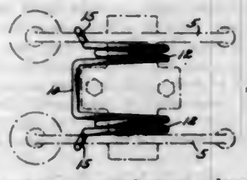
1,623,860. FURNACE-ROOF STRUCTURE. DAVISSON A. BENSON, Frostburg, Md., assignor to Standard Arch Company, Frostburg, Md., a Corporation of Maryland. Filed Mar. 26, 1926. Serial No. 97,719. 14 Claims. (Cl. 110—99.)

1. A furnace arch construction involving an integral slotted tuoular member adapted to support a plurality of bricks having heads received by said slotted tube, said member being provided with a cut out portion to permit the removal of bricks therefrom at a point intermediate its ends.



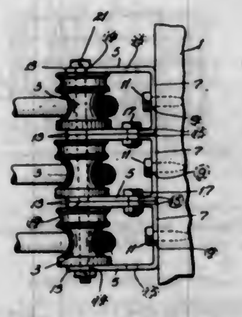
1,623,861. FILLING-REPLENISHING MECHANISM FOR LOOMS OF MORE THAN ONE SHUTTLE. EDWARD ARGEL BLACKSTON, Raleigh, N. C., assignor to Lovic Rogers Gilbert, Raleigh, N. C. Filed Aug. 15, 1925. Serial No. 50,392. 13 Claims. (Cl. 139—232.)

1. In a weft replenishing loom, a stationary magazine containing two or more groups of filling carriers differing in the characteristics of their filling and a mechanism consisting of a hook connected to the feeler or filling detecting device; a flexible connector attached to said hook; a guide for flexible connector; a cam-follower rod attached to said flexible connector; guides for said cam-follower rod; a cam follower adapted to contact with a cam on the loom bottom shaft; a spring adapted to hold said follower in contact with said cam; a bent rod adapted to be engaged by said hook; a track attached to said bent rod; guides for said track; and a sliding member adapted to be moved by said track to release a bobbin from said magazine; all substantially as shown and described.



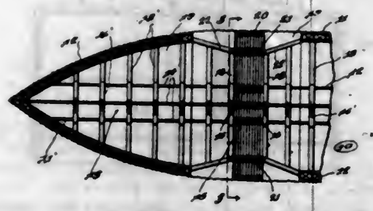
1,623,862. AUTOMATIC CLUTCH. FERNAND LOUIS BROUSSOUSE, Paris, France, assignor to Paul Jules Leboucher, Paris, France. Original application filed Jan. 6, 1923, Serial No. 611,150, and in France Jan. 11, 1922. Divided and this application filed Mar. 7, 1925. Serial No. 13,895. 2 Claims. (Cl. 192—105.)

1. A clutch comprising a driving member, a driven member having means providing an oil chamber in its outer portion, and friction clutch shoes fractionally engageable with the driven member, and means for connecting the shoes to the driving member in such manner



as to permit limited radial movement of the shoes relative to the driven member while affording a positive connection in respect of angular movements.

1,623,863. VALVE ROCKER ARM ATTACHMENT. THOMAS H. CADWELL, New Castle, Wash. Filed May 1, 1925. Serial No. 27,246. 1 Claim. (Cl. 123—90.)

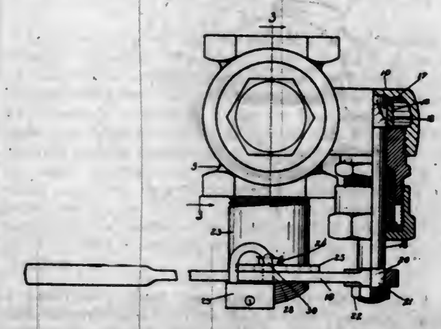


As a new article of manufacture a length of resilient wire bent intermediate its ends to provide a U-shaped member, adapted to be disposed horizontally, to lie flat upon the head of an internal combustion engine, the legs of the U-shaped member being convoluted and adapted to surround and embrace the bearing mountings of a pair of adjacent parallel arranged rocker arms of the engine, and laterally disposed divergent arranged hooks formed on the ends of the convoluted legs and adapted to embrace the parallel arranged rocker arms.

1,623,864. RACK. PHILIP H. CHASE, Bala, and WILLIAM FOSTER, Philadelphia, Pa.; said Foster assignor to said Chase. Filed Jan. 28, 1926. Serial No. 84,484. 5 Claims. (Cl. 173—321.)

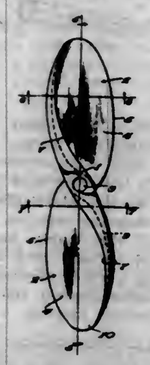
1. A rack for insulators and the like comprising interchangeable units adapted to be fastened together in various juxtapositioned combinations and aggregations while in the process of installation, said units comprising portions adapted to be fastened to a common frame and laterally formed legs the adjacent legs of juxtapositioned units being held together, and a bolt passing thru the legs of the units and upon which the insulators are mounted.

1,623,865. AIRSHIP. DEMETRE DONCHEFF, East St. Louis, Ill. Filed Nov. 30, 1925. Serial No. 72,350. 3 Claims. (Cl. 244—3.)



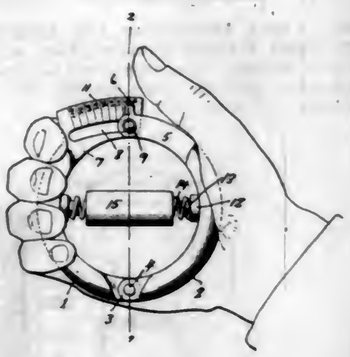
1. In a dirigible air-ship, the frame work comprising sectional members, a centrally disposed beam structure including triangular spaced plates, longitudinal beam rods, said spaced plates supported by connecting links from the body frame works, said body frame work including sectional portions defining the peripheric contours of said air-ship, coil springs distributively positioned between adjacent ends of said frame work sections, and an enveloping fabric for covering the entire structure provided with bellows-shaped portions at the several adjacent ends of the frame work.

1,623,866. PRESSURE-RELIEF MECHANISM FOR WELLS. WILLIAM D. EGENHOFF, Maricopa, Calif. Filed Dec. 28, 1925. Serial No. 77,957. 1 Claim. (Cl. 166—1.)



In a well tubing, an upper tube section, a bushing fitting in the lower end of said tube section and having an inner wall oval in cross section with longitudinal key ways in opposite sides across the minor axis of the inner wall, a hollow shank slidably fitting through the bushing and having longitudinal feathers at opposite sides engaging said key ways to hold the shank from turning in the bushing, said shank having flattened opposite exterior walls between the feathers for cooperation with the oval shaped inner wall of the bushing to provide lateral passages at the lower end of said tube section, said bushing having a valve seat on its upper end and said shank having a valve head on its upper end adapted to engage the valve seat when said tube section is raised to close said lateral openings, said tube section being adapted to be lowered to unseat said valve head and open said lateral passages to relieve pressure in the tube section.

1,623,867. VALVE STRUCTURE AND LOCKING DEVICE. HARRY J. ERNST, Cincinnati, Ohio, assignor to The D. T. Williams Valve Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 27, 1925. Serial No. 12,120. 3 Claims. (Cl. 70—125.)



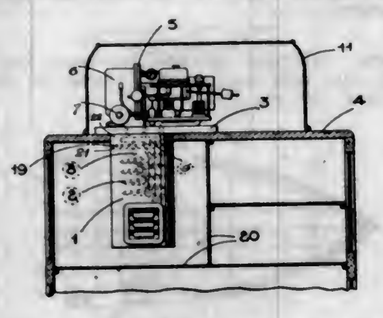
1. In a device of the class described the combination with a valve casing, of a valve in the casing and means for actuating the valve comprising a lever having a perforation therethrough, and a locking plate pivotally mounted upon the casing and having a series of perforations therethrough spaced at various distances from the pivotal mountings of said plate, the perforation in the lever being adapted to register with one of the perforations in the locking plate for receiving a staple lock whereby the valve lever and valve are locked against movement.

1,623,868. MARINE PROPELLER. JOSEPH FISCHER, Redelm, S. Dak., assignor to Fred Meyer, Redelm, S. Dak. Filed Mar. 20, 1926. Serial No. 96,226. 3 Claims. (Cl. 170—159.)

1. A marine propeller comprising a hub, and blades radiating therefrom, each blade having its leading and trailing faces respectively transversely concave and convex, the transverse curvature of the trailing face being greater than that of the leading face from a point inwardly of the leading edge of the blade to a point inwardly of the trailing edge thereof, the blade being provided along its trailing edge with a transversely curved fin of gradually decreasing width from its inner to its outer end and merging at its outer end with the margin of the leading face of the blade near the tip of the blade, the free margin of the fin overhanging the leading face for a major distance of its length.

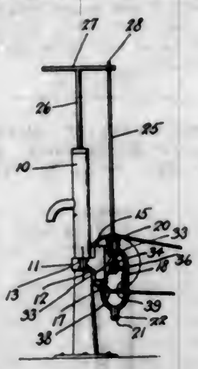
1,623,869. MUSCLE EXERCISER. ARMANDO GIRALDI, East Braintree, Mass. Filed Apr. 3, 1926. Serial No. 99,617. 2 Claims. (Cl. 265—21.)

1. A device for the purpose set forth, comprising a ring-like member constructed of two semi-circular sections, each having one of their ends pivotally connected together, the second end of one of the segments having a slotted extension provided with a dial plate, the free end of the second extension having a pivot passing through the slot of the first mentioned section and having a finger that is movable over the dial plate, a coil spring influencing the sections away from each other and a sleeve through which the coil spring is passed for holding the spring from twisting or bulging.



1,623,870. FISHHOOK. ALLEN GOODGAME, Rexford, Mont. Filed Apr. 17, 1926. Serial No. 102,757. 1 Claim. (Cl. 43—36.)

A fishing device comprising a shank, a ring, an arm semi-circular in configuration having the extremities thereof secured to the inner sides of the ring, an arcuate shaped arm carried by the ring and inter-secting the first mentioned arm at an intermediate point in its length in oppositely disposed relation with respect to the associated end of the shank, hooks having the shanks thereof disposed between said arms and within the ring, and offset loop portions formed upon the upper ends of the hook shanks around the first mentioned shank for sliding movement thereon.

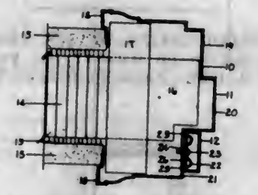


1,623,871. REFRIGERATION AND COLD STORAGE. ARTHUR GREEN, Coventry, England. Filed Apr. 3, 1925, Serial No. 20,488, and in Great Britain Oct. 15, 1924. 1 Claim. (Cl. 62—4.)

Refrigerating apparatus comprising a supporting plate, a compressor unit mounted on one side of said plate, said compressor unit including means for driving the compressor and a reservoir for receiving and condensing fluid compressed thereby, a valve for releasing fluid from the reservoir, a casing mounted on the other side of the supporting plate, a partition in the casing dividing it into two compartments, an evaporator coil within one of the compartments and having its ends connected one with the compressor and one with the release valve, said compartment which has the evaporator coil being adapted to contain a fluid for surrounding said coil, and a

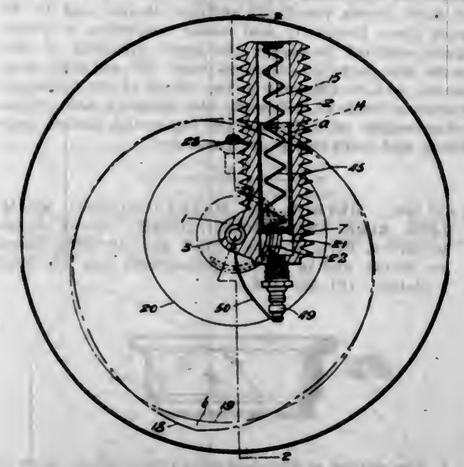
thermostat within the other compartment for controlling the operation of the apparatus, said thermostat compartment having openings in its walls.

1,623,872. MECHANICAL MOVEMENT. HARRY A. HOLMES, Aurelia, Iowa. Filed Dec. 19, 1925. Serial No. 76,512. 2 Claims. (Cl. 74—14.)



1. In a device of the class described, a link including parallel elements having oppositely located racks formed thereon, a power shaft, a segmental member non-rotatable on the shaft and adapted to mesh with the racks, an element to be driven and having connection with the link, a clamp for connection with a pump barrel, and means connected with the clamp for guiding the link when reciprocated by the engagement of the racks by the segmental member.

1,623,873. FENCING CONSTRUCTION. CHARLES K. JACKSON, Columbus, Ohio. Filed Dec. 23, 1925. Serial No. 77,319. 1 Claim. (Cl. 256—24.)

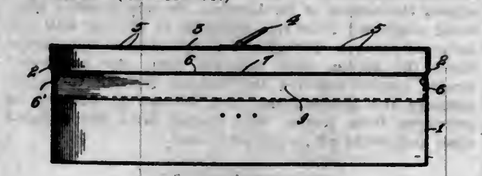


The combination with spaced fence posts each having vertical grooves at its opposite sides, of panels comprising upright end bars and loosely pivoted upper and lower rails, said rails having extensions projecting into said grooves and holes in the extensions of the upper rails, and detachable fastening devices passed through said holes and complementary holes in the fence posts.

1,623,874. DOORFRAME. AXEL Z. JOHNSON, Jamestown, N. Y., assignor to The Dahlstrom Metallic Door Company, Jamestown, N. Y., a Corporation of New York. Filed June 5, 1925. Serial No. 35,225. 5 Claims. (Cl. 189—46.)

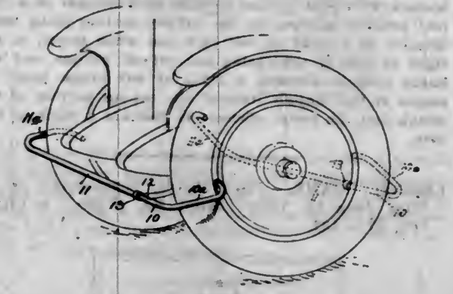
1. A door frame of the combination jamb and buck type comprising in combination with a base frame a removable subframe, which is morticed and reinforced to receive and support the door hardware, whereby the base frame can be rigidly installed in the building and the subframe can be prepared and installed later.

1,623,875. ROTARY INTERNAL-COMBUSTION ENGINE. CLIFFORD HARTY KAIN, San Carlos, Calif. Filed Mar. 23, 1925. Serial No. 17,730. 5 Claims. (Cl. 123—43.)



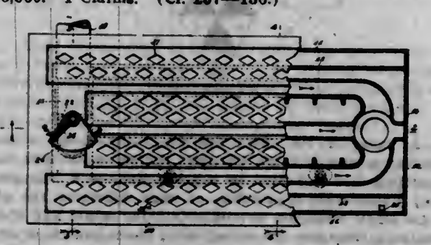
1. In an internal combustion engine a shaft, a rotating cylinder carried by said shaft having the longitudinal axis thereof arranged tangential to a circle concentric with the axis of rotation of said shaft, a relatively fixed eccentrically mounted guide ring, a piston within said cylinder re-acting against said guide ring in lines of force which are substantially radial to said guide ring throughout the working stroke of said piston, and means independent of said guide ring for returning said piston to its innermost position on the inward strokes of said piston.

1,623,876. PROCESS OF MAKING CEMENT. LUDWIG KERN, Baltimore, Md. Filed Dec. 23, 1925. Serial No. 77,379. 3 Claims. (Cl. 106—25.)



3. A process which comprises burning indurated sand-lime shaped products, at about 400 to 600° C., said shaped products being made from a natural mixture of calcareous and siliceous material by calcining at a temperature too low to produce any substantial amount of sintering, pulverizing, slaking with enough water to leave a moldable mass, molding, indurating under pressure at steam heat.

1,623,877. TOILET BOX. CHESTER E. KJETSAA, Philadelphia, Pa. Filed Dec. 7, 1925. Serial No. 73,843. 1 Claim. (Cl. 132—79.)



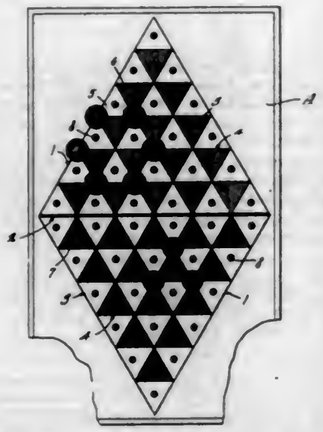
A rectangular box having perforations in its wall and crimped adjacent the upper edge thereof to provide an outwardly extending flange, said box being further crimped adjacent the flange first mentioned to provide an interiorly extending flange, a tray adapted to rest upon the interior extending flange and formed with a channel shaped receptacle at one longitudinal edge thereof, said receptacle being adapted to receive a hair comb, and said tray being further formed with a tooth brush receptacle, a tooth paste retainer receptacle and a depression to receive a cake of soap and said tray being provided with a centrally disposed opening for the purpose specified.

1,623,878. TOE-IN GAUGE. WENDELL J. KUND, Bedford, Pa. Filed Feb. 6, 1926. Serial No. 86,491. 3 Claims. (Cl. 33—203.)

1. A toe-in gauge comprising arms movably connected which, respectively, have wheel engaging extremities, the movable connection of the arms permitting movement of said extremities towards and from one another, and means to indicate different distances apart of such extremities comprising graduations and an index that consists of a slidable member frictionally engaging one of said arms and movable by pushing contact with the other arm, said frictional engagement retaining said slidable member in whatever position to which it may be slid.

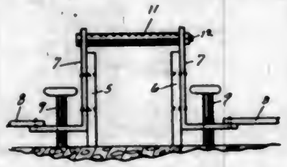
1,623,879. MOTOR-VEHICLE HEATER. EDWARD W. LEAHY, Albany, N. Y. Filed Oct. 31, 1925. Serial No. 66,060. 4 Claims. (Cl. 257—136.)

4. In an internal combustion motor exhaust heated radiator for motor vehicles, including a plurality of radiator pipes, a housing therefor having a top wall formed



with spaced rows of grille openings extending longitudinally of the housing, marginal side walls depending from the upper wall, and a tiltable bottom wall normally closing the bottom of the housing, the said radiator pipes being suspended from the underside of the top wall and arranged between the rows of grille openings and spaced above the bottom wall, whereby dust, dirt and other foreign matter entering the housing through the grille openings and accumulating upon the bottom wall will be prevented from coming into contact with the radiator pipes and giving off an offensive odor.

1,623,880. DIRECTION-INDICATING DEVICE ESPECIALLY FOR VEHICLES. AUGUSTIN MARŠIK, Prague, Czechoslovakia. Filed Apr. 22, 1926, Serial No. 103,932, and in Czechoslovakia Apr. 19, 1925. 4 Claims. (Cl. 116—44.)



1. A direction indicator for vehicles comprising a casing having a cut-out portion in the front wall thereof, said cut-out portion representing by the contour lines portions of arrows for right and left direction indications; and a movable image element in said casing adapted to cooperate with said cut-out portion, said element in a central position relative to the cut-out portion being unindicative of a right or left turn and when moved to the right or left in the casing the cut-out portion and the image element forming a right or left arrow point by means of the contour lines of the cut-out portion of the casing and the image element to indicate a right or left turn.

1,623,881. GAME. JOHN MAYER, Schenectady, N. Y. Filed June 19, 1925. Serial No. 38,308. 1 Claim. (Cl. 273—131.)

A game of the class described comprising a board having a pair of large triangles thereon with their bases abutting and separated by a heavy line, each triangle being divided into a plurality of small triangles, the alternate small triangles of both sets being white and the remaining triangles of one set being black and those of the other set being red, with the bases of the colored triangles facing toward the ends of the board and the bases of the center rows of the white triangles abutting each other, dots of red color in the white triangles which are associated with the black triangles, black dots in the white triangles which are associated with the red triangles, player pieces divided into two sets and adapted to be moved along the lines forming the small triangles.

1,623,882. FLOOR-LAYING DEVICE. JOSEPH L. MCWILLIAMS and JOSEPH MAROSKY, San Francisco, Calif. Filed Apr. 2, 1926. Serial No. 99,341. 1 Claim. (Cl. 25—118.)

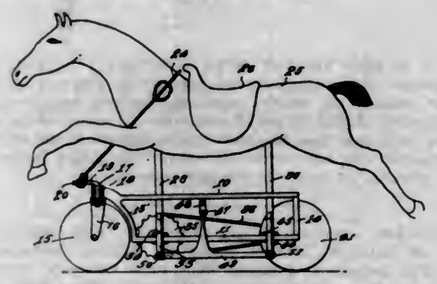
In a mold of the character described, a pair of vertically disposed mold boards, angle iron members secured to said mold boards, said angle iron members having one portion thereof horizontally disposed, a link extending between said horizontal portions of said adjacent angle iron members mounted upon the respective mold board, means for separating said mold boards from a similar set of mold boards positioned adjacent thereto and in the same plane therewith, said means comprising a tubular spacer adapted to engage the upper extremity of said angle iron members mounted upon the adjacent mold boards, and an adjusting screw carried in the horizontal portion of each of said angle iron members, said screws being capable of contacting the supporting surface upon which said mold boards are positioned.

1,623,883. METHOD OF MANUFACTURING SEAMLESS RIMS AND WHEEL DISKS. ANDRÉ JULES MICHELIN, Paris, France. Filed Nov. 10, 1925, Serial No. 68,134, and in France (provisional) Aug. 17, 1925. 2 Claims. (Cl. 29—159.)

1. The method of manufacturing from a single blank of resilient metal, both a seamless weldless metallic rim and a wheel disk, the two being adapted to be joined together to form a resilient wheel body for use on automobiles, which consists in preparing a disk of malleable metal of smaller radial diameter than the finished wheel body, subjecting this disk to mechanical processes so as to form a peripheral flanged portion and a central web, separating said central web from said peripheral portion, shaping by mechanical processes the peripheral portion to form an annular weldless rim of the desired cross-sectional profile adapted to receive and hold a pneumatic tire, and forming by mechanical processes from said central web, a dished resilient wheel disk with a thickened hub engaging portion, tapering outwards towards the periphery.

1,623,884. BANJO RESONATOR. HERMAN F. MIETZ, Franklinville, N. J. Filed Jan. 2, 1925. Serial No. 231. 4 Claims. (Cl. 84—271.)

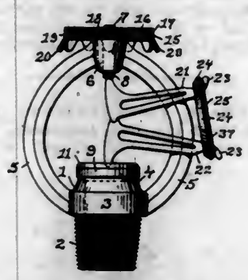
1. A banjo attachment constructed entirely of laminated wood and comprising an annular band, a sounding board secured to one edge of said band and having its inner surface concaved, an annular flange secured to said band adjacent the opposite edge thereof and being provided with a plurality of equidistantly spaced sound openings, a supporting means for said flange positioned



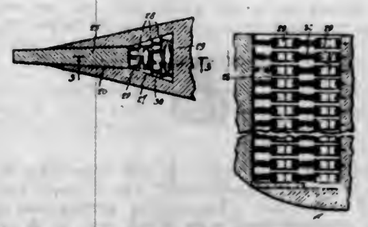
between the flange and sounding board, and a plurality of clamping members carried by said annular band, positioned inwardly of the inner edge of the flange.

1,623,885. CASING SLIP. GUSTAVUS A. MONTGOMERY, Titusville, Pa. Filed Apr. 21, 1926. Serial No. 103,579. 17 Claims. (Cl. 24—263.)

1. A casing slip comprising a tapered body adapted to be mounted on the tapered inner wall of the spider for free sliding movement, and a liner fixed to and longer than the body and held against longitudinal movement relative to the body, said liner having pipe-engaging means throughout its extent to present a gripping surface of relatively great area to the pipe.



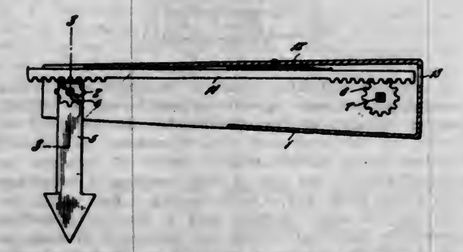
1,623,886. MECHANICAL TOY. HOWARD H. MORGAN, Hollywood, Calif. Filed Sept. 25, 1926. Serial No. 137,770. 1 Claim. (Cl. 208—42.)



In a device of the class described, a frame, a crank shaft mounted thereon, guiding means carried by the frame, means controlling the guiding means, wheels for mounting the frame, means for driving the wheels from the crank shaft, additional crank elements mounted on the frame, a body positioned above the frame, rods connecting the body with the crank shaft and additional crank elements, stirrups, and means connected with the stirrups for imparting movement to the crank shaft and crank elements.

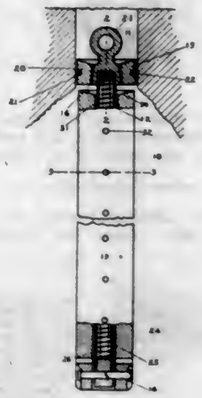
1,623,887. AUTOMATIC SPRINKLER. GEORGE FREDERICK NEWTON, Providence, R. I., assignor to United States Fire Protection Company, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 16, 1925. Serial No. 15,959. 6 Claims. (Cl. 169—37.)

1. In an automatic sprinkler, a fusible link member in the form of an outer and an inner disk, each disk having a central hole, a tube soldered to the disks in the central holes, the inner disk having a circular groove and the outer disk having a circular rib soldered in the circular groove, each disk having coinciding inclined annular peripheries soldered together, and means for securing the fusible link to the levers of an automatic sprinkler.



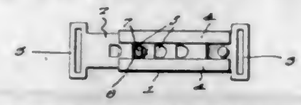
1,623,888. SHIP. JEROME PASINI, New York, N. Y. Filed July 8, 1926. Serial No. 121,210. 3 Claims. (Cl. 114—219.)

1. A ship having a tapered pocket in its bow, a vertical plate tapered in accordance with the pocket and including an edge projecting forwardly of the ship and constituting the prow, a series of cushioning springs interposed behind the plate and forcing the same into firm engagement with the tapered pocket.



1,623,889. TRAFFIC SIGNAL. WENDELL L. PHILLIPS, Bonair, Iowa. Filed Oct. 18, 1926. Serial No. 142,432. 1 Claim. (Cl. 116—50.)

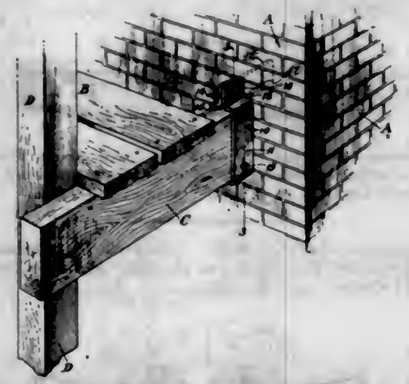
A signal of the class described comprising an elongated casing having its outer end open, the opening extending a considerable distance through the top of the casing and a greater distance from the bottom of the casing and a small opening in the inner end of the casing, a shaft rotatably mounted in each end of the casing, a gear on each shaft, a handle connected with the inner shaft, a signal arm connected with the outer shaft, said arm being of less length than that of the opening in the bottom of the casing so that the arm can enter the casing through said opening, a rack bar in the casing having a rack at each end thereof for engaging the gears, a leaf spring connected at its center to the top of the casing and having its ends engaging the rack bar for holding



its racks in engagement with the gears the small opening in the inner end of the casing permitting the inner end of the rack bar to pass through the same when the rack bar is moved in one direction and the top part of the opening at the outer end of the casing permitting the signal arm to be moved upwardly to a vertical position.

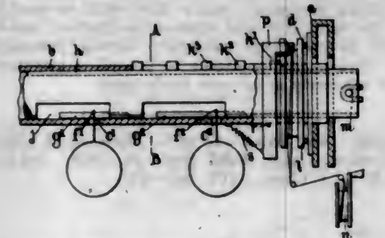
1,623,890. MEANS FOR TREATING OIL WELLS. BURTON W. SEYMOUR, Sr., Jamestown, N. Y. Filed Aug. 28, 1926. Serial No. 132,067. 4 Claims. (Cl. 166—17.)

1. Means for treating an oil well comprising a rod, adapted to support a heated billet, and a cupped plate on said rod above said billet, having perforations therethrough, said rod being hung in the well to be treated with the heated billet in the oil bearing portion, and said plate closing the well above said portion, whereby water poured into said well will pass through said perforations onto said heated billet and be transformed into steam.



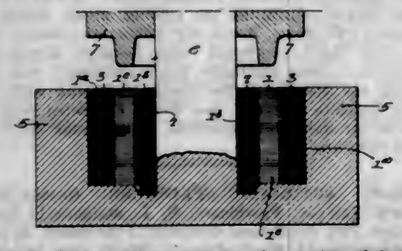
1,623,891. FASTENER. WILLIAM H. SHEARER, Rand, Colo. Filed Apr. 28, 1923. Serial No. 635,365. 1 Claim. (Cl. 24—206.)

A fastener including a pair of members, one having channel guides upon opposite edges thereof to slidably receive the edges of the other member, an elongated eye formed on the outer end of each member, one of said members being formed with a series of openings, an arcuate wall at one end of each opening, a transverse wall at the other end of each opening, a leaf spring carried by the other member and a bevelled projection carried by said leaf spring and projecting through an opening in the member to which it is attached whereby said bevelled projection may be projected into any one of the openings of the other members, a rounded front part on the projection adapted to coact with the arcuate wall of the openings as and for the purpose set forth.



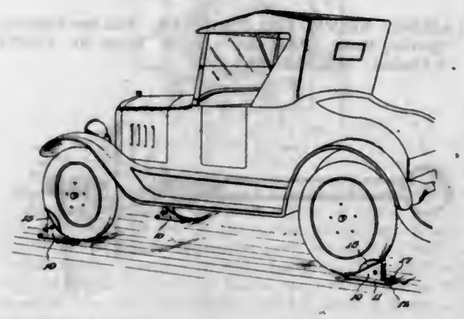
1,623,892. SCAFFOLD SHOE. LEONARD SOBRAY, New York, N. Y. Filed Oct. 11, 1926. Serial No. 140,900. 1 Claim. (Cl. 304—39.)

A scaffold shoe comprising a hanger formed of a single piece of strap metal bent into substantially U-shape, the free ends of said strap metal being bent inwardly and thence parallel to the side walls of the hanger to provide spaced flanges, an anchor arm having one of its ends fixedly secured between said flanges, and a tooth provided on the free end of said anchor arm, the



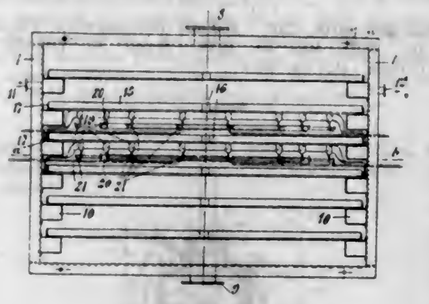
side walls of said hanger having aligned openings provided therein for the reception of a removable element for locking one end of a beam within said hanger.

1,623,893. DEVICE FOR DROPPING BOMBS FROM AIRCRAFT. WLADYSLAW SWIATECKI, Lublin, Poland. Filed Oct. 11, 1924, Serial No. 743,052, and in Great Britain July 15, 1924. 10 Claims. (Cl. 244—1.)



2. A bomb dropping device comprising two relatively movable rods engaging bomb supporting means, a spring for causing the relative movement between said rods, a plurality of pins on one of said rods and means co-operating with said pins to arrest the movement of the spring actuated rod and permit its advance in stages, whereby a plurality of bombs is released successively.

1,623,894. MECHANICAL ELEMENT AND METHOD OF MAKING SAME. JOHN M. TAYLOR, Bridgeport, Pa., assignor to Diamond State Fibre Company, Bridgeport, Pa., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 737,171. 8 Claims. (Cl. 18—56.)



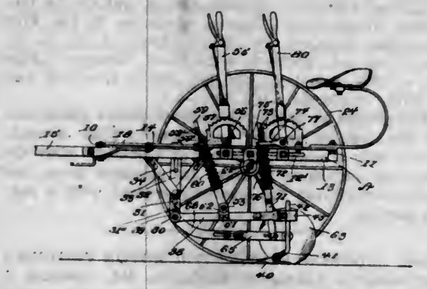
2. A mechanical element made of a series of laminations each having a peripheral overlap extending radially inward and a central overlap extending radially outward.

1,623,895. WHEEL CHOCK. ORA W. TURNBAUGH, Cambridge, Ohio. Filed June 11, 1926. Serial No. 115,333. 3 Claims. (Cl. 188—32.)

1. A wheel chock including a body formed of companion sections having wings to embrace the tire of a wheel chocked by the body, said sections being provided with flanges, and means adjustably connecting said sections with each other and maintaining the flanges in overlapped relation.

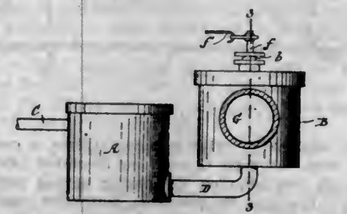
1,623,896. APPARATUS FOR THE INDUSTRIAL CULTURE OF FERMENTS, YEASTS, MICROBES, AND THE LIKE. CHARLES VIGREUX, Balesmes, France, assignor to Etablissements Poulenc Frères, Paris, France. Filed Feb. 29, 1924, Serial No. 696,093, and in France Mar. 17, 1923. 5 Claims. (Cl. 195—17.)

1. In culture developing apparatus of the class described, the combination of a receptacle, a tray supported therein, and separate culture and culture medium distributing conduits disposed over the tray in a series of concentric circles and adapted to uniformly discharge fluent material onto said tray from the interior of said conduits.



1,623,897. RULE. RUFFIN WILLIAMS, Wakefield, N. C. Filed Aug. 14, 1926. Serial No. 129,243. 1 Claim. (Cl. 33—161.)

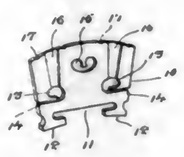
An extension rule comprising a plurality of telescoping sections, of gradually increasing size, all but the smallest or innermost section having channels at the sides, the channel of one section receiving the channel part of another section, with the inner section engaging the channel of the next section, means for limiting the outward movement of the sections, such means comprising a reduced end on one section forming shoulders and



shoulders on the next section which are formed by an enlarged end of the said section, said shoulders engaging each other.

1,623,898. COTTON CHOPPER. ALFRED H. WINNETT, Meridian, Tex. Filed Feb. 16, 1925. Serial No. 9,555. 5 Claims. (Cl. 97—23.)

1. In a cotton chopper, a frame, mounting means therefor, a transverse rotatable bar mounted beneath the frame, a plurality of plows, beams for the plows, means connecting the beams with the bar, guards mounted between the plows, beams for mounting the guards for swinging movement on the bar, a transverse bar connecting the plow beams and spaced from the bar first named, and means for lifting the second named transverse bar.

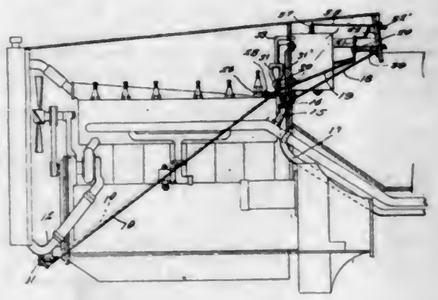


1,623,899. CARBURETOR. STEPHEN SEYMOUR ALLWILL, Auckland, New Zealand. Filed Sept. 8, 1926, Serial No. 134,244, and in New Zealand Aug. 7, 1926. 6 Claims. (Cl. 261—50.)

1. A carburetor comprising a fuel chamber closed to the atmosphere; a fuel supply pipe associated with the chamber; a float-controlled check valve in said chamber

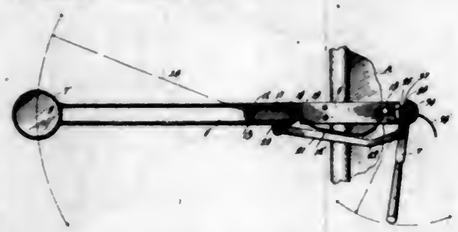
and adapted to check the supply of fuel from the supply pipe when the fuel reaches a predetermined level in the chamber; a mixing chamber for mixing the fuel and air and controlling the flow thereof; and a pipe connecting the fuel chamber with the mixing chamber.

1,623,900. VIOLIN BRIDGE. ALBERTO M. ALVARADO, Durango, Mexico. Filed Dec. 8, 1924. Serial No. 754,631. 1 Claim. (Cl. 84—309.)



A violin bridge comprising a flat body having its lower edge provided with feet and having its intermediate portion formed with openings located near the sides and formed with slots leading from said openings out to the side edges, the body having a flat face formed with a pair of grooves extending from the openings to the upper edge at points near the corners, the resultant thinning away of the material by the provision of the grooves providing sensitiveness for facilitating transmission of vibrations.

1,623,901. METHOD FOR THE IMPROVEMENT OF NATURAL RESINS. AUGUST AMANN and EWALD FONROBERT, Wiesbaden, Germany, assignors to the Firm Chemische Fabriken Dr. Kurt Albert G. m. b. H., Amoneburg, near Biebrich-on-the-Rhine, Germany. Filed Feb. 4, 1924, Serial No. 690,650, and in Germany Aug. 18, 1917. 3 Claims. (Cl. 260—4.)

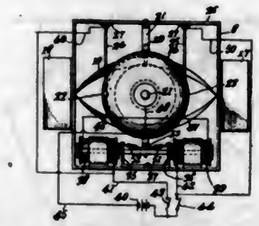


1. The process of producing resinous bodies which comprises the steps of reacting on a natural resin of acidic character with a reaction product of a phenolic body and a substance containing at least one carbonyl group, and thereafter esterifying the resulting product with a polyhydric alcohol.

1,623,902. COOLING SYSTEM FOR MOTOR VEHICLES. CARL MAGNUS ANDERSON, Baltimore, Md., assignor of one-half to Michael Chonkich, Baltimore, Md. Filed Dec. 24, 1924. Serial No. 757,891. 5 Claims. (Cl. 123—174.)

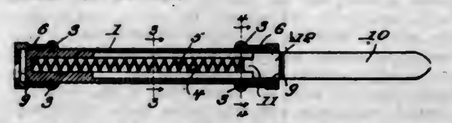
5. In combination with a motor vehicle, a casing connected with the dash thereof, an insulated tank in the casing, an extension on the casing having perforations therein, a heater in the extension, means for causing some of the exhaust gases to pass through the heater, means for connecting the cooling system of the motor of a vehicle to the tank, such means including a pipe having coils arranged in the heater, means actuated from the motor for creating a vacuum or a pressure in the tank, manual means for controlling all of the before mentioned means and means on the instrument board and associated with the tank for indicating the level of water in the tank and the temperature of the water.

1,623,903. SIGNAL FOR VEHICLES. EDWARD BEDNARZ, Everett, Wash. Filed Oct. 6, 1924. Serial No. 742,051. 3 Claims. (Cl. 116—52.)



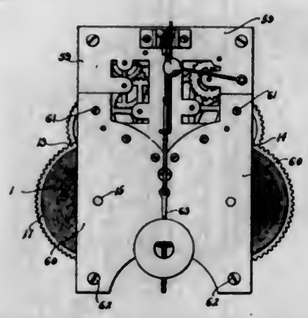
1. A signaling device of the class described including in combination a plate having one end provided with an annular series of depressions and the other end provided with a rounded edge having spaced projections, a lever pivoted on the first mentioned end of the supporting plate and provided with projections cooperating with the depressions to hold the lever in different positions, the other end of the supporting plate having an opening, a pin extended through the opening, a semaphore, a plate fixed to the semaphore and pivoted on the pin, a projection extending from the plate adapted to move along the rounded edge of the second mentioned end of the supporting plate and to abut the projections thereon, an extension formed on the plate, a link rod pivoted to the extension at one end and at its other end to the lever all in the manner and for the purpose specified.

1,623,904. OIL CAN. HAROLD BLATHERWICK, Chicago, Ill. Filed May 28, 1924. Serial No. 716,503. 4 Claims. (Cl. 24—47.)



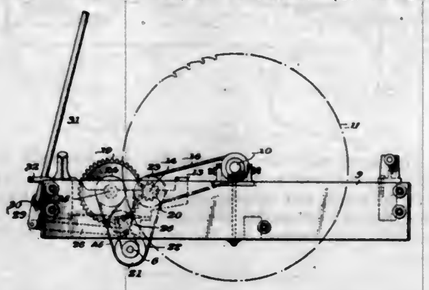
1. An oil can including a casing, a spout projecting from the casing, a plunger movable in the casing, a coil spring confined in the casing and having an end portion connected to the plunger and an opposite end portion connected to the casing, and a manually rotatable member within the casing and defining portions adapted to work over and along the convolutions of the coil spring for contracting and expanding the coil spring to move the plunger in reciprocatory action within the casing.

1,623,905. VEHICLE SIGNAL. MILLER BORGLUM, Bakersfield, Calif. Filed Dec. 4, 1924. Serial No. 753,957. 4 Claims. (Cl. 177—327.)



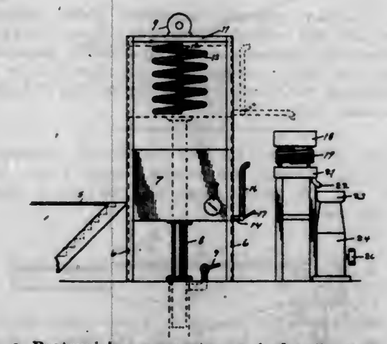
1. A signal device comprising a casing having a socket therein simulating an eye ball socket, a panel inclined forwardly at each side of the casing, an eye-ball member movably mounted in the socket provided with an opening therethrough, a source of light for projecting light rays through said opening, and means for moving the eye-ball member to aline the opening therein with a panel and illuminate the latter.

1,623,906. NOVELTY. DESMOND B. BROOKS, Haxtun, Colo. Filed Sept. 25, 1926. Serial No. 137,751. 8 Claims. (Cl. 30—10.)



1. A device of the class described comprising a handle member, a blade member slidably mounted therein, a spring within the blade member for projecting the knife member, a cap rotatably mounted on the handle member and having a slot therein which, when the cap member is turned in one position, will permit the spring to force the blade member therethrough, and a cam part on the cap for engaging the pointed end of the knife member to force the same into the handle member, after the blade member has been partly pushed into the handle member to cause the solid part of the cap to engage the knife member to hold the same in retracted position.

1,623,907. CLOCK. JOHN C. BURKE, Middlesboro, Ky. Filed Oct. 3, 1923. Serial No. 666,419. 1 Claim. (Cl. 58—52.)

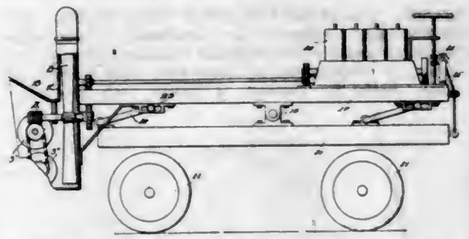


In a clock frame, a plate including an upper fixed section extending approximately from the top to the center of the frame and having openings therein, one of said openings accommodating the center shaft of the clock mechanism, a pair of removable complemental plate sections upon opposite sides of the longitudinal center of the frame, each of said sections having their upper edges overlapping the lower edge of the fixed section and extending downward to the bottom of the frame with their adjacent edges abutting and provided with semi-circular recesses to accommodate the center shaft and means to secure the removable sections to the fixed section and to the frame.

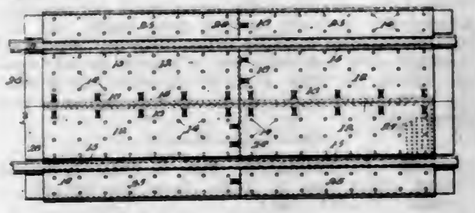
1,623,908. CHAIN-DRIVEN BELT FEED WORKS FOR SAWMILLS. GEORGE E. CAMPBELL, Chattanooga, Tenn., assignor to The Wheland Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Sept. 24, 1924. Serial No. 739,637. 4 Claims. (Cl. 74—21.)

1. The combination of at least two drive shafts spaced apart horizontally, a driven shaft arranged in a vertical plane passing substantially midway between said drive shafts, belts arranged on the driven shaft and extending substantially vertically to said drive shafts, and belt tightening pulleys arranged substantially in longitudinal alignment with each other and in position to bear upon and tighten the belts on the driven shaft and at least one of the drive shafts for transmitting power to said driven shaft.

1,623,909. PASTEURIZER. TITO L. CAVALLI, Benicia, Calif. Filed June 19, 1926. Serial No. 117,126. 1 Claim. (Cl. 257—104.)



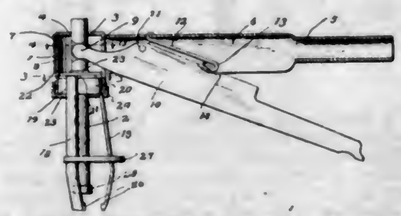
In a Pasteurizing apparatus, a hydraulic jack, a vat supported on said jack and adapted to be elevated thereby, angularly-shaped uprights positioned adjacent the corners of said vat, a platform positioned adjacent the upper end of said uprights, a motor positioned on said platform, a coil suspended from said platform and adapted to be rotated by said motor, said coil being tubular so as to receive a flow of liquid therethrough, and means for discharging the liquid from said vat, and a valve positioned therein for the purpose described.



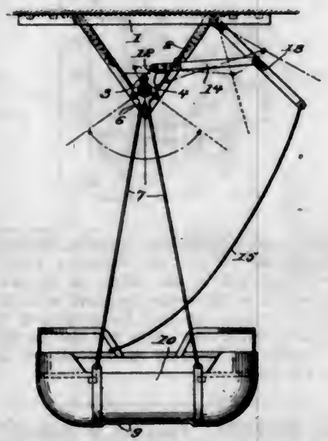
1,623,910. SNOW REMOVER. HARRY D. CURTIS, Oshkosh, Wis. Filed May 19, 1922. Serial No. 562,155. 1 Claim. (Cl. 37—43.)

A snow plow of the character described comprising a wheeled vehicle, a frame pivotally secured midway the

ends of the vehicle, bearings secured to the frame and vehicle respectively, cranks having their upper ends pivoted in the bearings of the frame and the lower portions of said cranks being received in the bearings of the vehicle, a snow removing apparatus fixed to the front of the frame, a motor for driving the snow removing apparatus and also adapted to counterbalance the weight thereof, and a windlass associated with the rear end of the frame and vehicle respectively to tilt the frame on its pivot for adjustably associating the snow removing apparatus with respect to the ground in front of the vehicle.

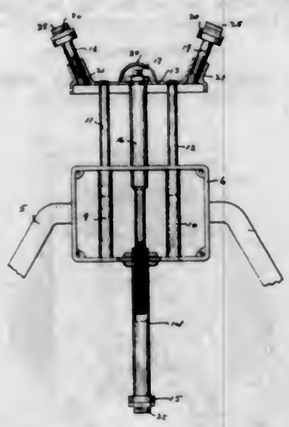


1,623,911. RAILROAD-GRADE CROSSING. JOHN A. DAILEY and LEWIS W. GERTH, Burlington, Iowa. Filed Nov. 16, 1926. Serial No. 148,644. 7 Claims. (Cl. 238—8.)



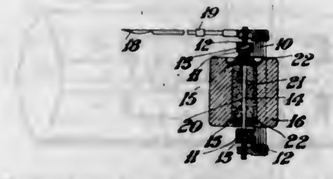
1. A railroad crossing, comprising plates extending parallel with and between the rails of a track and having the inner edges thereof abutting, and means mounted on the plates at their abutting edges and adapted to be projected beyond the abutting edges for holding the plates in the same plane.

1,623,912. TYPEWRITER-KEY REMOVER. PATRICK P. DUNN and GUSTAV SHOENFELD, Great Falls, Mont. Filed Aug. 10, 1926. Serial No. 128,460. 7 Claims. (Cl. 29—84.)



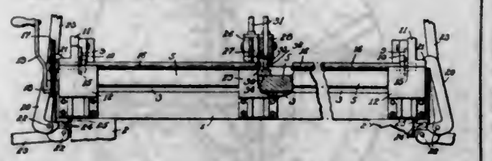
3. A tool for removing an article from encircling engagement with a carrier, said tool comprising pivoted handles, a casing carried by one handle, a plunger for engaging the carrier slidable through said casing transversely of said handle, the other handle extending into said casing and engaging said plunger and adapted to impart sliding movement thereto when swung towards and away from the first-mentioned handle, a collar in said casing having a bore slidably receiving said plunger, means to removably hold said collar in the casing, and jaws extending from said collar externally of said casing and adapted to grip the article to be removed.

1,623,913. SWING. EMIL EVALET, Alliance, Ohio. Filed Feb. 10, 1923, Serial No. 618,354. Renewed Dec. 27, 1926. 1 Claim. (Cl. 155—63.)



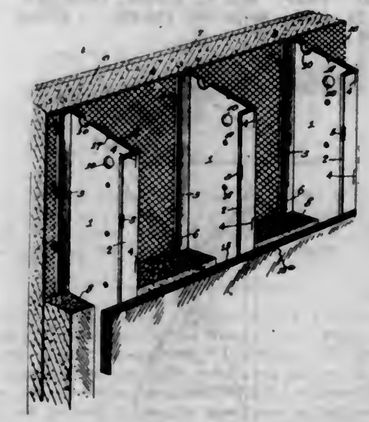
A swing of the class described comprising a supporting frame, a shaft carried thereby, a pair of castings rotatably mounted on the ends of the shaft, rods connecting the castings together and each casting having a pair of depending socket members and an upwardly extending ear, a rod threaded in each socket member, a seat carrying part connected with the lower ends of the rod, a yoke pivotally connected with the frame, links connecting the yoke with the ears of the castings and a cable connected with the yoke and extending to a point where it may be seized by an occupant of the swing.

1,623,914. COMBINED TIRE CARRIER AND RIM REMOVER. LYMAN H. FERGUSON, Ithaca, N. Y., assignor to J. William Ellis, Buffalo, N. Y. Filed Mar. 1, 1924. Serial No. 696,364. 6 Claims. (Cl. 224—29.)



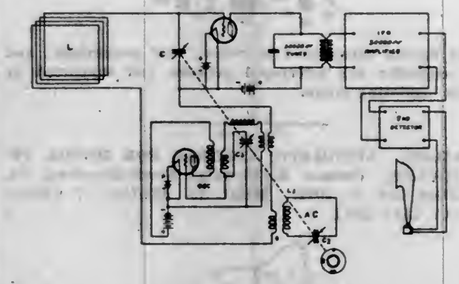
6. A combined tire carrier and rim remover comprising a stationary member, a movable member, and means for operating the movable member, the stationary member comprising a body and a rigid tire engaging means, the movable member comprising a yoke slidably carried by the body and a plurality of axially rigid rim engaging means, and the means for operating the movable member comprising a screw rotatably carried by the yoke and engaging the rigid arm carried by the body for moving the yoke.

1,623,915. MEASURING INSTRUMENT. CHARLES EDWIN FOSTER, Letchworth, England. Filed Apr. 29, 1924, Serial No. 709,835, and in Great Britain June 29, 1923. 5 Claims. (Cl. 171—95.)



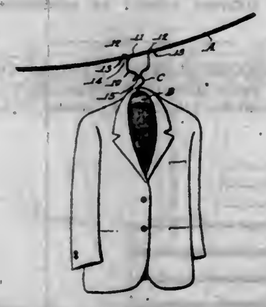
1. A measuring instrument having a moving system carrying a pointer, resiliently supported bearings for such system fixed on the opposite ends of a rod or staff, a supporting core, and a member consisting of a spongy rubber, the spongy rubber being supported in the core and arranged to surround the rod or staff and be in frictional contact therewith.

1,623,916. CORRUGATING MACHINE. CHESTER A. FRICK, Muncie, Ind., assignor to Glascock Brothers Manufacturing Company, Muncie, Ind., a Corporation of Indiana. Filed May 1, 1925. Serial No. 27,153. 7 Claims. (Cl. 153—76.)



1. In a sheet metal corrugating machine the combination with a plurality of spaced apart elongated dies substantially semi-cylindrical in cross section, of a plurality of co-operating dies having their faces recessed to form recesses corresponding to said first mentioned dies and means for moving co-operating sets of dies forming a single corrugation successively to form the corrugations in the metal and holding each corrugating set of dies clamped upon the metal until the next succeeding set is being moved to form a corrugation.

1,623,917. WALL CONSTRUCTION. WILLIAM F. GAUDIAN, Dallas, Tex. Filed Dec. 10, 1924. Serial No. 755,013. 2 Claims. (Cl. 72—48.)

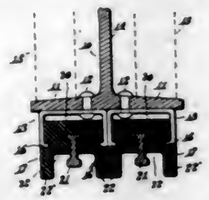


1. A wall construction, spaced metal uprights, a wire screen secured to the edges of the uprights, a wall formed of concrete having the screen and vertical portions of the uprights embedded in said wall, a second wire screen secured to the opposite edges of the uprights and a composition cement embedded in the second mentioned wire screen and spaced from the inner face of the concrete wall.

1,623,918. RADIO RECEIVING APPARATUS. ALFRED HENRY GREBE, Hollis, N. Y. Filed Dec. 17, 1924. Serial No. 756,520. 4 Claims. (Cl. 250—20.)

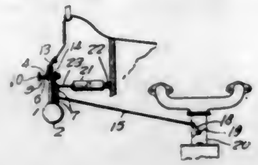
1. A radio receiving system comprising means for tuning its input, adjustable means for reducing a desired signal frequency simultaneously with a materially different interfering frequency to the same lower frequency, variable means for removing the undesired frequency and means common to the three above mentioned means for varying them simultaneously.

1,623,919. SUPPORTING ATTACHMENT FOR CLOTHESLINES. LOUIS HAGEN, Jersey City, N. J. Filed June 16, 1926. Serial No. 116,450. 1 Claim. (Cl. 248—30.)



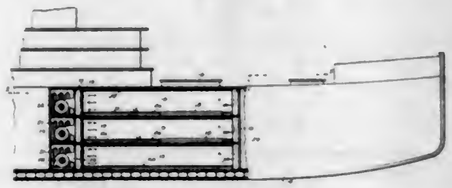
A supporting device of the character set forth comprising a length of resilient material bent into substantially U-shaped form to include a bight having a centrally depending offset and legs having reversely bent terminals arranged in the same plane with the legs and bight whereby when the terminals are engaged over a clothesline a lateral kink is formed therein to prevent accidental displacement of the same therefrom and sliding of the same thereon.

1,623,920. ELECTRIFIED MONORAIL SYSTEM. FRANK C. HARRIS, Brighton, Mass., assignor to The American Monorail Company, Cleveland, Ohio, a Corporation. Filed Dec. 16, 1925. Serial No. 75,833. 16 Claims. (Cl. 191—32.)



1. A monorail; a plurality of U-shaped members secured thereto and depending therefrom provided with

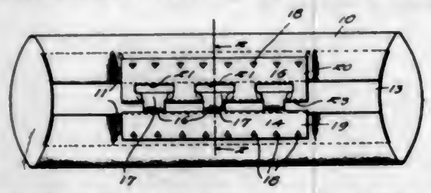
inwardly extending projections; two strips of insulating material extending the entire length of said monorail



and having depressions to receive said projections; and a conductor bar interposed between and supported by said insulating strips.

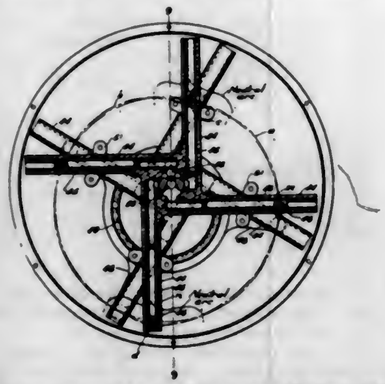
1,623,921. AUTOMATIC CONTROL FOR MOTOR VEHICLES. GEORGE M. HOWELL, Northumberland, Pa. Filed Oct. 7, 1922. Serial No. 593,153. 7 Claims. (Cl. 251—126.)

1. An automatic control for motor vehicles, comprising a pivot pin fixed to the vehicle, a pendulum adapted to be pivotally and slidably suspended upon said pivot pin, a rod connecting said pendulum with the throttle of the engine, and means for sliding the pendulum relatively to the pivot pin for adjusting the position of the pendulum upon its pivot to change its center of gravity, whereby the throttle may be adjusted and maintained by the pendulum in different normal or predetermined speed positions.



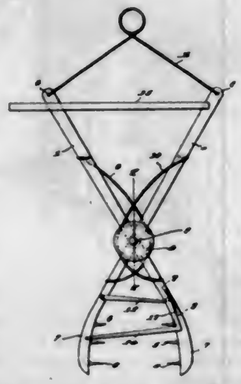
1,623,922. AIR-CIRCULATING SYSTEM FOR CARGO VESSELS. JOHN HUDSON, Brooklyn, N. Y. Filed July 1, 1926. Serial No. 119,925. 4 Claims. (Cl. 114—211.)

1. A cargo ship including a pair of decks and a pair of bulkheads defining a cargo storage space, a fore and aft vertical partition dividing the storage space into two parts and terminating short of one bulkhead, and means for maintaining a circulation of air around the ends of the partition forwardly through one section of the compartment and aft through the other section thereof.



1,623,923. TIRE BOOT AND FASTENER THEREFOR. CLARENCE L. JOHNSON, Littleton, Colo. Filed Nov. 20, 1926. Serial No. 149,709. 2 Claims. (Cl. 152—24.)

1. A fastener for use with tire boots and the like comprising coacting male and female sections, each consisting of a folded plate, the male section at the folded edge thereof being notched to provide outstanding necks having heads at their outer ends, the female section of the fastener being provided in one side thereof adjacent the folded edge thereof with slots through which said heads may pass and branch slots for the passage of said necks



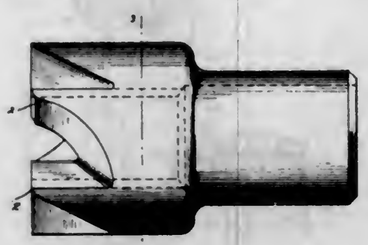
connecting with the first named slots of the female section and extending from the first named slots to and through the folded edge of the plate.

1,623,924. ROTARY PUMP AND MOTOR. CLIFFORD HASTY KAIN, San Carlos, Calif. Filed July 2, 1924. Serial No. 723,807. 4 Claims. (Cl. 103—118.)

1. A rotor comprising one or more cylinders having the longitudinal axes thereof arranged tangential to a circle concentric with the axis of rotation of the rotor, a relatively fixed eccentrically mounted guide ring, and plungers within said cylinders re-acting against said guide ring in lines of force which are substantially radial to said guide ring throughout the working stroke of said plungers.

1,623,925. TRAP. SAM C. KINZER, Estill, Ky. Filed Nov. 19, 1926. Serial No. 149,420. 4 Claims. (Cl. 43—94.)

1. A trap of the character described comprising crossed arms pivotally secured at their juncture, pulleys secured



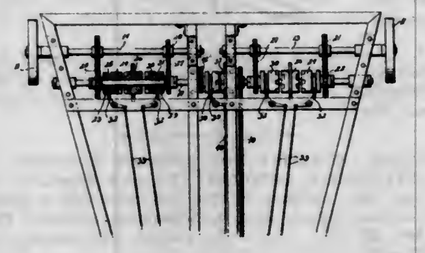
by the pivot means for the arms, springs secured to said arms and having convolutions received in said pulleys, and tripping means for holding one of the ends of said arms apart against the tension of said springs.

1,623,926. HOLDER FOR CONFECTIONS AND NAPKINS. JACK D. KOHLER, Miami, Fla. Filed Oct. 4, 1926. Serial No. 139,500. 2 Claims. (Cl. 99—16.)

1. A combined handle and anchor for frozen or like sticky confections, comprising a tubular member having one of its ends pressed longitudinally to provide the same with angularly disposed flattened ribs that provide an anchor and close one end of the tube, the tubular portion affording a compartment for a napkin and a protector disc slidably arranged on the anchor end of the device.

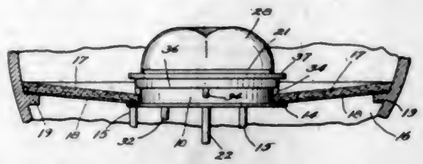
1,623,927. MILLING TOOL. LAWRENCE LENHARDT, Spencerport, N. Y., assignor of one-half to Frank De Felice, Rochester, N. Y. Filed July 14, 1926. Serial No. 122,423. 2 Claims. (Cl. 29—103.)

1. A milling tool comprising a hollow head having teeth formed at its free end and having curved recesses formed in its inner wall to provide teeth for cutting an object entering the interior part of the head.



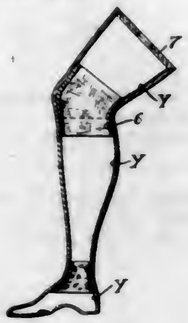
1,623,928. ROD GRIP. LEWIS JAMES LEWELLEN and ORRIS C. WILLIS, Cotton Valley, La. Filed June 5, 1926. Serial No. 113,960. 2 Claims. (Cl. 255—18.)

1. The combination with the sucker rod of an oil well pump, of a grip therefor, comprising an exteriorly threaded sleeve through which the upper end of the sucker rod passes, a head screwed on said sleeve, a yoke for the working beam having its ends clamped on the head, oppositely directed handles on the sleeve, a frame on the lower end of the sleeve, a tubular member that receives the sucker rod therethrough having its upper end received in the frame, spaced members in the frame through which



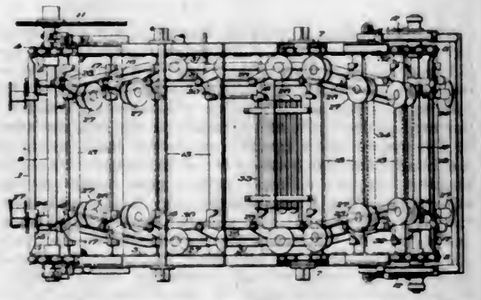
the tube passes, antifrictional elements between said members, means supporting the tube on the upper member, and means for clamping the sucker rod in the tube.

1,623,929. STEERING BY DRIVING MEANS FOR VEHICLES. JOSEPH LOYD, Broken Bow, Nebr. Filed Nov. 12, 1924. Serial No. 749,537. 1 Claim. (Cl. 180—17.)



In combination, a wheeled frame, a pair of aligned axles journaled thereon, a driven shaft arranged at one side and in parallelism with the axles, a gear carried by each axle, a central clutch member mounted on the shaft for each axle, a pair of cooperating clutch members slidably mounted on the shaft and arranged at the opposite sides of the central clutch member, an endless chain providing a driving connection between one of the cooperating clutch members and the adjacent axle, a gear carried by the other cooperating clutch member of each pair and meshing with the gear of the adjacent axle, pivoted arms associated with the cooperating clutch members, operating rods connected with the said arms, foot pedals associated with said rods, whereby said cooperating clutch members can be selectively actuated to rotate said axles in the same direction or in relatively different directions, an additional clutch member arranged centrally of the shaft, a cooperating sliding clutch member normally spaced from the last mentioned member, and pedal actuated means for controlling the sliding clutch member.

1,623,930. OIL BURNER. FRED D. LYONS, Kansas City, Mo., assignor to Izora M. Lyons. Filed Mar. 29, 1926. Serial No. 98,214. 2 Claims. (Cl. 158—91.)

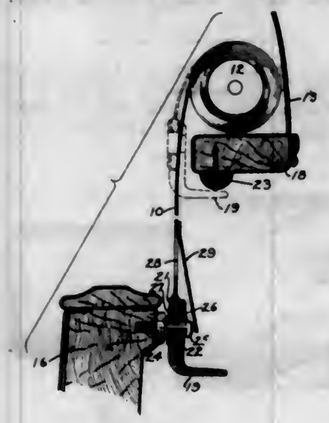


1. An oil burner construction comprising a base casting provided with an external supporting flange, packing material supported by said flange, said casting being also provided with external supporting lugs above said flange, a burner bowl and an arched air supply conduit supported by said casting, and an annular reinforcing member supported above said packing by said lugs and embracing the ends of said air supply conduit.

1,623,931. DISPLAY FORM AND METHOD OF MAKING THE SAME. LOUIS W. REINHARDT, Brockton, Mass. Filed June 6, 1925. Serial No. 35,435. 7 Claims. (Cl. 223—18.3.)

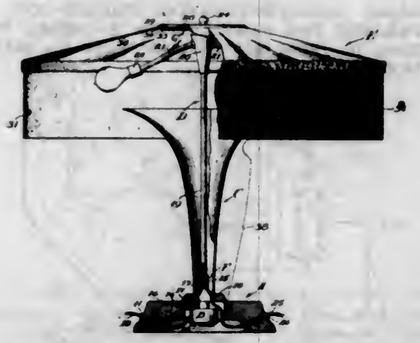
7. As an article of manufacture, a limb display form consisting of hollow sections of sheet stock each having a longitudinal seam with abutted edges and an internal steam stay.

1,623,932. MACHINE FOR TESTING POROSITY OF INFLATABLE ARTICLES. WILLIAM STEPHENS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 28, 1921. Serial No. 518,378. 17 Claims. (Cl. 73—51.)



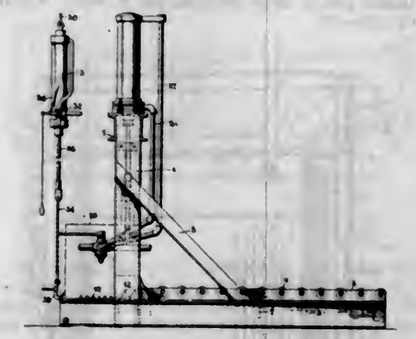
1. A tube testing machine comprising a tank, a pair of arms adapted to receive the tube to be tested, and means dependent upon the relative positions of the tubes within the tank for automatically separating the arms to stretch the tube when it is placed within the tank.

1,623,933. APPARATUS FOR AND METHOD OF MAKING ARTICLES FROM A FIBROUS COMPOSITION. PAUL BEEBE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 16, 1922. Serial No. 588,641. 6 Claims. (Cl. 92—54.)



1. Apparatus for making molded articles which comprises two spaced non-porous plates of contour similar to the article to be formed, said plates being connected at the edges by means of a screen.

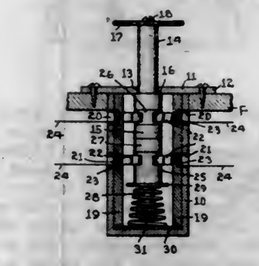
1,623,934. VEHICLE CLOSURE. JOSEPH H. BOURDON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Jan. 7, 1925. Serial No. 1,046. 1 Claim. (Cl. 296—143.)



The combination with a vehicle body, a top having sides and a bottom rail extending around said sides supported by said body, and a side enclosure vertically operable into said top, said enclosure having an opening therein to permit the raising and lowering thereof from either side and a cover secured along one side to said enclosure to cover said opening, of a curtain fastener secured to said vehicle body comprising an outwardly extending shank terminating in a downwardly turned lip adapted to be received in an opening adjacent the lower edge of said enclosure below said first opening to retain said enclosure in extended position, and an angle-shaped member secured to the bottom edge of said enclosure having an opening therein matching with said second opening to receive said fastener, the horizontal leg of said member co-operating with the bottom rail of said top to prevent said enclosure from disappearing into said top when in raised position, said leg also forming a handle for the guiding of the enclosure to raised or extended positions.

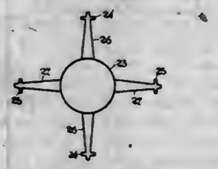
1,623,935. COMBINATION LAMP AND LOUD SPEAKER. FRED C. CASWELL, Minneapolis, Minn., assignor of one-half to Lawrence F. Fagerstrom, Minneapolis, Minn. Filed Feb. 11, 1924. Serial No. 691,944. 9 Claims. (Cl. 181—27.)

1. In an article of the class described, the combination of a base adapted to receive a reproducing unit, an anchor secured to the base axially of the outlet of such unit, a horn for such unit, the reduced end thereof being designed to fit over said anchor, said anchor including horn centering and securing means, a lighting and shade-supporting fixture reaching through the horn without contact therewith and secured to said anchor, and a shade carried by said fixture and cupping the atmosphere about the mouth of the horn.



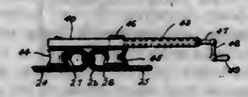
1,623,936. BALE-TEARING MACHINE. FRED COLLEY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 31, 1925. Serial No. 19,748. 6 Claims. (Cl. 18—2.)

1. A machine for tearing bales which comprises a frame provided with means for conveying a bale to an operable position, and means for engaging a portion thereof while separating its composite units.



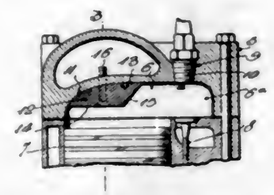
1,623,937. HEADLIGHT-CONTROL SWITCH. JOHN GIZEWSKI, Denver, Colo., assignor of one-half to Joseph J. Klimoski, Denver, Colo. Filed Feb. 16, 1924. Serial No. 693,304. 1 Claim. (Cl. 200—16.)

In a foot operated dimmer switch, a casing having an opening formed in one end wall thereof, a plunger within the casing and having its ends reduced, one of said reduced ends extending through the opening of the wall for engagement by the foot, the corresponding end of the plunger abutting said end wall to limit movement of the plunger in one direction, the other of said extensions engaging the opposite end wall of the casing to limit movement of the plunger in the opposite direction, a spring surrounding the last named reduced end of the plunger and extending between the last named end wall of the casing and the adjacent end of the plunger, insulating



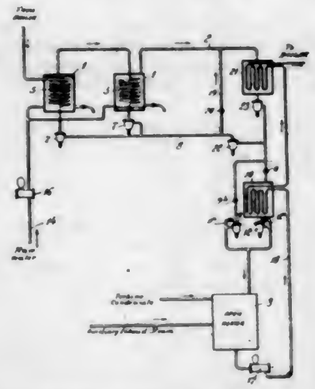
panels within the casing at opposite sides of the plunger, said plunger being of insulating material and spaced bands of conducting material surrounding the plunger, one of said bands being operative to connect one of said pairs of contacts when the plunger is at the first named limit of its movement, the other of said bands connecting the other of the pairs of contacts when the plunger is at the last named limit of its movement, spaced pairs of opposed contacts carried by said panels and embodying terminal portions partially embracing the plunger to form guides therefor.

1,623,938. FLANGED FIN. WOLFGANG B. KLEMPERER, Akron, Ohio, assignor to Goodyear-Zeppelin Corporation, Akron, Ohio, a Corporation of Delaware. Filed July 30, 1925. Serial No. 47,018. 7 Claims. (Cl. 244—3.)



7. A stabilizing member for a lighter-than-air ship provided with a hull comprising a fin of substantially cruciform cross-section rigidly secured to the hull.

1,623,939. METHOD OF CONSTRUCTING COLUMNS. HERMAN T. KRAFT, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 21, 1925. Serial No. 57,788. 6 Claims. (Cl. 29—155.)

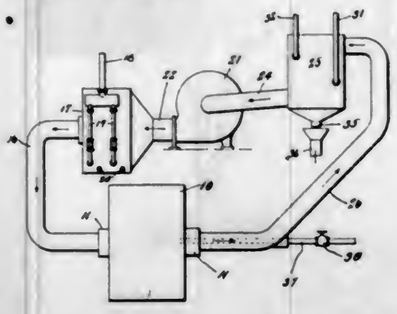


1. The method of constructing a girder which comprises riveting together a series of plates adjacent their edges, spreading the edges, and bending such edges back over along the line of riveting to form reinforcing members.

1,623,940. INTERNAL-COMBUSTION-ENGINE ATTACHMENT. JOSEPH M. MADER, Belleville, Ill. Filed June 7, 1926. Serial No. 114,228. 3 Claims. (Cl. 123—191.)

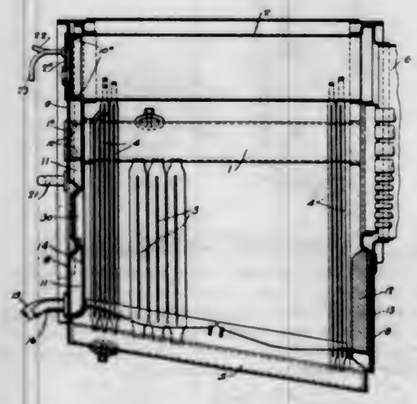
3. In an internal combustion engine whose cylinder head is formed with a combustion chamber extending laterally in one direction over intake and exhaust valves, said laterally extending portion having a spark plug opening in its top, and the portion of said top over the engine cylinder being of concave form; a removable metal block having a convex upper side secured against said concave top portion of the combustion chamber, said block having a substantially flat lower side and having a flat inner edge which inclines at an obtuse angle from its lower side toward but terminates in spaced relation with said spark plug opening, and fastening means engaged with said block and concaved top portion of the cylinder head for removably securing the former to the latter.

1,623,941. LOW-HEAT-LEVEL EVAPORATOR SYSTEM. LESLIE EARL SEBALD, Ridgewood, N. J., assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 24, 1922. Serial No. 583,977. 2 Claims. (Cl. 257—30.)



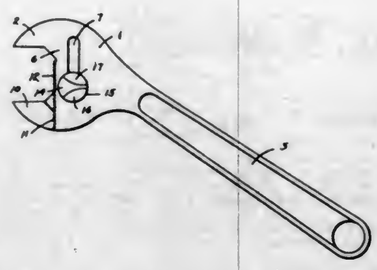
1. In a combined multi-effect evaporator and boiler feed system, means for joining the drains from all the evaporator coils at substantially the pressure existing in the shell of the last effect evaporator, means for conveying the resulting flash steam from said drains together with vapor from the said evaporator shell to a condenser, said condenser being adapted to receive said joined vapors and transfer heat therefrom to the boiler feed water, means for joining the condensate from said coils with the condensate from said condenser at a pressure lower than that maintained in said condenser, a second condenser operating at said lower pressure for receiving said condensate and bringing it into heat exchanging relation with the boiler feed water at said lower pressure, and means for conveying the condensate from said second condenser to the primary boiler feed heater, said boiler feed water passing successively through the primary heater, the second condenser and the first condenser.

1,623,942. METHOD FOR THE PREPARATION OF HYDROGEN SULPHIDE. ABRAHAM HENWOOD, Cynwyd, Pa., assignor, by mesne assignments, to Raymond M. Garey, Willow Grove, Pa. Filed Nov. 9, 1925. Serial No. 68,016. 19 Claims. (Cl. 23—181.)



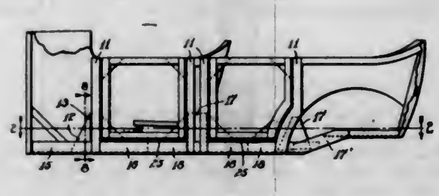
1. As a new composition of matter, a substance which will evolve hydrogen sulphide upon the application of heat, comprising a hydrocarbon having a boiling point above 110° C., sulphur and asbestos.

1,623,943. LEATHER-TREATING PROCESS AND APPARATUS FOR SAME. GEORGE S. NEELEY, Wood River, Ill. Filed May 31, 1923. Serial No. 642,640. 10 Claims. (Cl. 149—11.)



1. A leather treating process consisting in placing the leather in a revoluble container closed to the atmosphere, admitting steam thereinto and circulating hot air through said container for heating same and conveying away therefrom vapor, and reheating such air and extracting the vapor therefrom before readmitting said reheated air to said container for controlling the amount of moisture in said container.

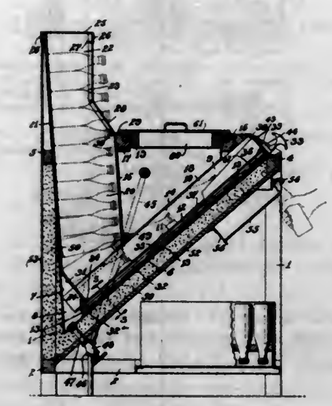
1,623,944. STEAM GENERATOR. ROBERT ABSALOM THOM, Bearsden, near Glasgow, and JAMES THOM, Aberdeen, Scotland, assignors to The Superheater Company, New York, N. Y. Filed June 11, 1926. Serial No. 115,296, and in Great Britain June 9, 1925. 7 Claims. (Cl. 122—94.)



2. In a boiler of the locomotive type, a fire box having a rear wall forming a water space independent of the boiler, a conduit supplying boiler feed water to said rear wall and a connection leading from the rear wall water space to the boiler.

1,623,945. WRENCH. LOUIS R. CARBEIL, Savanna, Ill. Filed Sept. 18, 1926. Serial No. 136,218. 2 Claims. (Cl. 81—130.)

1. A wrench, comprising a recessed head provided with a transverse slot, a jaw fixed on said head, a movable jaw having a tongue movable in said recess, said head and movable jaw having interengaging edges, means for holding said parts yieldably in engagement, a pin movable in said slot and connected with said tongue, so as to impart a rocking movement thereto, and a thumb-button on the end of said pin, having a part engageable by the operator to give an initial rocking movement to said pin and disengage the edges of said movable jaw and head.



1,623,946. AUTOMOBILE BODY. CHESTER A. FRICK and RALPH W. DWIGHT, Muncie, Ind., assignors to Glascock Brothers Manufacturing Company, Muncie, Ind., a Corporation of Indiana. Filed Oct. 29, 1923. Serial No. 671,341. 6 Claims. (Cl. 296—28.)

1. An automobile body comprising two longitudinal series of sill irons, each extending part way across a door opening, door-opening posts carried by said sill irons, gusset plates secured to said sill irons and posts, bridge irons extending across a door opening, and means connecting each bridge iron with two adjacent sill irons.

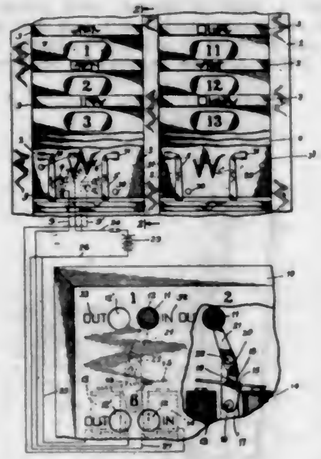
1,623,947. BOTTLE REFRIGERATOR. CHESTER A. FRICK, Muncie, Ind., assignor to Glascock Brothers Mfg. Company, Muncie, Ind., a Corporation of Indiana. Filed Oct. 2, 1925. Serial No. 59,993. 16 Claims. (Cl. 211—8.)

1. The combination with a tub having a forwardly and upwardly inclined bottom, of a second tub nesting said first tub the space between the bottoms of said tubs being formed into a series of laterally liquid communicating bottle channels open at their forward end and supporting the bottles in axial stacked relation one on top of the other and the space between the backs of said tubs being formed into a series of vertical bottle chutes open at their tops and communicating with said first mentioned channels and arranged to support the bottles in stacks with the bottles disposed horizontally and reciprocable

means in each channel for engaging the bottom bottle of the axial stack and moving the stack axially to the open end of the channel and from beneath the horizontally stacked bottles.

1,623,948. NICKEL ALLOY. TRUMAN S. FULLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 16, 1925. Serial No. 9,425. 8 Claims. (Cl. 75—1.)

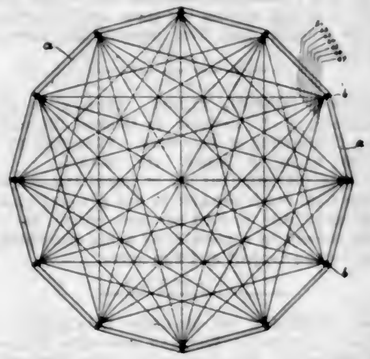
1. An alloy consisting mainly of nickel and copper and containing from about one-half to five per cent aluminum and from about 0.40 to 0.03 per cent carbon, the higher aluminum content in a given alloy being associated with the lower carbon content and vice versa.



1,623,949. PROCESS OF MAKING GUAIACOL. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors to The Newport Company, a Corporation of Delaware. Filed Sept. 30, 1925. Serial No. 59,735. 5 Claims. (Cl. 260—150.)

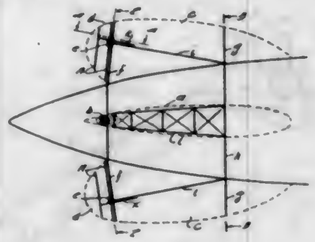
5. The process of making guaiacol which consists in decomposing diazo-o-anisol in the presence of a phosphoric acid salt, but in the absence of free sulphuric acid.

1,623,950. INDICATING DEVICE. HOWARD R. SARGENT, Bridgeport, Conn. Filed Dec. 31, 1921. Serial No. 526,866. 14 Claims. (Cl. 177—337.)



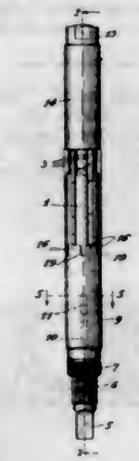
1. An indicating system of the character described including a card, a compartment for the card, an electric indicator adapted to maintain the indicating position to which it is actuated, and electrical means, including an electric circuit for the indicator, terminals in said compartment and cooperating contacts on the card, whereby the indicator will be actuated to give certain

signals corresponding with the direction of movement of the card, faced in a certain direction, into and out



of compartment, and whereby the indicator will not be actuated upon movement of the card, faced in the opposite direction, into and out of the compartment.

1,623,951. AIRSHIP FRAME. KARL ARNSTEIN, Friedrichshafen-on-the-Bodensee, Germany, assignor to the Firm: Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Filed Mar. 21, 1923, Serial No. 626,709, and in Germany Sept. 7, 1922. 7 Claims. (Cl. 244—3.)



1. A rigid airship hull, comprising a longitudinal member and a cross member, said cross member constituting a substantially annular polygonal frame composed of individual elements, joining in points of juncture, each of said points of juncture being connected by tension members to every other point of juncture within said frame distanced from the originating point by more than two of such points of juncture.

1,623,952. STABILIZING APPARATUS FOR RIGID AIRSHIPS. KARL ARNSTEIN, Friedrichshafen, Bodensee, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Aug. 27, 1924, Serial No. 734,535, and in Germany Sept. 20, 1923. 6 Claims. (Cl. 244—3.)

1. A rigid airship comprising a hull, fins of streamline shape, with rudders and elevators, said fins having cross sections of the shape of lancet arches, this shape tapering towards the rear end of the fins into a lentil-like shape.

1,623,953. ROTARY CUTTING TOOL. FRANCIS G. ECHOLS, Greenfield, Mass., assignor to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Sept. 25, 1925. Serial No. 58,515. 3 Claims. (Cl. 77—75.5.)

1. In a tool of the character described, a body, blades having beveled ends, and means for securing the blades in place on the tool body, said means including fingers mounted on the tool body and resilient radially with respect thereto, each finger resiliently engaging the beveled end of a blade, whereby when said fingers and blade ends are forced together endwise one or more of said fingers may become flexed radially outward, to permit each blade to be tightly engaged by one of said fingers irrespective of variations in the lengths of the blades.

Patents Nos. 1,623,954 to 1,624,004.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 357—No. 2. TUESDAY, APRIL 12, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notice.

U. S. PATENT OFFICE, *Washington, Mar. 28, 1927.*

It is directed that all registrations of marks used on malt extracts and sirups or on malt preparations for food purposes, but capable of use for beverage purposes, be transferred from Class 46, Foods and ingredients of foods, to Class 48, Malt beverages, extracts, and liquors.

THOMAS E. ROBERTSON,
Commissioner.

ADJUDICATED PATENTS.

(D. C. Del.) The Levy and Heibronner patent, No. 957,170, for method of separating gases from their mixtures, claims 1–4 *Held* invalid. *Air Reduction Co.* v. *Carbo-Oxygen Co.*, 17 F (2d) 138.

(D. C. Del.) The Levy and Heibronner patent, No. 959,563, for method of separating gases from their mixtures, *Held* invalid. *Air Reduction Co.* v. *Carbo-Oxygen Co.*, 17 F. (2d) 138.

(D. C. Del.) The Coolidge patent, No. 1,082,933, product claims 24, 26, 27, 28, 33, and 34, for improved tungsten, *Held* invalid, and process claims 1–7, 9–12, 14, and 16–23, for methods of making improved tungsten for filaments, *Held* invalid. *General Electric Co.* v. *De Forest Radio Co.*, 17 F. (2d) 90.

(D. C. N. Y.) The Meyer patent, No. 1,341,145, for improvement in plate valves, claims 1, 4, and 6 *Held* valid and infringed. *Worthington Pump & Machinery Corporation* v. *Clark Bros. Co.*, 17 F. (2d) 189.

(D. C. N. Y.) The Meyer reissue patent, No. 13,901, for plate valve, claim 3 *Held* valid and infringed. *Worthington Pump & Machinery Corporation* v. *Clark Bros. Co.*, 17 F. (2d) 189.

Briefs in Appealed Cases.

All briefs filed in this Office should have conspicuously printed thereon a statement designating the particular tribunal of the Patent Office to which the brief is addressed.

NOTICE—CHANGES IN PATENT OFFICE FEES—EFFECTIVE APRIL 14, 1927.

The act of Congress approved February 14, 1927, amends section 4934, Revised Statutes, so as to provide (except in design cases) a fee on filing each original application for a patent of $20 and of $1 for each claim in excess of twenty, and on issuing each original patent, of $20 and of $1 for each claim in excess of twenty.

The new rates are effective in connection with all applications filed on or after April 14, 1927, and all final fees paid on or after that date.

In every case which contains more than twenty claims, the payment after April 13, 1927, of a final fee of $20, or less than $20 plus $1 for each claim in excess of twenty, will not save the case from forfeiture.

Condition of Applications Under Examination at Close of Business April 1, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 57,200; Trade-Mark Division, 1,938. Oldest new case, July 29, 1926; oldest amended, Aug. 4, 1926. The dates given are 1926 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application awaiting action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders	†Jan. 28	†Jan. 28	499
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	Dec. 9	Dec. 10	681
331	3. LINDSEY, A., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Nov. 9	Dec. 1	1,490
234	4. MERRITT, A. D., Conveyers; Hoists; Handling Apparatus and Implements, and Pushing and Pulling.	Oct. 19	Oct. 25	1,444
108°	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording; Knotters	Oct. 22	Oct. 22	915
318	6. LEWERS, A. M., Chemistry; Chemistry—Carbon Compounds; Substance Preparation	Aug. 23	Sept. 9	1,602
106	7. JARBOE, C. G., Amusement and Exercising Devices; Toys; Optics; Photography	Oct. 25	Oct. 25	1,189
133	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	Nov. 26	Dec. 4	1,632
221	9. ADAMS, R. E., Pumps; Fluid and Fluid-Current Motors	†Jan. 12	†Jan. 14	745
118	10. HUNTER, O. P., Land Vehicles—Animal Draft Appliances, Bodies and Tops	Nov. 17	Nov. 18	1,164
148°	11. ARMSTRONG, H. C., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Hides, Skins, and Leather Manufactures; Nailing and Stapling; Whip Apparatus; Cutting and Punching Sheets and Bars.	Dec. 18	Dec. 21	899
890	12. PIERCE, P. P., Machine Elements	Nov. 3	Nov. 15	1,042
154°	13. CLIFT, J. W., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning; Boring and Drilling.	Oct. 25	Nov. 26	1,212
102°	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working; Metal Working, Assembling, and Blanks and Processes.	Oct. 7	Oct. 19	1,072
329	15. REDROW, W. L., Glass; Paper Making; Plastic Block and Earthenware Apparatus; Plastics	Dec. 2	Dec. 4	1,256
242°	16. SPENCER, C. J., Batteries; Resistances and Rheostats; Telegraphy; Telephony	Dec. 6	†Jan. 3	995
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Oct. 23	Oct. 25	726
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Sept. 23	Sept. 20	960
236	19. GLASCOCK, E. S., Furnaces; Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces.	Dec. 15	†Jan. 3	745
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Safes; Undertaking.	Nov. 22	Nov. 22	958
212	21. THURBER, W. L., Winding and Reeling; Textiles; Cloth Finishing	Nov. 4	Nov. 3	951
244°	22. COLWELL, J. H., Aeronautics; Amusement Devices, Games; Firearms, Ordnance, and Explosive Devices; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Oct. 4	Oct. 5	826
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers; Horology; Time-Controlling Mechanism.	Oct. 25	Dec. 3	613
147°	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Sept. 27	Sept. 21	1,007
314	25. LIGHTFOOT, J. H., Agitating; Bleaching and Dyeing; Butchering; Classifying Solids; Centrifugal-Bowl Separators; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Mills; Sugar and Starch; Threshing; Vegetable and Meat Cutters and Comminutors.	Oct. 16	Nov. 1	1,216

DECISIONS IN PATENT AND TRADE-MARK CASES.

U. S. Circuit Court of Appeals—Third Circuit.

MUTHER ET AL. *v.* UNITED SHOE MACHINERY CORPORATION.

Decided September 5, 1928.

[14 Fed. Rep. (2d) 808.]

INTERFERENCE—CONCEPTION BY A. AND LATER INDEPENDENT CONCEPTION AND REDUCTION TO PRACTICE BY B., TO WHOM A. ASSIGNED, DO NOT CARRY DATE OF INVENTION BACK TO A.'S CONCEPTION.

A. was first to conceive an invention, but did not reduce it to practice. B. afterwards conceived the same invention, reduced it to practice, and applied for patent, believing himself to be the original inventor. But other applications were filed, claiming prior dates of invention, and B., learning of A.'s conception, purchased an assignment from him and caused him to file application, canceling his own claims. *Held* that there was no such relation between them that B.'s reduction to practice could inure to the benefit of A., and that the Patent Office correctly held that his date of invention must be restricted to the date of his application as his constructive reduction to practice.

APPEAL from the District Court of the United States for the District of New Jersey; Joseph L. Bodine, judge.

Suit in equity by Lorenz Muther and Albert F. Deitsch against the United Shoe Machinery Corporation to obtain the issuance of patent. Decree for defendant, and complainants appeal. Affirmed.

[For opinion below, see 7 F. (2d) 954.]

Mr. Edward F. McClennen and *Mr. Francis J. V. Dakin* for the appellants.

Mr. Edward G. Curtis, Mr. Frederick P. Fish, and *Mr. Alex. D. Salinger* for the appellee.

Before BUFFINGTON and WOOLLEY, Circuit Judges, and DICKINSON, District Judge.

WOOLLEY, *Cir. J.:*

This is an appeal by the complainants from a decree of the district court dismissing the bill in a suit brought under section 4915 of the Revised Statutes (Comp. St. sec. 9460) by Albert F. Deitsch, the inventor, and Lorenz Muther, his assignee, to obtain a patent, refused by the Commissioner of Patents, on a restricted shoulder in an invisible-eyelet-setting device.

Deitsch's claimed invention relates to the art of eyeleting in the manufacture of shoes. A shoe upper of ordinary construction is made of a number of layers of material—an outer layer of leather, a buckram reenforcing stay, a canvas lining, and a leather facing. Eyelets are of two kinds, visible from the outside of the shoe and invisible. Visible eyeleting is completed in one operation. The eyelet, inserted in an eyelet hole on the outside of a fully stitched shoe upper, extends inwardly through all the layers and is clenched upon the surface of the inner layer next to the stocking of the wearer. Invisible eyeleting, prior to the invention in suit, comprised two operations on the shoe upper before its layers were completely sewed together; one, inserting the eyelet in the punched hole beneath the inner layer, passing it outwardly through the next layer and clenching it between the outside of the third layer and the inside of the outer layer; and the other, returning the outer layer to its position overlying the under layers, thus concealing the eyelet and giving the appearance of a mere perforation in the leather. Through eyelets of both kinds shoes are laced.

The instrument used for eyeleting in both ways was a small die or punch with a curved shoulder which in action expanded and compressed the flanges of the eyelet barrel. Deitsch conceived the idea that if the shoulder of this tool were cut off at a precisely determined point in its curvature, the lower extremity of the tool would enter the eyelet and the shoulder, thus restricted, descending through the outer layer of the upper would contact with the eyelet between it and the next layer and there spread and compress its flanges out of sight, performing the two operations in one on a fully stitched upper. The idea, if novel and practical, was highly useful.

In August, 1912, Deitsch, then a machinist in the employ of the Brown Shoe Company at its Blue Ribbon Plant in St. Louis, took a visible-eyelet punch and cutting down the shoulder tried it in invisible eyeleting on uppers made of various kinds of leather with success that was indifferent yet sufficient to call it to the attention of Edmund Muther, in charge of the local office of the Peerless Machinery Company. Later, Edmund Muther sent the punch and a sketch (now lost) to his brother, L. F. Muther, in Boston, writing him that Deitsch had done the best he could with the facilities at hand and requesting him to make up several of them. L. F. Muther, it is testified, showed the tool to Lorenz Muther, his father, head of the Peerless Machinery Company, who was little impressed with it. He then wrote his brother Edmund for more information. Here it seems the matter rested until Lorenz Muther himself, in January, 1914, invented a punch for invisible eyeleting which embodied Deitsch's idea of a restricted shoulder as one of its two characteristics—the other, essentially his own, being a recess above the shoulder. In his application for a patent, Muther, sr., broadly claimed the Deitsch invention, yet he abandoned the claims covering it when, later (as testified), he was informed for the first time of the Deitsch device. Being concerned about what Deitsch had done, and doubtless desiring the advantage of his earlier date of conception, he bought his invention. In the meantime other inventors had entered the field and applied for patents for the same or related device with claimed dates of invention not far apart. These were Doulett, Cote and Smith. As a result, the Patent Office directed interference proceedings between the several applicants on their respective inven-

tions. This induced Muther, rather hurriedly, to have Deitsch apply for a patent on his assigned invention. Deitsch filed his application on August 10, 1914. The patent tribunals, beginning with the Court of Appeals of the District of Columbia, all found that Deitsch was first to conceive the invention and fixed his date of conception some time in August, 1912. They also found that between the date of his conception and the date of his application for a patent Deitsch did substantially nothing toward its reduction to practice, and held that his failure to develop his invention by further experiments and ultimately by actual reduction to practice amounted to that lack of diligence which precludes an award of a patent based on the date of conception. *Christie v. Seybold*, 64 O. G. 1650, 55 F. 69, 76, 5 C. C. A. 33. Thus he was restricted to the date of his application as the date of constructive reduction to practice. In the interference proceedings, where there were several issues between the several interferents, Doulett defeated Deitsch and the Commissioner of Patents on the decree of the Court of Appeals of the District of Columbia refused him a patent. Hence this action.

For a statement of the facts and proceedings in greater detail we refer to the opinion of the trial court. (D. C.) 7 F. (2d) 954.

As confusion, arising in the somewhat complicated interference proceedings, has extended into and through the trial and review of this case, it may be well to state the true question involved. This may be done and the controversy clarified by first determining what question is not involved. There is no question here as to which one of several claimants was the first and original inventor of the restricted shoulder on an invisible eyeleting tool. The question is whether Deitsch was the first and original inventor, because it is only on a finding that he was such an inventor that, in this proceeding, he would be entitled to the patent refused him by the Commissioner. Except as their positions bear on that of Deitsch we are not concerned with Muther, Cote, Smith and Doulett.

The question of inventorship in Deitsch turns on several others; first, the time and, second, the character of his concept, and, third, its reduction to practice with reasonable diligence before others came into the art with the same thought and diligently reduced it to practice.

We shall assume—indeed, we find—that the patent tribunals were right in holding that Deitsch had the first concept of the invention and that it occurred some time in August, 1912. Our next inquiry therefore is when did he reduce it to practice? His constructive reduction to practice was on the date he filed his application for a patent—August 10, 1914. Did he actually reduce his conception to practice between those dates? This question is divided into two others: first, whether he made such reduction himself; or, second, whether he made it through Muther, sr., acting as his agent.

First: Without repeating the testimony it will be enough to say that, in obedience to the law of *Morgan v. Daniels*, 67 O. G. 811, 153 U. S. 120, 14 S. Ct. 772, 38 L. Ed. 657, yet more particularly as a result of our independent judgment, we subscribe to the finding of the patent tribunals that Deitsch did not himself reduce his inventive concept to practice. True, he made several experiments in August, 1912, which showed the possibility of a practical tool, yet they either failed to impress him with the value of his thought or discouraged further trials. At all events after turning the result of his work over to Edmund Muther, he did nothing for nearly two years, when, the matter being called to his attention by Muther, sr., he sold him his rights in the invention for a small sum.

Second: Muther, sr., reduced the invention to actual practice in January, 1914. Whether he conceived it independently of Deitsch or unconsciously dependent on Deitsch, being a mental operation of his own, it is difficult for any one but himself to determine. There is evidence that the Deitsch device was called to his attention a year and a half before, yet Muther testified that he had no recollection of it and in his application for a patent, filed January 31, 1914, he made the usual affidavit that he believed himself to be the original, first and sole inventor. We think Muther, sr., was entirely honest in what he said and did. Certainly he is the only one who knows how he acquired his conception of the invention. Rather than surmise that it was born of an unconscious impression of the Deitsch device previously shown him, we shall take his word and, accepting as true his story of his conception in November, 1913, we find that he conceived the invention independently of Deitsch. *Rousso v. Barber*, 338 O. G. 737, (C. C. A.) 3 F. (2d) 740, 741; *Miehle Printing Press & Mfg. Co. v. Miller Saw Trimmer Co.* (C. C. A.) 6 F. (2d) 417, 418.

The evidence which has brought us to this view brings us to the conclusion that Muther's reduction to practice was equally independent of Deitsch. We find no relation of principal and agent, beneficiary or trustee between Deitsch and Muther in respect to the invention by which Muther's reduction to practice inured to Deitsch. Here again we are in accord with the findings of the patent tribunals.

As between Deitsch and Muther, the situation is that Deitsch first conceived the invention and Muther first reduced it to practice. Deitsch's conception, however inventive, is not the subject of a patent except through means by which to carry it out. He supplied none. Reduction of his inventive conception to practice is therefore the price of a patent. This he has not paid unless by the constructive reduction incident to the filing of his patent application on August 10, 1914. But this will avail him nothing because before that date a number of inventors had both conceived and reduced to practice the same idea—three, Muther, Cote and Doulett, had applied for patents. Also, the invention had gone into commercial use. The grant of a patent to Muther, assignee of Deitsch, therefore, must be refused, unless, as he maintains, the respondent is estopped to deny his right to a patent by the decision of the District Court of the United States for the District of Massachusetts, affirmed by the Circuit Court of Appeals for the First Circuit, in *United Shoe Machinery Corporation et al v. Muther*, 288, F. 283.

Muther brought that suit against the United Shoe Machinery Corporation for infringement of his Patent No. 1,112,643, granted October 6, 1914, on the application to which we have referred, filed January 31, 1914. The United Shoe Machinery Corporation was operating under a patent to Doulett, granted after the interference proceedings on an application filed August 1, 1914. As Muther had abandoned all claims covering the Deitsch device, the action naturally and necessarily related to the remaining claims for the recess or "a contracted portion [of the tool] above the setting shoulder." That the issue was limited to this feature was repeatedly stated by the court. Therefore the case had nothing to do with priority of invention of the restricted shoulder as between Deitsch and Doulett. Because of lack of identity of causes of action, the complainants concede that the decision of the Federal courts in Massachusetts cannot operate as res judicata in this case, but they insistently urge that decision as an estoppel by judgment, grounded on the distinction between res judicata, which is confined to the thing adjudged, and estoppel by judgment, which extends beyond the thing adjudged to the decision on issues actually tried and decided. *Friend v. Talcott*, 228 U. S. 27, 38, 33 S. Ct. 505, 57 L. Ed. 718, and *Myers v. International Trust Co.*, 263 U. S. 64, 44 S. Ct. 86, 68 L. Ed. 165. The effect of the decision was a reversal of the patent tribunals on evidence not before them and particularly on a letter written by Doulett showing test and use of his invention not in 1913 as found by the patent tribunals but "since March 1, 1914." Finding Muther prior to Doulett on the recess above the shoulder, the court sustained the Muther patent. As Doulett's experiments in respect to both the upper and lower inventions on the little tool were (it is claimed) but a month or so apart, the complainants insist that the court in deciding the issue of priority between Muther and Doulett on the upper invention necessarily decided an issue of priority between Deitsch and Doulett on the lower invention and in effect reversed the patent tribunals also on that issue and thereby estopped the respondent from retrying it here. While this argument may be persuasive—it was, indeed, admirably presented—we are constrained to hold that it does not apply, and for two reasons: one, that an issue of priority between Deitsch and Doulett as to the restricted shoulder was not there pleaded, tried or decided; and, if by any chance we are wrong in this, the other, that the decision is without effect on the instant case because Doulett's very latest date of actual reduction to practice was in April or May, 1914, which was before Deitsch's earliest date, that of his constructive reduction to practice, when on August 10, 1914, he applied for a patent. Moreover, the complainants' contention of estoppel by judgment, if sustained on the facts and on the law, would be of value only if we should hold that Muther's reduction to practice, prior to Doulett's, inured to Deitsch. Having held the contrary, the point falls.

These views are decisive of the suit and sustain the decree below.

PATENT SUITS.

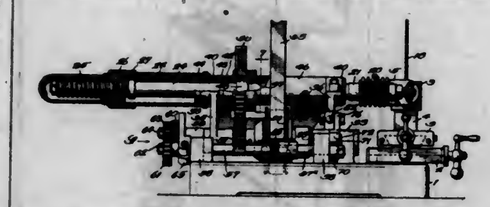
REISSUES

APRIL 12, 1927.



16,589. LIQUID-LEVEL GAUGE. ALEXANDER K. SCHAAP, Jr., Brooklyn, N. Y., assignor to The Schaap-Durant Control Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,991. Original No. 1,516,829, dated Nov. 25, 1924, Serial No. 636,551, filed May 4, 1923. 19 Claims. (Cl. 73—54.)

1. In a device of the class described, in combination, a liquid supply tank, an intermittently operating suction system including a suction device and a conduit extending from a position near the bottom of the supply tank to the suction device, a gauge system including a device for indicating the level of the liquid in the supply tank, and a conduit which extends from a point near the bottom of the supply tank to the gauge, said first and second conduits having their lower ends so arranged that the lower open end of the first named conduit is below the lower open end of said second named conduit, and means for entraining air in the liquid in said first named conduit during the suction flow and the return flow of the liquid.

16,590. HOB-GRINDING MACHINE. CARL G. OLSON and FRANK W. ENGLAND, Chicago, Ill., assignors to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1924. Serial No. 708,319. Original No. 1,383,843, dated July 5, 1921, Serial No. 275,537, filed Feb. 7, 1919. 19 Claims. (Cl. 51—225.)

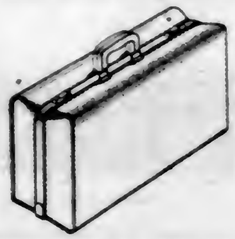
1. In a relieving grinding machine for grinding hobs and taps, a rotating grinder, a work spindle which is rotatable, axially movable and transversely rockable, a non-traveling support in which the spindle is both rotatable and axially movable, said support being rockable transversely of the work spindle axis for producing bodily movement of the work toward and from the grinder, means for causing the work spindle to travel axially as it rotates to conform to the helical lead of the teeth on the work, a gear having an axis coincident with the axis of the work spindle for rotating the latter, and a pinion for

rotating said gear, the axis of the pinion being coincident with the axis of oscillation of the work spindle and its support.

16,591. PROCESS FOR MAKING ESTER CONDENSATION PRODUCTS. RAY M. CARTER, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed July 19, 1924. Serial No. 727,082. Original No. 1,472,324, dated Oct. 30, 1923, Serial No. 458,851, filed Apr. 5, 1921. 13 Claims. (Cl. 260—106.)

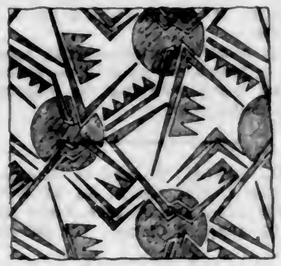
1. A process which comprises reacting upon an ester with a metal to form a compound of the metal therewith and an alcohol, and maintaining the reacting temperature near the boiling point.

16,592. RAIL CHAIR. WARREN M. OSBORN, Chicago, Ill. Filed Dec. 1, 1926. Serial No. 152,039. Original No. 1,518,871, dated Dec. 9, 1924, Serial No. 722,724, filed June 27, 1924. 6 Claims. (Cl. 238—208.)



1. A metallic rail-chair having a base and side walls forming a tapering rail-space and having their tops shorter than the base, and wooden wedges adapted to be driven into said space and being longer than the tops of the side walls when in place.

DESIGNS



APRIL 12, 1927.

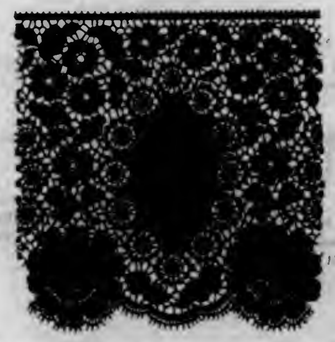
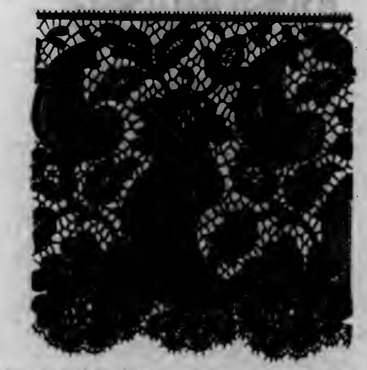
The ornamental design for a bottle, as shown.

72,435. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Feb. 2, 1927. Serial No. 20,574. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

72,436. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Feb. 5, 1927. Serial No. 20,621. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

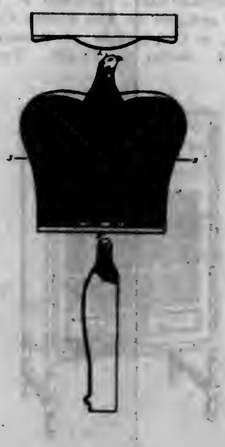
72,437. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Feb. 10, 1927. Serial No. 20,666. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

72,438. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Feb. 11, 1927. Serial No. 20,701. Term of patent 3½ years.

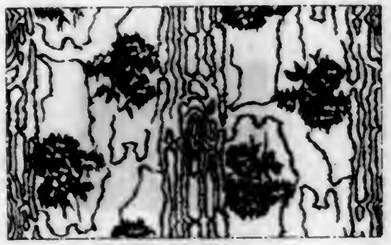
The ornamental design for lace substantially as shown.

72,439. PILE FABRIC. JOHN F. NICHOLS, Crompton, R. I., assignor to Crompton Company, Crompton, R. I., a Corporation of Rhode Island. Filed Aug. 6, 1926. Serial No. 18,605. Term of patent 3½ years.



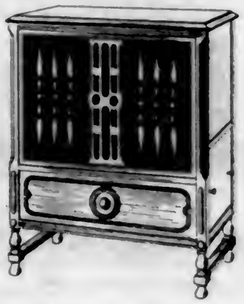
The ornamental design for a pile fabric substantially as shown.

72,440. PILE FABRIC. JOHN F. NICHOLS, Crompton, R. I., assignor to Crompton Company, Crompton, R. I., a Corporation of Rhode Island. Filed Aug. 6, 1926. Serial No. 18,612. Term of patent 3½ years.



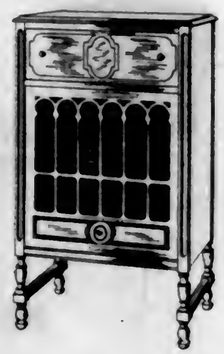
The ornamental design for a pile fabric substantially as shown.

72,441. RADIATOR CASING. ANDREW PALKA, Detroit, Mich. Filed Jan. 26, 1926. Serial No. 16,273. Term of patent 3½ years.



The ornamental design for a radiator casing, as shown.

72,442. TEXTILE FABRIC. FRANKLIN H. PILLSBURY, Arlington, N. J. Filed Jan. 31, 1927. Serial No. 20,560. Term of patent 3½ years.



The ornamental design for a textile fabric substantially as shown.

72,443. RADIOCABINET. EDWARD F. POOLEY, Philadelphia, Pa., assignor to The Pooley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1927. Serial No. 20,349. Term of patent 7 years.

The ornamental design for a radiocabinet as shown.

72,444. RADIOCABINET. EDWARD F. POOLEY, Philadelphia, Pa., assignor to The Pooley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1927. Serial No. 20,350. Term of patent 7 years.

The ornamental design for a radiocabinet as shown.

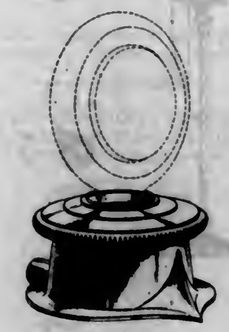
72,445. TEXTILE FABRIC. MAX ROTHSCHILD, New York, N. Y., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Feb. 14, 1927. Serial No. 20,738. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

72,446. TEXTILE FABRIC. MAX ROTHSCHILD, New York, N. Y., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Feb. 14, 1927. Serial No. 20,741. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

72,447. TEXTILE FABRIC. MAX ROTHSCHILD, New York, N. Y., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Feb. 14, 1927. Serial No. 20,742. Term of patent 3½ years.



The ornamental design for a textile fabric as shown.

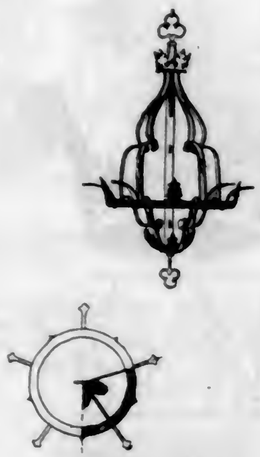
72,448. EMBROIDERED LACE MEDALLION. HENRY SCHWARBER, Weehawken, N. J. Filed Feb. 15, 1927. Serial No. 20,765. Term of patent 3½ years.

The ornamental design for embroidered lace medallion, as shown.

72,449. RADIATOR CAP. ERNEST W. SEAHOLM, Detroit, Mich. Filed Nov. 15, 1926. Serial No. 19,739. Term of patent 14 years.

The ornamental design for a radiator cap as shown.

72,450. LIGHTING-FIXTURE HUSK OR SIMILAR ARTICLE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 5, 1927. Serial No. 20,623. Term of patent 7 years.

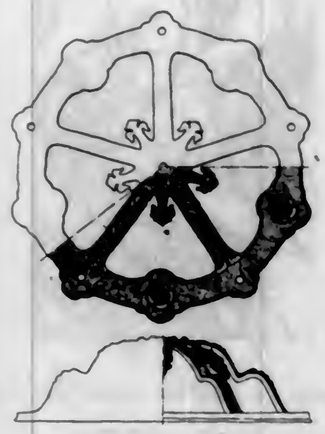


The ornamental design for a lighting fixture husk or similar article substantially as shown.

72,451. LIGHTING-FIXTURE ARM. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 5, 1927. Serial No. 20,624. Term of patent 7 years.

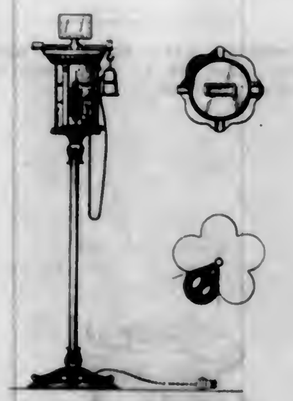
The ornamental design for a lighting fixture arm substantially as shown.

72,452. CHANDELIER. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 5, 1927. Serial No. 20,625. Term of patent 7 years.



The ornamental design for a chandelier substantially as shown and described.

72,453. BACKPLATE FOR LIGHTING FIXTURES. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 5, 1927. Serial No. 20,626. Term of patent 7 years.



The ornamental design for a backplate for lighting fixtures substantially as shown and described.

72,454. LIGHTING-FIXTURE PLATE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 5, 1927. Serial No. 20,627. Term of patent 7 years.

The ornamental design for a lighting fixture plate substantially as shown and described.

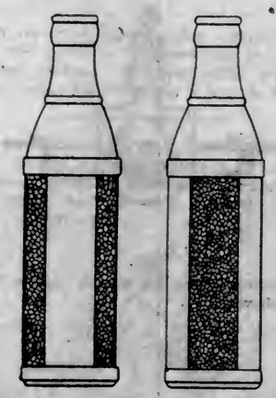
72,455. SMOKING STAND. PHILIP C. SHAPIRO, Philadelphia, Pa., assignor to Siegel Light Supply Company, Philadelphia, Pa. Filed Jan. 4, 1927. Serial No. 20,279. Term of patent 3½ years.

The ornamental design for a smoking stand as shown.

72,456. LIGHTING-FIXTURE BRACKET. HARRY SHARDLOW, Los Angeles, Calif., assignor to Solar Lighting Fixture Co., Los Angeles, Calif., a Corporation of California. Filed Jan. 18, 1927. Serial No. 20,419. Term of patent 7 years.

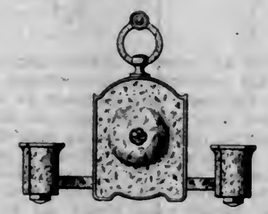
The ornamental design for a lighting fixture bracket, as shown.

72,457. LIGHT SHADE OR SIMILAR ARTICLE. FRED W. STEWART, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 16, 1926. Serial No. 20,063. Term of patent 14 years.



The ornamental design for a light shade or similar article, substantially as shown and described.

72,458. WASHING-MACHINE CABINET. CARL W. SWANSON, Chicago, Ill. Filed Jan. 15, 1926. Serial No. 16,107. Term of patent 14 years.

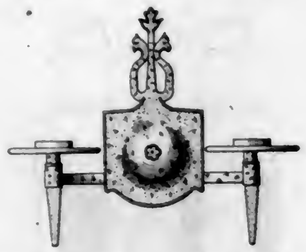


The ornamental design for a washing machine cabinet as shown and described.

72,459. BOTTLE. ARCH B. TAYLOR, Charlotte, CORNELIA TAYLOR LONG, Winston-Salem, N. C., and ARCHIE C. SOHN, Pittsburgh, Pa., assignors to Taylor-Long Company, Charlotte, N. C., a Corporation of North Carolina. Filed Dec. 4, 1926. Serial No. 19,931. Term of patent 14 years.

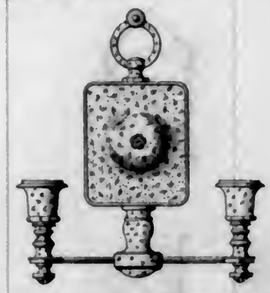
The ornamental design for a bottle as shown and described.

72,460. WALL BRACKET FOR LIGHTING FIXTURES. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Jan. 26, 1927. Serial No. 20,508. Term of patent 3½ years.



The ornamental design for a wall bracket for lighting fixtures, as shown.

72,461. BACKPLATE FOR LIGHTING FIXTURES. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Jan. 26, 1927. Serial No. 20,509. Term of patent 3½ years.

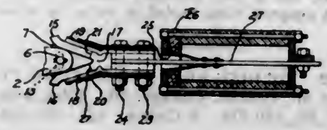


The ornamental design for a back plate for lighting fixtures, as shown.

72,462. WALL BRACKET FOR LIGHTING FIXTURES. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Jan. 26, 1927. Serial No. 20,505. Term of patent 3½ years.

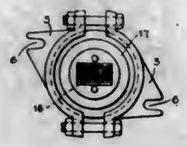
The ornamental design for a wall bracket for lighting fixtures, as shown.

72,463. WALL BRACKET FOR LIGHTING FIXTURES. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Jan. 26, 1927. Serial No. 20,507. Term of patent 3½ years.



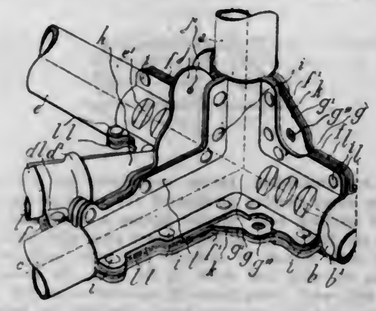
The ornamental design for a wall bracket for lighting fixtures, as shown.

PATENTS



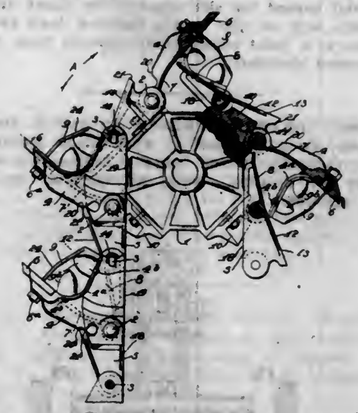
GRANTED APRIL 12, 1927.

1,623,954. ELECTRICAL SWITCH. HERMAN KIMBALL ANSINGH, Murraysville, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1921. Serial No. 497,475. 7 Claims. (Cl. 200—166.)



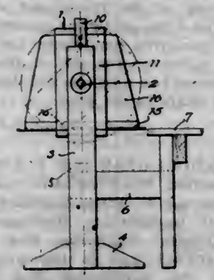
1. The combination with a pair of coacting contact members, of means for supporting one of said contact members and spring means for yieldingly supporting the other contact members for permitting the alinement of said contact members when in engagement, said first means comprising a pivotal connection between said one contact member and its supporting means permitting displacement bodily in a lateral direction.

1,623,955. SWITCH MECHANISM. HERMAN K. ANSINGH, Toronto, Ontario, Canada, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1922. Serial No. 592,767. 3 Claims. (Cl. 173—332.)



1. A switch-jaw member comprising five relatively long and flexible conducting strips secured together at one end and constituting a relatively flexible laminated conducting member, the outermost pairs of strips being offset with respect to one another and provided with reentrant contact surfaces for engaging opposite sides of a pair of contact-blade members.

1,623,956. CONNECTING MEMBER. FELIX AMIOT, Colombes, France. Filed Sept. 10, 1923, Serial No. 661,974, and in Belgium Nov. 22, 1922. 4 Claims. (Cl. 189—36.)

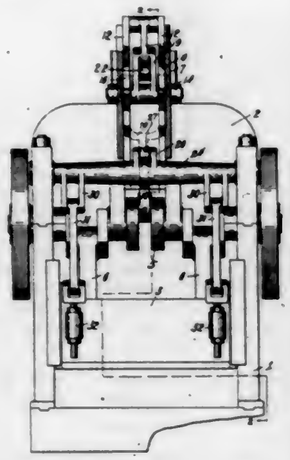


1. A joint or connecting device for assembling or attaching parts together comprising a plurality of metal elements provided with recesses in such a way that when the elements are fitted together they embrace and secure the ends of the parts to be assembled, an intermediate plate provided between two neighboring edges of two elements and means for attaching a stay to said plate.

1,623,957. DIGGING MEMBER FOR DITCHING MACHINES. HARRY H. BARBER, Aurora, Ill., assignor to Barber-Greene Company, Aurora, Ill., a Corporation of Illinois. Filed May 14, 1924. Serial No. 718,242. 6 Claims. (Cl. 37—191.)

1. In a ditching machine a chain link comprising two parts hinged together, one part carrying the bottom and side walls of an upwardly and rearwardly open bucket extending from its outer face, the hinge axis being disposed at a distance above the bottom of the bucket and the other part of the link including a back wall for the bucket extending above and below said hinge and between said side walls to close the rear opening of the bucket, the bottom of the bucket being curved concentrically about the hinge axis to permit the lower edge of the back wall to sweep across said curved bottom when the link folds at the hinge as in traversing a pulley.

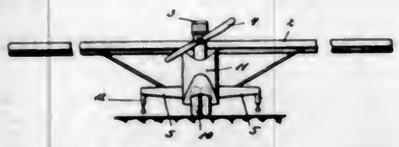
1,623,958. MEANS FOR INVERTING PACKAGES. JACOB BAUER, Youngstown, N. Y., assignor of one-third to Charles L. Johnson and one-third to Lindley W. Johnson, Youngstown, N. Y. Filed Oct. 26, 1926. Serial No. 144,308. 6 Claims. (Cl. 226—17.)



1. Means for inverting packages, including a pivoted carrier having twin upper and lower halves reversible in the rotation of the carrier.

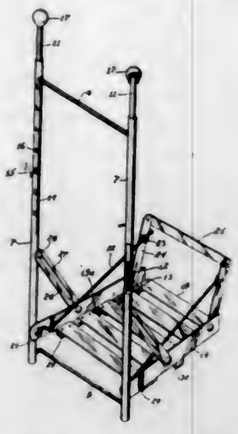
1,623,959. KEY CASE. WARNER R. BUXTON, Longmeadow, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1924. Serial No. 690,171. 2 Claims. (Cl. 150—40.)

1. A key retaining device for key cases and the like, having one end of its shank bent to form a circular eye and the terminus of said eye being flattened out to offset the metal beyond the side edges of the shank and form shoulders, said eye also having flattened down and offset portions at a point substantially opposite from the said first named shoulders.



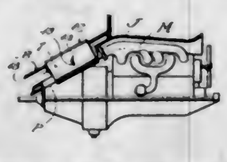
1,623,960. DRAWING PRESS. ARTHUR A. BYERLEIN, Toledo, Ohio, assignor to The Toledo Machine and Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 6, 1923. Serial No. 666,883. 18 Claims. (Cl. 113—38.)

1. In combination with the frame, crank shaft and reciprocatory blank holder of a drawing press, a lever fulcrumed midway of the frame and above the crank shaft, and having arms projecting towards opposite sides of the frame, operative connections between each arm and the blank holder on the side of the frame towards which the respective arm projects, and driving connections from the crank shaft to the lever.



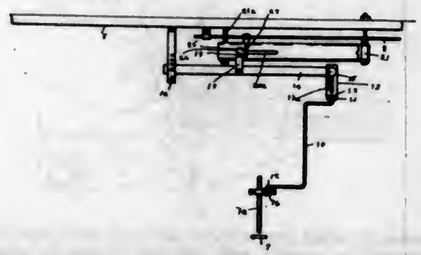
1,623,961. LANDING GEAR FOR FLYING MACHINES. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor to Firm Zeppelinwerk Lindau Gesellschaft mit beschränkter Haftung, Lindau-Reutin, Germany. Original application filed June 15, 1921, Serial No. 477,843, and in Germany Dec. 4, 1920. Divided and this application filed May 22, 1924. Serial No. 715,261. 6 Claims. (Cl. 244—2.)

1. In a device of the class described, the combination of a pair of vertical spaced tubular standards, rods guided in said standards, resilient means tending to extend said rods from said standards, means for adjust-



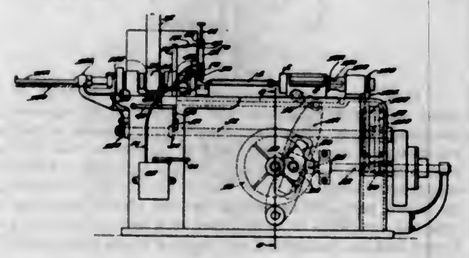
ing the length of the extension of said rods from said standards, and a seat pivotally mounted on said standards and adapted to be folded so as to lie between them.

1,623,962. FOLDING SEAT FOR WINDOW CLEANING. BRUNO W. DREYER, Chicago, Ill. Filed July 6, 1926. Serial No. 120,559. 6 Claims. (Cl. 304—24.)



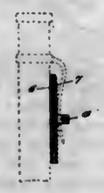
1. In a device of the class described, the combination of a pair of vertical spaced tubular standards, rods guided in said standards, resilient means tending to extend said rods from said standards, means for adjusting the length of the extension of said rods from said standards, and a seat pivotally mounted on said standards and adapted to be folded so as to lie between them.

1,623,963. AUTOMOBILE HEATER. JAMES ROYAL FRUSHOUR, Andrews, Ind. Filed June 10, 1926. Serial No. 115,081. 4 Claims. (Cl. 237—12.3.)



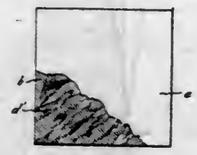
1. An automobile heater comprising an air receiver whose upper portion is adapted for reception in a floor board opening, said receiver having a bottom to contact with the lower side of an exhaust pipe, side walls rising from said bottom to straddle the pipe, and projecting means on said side walls to lie upon the floor board, said side walls being inwardly movable to permit upward passage of said projecting means through the floor board opening when the heater is being installed, and means for holding said side walls against unintentional inward movement after installation of the heater.

1,623,964. STOP MOTION FOR SPINNING MACHINES. PHILIP S. GIROUX, West Warren, Mass. Filed Nov. 19, 1924. Serial No. 750,913. 2 Claims. (Cl. 118—5.)



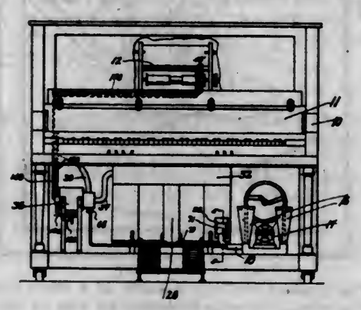
1. A combination with the belt shifter, a housing having a longitudinal slot therein, one end of said slot having a lateral recess, a cylinder, a plunger in said cylinder provided with a pin adapted to engage the recess, a spring engaging said plunger to propel said pin in said slot, said pin being arranged to engage the belt shifter and said spring being of sufficient force to operate said belt shifter, and means operable by the load controlling rail of a spinning frame for disengaging said pin from said recess to permit said spring and plunger to operate said belt shifter.

1,623,965. TUBE POLISHING OR SIZING MACHINE. NORMAN MARSHALL, Nashua, N. H., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Feb. 26, 1924. Serial No. 695,249. 12 Claims. (Cl. 93—83.)



4. A machine for sizing or polishing tubes having, in combination, a tube carrying mandrel, a revolving die, mechanism for relatively moving the mandrel and die to force a tube on the mandrel through the die, and lubricating means for the tube arranged in proximity to the mandrel only during the entrance of the tube into the die.

1,623,966. PEN AND PENCIL HOLDER. FRANKIE LEE MCCASKILL, Louisville, Ky. Filed Dec. 13, 1926. Serial No. 154,532. 1 Claim. (Cl. 24—12.)

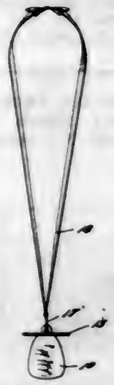


In a holder for pens and pencils provided with spring clasps, a plate member, means upon the rear surface of the plate whereby the same may be secured to a garment, said pens and pencils adapted to be arranged vertically upon the outer surface of the plate and to have their spring clips arranged over the rear surface of said plate in a manner and for purpose described, and spaced longitudinal teeth upon the rear surface of the plate for providing a friction surface for said spring clips.

1,623,967. PROCESS OF PRODUCING IMITATION MARBLE. JOSEPH A. MOROSS, Detroit, Mich. Filed Oct. 25, 1926. Serial No. 144,041. 3 Claims. (Cl. 41—26.)

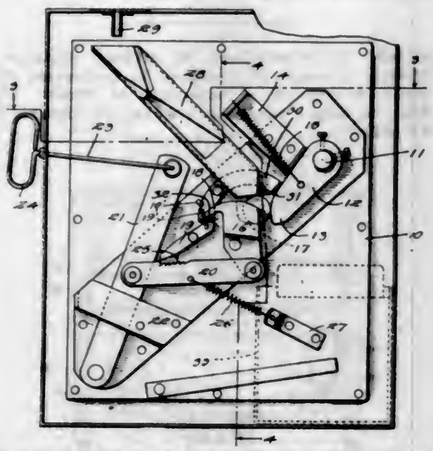
1. In a process of producing imitation marble, applying to the back of a sheet of transparent material a coating of water color, streaking said water color with a surface tension reducing medium whereby transparent veins are opened up in the color, filling the said transparent veins with a further color adapted with the first color to produce a marbled effect, and subsequently applying a suitable protective coating over the said colors.

1,623,968. REPRODUCTION OF MUSIC. WILLIAM L. MORRIS, Chicago, Ill., assignor to Gulbransen Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1924. Serial No. 736,814. 35 Claims. (Cl. 84—41.)



2. In a player piano, the combination with the pneumatic stack, of expression mechanism for varying the suction transmitted to the stack, two independent sources of suction, one motor driven and the other foot actuated, and connections for delivering suction from the motor driven source to the action modified by said expression mechanism, and delivering suction from said foot actuated source to the action direct and unmodified.

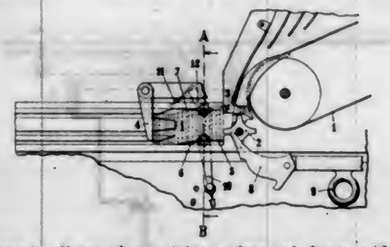
1,623,969. TEETHING DEVICE FOR INFANTS. JAMES A. PALMER, Taunton, Mass., assignor to Taunton Pearl Works, Inc., Taunton, Mass., a Corporation of Massachusetts. Filed July 12, 1926. Serial No. 121,748. 2 Claims. (Cl. 128—359.)



1. A teething device for infants, comprising a body portion formed of mother-of-pearl, the upper portion of the body being reduced to form a shoulder having an

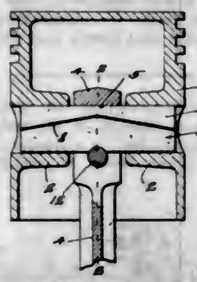
integral neck extending therefrom with a hole therethrough, a guard plate resting on said shoulder and having an opening through which the neck extends, and

attaching means extending through said opening on the distal side of said plate from said shoulder to prevent disengagement of said guard plate from the body.



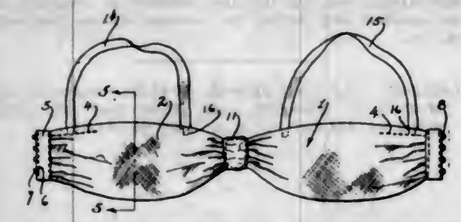
1,623,970. CHECK-CONTROLLED MECHANISM. JOHN M. PERRY, Vosburg, Miss. Filed Aug. 10, 1926. Serial No. 128,446. 4 Claims. (Cl. 194—83.)

1. The combination with a shaft, of a check controlled operating means therefor including an arm on the shaft, a check receiving rockable member, means for rocking the member to engage the check with said arm to move said arm and rock said shaft, means for preventing premature retrograde movement of the rocking means, and means operable by the said arm upon assuming normal position for releasing the preventing means upon completion of the stroke of said rockable member.



1,623,971. MATRIX-SETTING AND LINE-CASTING MACHINE. DAVID PETRI-PALMEDO, deceased, by Anna Emilie Emma Petri-Palmedo, executrix, Berlin-Charlottenburg, Germany, assignor to Standard Compositor Aktiengesellschaft, Berlin, Germany. Filed Feb. 8, 1924, Serial No. 691,528, and in Germany Feb. 12, 1923. 7 Claims. (Cl. 199—29.)

1. In matrix setting and line casting machines, a matrix collecting conduit having two pairs of parallel and predetermined spaced ledges on opposite walls to arrange the conduit with superposed matrix lug engaging recesses, a fixed matrix receiving support arranged at and spaced from the entrance ends of said conduit recesses, and a switch interposed between said fixed support and conduit

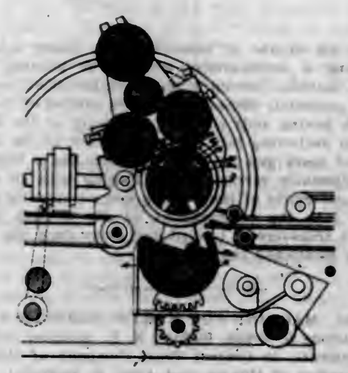


recesses to direct the matrices advanced from said support into the conduit with the lugs thereon to engage either the upper or lower recess in the collecting conduit.

1,623,972. PISTON AND PISTON-PIN CONSTRUCTION. HOWARD W. PIERCE, Butte, Mont., assignor to Louis M. Stellmann, Onondaga County, N. Y. Filed June 12, 1924. Serial No. 719,669. 3 Claims. (Cl. 74—108.)

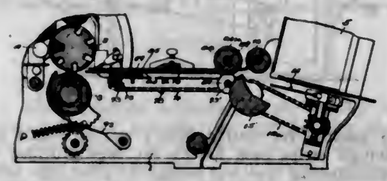
1. In a piston, the combination of a piston body of a metal having a relatively high coefficient of expansion, the piston body being formed with pin bosses, a piston pin mounted in the bosses, and a connecting rod having a bearing mounted on the pin, the pin being of a different combination of metals from that of the piston, and having the same ratio of expansion as the piston, whereby a constant clearance is maintained between the pin, the pin bosses and the connecting rod bearing at all temperatures.

1,623,973. BUST CONFINER. ESSYE K. POLLACK, New York, N. Y. Filed Oct. 30, 1923. Serial No. 671,666. 1 Claim. (Cl. 2—42.)



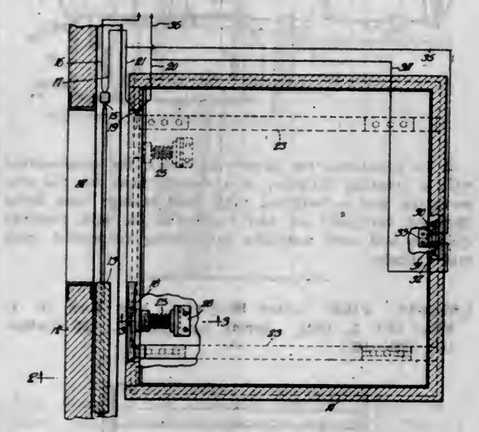
A bust support comprising a strip of material folded longitudinally upon itself along a line lying beyond one side of the median longitudinal dimension of the strip to form a pocket having a relatively broad side wall and a relatively narrow side wall, the folds being gathered transversely at their ends and longitudinally disposed lines of stitching extending inwardly from the gathered end edges of the folds and passing through the narrower fold at the longitudinal free edge thereof, and through the broader folds along lines spaced from and approximately parallel with the free longitudinal edge thereof.

1,623,974. CLAMPING MEANS FOR PRINTING SLUGS AND THE LIKE. CLAUDE L. POST, Chicago, Ill. Filed Oct. 3, 1924. Serial No. 741,427. 9 Claims. (Cl. 101—377.)



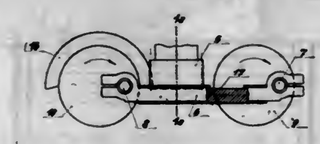
1. In a printing press, a type roll having a longitudinal groove therein and a longitudinal slot at each side of said groove, and means for securing type in said groove consisting of means for engaging the ends of a type slug positioned in said groove, and means cooperating with the said slots at either side thereof for maintaining said retaining means in place, said maintaining means being adjustable longitudinally of the slots.

1,623,975. PRINTING APPARATUS. CLAUDE L. POST, Chicago, Ill. Filed June 18, 1925. Serial No. 38,035. 10 Claims. (Cl. 101—377.)



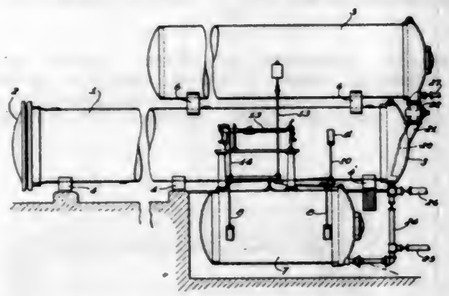
1. The combination with a type roll having a longitudinal type receiving groove therein, of means slidably mounted on the roll and projecting into the groove for holding the type in adjusted positions therein, and means for clamping said last-mentioned means in the adjusted positions.

1,623,976. FEEDING MECHANISM. CLAUDE L. POST, Chicago, Ill. Filed June 18, 1925. Serial No. 38,034. 2 Claims. (Cl. 271—2.)



1. In apparatus of the kind described, a magazine for holding a supply of envelopes, means for extending the flaps of the envelopes forwardly, means engageable with the extended flaps for pulling the envelopes from the magazine, means adapted to receive the flaps from said pulling means and to advance them, and means for flexing the envelopes as they enter said advancing means.

1,623,977. ELEVATOR PLATFORM. JOSEPH RICE, Chicago, Ill., assignor to Elevator Company of America, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1926. Serial No. 122,367. 6 Claims. (Cl. 187—29.)

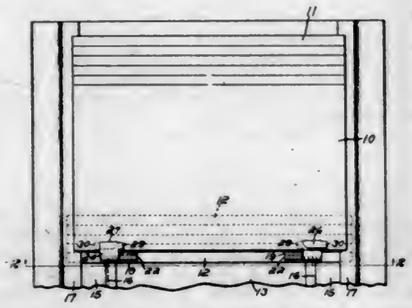


5. A car having a framework, a movable floor carried by said framework, car control mechanism responsive to the position of said floor, means for movably carrying said floor on said framework, said means including a pair of parallel inclined runways and balls interposed between said runway, and a recoil spring tending to move said framework upwardly upon said runway.

1,623,978. DEVICE FOR INTERMITTENTLY DRIVING CIGARETTE-MACHINE SHAFTS. CONSTANTIN FRIEDRICH RÖBER, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinenfabrik J. C. Muller & Co., Dresden, Germany. Filed Aug. 14, 1924, Serial No. 732,105, and in Germany May 19, 1924. 7 Claims. (Cl. 74—14.)

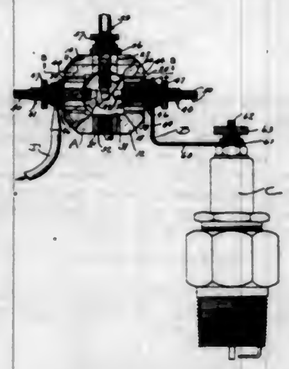
1. In an intermittent motion mechanism, a pinion adapted to be rotated intermittently in one direction, a rack adapted to engage said pinion, means for reciprocating said rack, and for effecting an engagement thereof with the pinion for driving it during the longitudinal movement thereof in one direction, and means carried by the rack operating means for holding the pinion against turning during the movement of the rack in the reversed direction.

1,623,979. WOOD-TREATING APPARATUS. GRANT B. SHIPLEY, Pittsburgh, Pa. Filed June 11, 1926. Serial No. 115,206. 5 Claims. (Cl. 99—12.)



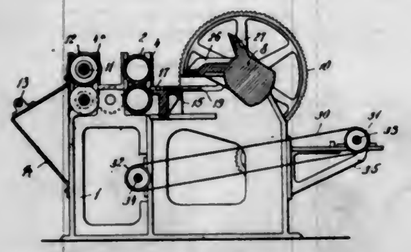
2. In apparatus for preserving wood, the combination with a treating cylinder, of a storage tank for the preservative, and a weighing tank, said storage tank being disposed vertically of and supported on said treating cylinder and said weighing tank being suspended from said cylinder.

1,623,980. FILE. JOHN S. SMALL, New York, N. Y. Filed Oct. 5, 1921. Serial No. 505,643. 25 Claims. (Cl. 129—16.)



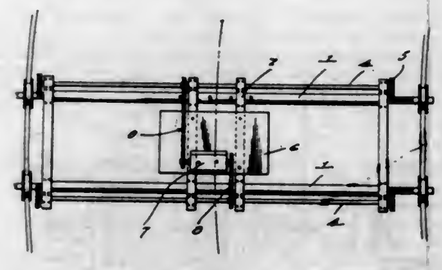
1. In a file, the combination of a frame, a plurality of cards, and a plurality of card holders held by said frame, each holder comprising a bar and attaching means hinged to said bar and secured to the card held by such holder, each holder being adapted to prevent the card held thereby from being detached from such holder without first detaching the latter from said frame.

1,623,981. PAPER FILE. JOHN SANFORD SMALL, Topeka, Kans. Filed Nov. 17, 1924. Serial No. 750,225. 28 Claims. (Cl. 129—16.)



1. In a file, the combination of a sheet having openings, attaching clips extending along one face of said sheet, thence through said openings and thence along the other face of said sheet, a frame, and a support detachable from said frame and affording pivotal support for said clips on said frame and having means preventing removal of said sheet from said clips except by first removing said support from said frame.

1,623,982. SPARK INTENSIFIER FOR ELECTRIC CURRENTS. GEORGE M. SMITH, Cincinnati, Ohio. Filed Oct. 6, 1924. Serial No. 742,026. 9 Claims. (Cl. 175—183.)

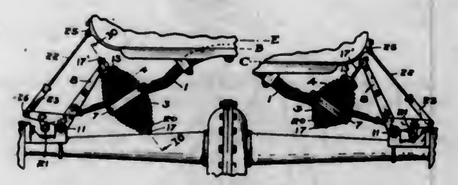


1. As an article of manufacture a spark intensifier comprising a substantially transparent housing of insulation material having a small compartment interiorly thereof, oppositely disposed electrodes carried by the housing each having ends mounted exteriorly of the housing and ends projecting into the compartment of the housing in spaced spark gap providing relation, and a third electrode adjustably carried by the housing with an end extending exteriorly of the housing and an opposite end extending into the compartment of the housing for adjustment transversely toward and away from the gap of the first mentioned electrodes.

1,623,983. MACHINE FOR MAKING SHINGLE STRIPS. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to Central Trust Company of Illinois, a Corporation of Illinois, and Aksel K. Bodholdt, Evanston, Ill., trustees. Filed Feb. 17, 1922. Serial No. 537,327. 7 Claims. (Cl. 164—68.)

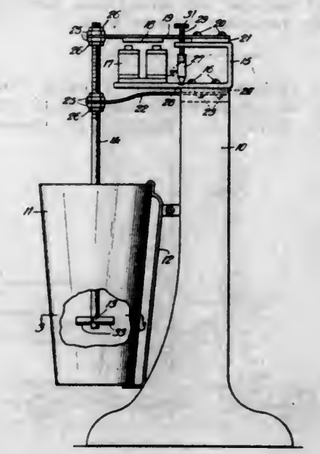
1. A machine for cutting from a web of roofing material shingle strips each having one edge provided with spaced reinforcing tabs, and having the other edge notched to provide shingle tabs, with the notches opposite the reinforcing tabs and of greater depth than the length of such tabs, comprising a ledger blade having a cutting edge notched to correspond with the shape of the reinforcing tabs and slotted at the bottom of the notches to form extensions to notches, means for feeding a web of roofing material over the ledger blade, and cutter blades, one blade having its edge shaped to cooperate with the notched edge of the ledger blade, and the other having a straight edge, and means for moving said blades in succession past the ledge blade, thereby to first form the shingle tabs, and to afterwards remove the excess material formed by the slots of the ledger blade.

1,623,984. ROAD MACHINE. SMITH A. STOUFFER, Kingview, Pa. Filed Aug. 31, 1926. Serial No. 132,819. 8 Claims. (Cl. 94—39.)



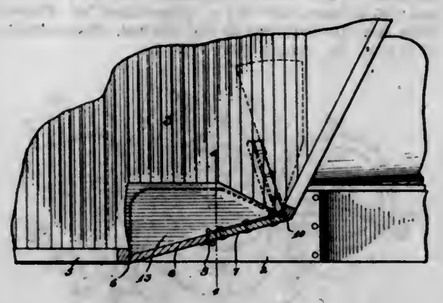
3. In a road machine of the class described, a supporting structure including an axle housing, an axle slidable and rotatable in said housing and forming with longitudinal driving ribs, a driving wheel fixed to the outer end of the axle, a gear meshing with the ribs of the axle, and means for driving said gear.

1,623,985. CONCRETE-BLOCK COMPOSITION. MAXIMILIAN E. VON MACH, Jr., Detroit, Mich. Filed Apr. 13, 1922. Serial No. 552,312. 1 Claim. (Cl. 106—24.)



The process of forming a composition of matter which consists in subjecting residue of burned fuel to the action of a mineral acid to remove sulphides, washing the residue of burned fuel to remove the soluble matter and mixing the remaining portion of residue with cement, finely divided wood, lime and plaster of Paris.

1,623,986. SPRING SUSPENSION FOR VEHICLES. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Jan. 20, 1921. Serial No. 438,597. 33 Claims. (Cl. 267—17.)

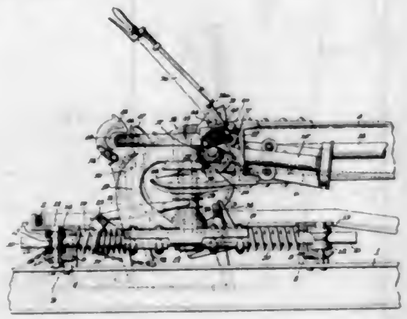


1. A shock absorber organization for vehicles which comprises, a set of counteracting spring units adapted to elastically restrain the movements of the vehicle parts in either direction from normal load position, means for definitely limiting the reflex movement of each unit and thereby preventing it from diminishing the positive restraint action of the other unit, and means for imposing a frictional restraint on the return movement of the said parts from one direction of displacement.

1,623,987. VIBRATOR. LEO J. WAHL, Sterling, Ill., assignor to Wahl Clipper Corporation, Sterling, Ill., a Corporation of Illinois. Filed June 28, 1926. Serial No. 119,049. 8 Claims. (Cl. 259—113.)

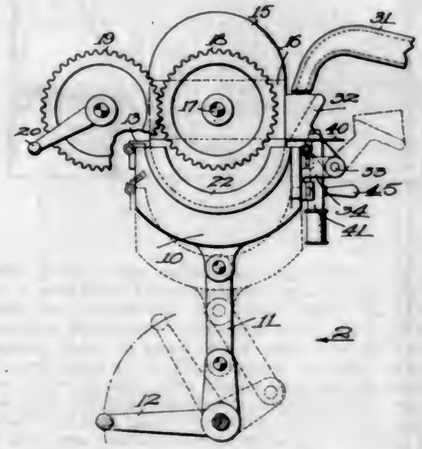
1. A device of the character described comprising a support, means associated therewith adapted to carry a receptacle, vertically reciprocable means carried by said support to agitate the contents of said receptacle and a pair of separated horizontally extending springs upon which said reciprocable means is mounted.

1,623,988. BUS BODY. CHARLES H. WHITFIELD, Penn Yan, N. Y. Filed June 24, 1922. Serial No. 570,645. 2 Claims. (Cl. 296—28.)



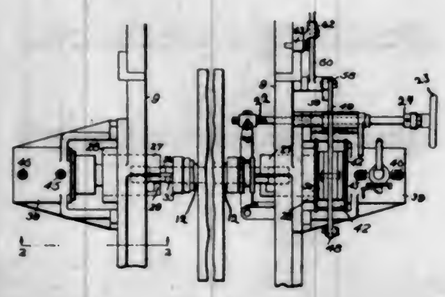
1. In a vehicle, the combination with a lower frame having longitudinally extending beams and a step at one side of one of said beams, of a body having floor boards secured to said beams transversely thereof and projecting beyond the outer sides of said beams to provide resilient portions, said body having vertical walls rising from the resilient portions, one of said walls being provided with a door opening and the floor boards adjacent said door opening having their outer ends spaced from the vertical wall above the step so that passengers may step from the step directly to the floor of the vehicle, a door for closing the door opening in a vertical wall of the body, and a closure for the opening in the floor adjacent said door opening, said closure being controlled by the door.

1,623,989. ICE CONCRETE. VIKTOR WIKKULA, Helsingfors, Finland. Filed Mar. 14, 1924, Serial No. 699,388, and in Finland Jan. 21, 1924. 1 Claim. (Cl. 106—18.)



A method of preparing porous building material, which consists in mixing with particles of ice, a rapidly setting hydraulic substance thereby to form an insulating coating on said particles, and mixing said particles into a hydraulically hardening concrete mass.

1,623,990. TRACTOR-TRAILER SAFETY COUPLING DEVICE. SIDNEY B. WINN, Lapeer, Mich. Filed Dec. 8, 1924. Serial No. 754,570. 24 Claims. (Cl. 280—33.1.)

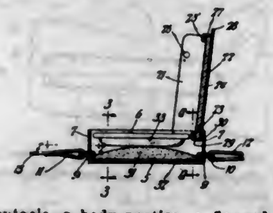


1. A coupling device for a tractor trailer combination, comprising a tractor member, a trailer member swingable down over said tractor member; and means carried by said tractor member adapted to retain said trailer member in a closed coupling position, said trailer member being supported to automatically assume an open uncoupled position when released by said means.

1,623,991. CASTING DEVICE FOR SEGMENTAL PLATES. HENRY A. WISE WOOD, New York, N. Y., assignor to The Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 11, 1919, Serial No. 329,946. Renewed Dec. 27, 1920. 23 Claims. (Cl. 22—2.)

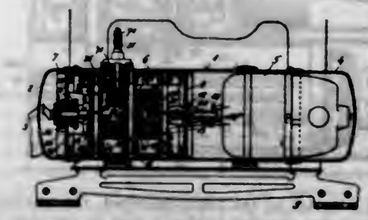
1. The combination with a central member and a plurality of semi-cylindrical cores mounted rigidly on different sides thereof at a material distance apart, of a single semi-cylindrical back for casting printing plates adapted to co-operate with each of said cores, and means for moving said back radially toward and from the cores.

1,623,992. BRAKE FOR WEB-ROLL TENSION DEVICES. HENRY A. WISE WOOD, New York, N. Y., and CONRAD NORDFORS, Jersey City Heights, N. J., assignors to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Dec. 18, 1914, Serial No. 877,873. Divided and this application filed Jan. 21, 1921, Serial No. 438,828. Renewed Dec. 27, 1926. 12 Claims. (Cl. 188—151.)



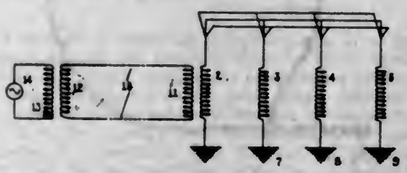
1. In a printing press, the combination with a spindle for a paper roll and a brake pulley rotatable independently thereof, of means rotatable with the brake pulley for connecting it with the spindle and transmitting the motion of rotation of the spindle to the pulley, a pair of brake shoes engaging the surface of said pulley, one of said brake shoes being provided with a spring, and a brake beam engaging said spring to press it inwardly toward the brake shoe whereby a yielding pressure can be applied to the brake pulley through said brake shoe.

1,623,993. HEAT-RETAINING GARMENT. ARVID E. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Airubber Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1922. Serial No. 590,985. 4 Claims. (Cl. 9—20.)



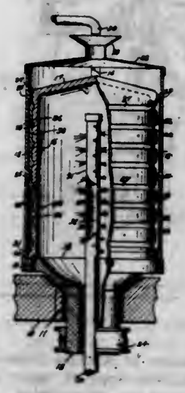
1. A vest-like garment comprising side air pockets formed of two thicknesses of rubberized fabric with the rubber surfaces placed together and vulcanized at the edges and the fabric side forming the outer material of the vest, and a tube connecting the air pockets at the tops and extending about the neck-band of the garment.

1,623,994. VANITY BOX. SAMUEL BUCHSBAUM and HERBERT BUCHSBAUM, Chicago, Ill. Filed July 30, 1923. Serial No. 654,607. 1 Claim. (Cl. 220—31.)



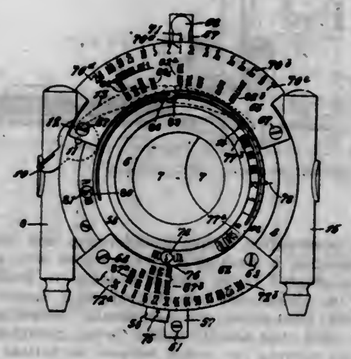
In a receptacle, a body portion, a flanged cover hinged thereto, a mirror, and means for securing said mirror in said lid; comprising opposite pairs of instruck lugs on the flanges of said cover, one pair of said lugs forming recesses for the reception of lugs on said body portion to hinge the cover thereto.

1,623,995. APPARATUS FOR DRIVING TYPEWRITERS PROVIDED WITH CALCULATING MECHANISM. THEODOR EUGEN BÜSCHMANN, Chemnitz-Kappel, Germany, assignor to Wanderer-Werke, vorm. Winklhofer & Jaenicke Akt.-Ges., Schonau, near Chemnitz, Saxony, Germany. Filed July 16, 1924, Serial No. 726,403, and in Germany Nov. 8, 1923. 8 Claims. (Cl. 185—40.)



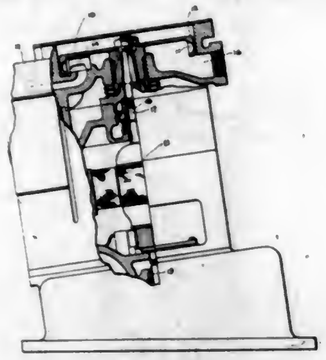
1. A mechanical driving apparatus for typewriters provided with calculating mechanism, comprising a driving motor, a power-storing device for operating the calculating mechanism operatively connected with the said driving motor, in combination with a casing for containing and enclosing said power-storing device with its gear and having a tubular extension for housing the driving motor, driving means for coupling the driving motor up to the power-storing device, said means being capable of coming into engagement when the driving motor is inserted into the tubular extension and of moving out of engagement again when the motor is withdrawn from said extension, means for securing the driving motor in its working position inside the tubular extension, and means for closing the end of the tubular extension.

1,623,996. RADIO TRANSMISSION SYSTEM. PHILIP S. CARTER, New Brunswick, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 25, 1923, Serial No. 647,463. Renewed Feb. 12, 1925. 8 Claims. (Cl. 250—17.)



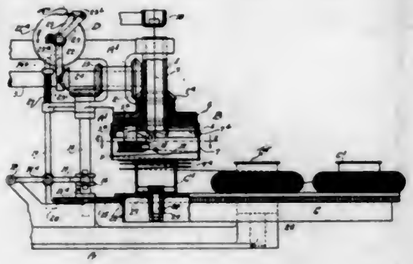
1. In a radio signalling system, the combination of an energy radiating circuit, a source of power for energizing said circuit and a transmission line of electrically infinite length connecting said circuit and said source.

1,623,997. METHOD OF CASTING CURVED AND FLAT STEREOTYPE PLATES. JOSEPH P. CATLIN, Bridgeport, Conn., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Jan. 19, 1922, Serial No. 530,310. Renewed Dec. 27, 1926. 15 Claims. (Cl. 22—65.)



1. The process of forming stereotype plates which consists in placing a matrix in a mold facing inwardly, introducing molten metal into the mold inwardly of the matrix, rotating the mold and matrix at sufficient speed to force the molten metal into the depressions in the matrix by centrifugal action, and continuing such rotation until the metal has set.

1,623,998. PHOTOGRAPHIC SHUTTER. HEREWARD LESTER COOKE, Princeton, N. J., assignor to Cooke Patents Incorporated, New York, N. Y., a Corporation of Delaware. Filed June 22, 1918, Serial No. 241,331, and in Great Britain Mar. 27, 1914. 48 Claims. (Cl. 95—53.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



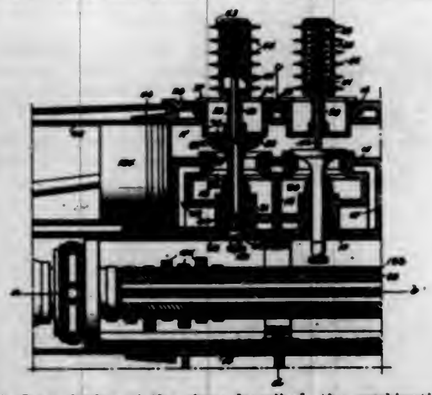
1. In a photographic shutter, the combination of shutter mechanism, control means for varying the speed of operation of the shutter, a rotary member for actuating said control means having logarithmic motion with relation to the speed of the shutter, an adjustable diaphragm, and a rotary member for adjusting said diaphragm having logarithmic motion with relation to the diaphragm aperture.

1,623,999. TURBINE. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 27, 1924. Serial No. 758,406. 3 Claims. (Cl. 308—8.)

1. The combination of a rigid frame-work adapted to be secured to a suitable support, upper and lower aligned bearings carried by the frame-work, a spindle fitting the bearings, and a rotor carried by the spindle and arranged above the lower bearing, the axis of the spindle and of said bearings being slightly inclined with respect to the vertical to avoid vibration due to precessional movements and consequent vibration of the spindle with respect to the upper bearing.

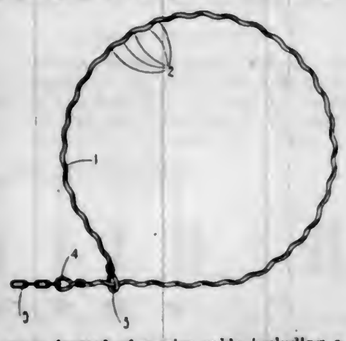
1,624,000. MECHANISM FOR AND METHOD OF COILING WIRE OR THE LIKE. FRANK HONIG, Oak Park, Ill., assignor to Cyclo Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1923. Serial No. 626,833. 7 Claims. (Cl. 242—79.)

1. In combination, convolution-forming and discharging mechanism, a movable carrier equipped with a series of cores adapted to be placed, seriatim in position to receive the discharged convolutions, and means timed with said mechanism for periodically actuating said carrier, said last-named means being provided with means for varying the period between actuations of the carrier.



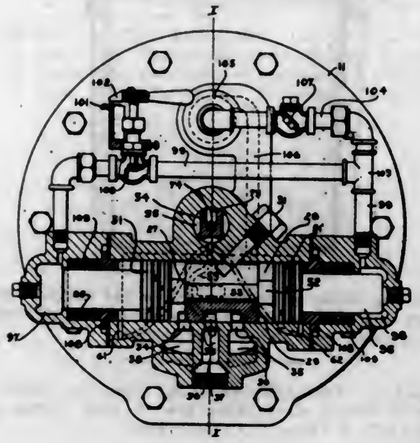
1,624,001. SHANK STIFFENER FOR SHOES. GEORGE A. HURLEY, Rockland, Mass. Filed Apr. 18, 1923. Serial No. 632,990. 6 Claims. (Cl. 36—76.)

3. A shank stiffener for shoes comprising the combination of a base member comprising a ball-supporting portion and having a longitudinally extended raised portion in one face, and a corresponding recessed portion in its opposite face, and a flat, longitudinally-extended, metal re-inforcing plate secured to said base



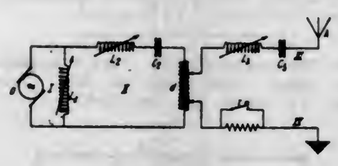
member over said recess and having a lateral forward end-extension disposed over the ball-supporting portion of said base member.

1,624,002. ENGINE-CYLINDER STRUCTURE. ALBERTO LLEO and CLAUDIO BARADAT, Barcelona, Spain; said Baradat assignor to said Lleo. Filed Jan. 15, 1921. Serial No. 437,483. 8 Claims. (Cl. 123—188.)



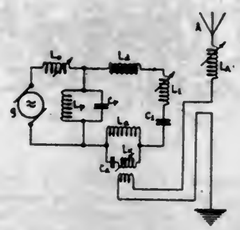
1. In a device of the class described, the combination of an explosive chamber having a port in one side thereof, a valve for controlling said port, said valve provided with a stem, means engaging the stem for guiding the valve to and from its seat, means engaging the stem for moving the valve in one direction off its seat, the side of the valve opposite the stem provided centrally thereof with a recess, a wearing nut positioned in said recess, means for securing the nut clamped to the valve, and a spring pressed plunger bearing on said wearing nut to force the valve onto its seat.

1,624,003. ANIMAL SNARE. ERNEST COE MALIN, Fertile, Saskatchewan, Canada. Filed Mar. 17, 1926. Serial No. 95,412. 6 Claims. (Cl. 43—87.)



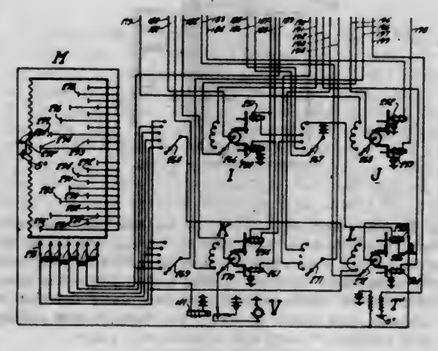
1. A snare formed of a wire cable including a number of strands of wire twisted together, said cable being provided with relatively short curves to render the same obscure.

1,624,004. MECHANICAL STOKER. CHARLES F. MILLER, Moore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 18, 1923. Serial No. 663,436. 2 Claims. (Cl. 121—151.)



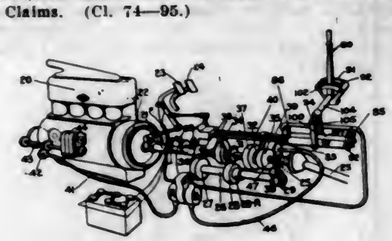
1. In a stoker engine, in combination, a power cylinder, a valve for controlling the supply of motive steam to the cylinder, means for operating said valve hydraulic chambers operatively associated with the valve for governing the movements of the same, means for supplying steam to the engine, means for condensing a quantity of said steam and for delivering the condensate to the hydraulic chambers, and means for preventing a back-flow of the condensate into the steam supply means.

1,624,005. METHOD OF WIRELESS SIGNALING. MENDEL OSNOS and LEO KASARNOWSKY, Berlin, Germany, assignors to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Jan. 12, 1923, Serial No. 612,283, and in Germany Jan. 12, 1922. 3 Claims. (Cl. 250—17.)



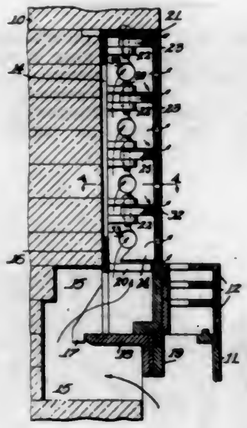
1. A method of producing even harmonics of a basic frequency without the superimposition of direct current by means of a circuit arrangement comprising a saturated iron choke coil, and a tuned path, which consists in conducting the desired harmonic into the correspondingly tuned path, the capacity and inductance of the tuned path being so proportioned that the resulting impedance of the path has an essentially capacitive character for the frequency of the desired harmonic so that current of such frequency will advance with respect to its eletromotive force, thereby causing the current to be strengthened and to suppress waves of other frequencies.

1,624,006. CIRCUIT ARRANGEMENT FOR HIGH-FREQUENCY SENDING STATIONS. MENDEL OSNOS, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Hallesches, Berlin, Germany, a Corporation of Germany. Filed Feb. 17, 1923, Serial No. 619,739, and in Germany Feb. 18, 1922. 6 Claims. (Cl. 250—17.)



1. A circuit arrangement for high frequency sending stations comprising a generator, an iron core choke coil and an inductance coil connected in series, a condenser connected in parallel with the generator and in series with the iron core choke coil and the inductance coil so as to provide a loading branch circuit, an antenna coupled with said loading branch circuit and a tuning element separate from the condenser for promoting the development of harmonics of the desired frequency in the loading branch circuit, said condenser serving also as a protection for the generator against the harmonics.

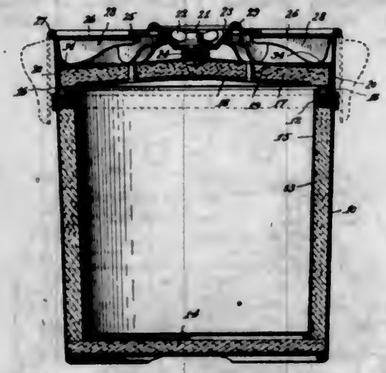
1,624,007. AUTOMATIC TELEPHONE SYSTEM. ARTHUR J. RAY, Chicago, Ill.; FRED T. MADSEN, Green Bay, Wis.; and HERBERT F. OBERGFELL, River Forest, Ill., assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 11, 1921. Serial No. 436,559. 35 Claims. (Cl. 179—17.)



35. In a telephone system, an automatic switch, a party line, means for operating said switch to connect with said party line, signalling selecting means operable in accordance with a plurality of digits after said switch is operated, and means for testing said party line after said signalling selecting means is operated.

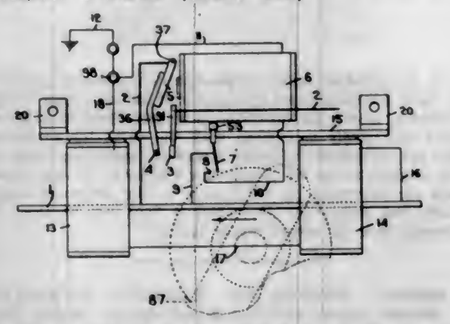
1,624,008. CHANGE-SPEED GOVERNOR. CHESTER S. RICKER, Indianapolis, Ind. Filed Jan. 21, 1916, Serial No. 73,313. Renewed Feb. 9, 1920. Serial No. 357,848. 50 Claims. (Cl. 74—95.)

1. In combination, two separately rotatable parts which may be moved into intermeshing engagement, means for moving said two parts relatively to each other to produce such intermeshing engagement, mechanism responsive to the speed of each of said two parts, and means controlled by said two speed-responsive mechanisms for preventing such relative movement to produce such intermeshing engagement save when the speeds of such two parts are equal.



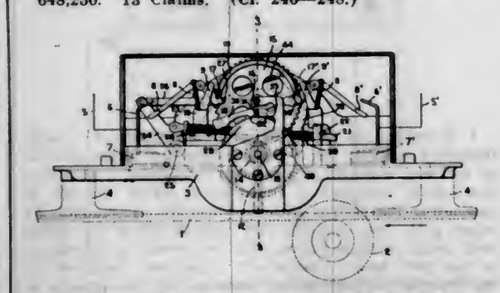
1,624,009. FURNACE-WALL CONSTRUCTION. ROBERT SANFORD RILEY, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 9, 1921. Serial No. 499,508. 6 Claims. (Cl. 110—75.)

1. In an underfeed furnace, in combination, underfeed retorts, tuyère plates therebetween, tuyère side blocks for said furnace, a side wall, a frame supported thereby, wall plates detachably secured to said frame above the plane of said tuyère blocks, said frame and plates defining an air passage, and means to supply air through said passage to said furnace through and around said plates.



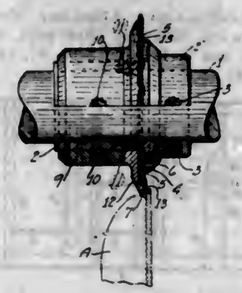
1,624,010. FOOD RECEPTACLE. MICHAEL A. ROLLMAN, Mount Joy, Pa. Filed Jan. 6, 1923. Serial No. 611,070. 5 Claims. (Cl. 220—9.)

1. A food container consisting of an outer metallic vessel, an inner metallic vessel, a cover fitting within the outer vessel and adapted to close the inner vessel, devices for locking the cover in place, and means for completely insulating the inner vessel from all metallic contact with the outer vessel, said means embodying a



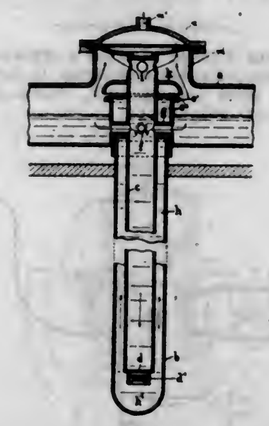
cork ring fitting between the vessels and having a seat in an annular groove in one of the vessels formed therein at a distance from the top edge thereof.

1,624,011. TROLLEY SWITCH. JOHN J. RUDDICK, West Newton, Mass. Filed Feb. 16, 1923. Serial No. 619,497. 8 Claims. (Cl. 246—249.)



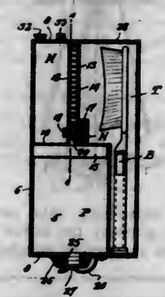
1. In a device of the class described, the combination with a magnet and a normally-open circuit therefor, of a circuit-closing device in the circuit comprising a magnetically-sensitive member responsive to the magnetic attraction exerted on it by a passing body, and an electromagnet for holding said member in suspended position, said member when so attracted operating to close the circuit.

1,624,012. TROLLEY SWITCH. JOHN J. RUDDICK, West Newton, Mass. Filed June 28, 1923. Serial No. 648,250. 13 Claims. (Cl. 246—248.)



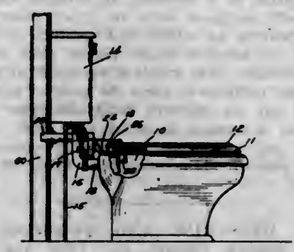
1. In a trolley switch, the combination with a trolley-actuated pendulum member, of a circuit-closing contact, operative connections between said pendulum member and contact by which a trolley-actuated movement of the former gives the latter a circuit-closing movement, and an escapement device frictionally connected to said connections and constructed to permit a quick trolley-actuated movement of the pendulum member while retarding the return movement thereof.

1,624,013. STITCH REMOVER. LEO SCHILDKNECHT, St. Louis, Mo., assignor to Landis Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed July 17, 1925. Serial No. 44,293. 8 Claims. (Cl. 12—17.)



1. A rotating stitch removing tool comprising a member having a plurality of teeth integrally formed on one face and arranged in a circle thereon, and a separately formed perforated disk having a smooth work supporting edge and secured to said member with the teeth of said member projecting through the perforations in said disk.

1,624,014. APPARATUS FOR VAPORIZING LIQUIDS. ADOLF SCHNEIDER, Kelheim-on-the-Danube, Germany, assignor to Niederbayerische Cellulosewerke, Kelheim-on-the-Danube, Germany, a Corporation of Germany. Filed Apr. 8, 1925, Serial No. 21,599½, and in Germany Apr. 11, 1924. 2 Claims. (Cl. 122—305.)



1. An apparatus for vaporizing liquids, comprising a tubular receptacle having a closed bottom, a feeding pipe within said receptacle and extending to a point near the bottom of said receptacle, means to supply liquid to said feeding pipe, a check-valve positioned to prevent back-streaming of liquid within the said feeding pipe, and means for heating said receptacle.

1,624,015. ORAL KIT. WILLIAM THEODORE SCHOLL, Oakland City, Ind. Filed May 13, 1926. Serial No. 108,837. 1 Claim. (Cl. 132—84.)

A device of the class described including a casing formed with a pair of sides, a pair of ends, and a pair of edges, partitions in the casing one extending from one edge between the sides, another extending from one end between the sides of the inner end of the first mentioned partition for forming a tooth paste compartment, a plunger in said compartment, means for operating the plunger, a partition rising from the first mentioned partition between the sides to the other end to form a mouth wash compartment, a tooth brush containing compartment, and a perforated plate closure for the tooth paste compartment.

1,624,016. VENTILATING APPARATUS. ANTHONY G. SCHUCK, Los Angeles, Calif. Filed Apr. 8, 1926. Serial No. 100,728. 1 Claim. (Cl. 4—214.)

In combination with a closet bowl having a flush pipe therefor and a lid pivotally connected to said bowl, a ventilating apparatus comprising a conduit for exhausting gases from said bowl, a suction fan at the outer end of said conduit, an exhaust outlet pipe for said fan, a shaft for said fan, a rotor mounted on said shaft, a water supply pipe for said rotor, a valve in said water supply pipe, a casing enclosing said rotor, a discharge pipe for said casing connected into the flush pipe of said bowl, a gasket on said discharge pipe, means for clamping said discharge pipe to said flush pipe, said clamping means engaging said gasket to form a water-tight joint between said discharge pipe and said flush pipe, and means whereby said valve is connected to said lid whereby raising said lid operates said valve to deliver water to said rotor.

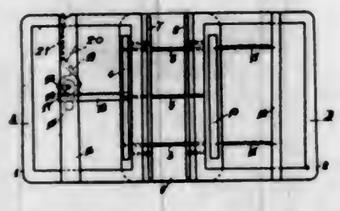
1,624,017. TOASTER. CARL E. SHIELDS, Rock Island, Ill. Filed May 2, 1923. Serial No. 636,061. 5 Claims. (Cl. 53—5.)

1. A toaster comprising a heating element, a fixed supporting member adjacent the base of said heating element, a movable supporting member normally positioned in substantially parallel relation with said heating element and engaging said fixed supporting member for

limited movement toward and from said heating element, a carrier movable to and from said heating element, and

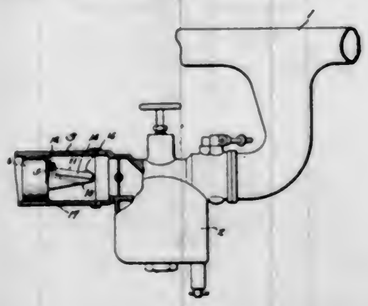
means operatively connecting said carrier and movable supporting member whereby the latter is actuated transversely of said fixed supporting member.

1,624,018. AIR-OPERATED DEVICE. HARRY SLATER, Hawthorne, Calif. Filed Jan. 5, 1925. Serial No. 532. 3 Claims. (Cl. 46—14.)



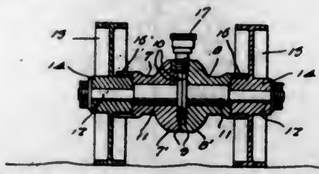
1. In an air operated device adapted for special use in connection with the radiator cap of a motor vehicle, the combination of a manikin, an integral single length vertical shaft equipped with an upper reduced end to provide a bearing on which said manikin is adapted to be rotated, an integral single length piece of material extending through said manikin equipped with reversely bent external portions to form the arms of said manikin, a hollowed out air operated hand associated with each of said arms, a member on which said shaft is revolubly positioned, and an element externally embracing said member to prevent said manikin from flying off by centrifugal action.

1,624,019. MEASURING AND WEIGHING DEVICE. VINCENT SLEZAK, Chicago, Ill. Filed Aug. 14, 1922. Serial No. 581,653. 4 Claims. (Cl. 194—1.)



1. A height-measuring device of the character described including a substantially vertically disposed mirror, said mirror having vertically-spaced-apart sight openings therein, a member having height indications thereon positioned adjacent to said sight openings and being mounted for movement to disclose said height indications through said sight openings and for movement out of such disclosing position, coin-controlled means for causing said member to move so as to disclose said indications through the sight openings when the device is in use, said indications being so arranged that the one thereof which is substantially opposite the eyes of a person standing before said mirror indicates substantially the person's height, and means for moving said member to carry said indications out of such disclosing position when the device is not in use.

1,624,020. LOOSE-LEAF LEDGER. CHARLES STOCKMANS, Antwerp, Belgium. Filed Sept. 8, 1925, Serial No. 55,095, and in Belgium Sept. 17, 1924. 2 Claims. (Cl. 129—41.)

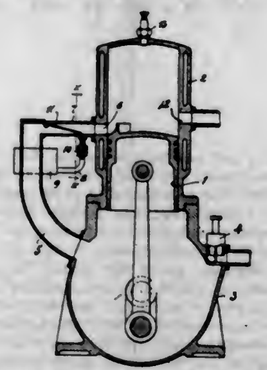


1. In a loose-leaf ledger, the combination with two cover-frames, one with a transverse flat bar movable therein, and extensible back and a series of parallel straps having one end secured to one of the cover frames and their other attached to the movable flat bar within the other cover frame, of a rack extending at right angles and secured at one end to said movable bar; an intermediate frame-member mounted on the cover-frame in close proximity to said rack; a pinion in engagement with said rack secured on a shaft rotatably mounted on said intermediate frame-member and capable of being rotated from the outside by means of a key; a ratchet wheel integral with said pinion; a spring-influenced pawl normally tending to remain in engagement with said ratchet wheel; and means operable from the edge of the corresponding frame cover for disengaging said pawl from said ratchet wheel, substantially as described.

1,624,021. AIR VALVE. THOMAS J. STOKES, Jefferson, Tex., assignor of one-half to Horace O. Nelson, Jefferson, Tex. Filed Apr. 24, 1926. Serial No. 104,503. 2 Claims. (Cl. 251—125.)

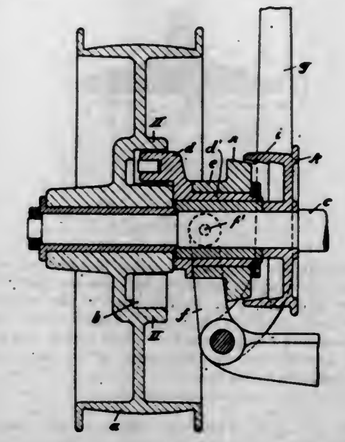
2. In a device of the class described, a partition adapted for mounting in an air intake of a carburetor, the partition having an opening, a reduced trough-shaped member carried by the partition and extended part-way around the opening, a gravity valve and means for mounting the valve for hinged movement, the valve constituting a closure for the upper part of the trough-shaped member, that end of the trough-shaped member which is adjacent to the free end of the valve being open when the valve is closed.

1,624,022. PRESS-WHEEL BOXING FOR GRAIN DRILLS. ANDREW M. STRECKER, Phroso, Okla. Filed Feb. 12, 1926. Serial No. 87,847. 2 Claims. (Cl. 308—16.)



1. In a boxing, a pair of complementary axle housing sections secured together at their inner ends, axles extending through the respective sections, press wheels on the outer ends of the axles, disks carried by the inner opposed ends of the axles, the inner opposed faces of the housing sections having circular depressions formed therein in which said disks are rotatable, an apertured lug extending laterally from the inner end of one of the axle housing sections, the adjacent portion of the inner end of the other housing section being cut out to receive said lug, and a grease cup supported in the apertured lug and adapted to communicate with said circular depressions.

1,624,023. EQUALIZATION OF TRANSMISSION. MAURICE E. STRIEBY and CHARLES H. FETTER, Millburn, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 27, 1926. Serial No. 98,000. 5 Claims. (Cl. 178—44.)



1. A transmission system comprising a pair of transmission lines, each terminated at one end in a terminal impedance, an attenuation equalizer for each line connected thereto at the opposite end, and means to directly connect the ends of said lines at which the attenuation equalizers are located.

1,624,024. FUEL-FEEDING DEVICE OF INTERNAL-COMBUSTION ENGINES. OSKAR SVENSSON and GUSTAF SVENSSON, Dagloesen, Sweden. Filed Mar. 17, 1923, Serial No. 625,815, and in Germany Apr. 18, 1922. 2 Claims. (Cl. 123—73.)

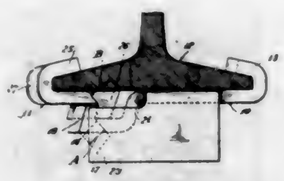
2. In an internal combustion engine of the two stroke cycle system, having a channel extending from the crank chamber to the cylinder and an inlet for the fuel leading to the said channel, a mixing chamber forming part of the channel and having a substantially plane and substantially horizontal bottom and further a great width, the chamber thus operating as surface carburetor in association with a throttle baffle member located in the said channel and directing the air, passing from the crank chamber toward the fuel spread on the bottom of the mixing chamber.

1,624,025. CLUTCH. KARL TESSKY, Esslingen-on-the-Neckar, Germany. Filed June 30, 1925, Serial No. 40,651, and in Germany July 21, 1924. 2 Claims. (Cl. 192—18.)

1. Clutch comprising a shaft, a driven part loose on said shaft, an annular slide secured against rotation and adapted to connect said driven part and said shaft, a brake disc on said slide and a brake drum on said shaft adapted to cooperate with said disc.

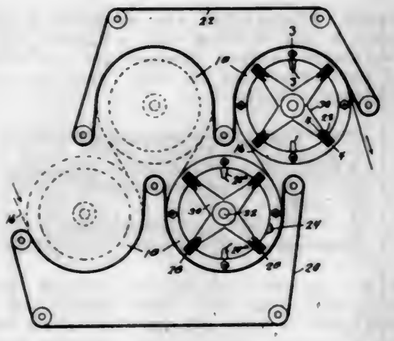
1,624,026. STERILIZING AND WASHING MACHINE. LOUIS F. UTZ, Hamilton, Ohio, assignor to The Freiberg-Simrall Company, Hamilton, Ohio, a Corporation of Ohio. Filed Sept. 20, 1921. Serial No. 502,026. 3 Claims. (Cl. 141—7.)

1. In a machine of the character described, the combination of a casing, water tanks therein, spray heads located above the tanks, and means for forming compartments of the space above the tanks comprising depending screens formed of metallic plates hinged together and secured to the casing so as to depend and act as a curtain.



1,624,027. WIRE-DRAWING DIE. FREDERICK VOLLMER, Cranford, N. J. Filed Jan. 16, 1926. Serial No. 81,676. 7 Claims. (Cl. 205—29.)

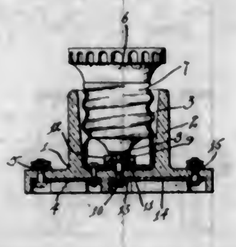
1. A diamond die for drawing wire having, in combination, a perforated wire-drawing diamond provided with a



smooth taper on its periphery, and a block of hard and strong metal having therein a tapering hole which fits the taper on the diamond and into which the tapered diamond has been wedged to reinforce the diamond.

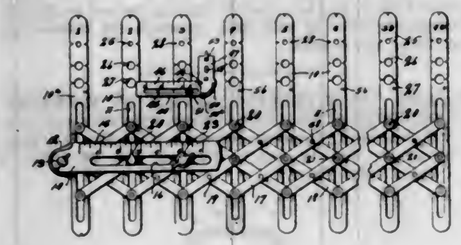
1,624,028. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1925. Serial No. 6,099. 25 Claims. (Cl. 238—325.)

1. A rail anchor comprising rail gripping members provided with coengaging wedging surfaces so disposed that movement of one member with relation to the other effects a grip of said members on opposite edges of the rail, one of said members being formed of sheet metal and adapted to exert pressure at the extremity of its said wedging surface against a cross tie.



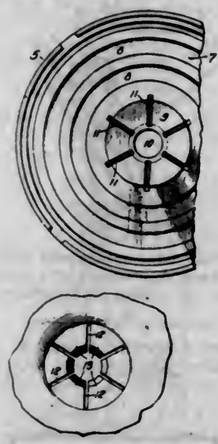
1,624,029. PAPER MAKING. WILLIAM A. WHITCOMB, Dedham, Mass., assignor to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Feb. 28, 1925. Serial No. 12,414. 17 Claims. (Cl. 34—48.)

1. The method of drying a wet paper sheet which consists in conducting through it an electric current of such value as directly to heat and evaporate moisture in the sheet.



1,624,030. FUSE PLUG AND RECEPTACLE. ROY H. WILLIAMS, Evansville, Ind. Filed Apr. 6, 1925. Serial No. 21,065. 1 Claim. (Cl. 200—119.)

A device of the character described comprising a fuse plug having a central contact member, said contact member having a projection extending therefrom, an enlarged head composed of insulating material for said fuse plug, a receptacle for said fuse plug adapted to be secured to a switch box, a central contact member for said

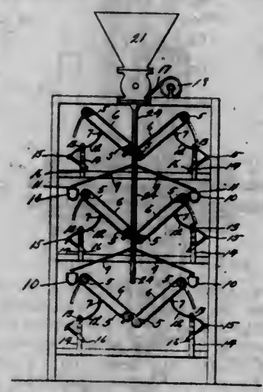


receptacle, said contact member having transversely extending prongs forming a cross-shaped head, and insulating means surrounding said cross-shaped head of the central contact member in said receptacle, except for a space just sufficiently large to permit the introduction of said projection on the fuse plug contact member therethrough, said insulating means having openings equally spaced between said prongs for permitting the central contact member of said receptacle to be removed therefrom without the necessity of removing said receptacle from the switch box.

1,624,031. DIVIDING AND SPACING INSTRUMENT. HARRY ADLER, Melville, Johannesburg, South Africa, assignor of one-third to Frank Albert Baker, Melrose, Johannesburg, South Africa. Filed Mar. 14, 1925. Serial No. 15,582. 8 Claims. (Cl. 33—108.)

1. A dividing and spacing instrument including a series of crossed bars, each bar being pivoted at its ends and intermediate its ends to a plurality of intersecting bars to thus provide a lazy-tongs, the middle series of pivots having outwardly projecting studs and the end pivots having outwardly projecting studs, a scale having a longitudinal slot through which the middle series of studs pass, a plurality of parallel point-indicating rods extending at right angles to said scale and with which the end pivots of the lazy-tongs have sliding engagement, means disposed in connection and movable with one of said rods for indicating on the scale the space between any two rods, and clamping means engaging one of said studs and the scale, for holding the instrument and the scale in adjusted position.

1,624,032. INNER DISK FOR DISK CRUSHERS. CHARLES B. ANDREWS, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed June 5, 1925. Serial No. 35,169. 2 Claims. (Cl. 83—8.)



1. An inner disk for crushing machines of the disk action type having a centrally apertured integral flat center with panels ranging radially thereof to provide alternate thick and thin metal sections whereby sufficient resiliency is established to relieve the strain on the anchoring means.

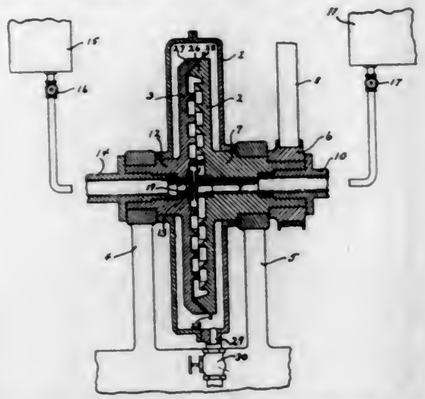
1,624,033. WEED KILLER. WILBUR DEAN BARNARD, Neenah, Wis. Filed Oct. 17, 1925. Serial No. 63,074. 1 Claim. (Cl. 47—49.)

A weed destroyer comprising an elongated barrel adapted to contain a destructive liquid, a reciprocatory rod mounted within said barrel and projecting from its upper end, an operating handle carried by said rod, a spring urging said rod downwardly, a tip carried by the lower end of said barrel and having a contracted apertured lower end, a packing interposed between a portion of said tip and the lower end of said barrel, a measuring plunger connected to the lower end of said rod and adapted to reciprocate within said packing, said measuring plunger having apertures formed therein and adapted to be filled with the destructive liquid from the interior of said barrel when located above said packing during the upward reciprocation of said plunger, and to deliver such liquid to the interior of said tip upon the downward reciprocation of said plunger, a shoulder formed inside said tip, a valve carried by said measuring plunger, and adapted to contact with said shoulder when said measuring plunger is in its lowermost position, and a pointed end projecting from said measuring plunger and adapted to be projected through the lower end of said tip or withdrawn into said tip.

1,624,034. SEED-CLEANING MACHINE. ALBERT BLEAM, Clarksville, Mich. Filed June 25, 1925. Serial No. 39,538. 4 Claims. (Cl. 209—114.)

1. A seed cleaning machine comprising a frame, a plurality of inwardly and downwardly inclined endless conveyors, said conveyors inclining longitudinally in relation to the frame, means for discharging seed onto the upper side portions of the conveyors, means for simultaneously operating said conveyors, downwardly and outwardly inclined deflecting plates between the conveyors, scrapers cooperating with the undersides of the conveyors above the deflecting plates and troughs suspended below the outer ends of the deflecting plates.

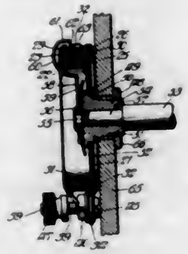
1,624,035. LINING FOR BRAKE BANDS AND SHOES. JOHN G. BOWMAN, Kansas City, Mo., assignor of one-half to William C. Haseltine, Kansas City, Mo. Filed July 3, 1925. Serial No. 41,430. 2 Claims. (Cl. 188—249.)



1. A replacement lining for brake bands and shoes comprising a friction facing material, and exceedingly thin metal securing elements extended laterally therefrom adapted to be bent backwardly upon a band or shoe by the use of the hands alone, whereby a lining may be secured in place without the use of an implement.

1,624,036. METHOD OF PRODUCING AN EDIBLE PROTEIN PRODUCT. JOHN W. M. BUNKER, Belmont, Mass., assignor to American Protein Corporation, Boston, Mass., a Corporation of Massachusetts. Filed June 19, 1925. Serial No. 38,341. 10 Claims. (Cl. 99—11.)

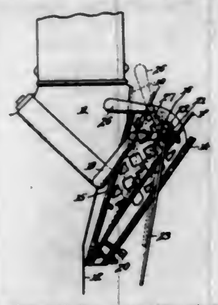
8. That step in the method of producing an edible protein product which consists in treating blood serum substantially free from fibrin and red corpuscular matter with a solvent of organic fats of a character to dissolve out fatty substances and traces of fibrin, if present without forming a by-product objectionable from a food standpoint, and separating the solvent solution from the serum.



9. That step in the method of producing an edible protein product which consists in treating blood serum substantially free from fibrin and red corpuscular matter with carbon tetrachloride to dissolve out fatty substances, and separating the carbon tetrachloride solution from the serum.

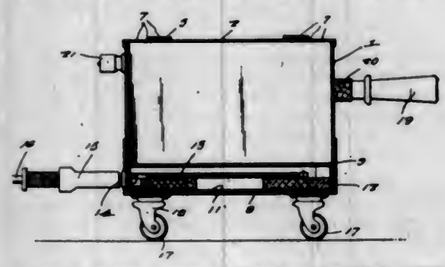
1,624,037. APPARATUS FOR DEFLOCCULATING AND EMULSIFYING. EDWARD A. BUTLER, Buffalo, N. Y., assignor to Colloidal Equipment Corporation, New York, N. Y., a Corporation of New Jersey. Filed Apr. 30, 1925. Serial No. 26,909. 4 Claims. (Cl. 259—96.)

1. Apparatus for deflocculation, emulsification, or disintegration comprising a chamber, a rotor closing one side thereof, recessed annular projections extending into said chamber from its opposite sides, the recesses at one side of said chamber being inclined oppositely to those at the other side thereof.



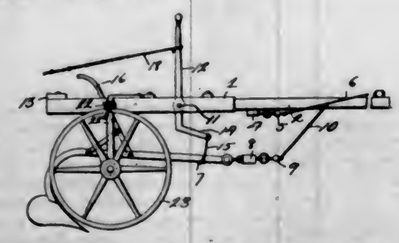
1,624,038. RHEOSTAT. ALVA J. CARTER, Chicago, Ill., assignor to Carter Radio Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1925. Serial No. 41,120. 16 Claims. (Cl. 201—55.)

6. In a device of the character described, a winding, and means for supporting said winding comprising a pair of annular members having laterally extending flanges one fitting inside the other to provide an annular seat for said winding, side flanges to provide an annular groove, an annular insulating member between said seat and said winding, and ring like insulating members between said side flanges and said winding.



1,624,039. AUTOMATIC REGULATOR. LESLIE DANA, St. Louis, Mo. Filed June 4, 1926. Serial No. 113,696. 9 Claims. (Cl. 336—16.)

1. A regulator for stoves, furnaces and the like, having check and draft dampers, comprising an operating arm associated with one of said dampers, a flexible thermostat element positioned to engage said arm, means connecting said dampers for simultaneous operation, and

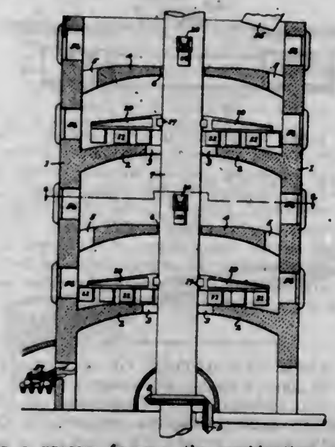


latch means positioned for engagement with said arm for locking said thermostat element in a position where it will be ineffective to control said dampers.

1,624,040. CORN POPPER. JAMES E. DEMPSEY and LEROY E. BURTON, Johnston City, Ill. Filed Dec. 21, 1925. Serial No. 76,690. 1 Claim. (Cl. 219—19.)

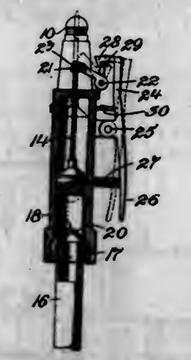
A wheeled corn popper of the class described comprising in combination, an open top receptacle, a cover therefor, an open top casing, the lower edges of the receptacle adapted to rest on the upper edges of the open top casing, angular securing brackets at the corners of the casing and the receptacle on the outer side thereof for securing the same together providing a unitary structure, an insulated block arranged within the casing, electrical heating units mounted on the block, the terminals for the electrical heating units projecting outwardly through one end of the casing, surface engaging rollers carried by the bottom of the casing, and a handle secured on one end of the receptacle for facilitating the reciprocatory movement thereof.

1,624,041. PLOWING DEVICE. JOHN P. DERRICK, Carmine, Tex. Filed Apr. 24, 1925. Serial No. 25,543. 1 Claim. (Cl. 97—82.)



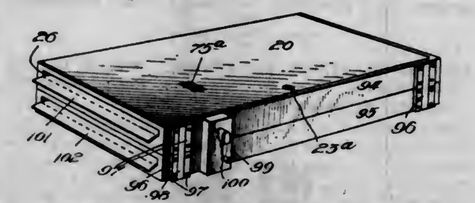
The combination with a wheel supported frame, draft means carried by said frame and including traces, of a plow disposed below said frame and between the wheels thereof, a double tree connected to the forward end of the plow, single trees carried by said double tree, flexible connections between the single trees and the traces, a lever carried by the wheel supported frame, a flexible connection between said lever and the plow adjacent its forward end, a seat carried by the rear end of the frame, said plow being provided with upwardly extending handle members extending through the frame and terminating adjacent the seat, said handle members in combination with the weight of the forward end of the plow and the double tree forming means whereby said plow may be controlled during a plowing operation.

1,624,042. RADIATOR COVER. CHARLES F. DUGGINS, Richmond, Va. Filed Mar. 20, 1926. Serial No. 96,282. 1 Claim. (Cl. 45—68.)



A radiator cover comprising a rectangular top; two sides fixed, at one end of each, to said top at the opposite ends thereof, and having their free ends recessed to form feet adapted to rest on a floor; a cross brace parallel to said top and spaced above the recessed ends of said sides and having its opposite ends fixed to the rear edges of said sides; a back fixed to said brace and the rear edge of said top; said sides having their opposed faces similarly rabbeted at their front edges to form a seat for a removable front, and the top having a groove in its lower face of the same width as the rabbets in said sides; a front, of the same thickness as the width of said groove and rabbets, removably positioned with its top in said groove and with its sides seated in said rabbets and having its bottom end recessed to form feet adapted to rest on said floor when the front is seated in said groove and rabbets.

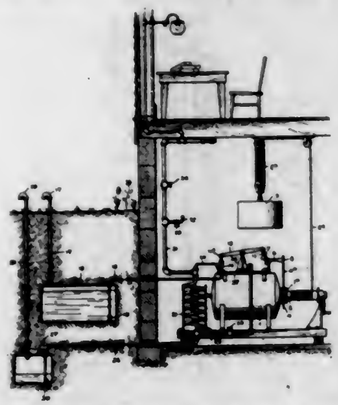
1,624,043. FURNACE. FRANK A. FAHRENWALD, Chicago, Ill. Filed Jan. 13, 1926. Serial No. 80,960. 11 Claims. (Cl. 263—26.)



1. In a process furnace, the combination with rabble arms of a driving member to which said arms are attached, such attachment including pivoting provisions and a frangible element normally securing the parts against pivoting movement but adapted to yield upon excessive stress.

1,624,044. SAFETY GAS VALVE. CLIMACO FERRARI, Newark, N. J. Filed May 20, 1926. Serial No. 110,334. 2 Claims. (Cl. 67—115.)

1. A gas valve comprising a casing, a tapered inlet gasket at the bottom of the casing, the casing having an outlet at the side, a hollow piston fitting the casing and extending over the outlet when the piston is down and also forming a tight fit on the gasket, a stem on the piston and extending through the top of the casing, a lever pivoted to the side of the casing and having a handle on one end and a nose on the other end, and a latch having a recess to receive the end of the stem to hold it down and having a finger under the nose of the lever to release the latch from the stem.



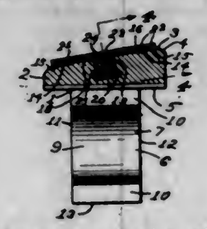
1,624,045. BALLOTING SYSTEM AND THE LIKE. JOSEPH B. FISCHER, Chicago, Ill. Filed June 4, 1925. Serial No. 34,815. 9 Claims. (Cl. 211—8.)

1. A ballot issuing box comprising, in combination, a suitable rectangular enclosure having a cover hinged to one side and a ballot slot formed in one end, a platform hinged to the other end of the interior of the enclosure, spring means for forcing the free end of the platform upwards toward the slotted opening, a series of ballot aligning guides adjustably secured to the platform for aligning a stack of ballots of selected size thereon in proper position with respect to the slotted opening, a friction roller journaled to the inside face of the cover in position to make contact with the topmost ballot of the stack when the platform is raised by the springs aforesaid, counting means carried by the under side of the cover and having a numerical index visible through the cover, stamping means carried by the inside face of the cover in position to impress selected characters on the topmost ballot of the stack, means for actuating both the counting mechanism and the printing mechanism harmoniously with the feeding rotations of the roller, means in conjunction with the roller shaft operative effectively to depress the platform against the springs at the completion of each roller revolution, and means for actuating the roller comprising a handle removably inserted through

the wall of the enclosure and having locking means operative effectively to lock the handle against further rotation at the end of each revolution thereof, substantially as described.

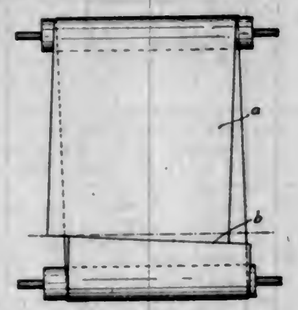
1,624,046. METHOD OF MAKING AIR GAS. HANS FOERSTERLING, Jamesburg, N. J. Filed Mar. 28, 1925. Serial No. 19,167. 10 Claims. (Cl. 48—219.)

10. The method of making an air gas from an inflammable volatile liquid possessing a vapor tension insufficient to form with air at low pressure an ignitable gas, which comprises mixing such volatile inflammable liquid with another volatile inflammable liquid possessing a vapor tension sufficient to form with air an ignitable gas containing a deficit in oxygen content for complete combustion in such proportion that the total amount of oxygen contained in the air gas resulting from such mixture is not greater than required for the complete combustion of the combustible constituents of such liquid mixture, vaporizing such liquid mixture with air at low pressure, and regulating the amount of air accordingly.



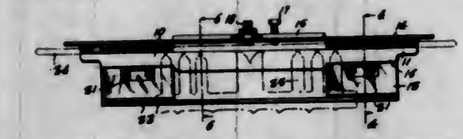
1,624,047. BATTERY CONNECTION. WILLIAM E. GILL, Lake Geneva, Wis. Filed June 19, 1922. Serial No. 569,299. 2 Claims. (Cl. 173—259.)

1. A battery connection, comprising a cable terminal providing a socket for the reception of a cable and a pair of projections extending laterally in spaced relation from said socket and provided with aligned openings for the reception of a battery stud, an eye bolt, the eye of which is adapted to be disposed between said members in alignment with said openings and the shank of which projects radially outwardly between said members, said eye bolt being angularly adjustable about the battery stud and relatively to said terminal, and a nut threaded on said bolt to detachably clamp the connection to said stud.



1,624,048. MEMORIAL TABLET. JOHN JOSEPH HAGENJOS, St. Louis, Mo. Filed July 6, 1925. Serial No. 41,549. 3 Claims. (Cl. 40—124.5.)

1. A memorial tablet comprising a base presenting an inclined top face, including a raised central portion defined by a smooth plane marginal portion and having a plurality of cavities disposed at the opposite ends in said central portion and presenting constricted mouths, a plate having a marginal flange on its underside adapted to fit the marginal portion of said inclined top face, a

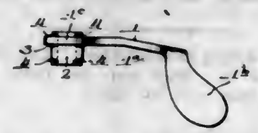


plurality of anchoring stems having enlarged heads projecting into said cavities from the underside of said plate and a filling of binding material in each of said cavities.

1,624,049. WIRE NETTING FOR PAPER-MAKING MACHINES AND METHOD OF MAKING THE SAME. CARL KURTZ-HÄHNLE and HANS KURTZ, Reutlingen, Germany. Filed June 14, 1926, Serial No. 116,008, and in Germany Oct. 26, 1925. 8 Claims. (Cl. 92—44.)

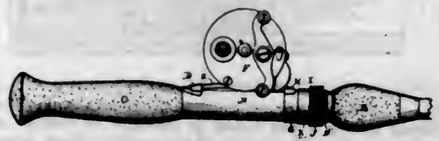
1. As a new article of manufacture, a wire cloth or Fourdrinier wire for paper making machines comprising a seam extending at an inclined angle to the direction in which said wire is moving through the machine.

1,624,050. SAW GAUGE. MARTIN J. HAHRE, Smithers, British Columbia, Canada. Filed June 22, 1925. Serial No. 38,840. 8 Claims. (Cl. 76—46.)



1. A saw gauge comprising an upper section composed of side plates, a pair of spaced longitudinal flanges connected to and extending between the side plates, a set screw threadedly mounted in the upper flange, a machine screw threadedly mounted in the upper flange; and a lower section including a pair of side plates, a tapered flange formed on the lower edges of the lower plates, hinge members secured to the adjacent edges of the upper and lower sections adapted to permit the upper section to swing in an angular position relative to the lower section.

1,624,051. LOCK AND METHOD OF MANUFACTURE. AUGIE L. HANSEN, Chicago, Ill., assignor to A. L. Hansen Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed May 15, 1926. Serial No. 109,236. 15 Claims. (Cl. 29—148.)

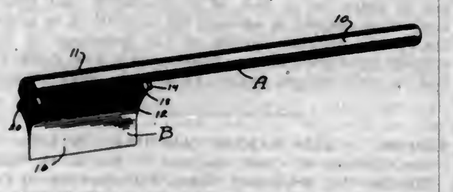


1. A part for locks or the like, comprising a member having an opening therethrough and a metal bushing

inserted in said opening and having surface portions of the metal on opposite sides of said member upset to secure the bushing against displacement in said member.

8. A method of forming bushings for the operating parts of locks and the like, consisting of stamping rectangular blanks from sheet metal, bending said blanks into tubular form, inserting the bushing through an aperture in the part to carry the bushing, and swaging the metal at the ends of the bushing.

1,624,052. REEL SEAT FOR FISHING RODS. CHARLES HEDDON and JACK T. WELCH, Dowagiac, Mich., assignors to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed May 18, 1925. Serial No. 30,902. 8 Claims. (Cl. 43—22.)

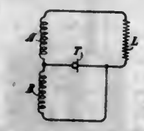


1. In a reel seat, in combination with a barrel, a socket fixedly mounted on the barrel, a clamping ring closely fitting the barrel and slidably mounted thereon and provided with an outwardly protruded portion furnishing a movable socket, a set of threads on the barrel, and a follower ring adapted to abut against the clamping ring and provided with an inner bore adapted in part to engage with the threads on the barrel, and in part to ride freely upon the unthreaded portion of the barrel, substantially as described.

1,624,053. SHADE ROLLER. HARRY F. HUSTED, Shavertown, Pa., assignor of one-third to Edmond C. Wideman and one-third to Harry D. Levy, Wilkes-Barre, Pa. Filed Oct. 25, 1926. Serial No. 144,007. 7 Claims. (Cl. 156—35.)

1. In a device of the character described, a fixed support, rotatable means automatically controlled by a shade roller and frictionally engaging said support, and latching means adapted to be actuated by the shade roller to lock the friction means therewith.

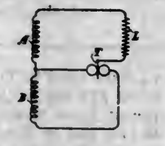
1,624,054. TOOTH-CLEANING DEVICE. BEAT KUHNE, Lewistown, Mont. Filed Dec. 28, 1925. Serial No. 77,982. 5 Claims. (Cl. 132—93.)



1. A tooth cleaning device comprising a holder embodying a head, a flaring key formed on said head, a cleaning member formed of elastic material, slidably fitting on said key, and means for preventing shifting of the cleaning member longitudinally of said key

---

1,624,055. DIRT AND GREASE CLEANING COMPOSITION. JACOB LENENBERG, Baltimore, Md. Filed Feb. 20, 1926. Serial No. 89,779. 1 Claim. (Cl. 87—5.)

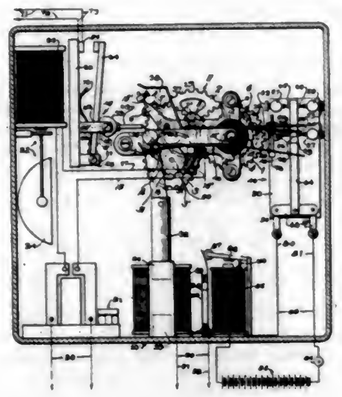


A composition to be used in conjunction with gasoline to form a cleaning solution, consisting of the reaction products of 25 gallons of castor oil, 25 pounds of powdered magnesia, 1 gallon of redistilled oleic acid, 1 gallon of acetone and 2 gallons of aqueous ammonia.

1,624,056. TELEPHONE SUBSTATION CIRCUITS. FREDERICK W. MCKOWN, Englewood, and EGINHARD DIETZE, Westfield, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 1, 1925. Serial No. 34,163. 6 Claims. (Cl. 179—81.)

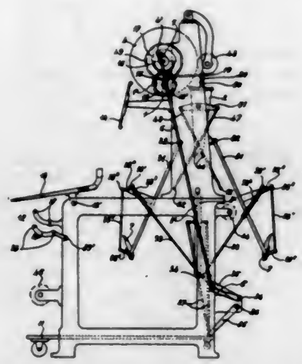
1. A substation circuit comprising a transmitter and a receiver of the electromagnetic type having two windings each of substantially low resistance, said instruments being connected effectively in parallel with each other with respect to signaling currents from a telephone line, the windings of said receiver being closely coupled and being so arranged with respect to said transmitter as to step-up the resistance of said transmitter to a predetermined value.

1,624,057. TELEPHONE SUBSTATION CIRCUITS. FREDERICK W. MCKOWN, Englewood, and EGINHARD DIETZE, Westfield, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 1, 1925. Serial No. 34,164. 8 Claims. (Cl. 179—81.)



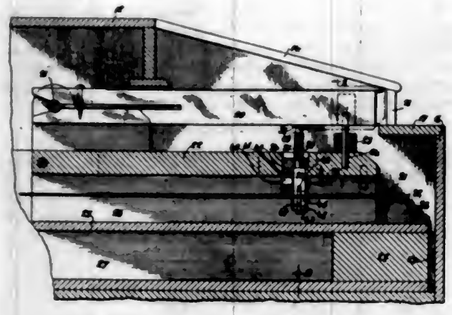
1. A circuit comprising two branches, devices for converting sound waves into electric waves, means for simultaneously actuating said devices, and means for converting electric waves into sound waves, said latter means consisting of two closely coupled windings each of substantially low resistance, one of which is arranged in each of said branches, said windings being employed to step-up the resistance of said devices to any desired value.

1,624,058. POWER DRIVE CHAIN. FRANK L. MORSE, Ithaca, N. Y., assignor to Morse Chain Company, a Corporation of New York. Filed Mar. 14, 1923. Serial No. 15,611. 4 Claims. (Cl. 74—32.)



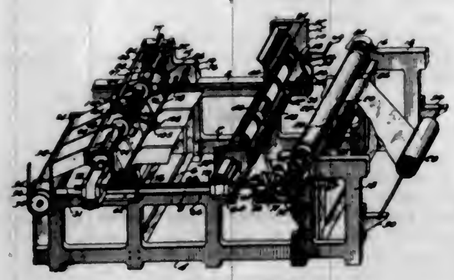
4. A chain comprising in combination, a series of links composed of plates, a joint for said links comprising a cylindrical pin and a semi-circular bush, the pin being nonrotative in the link in which it is secured, and the bush being provided with clearance at its inner side edges and being arranged to materially overhang that portion of the pin which wears bright in operation.

1,624,059. CIRCUIT-CONTROLLING MECHANISM. JOHN T. MILLER and MICHAEL HANLEY, Chicago, Ill. Filed Dec. 14, 1925. Serial No. 75,206. 3 Claims. (Cl. 177—369.)



1. In combination, an electrical switch, a first means including a pull-lever for operating said switch, an adjustable lost motion connection between said lever and said switch, a second means for moving the said pull-lever in a given direction to actuate the switch, signal sending mechanism, a third means for slowly returning the pull-lever to its initial position and for operating the said signal sending mechanism, said latter means causing said first means to actuate said switch so as to return the switch to its initial position, and a fourth means controlled by the said switch for preventing said second means from being operated until the pull lever is returned to its initial position after an operation thereof.

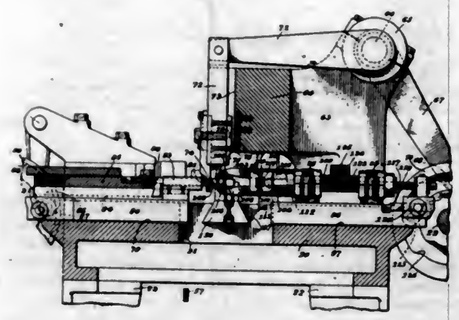
1,624,060. MACHINE FOR INSPECTING A PIECE OF TISSUE, MEASURING ITS LENGTH, AND FOLDING IT. JOSEPH NANTERME, Lyon, France. Filed Oct. 31, 1925, Serial No. 66,118, and in France Feb. 11, 1925. 22 Claims. (Cl. 270—79.)



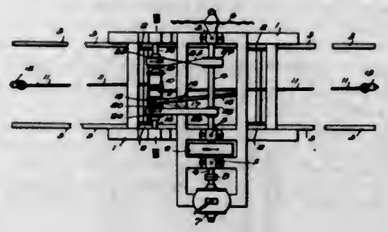
1. A machine for folding a continuous strip of fabric, comprising a feed roller over which the strip passes; a folding head engaging the strip beyond the roller; a gear train connecting the feed roller and folding head for oscillating the latter; a substantially vertical support on opposite sides of which the strip is folded alternately by said head; and a device for automatically stopping the folding operation at the completion of each fold.

1,624,061. MUSICAL INSTRUMENT. KARL P. NESSELER, Elizabeth, N. J. Filed Nov. 30, 1925. Serial No. 72,133. 1 Claim. (Cl. 84—320.)

A key operated stringed musical instrument comprising a casing having a key board, a plurality of strings extending in a horizontal plane transversely in said casing below the key board, a plunger for each key, pairs of plectrums pivoted in opposed relation in each plunger, said plectrums engaging the strings on their upward movement, means for actuating said plungers and means to release said plectrums upon raising said plungers.



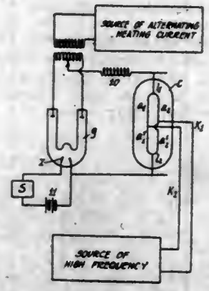
1,624,062. ROTARY PRINTING PRESS. WALTER E. OLIVER, Woodcliff, N. J. Filed Oct. 1, 1924. Serial No. 740,886. 3 Claims. (Cl. 101—225.)



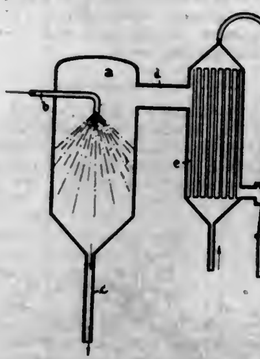
1. A rotary printing press having a printing cylinder adapted to print for part of a revolution, and adapted not to print for a part of a revolution, and feeding mechanism adapted to advance the material to be printed during the printing portion of the movement of said cylinder comprising narrow flanges and a wide flange carried by each narrow flange and at right angles thereto.

1,624,063. CHAIN-MAKING MACHINE. MAURITZ OLSON, Bridgeport, Conn., assignor to The A. H. Nilson Machine Co., Bridgeport, Conn., a Corporation of Connecticut. Filed July 11, 1925. Serial No. 42,875. 3 Claims. (Cl. 59—16.)

1. In a chain making machine, a vertical mandrel adapted to have lateral movement, wire feeding means for feeding wire horizontally in relation thereto, horizontally movable means adapted to have an initial movement to support said wire against said mandrel, means for bending said wire into U-form about said mandrel, means for supporting the previously formed link in vertical position in relation to said mandrel, horizontally movable means movable at a right angle to said first mentioned horizontally movable means for partially bending the wire ends inwardly about said mandrel whereby they are engaged in the opening of said previously formed link in spaced relation to said mandrel, said first mentioned horizontally movable means adapted to have a further movement to compress said link against said last mentioned horizontally movable means and said mandrel whereby the link is completed, said mandrel adapted to move laterally during said final link forming operation.

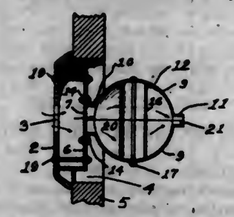


1,624,064. BREAKING DOWN SAW. PATRICK SARSFIELD O'NEILL, Aicken's Township, Westland County, New Zealand. Filed Aug. 28, 1926, Serial No. 132,271, and in New Zealand Sept. 3, 1925. 3 Claims. (Cl. 104—235.)



1. Improvements relating to breaking down saws comprising a wheeled bench arranged to travel back and forth upon a railed track, a spindle disposed transversely upon said bench and rotatable in bearings thereon, a circular saw fixed upon one end of said spindle to overhang one lateral side of said bench, a source of power carried upon said bench and connected to rotate said spindle, a flexible connection disposed longitudinally with said track and anchored to fixed points located one near either end thereof, a drum rotatably mounted in said bench and adapted when rotated to wind and unwind said connection thereby to produce the travel of said bench, a pair of friction-clutch-members mounted upon said bench and connected with said source of power to be rotated thereby in opposite directions, and manual means whereby said drum may be brought into engagement alternatively with each of said friction-clutch-members thereby to produce its rotation in either direction.

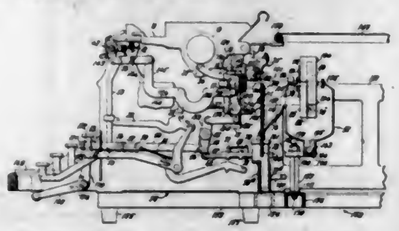
1,624,065. FREQUENCY CHANGER FOR SHORT WAVES. MENDEL OSNOS, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Oct. 20, 1925, Serial No. 63,619, and in Germany Sept. 12, 1924. 18 Claims. (Cl. 179—171.)



1. In combination, an inductance device having a magnetic circuit and an electric circuit, both of said circuits being formed through a bi-filar conductor, a source of energy connected with said circuits, and means for controlling the output of said device by varying its temperature.

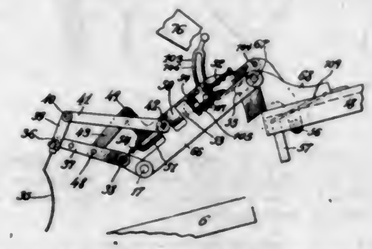
1,624,066. CONDENSING APPARATUS. ALFRED OTTO HERMANN PETERSEN, Altona/Elbe, Germany, assignor to N. V. Nederlandsche Inatallatie Maatschappij Therma, Amsterdam, Netherlands. Filed May 20, 1925, Serial No. 31,526, and in Germany Jan. 17, 1924. 2 Claims. (Cl. 257—24.)

1. In combination, a condenser, and a jet pump connected to said condenser for removing condensate therefrom, said jet pump being operated by the cooling water passed through said condenser.



1,624,067. FUEL ECONOMIZER. NENI J. PETITCLERC, St. Louis, Mo. Filed Dec. 24, 1925. Serial No. 77,659. 4 Claims. (Cl. 110—175.)

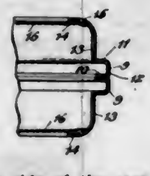
1. A device for preheating the air supplied to a fire box and comprising a spheroidal shell having a tubular baffle therethrough, and inlet and outlet openings dis-



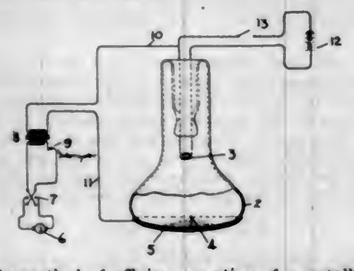
posed in the shell on diametrically opposite sides of the said baffle, the said shell being formed of hemi-spheroidal sections meeting in a plane passing through the said openings and transversely through the said tubular baffle, and means within the tubular baffle for detachably securing the sections together.

1,624,068. TYPEWRITING MACHINE. HENRY L. PITMAN, Westfield, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1923. Serial No. 632,836. 30 Claims. (Cl. 197—65.)

1. The combination with a typewriting machine having a platen-carriage, movable in letter-feed and return directions, of carriage-feeding mechanism including escapement devices, a motor, a support for the machine, an extension of said support behind the machine, a bracket above said supporting extension, said motor being supported on said bracket directly at the rear of the escapement devices, driving connections from the motor to the carriage including a shaft, and a horizontal pivotal connection between said motor and said bracket for rendering the motor displaceable downwardly, to give free access to the escapement devices, said motor being disconnectible from said driving shaft.



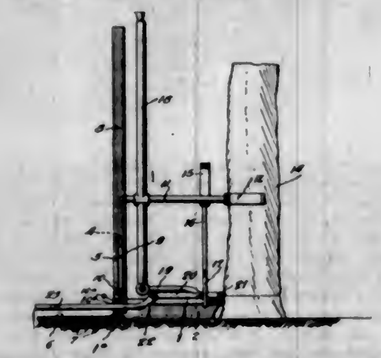
1,624,069. SHEET-FEEDING MECHANISM. STEPHEN HAINES PLUM, 2d, Madison, and AMOS ACKLEY, Camden, N. J., assignors to American Type Founders Company, a Corporation of New Jersey. Filed Sept. 22, 1925. Serial No. 57,857. 14 Claims. (Cl. 101—287.)



1. A feeding device for a press having a platen movable from a sheet receiving to an impression position comprising a paper feed table, a paper guide rack for guiding the paper in its passage to the platen and adjustable means on said paper feed table for lowering the said guide rack towards the platen when the latter is in sheet receiving position, and for raising said guide rack away from the platen when the latter moves into impression position.

1,624,070. VANITY-CASE FRAME. FRANK J. QUIGAN, Brooklyn, N. Y. Filed June 18, 1924. Serial No. 720,719. 2 Claims. (Cl. 220—32.)

1. A case comprising two sections each consisting of a metal plate having an edge portion of continuous channel shape form in cross section, an intermediate portion extending laterally from one wall of said channel and an opposite edge portion extending substantially at right angles to the plane of said intermediate portion and apertured to receive attaching means for a wall closing one side of the case section, and a hinge connecting said channelled edges at one side of the case sections with each other and permitting of the close contacting engagement of the opposed flanges of said channelled edge portions with each other when the case closed.



1,624,071. METHOD OF AFFIXING COATINGS ON INCANDESCENT-LAMP FILAMENTS. HENRY KNEELAND RICHARDSON, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 28, 1921. Serial No. 488,133. 8 Claims. (Cl. 176—131.)

1. The method of affixing a coating of a metallic oxide to an electrode comprising connecting the electrode, in a rarified atmosphere in the presence of the metallic oxide in powdered form, with another electrode in an electric circuit, and impressing a high potential between said electrodes to cause a bodily transfer of the powdered particles to the electrode without dissociation thereof.

1,624,072. SAW. JOHAN PAUL SALMI, Chicago, Ill. Filed Jan. 25, 1924, Serial No. 688,425. Renewed Sept. 13, 1926. 4 Claims. (Cl. 143—64.)

1. In a tree saw, a platform, an upright support thereupon and adjustable relative thereto, tree engaging means carried by said upright, a rock lever carried by said means, a frame carried by said rock lever, a second frame carried by said first named frame, a blade for said second frame, and supporting means for said second frame slidably carried by said upright.

1,624,073. WRINGER. SIMON E. SCHROEDER, Oak Park, Ill. Filed Mar. 24, 1922. Serial No. 546,307. 5 Claims. (Cl. 68—32.)

1. In a wringer, a pair of end bearings, each having a vertical guide channel and an extended bearing boss, a pair of relatively slidable bearings in each channel, rollers journalled in said bearings, a swingable frame supported upon said extended bearing bosses comprising end members, spring pressed slidable plate members associated with said end members, and rollers carried by said plate members and normally bearing upon the upper bearings.

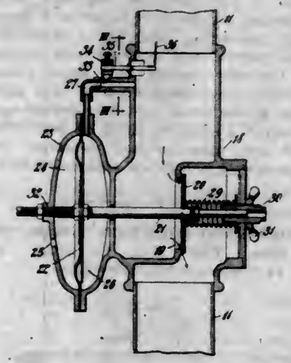
1,624,074. METHOD OF REMOVING RESIDUAL POISONS FROM FRUIT. EDWARD M. SEARS, Yakima, Wash. Filed Oct. 21, 1926. Serial No. 143,306. 3 Claims. (Cl. 99—11.)

3. The herein described method which consists of subjecting fruit to be washed free of arsenate of lead, to the action of a solution of oil and fatty acid in any proportions, then subjecting the fruit to the action of a solution of alkaline water and then washing the fruit in clear water.

1,624,075. STEEL OF HIGH-TEMPERATURE STABILITY. WILLIAM ROBERT SHIMER, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Nov. 29, 1924. Serial No. 752,929. 6 Claims. (Cl. 75—1.)

1. A low-carbon, tough, and readily workable commercial steel containing between .40 and .60 chromium, between .50 and .80 manganese and with tungsten between 1% and 1.50% added thereto to preserve the strength of the steel at high temperatures.

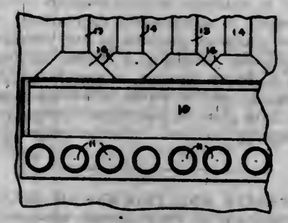
1,624,076. MAGNETIC BAR POLE CHUCK. FRANK LEROY SIMMONS, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Oct. 6, 1920. Serial No. 415,173. 6 Claims. (Cl. 175—367.)



1. A magnetic chuck comprising a face plate having a horizontal supporting face, vertically extending pole pieces having side holding faces angularly disposed to said supporting face, and non-magnetic material between said pole pieces, one of said poles having a sidewise extension extending across another pole and terminating in the same plane as the other said pole to form said holding face

---

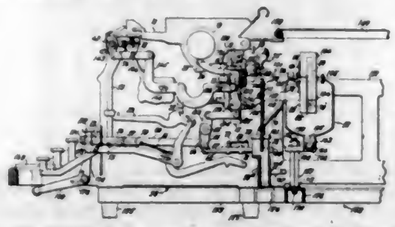
1,624,077. INCANDESCENT ELECTRIC LAMP. WILLIAM CHARLES SPROESSER, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 3, 1921. Serial No. 519,764. 16 Claims. (Cl. 176—16.)



1. The process of controlling the crystal growth in a metal lamp filament when initially heated which consists in coating said filament with a compound having a high volatilization temperature and which will not react detrimentally with said filament or the residual gases within the lamp.

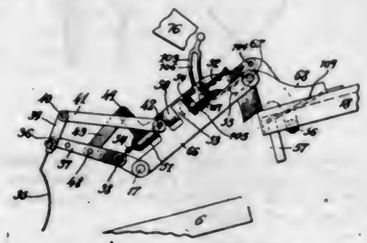
1,624,078. PNEUMATIC-TUBE APPARATUS. JOSEPH JOHN STOETZEL, Queens Village, N. Y., assignor to G. & G. Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 17, 1926. Serial No. 102,675. 4 Claims. (Cl. 243—9.)

1. In a pneumatic tube system, a transmitting tube, a casing communicating with said transmitting tube and provided with an orifice, means for producing a flow of air through said orifice, a valve for said orifice adapted to control the flow of air therethrough, said valve being adapted to open in the direction of said flow, spring means tending to close said valve, and means responsive to the pressure conditions in the transit tube for opening said valve.



1,624,079. MEANS FOR DELIVERING COAL TO HOPPERS OF CONTINUOUS FUEL-FEED STOKERS. ALBERT F. STROUSE, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 1, 1925. Serial No. 27,323. 7 Claims. (Cl. 193—2.)

1. In combination with a multiple retort stoker, a hopper for said stoker, a plurality of chutes having discharge ends arranged to discharge into said hopper, said discharge ends being arranged in a plurality of rows and the discharge ends of one row being staggered with respect to the discharge ends of the other row.



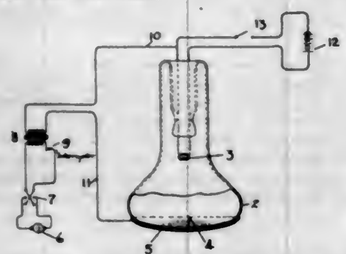
posed in the shell on diametrically opposite sides of the said baffle, the said shell being formed of hemi-spheroidal sections meeting in a plane passing through the said openings and transversely through the said tubular baffle, and means within the tubular baffle for detachably securing the sections together.

1,624,068. TYPEWRITING MACHINE. HENRY L. PITMAN, Westfield, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1923. Serial No. 632,836. 30 Claims. (Cl. 197—65.)

1. The combination with a typewriting machine having a platen-carriage, movable in letter-feed and return directions, of carriage-feeding mechanism including escapement devices, a motor, a support for the machine, an extension of said support behind the machine, a bracket above said supporting extension, said motor being supported on said bracket directly at the rear of the escapement devices, driving connections from the motor to the carriage including a shaft, and a horizontal pivotal connection between said motor and said bracket for rendering the motor displaceable downwardly, to give free access to the escapement devices, said motor being disconnectible from said driving shaft.

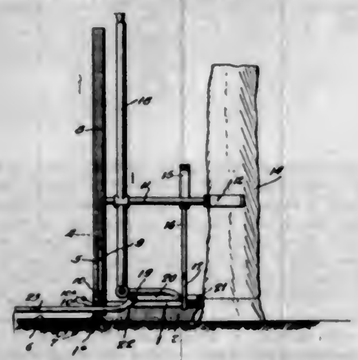
1,624,069. SHEET-FEEDING MECHANISM. STEPHEN HAINES PLUM, 2d, Madison, and AMOS ACKLEY, Camden, N. J., assignors to American Type Founders Company, a Corporation of New Jersey. Filed Sept. 22, 1925. Serial No. 57,857. 14 Claims. (Cl. 101—287.)

1. A feeding device for a press having a platen movable from a sheet receiving to an impression position comprising a paper feed table, a paper guide rack for guiding the paper in its passage to the platen and adjustable means on said paper feed table for lowering the said guide rack towards the platen when the latter is in sheet receiving position, and for raising said guide rack away from the platen when the latter moves into impression position.



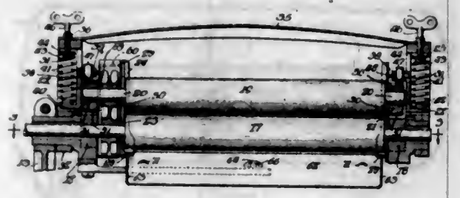
1,624,070. VANITY-CASE FRAME. FRANK J. QUIGAN, Brooklyn, N. Y. Filed June 18, 1924. Serial No. 720,719. 2 Claims. (Cl. 220—32.)

1. A case comprising two sections each consisting of a metal plate having an edge portion of continuous channel shape form in cross section, an intermediate portion extending laterally from one wall of said channel and an opposite edge portion extending substantially at right angles to the plane of said intermediate portion and apertured to receive attaching means for a wall closing one side of the case section, and a hinge connecting said chan-



nelled edges at one side of the case sections with each other and permitting of the close contacting engagement of the opposed flanges of said channelled edge portions with each other when the case closed.

1,624,071. METHOD OF AFFIXING COATINGS ON INCANDESCENT-LAMP FILAMENTS. HENRY KNEELAND RICHARDSON, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 28, 1921. Serial No. 488,133. 8 Claims. (Cl. 176—131.)



1. The method of affixing a coating of a metallic oxide to an electrode comprising connecting the electrode, in a rarified atmosphere in the presence of the metallic oxide in powdered form, with another electrode in an electric circuit, and impressing a high potential between said electrodes to cause a bodily transfer of the powdered particles to the electrode without dissociation thereof.

1,624,072. SAW. JOHAN PAUL SALMI, Chicago, Ill. Filed Jan. 25, 1924, Serial No. 688,425. Renewed Sept. 13, 1926. 4 Claims. (Cl. 143—64.)

1. In a tree saw, a platform, an upright support thereupon and adjustable relative thereto, tree engaging means carried by said upright, a rock lever carried by said means, a frame carried by said rock lever, a second frame carried by said first named frame, a blade for said second frame, and supporting means for said second frame slidably carried by said upright.

1,624,073. WRINGER. SIMON E. SCHROEDER, Oak Park, Ill. Filed Mar. 24, 1922. Serial No. 546,307. 5 Claims. (Cl. 68—32.)

1. In a wringer, a pair of end bearings, each having a vertical guide channel and an extended bearing boss, a pair of relatively slidable bearings in each channel, rollers journalled in said bearings, a swingable frame supported upon said extended bearing bosses comprising end members, spring pressed slidable plate members associated with said end members, and rollers carried by said plate members and normally bearing upon the upper bearings.

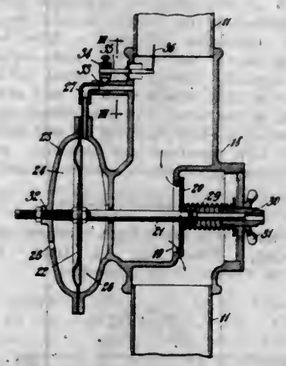
1,624,074. METHOD OF REMOVING RESIDUAL POISONS FROM FRUIT. EDWARD M. SEARS, Yakima, Wash. Filed Oct. 21, 1926. Serial No. 143,306. 3 Claims. (Cl. 99—11.)

3. The herein described method which consists of subjecting fruit to be washed free of arsenate of lead, to the action of a solution of oil and fatty acid in any proportions, then subjecting the fruit to the action of a solution of alkaline water and then washing the fruit in clear water.

1,624,075. STEEL OF HIGH-TEMPERATURE STABILITY. WILLIAM ROBERT SHIMER, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Nov. 29, 1924. Serial No. 752,929. 6 Claims. (Cl. 75—1.)

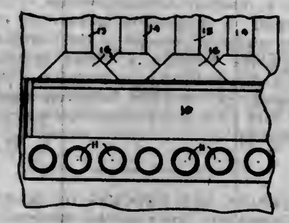
1. A low-carbon, tough, and readily workable commercial steel containing between .40 and .60 chromium, between .50 and .80 manganese and with tungsten between 1% and 1.50% added thereto to preserve the strength of the steel at high temperatures.

1,624,076. MAGNETIC BAR POLE CHUCK. FRANK LEROY SIMMONS, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Oct. 6, 1920. Serial No. 415,173. 6 Claims. (Cl. 175—367.)



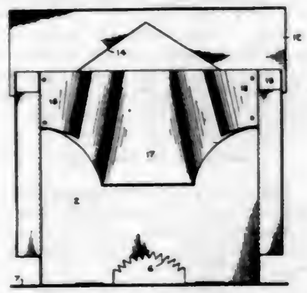
1. A magnetic chuck comprising a face plate having a horizontal supporting face, vertically extending pole pieces having side holding faces angularly disposed to said supporting face, and non-magnetic material between said pole pieces, one of said poles having a sidewise extension extending across another pole and terminating in the same plane as the other said pole to form said holding face

1,624,077. INCANDESCENT ELECTRIC LAMP. WILLIAM CHARLES SPAEDSER, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 3, 1921. Serial No. 519,764. 16 Claims. (Cl. 176—16.)



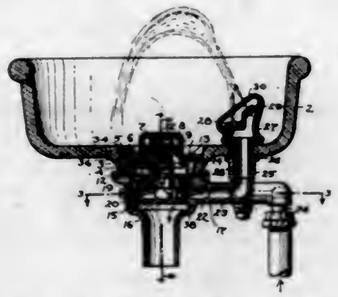
1. The process of controlling the crystal growth in a metal lamp filament when initially heated which consists in coating said filament with a compound having a high volatilization temperature and which will not react detrimentally with said filament or the residual gases within the lamp.

1,624,078. PNEUMATIC-TUBE APPARATUS. JOSEPH JOHN STOETZEL, Queens Village, N. Y., assignor to G. & G. Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 17, 1926. Serial No. 102,675. 4 Claims. (Cl. 243—9.)



1. In a pneumatic tube system, a transmitting tube, a casing communicating with said transmitting tube and provided with an orifice, means for producing a flow of air through said orifice, a valve for said orifice adapted to control the flow of air therethrough, said valve being adapted to open in the direction of said flow, spring means tending to close said valve, and means responsive to the pressure conditions in the transit tube for opening said valve.

1, 624,079. MEANS FOR DELIVERING COAL TO HOPPERS OF CONTINUOUS FUEL-FEED STOKERS. ALBERT F. STROUSE, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 1, 1925. Serial No. 27,323. 7 Claims. (Cl. 193—2.)

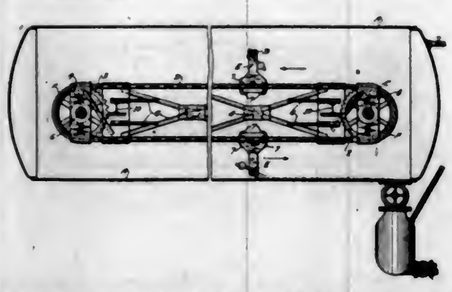


1. In combination with a multiple retort stoker, a hopper for said stoker, a plurality of chutes having discharge ends arranged to discharge into said hopper, said discharge ends being arranged in a plurality of rows and the discharge ends of one row being staggered with respect to the discharge ends of the other row.

1,624,080. HEATING DEVICE. FREDA DORETTE SULLIVAN, New York, N. Y. Filed Aug. 8, 1922. Serial No. 580,436. 6 Claims. (Cl. 126—248.)

1. A device of the character described, comprising a drum, an opening at the bottom of said drum for the admission of combustion products, a deflector mounted in said drum above said opening and extending outwardly and inwardly therein, said drum having lateral openings therein above the bottom of said deflector and below the top of the drum, and also lateral openings below said deflector, a cover mounted on said drum and extending over said openings and deflector, said device provided with openings between said cover and drum.

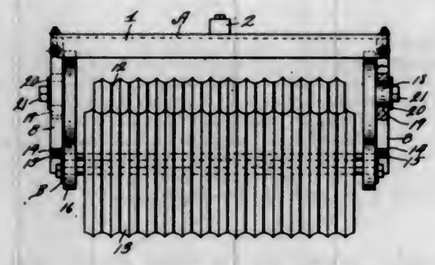
1,624,081. DRINKING FOUNTAIN. HALSEY W. TAYLOR, Warren, Ohio. Filed Aug. 14, 1922. Serial No. 581,650. 14 Claims. (Cl. 299—12.)



1. A method of producing uniformity of delivery in a drinking stream projected at an angle to the vertical under fluctuating conditions in the water supply, which consists in regulating the amount of water flowing through a delivery nozzle to maintain a predetermined minimum pressure to produce an arched drinking stream of substantial height, and in venting a part of the supply under a constant counter-pressure extraneous of the water supply to compensate fluctuations above said predetermined minimum pressure in the water supply.

4. In a drinking fountain, a fitting having a drain opening and a supply passage, a perforated plate covering said opening, and a water balancing member positioned under said plate in discharge communication with said drain opening.

1,624,082. RESINS AND PROCESS OF MAKING THE SAME. CHARLES O. TERWILLIGER, Beacon, N. Y., assignor to Fritz v. Briesen, trustee, New York, N. Y. Filed June 29, 1923. Serial No. 648,565. Renewed Feb. 7, 1927. 12 Claims. (Cl. 260—3.)

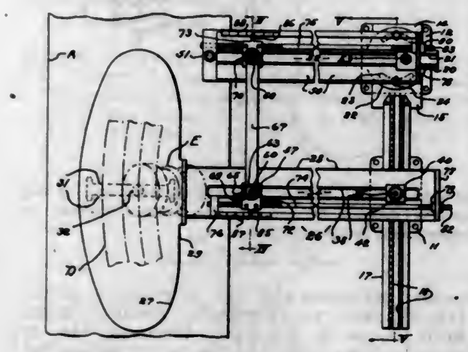


1. A resin which contains in combination a high boiling coal tar oil, a ketone and a formaldehyde body, and which has been produced by permitting such substances to react simultaneously

1,624,083. CARBON-REMOVING MECHANISM FOR STILLS. JAMES M. WADSWORTH, Fort Worth, Tex. Filed Dec. 27, 1921. Serial No. 525,171. 5 Claims. (Cl. 196—122.)

2. A still, comprising a shell provided adjacent one end with an outlet through which sediment can be removed, a scraping device arranged inside of said shell for removing sediment from the bottom of same and discharging the sediment through said outlet, an endless flexible element in said shell for actuating said scraping device, a supporting structure in said shell arranged longitudinally of same with one of its end portions in substantially fixed relation with the shell and its opposite end portion free to move longitudinally and also laterally with relation to the shell, and rotatable elements arranged adjacent the opposite ends of said supporting structure around which said flexible element travels.

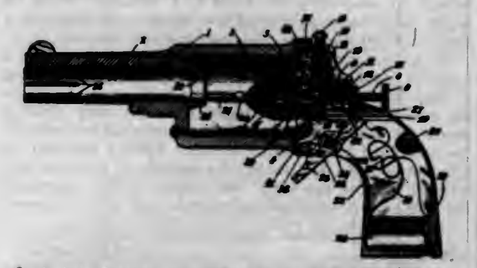
1,624,084. LAND ROLLER AND PULVERIZER. JOSEPH F. WAGNER, South Bend, Ind. Filed May 25, 1925. Serial No. 32,850. 7 Claims. (Cl. 55—77.)



1. The combination with a land roller comprising a weight frame, a roller carrying frame, of arcuately arranged meshing toothed connections between said frames and forming sole draft connections between the frames.

1,624,085. MECHANICAL MOVEMENT. JULIUS WEGNER, New York, N. Y. Filed Mar. 20, 1926. Serial No. 96,181. 19 Claims. (Cl. 90—32.)

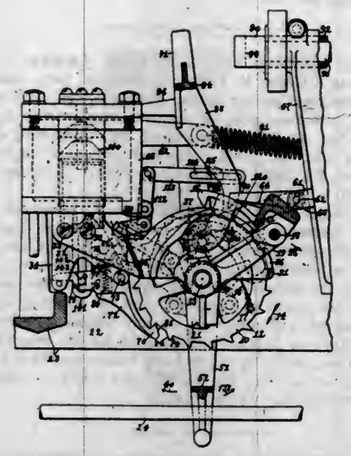
1. In a mechanical movement of the character described, the combination of a reciprocatory member, a pair of spaced apart elements coacting therewith, the latter being oscillated from their inner ends by said member, said elements having pivotal connections respectively with and offset from the member, the outer extremities of the elements being guided respectively in angular relation to and in parallelism with the direction of movement followed by the member, and a connection between the said elements intermediate the terminals thereof acting to reduce the motion of the element's extremity guided in parallelism with the reciprocation of the member, thereby contemporaneously flattening the arc of oscillation of the inner end of the last named element.



10. A device of the character described comprising in combination with a reciprocatory table and its tool,

guides disposed respectively in parallelism with and in angular relation to the direction of motion followed by said table, a primary element fulcrumed at one extremity to said parallel guide with its other end overlying the table, said overlying end affording a carrier for work presented to said tool, means for oscillating said carrier by the table about the fulcrum of said element, a secondary element spaced from said primary element pivotally

connected by the same end as the latter to the table in offset relation to said means, having the opposite terminal thereof in engagement with said angularly disposed guide, a linkage connecting the said elements intermediate their said guides and the table, serving to shift the fulcrum of the primary element during the oscillation of said carrier, and means for adjusting said linkage relatively to the elements in order to vary the arcuate travel of the carrier.



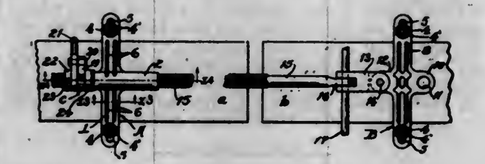
1,624,086. TOY FIREARM. JAMES H. WILY, Bethlehem, Pa. Filed Feb. 23, 1923. Serial No. 620,570. 27 Claims. (Cl. 42—54.)

2. A toy firearm comprising a barrel member having a gas chamber therein, a stock of the piston type secured to said barrel member, means whereby explosive gas may be produced in said chamber, a pyrophoric metal igniting mechanism for said chamber, and a trigger member adjacent said stock in position to produce relative motion between the elements of said igniting mechanism.

1,624,087. RAILWAY SIGNALING SYSTEM. JOHAN M. ANDERSEN, Boston, Mass., assignor to Albert & J. M. Anderson Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 5, 1923. Serial No. 616,967. 50 Claims. (Cl. 246—78.)

1. In a signal system for railways provided with a block in the track into and out of which cars pass, a switch member located at the entrance end of the block, an electrically-operated danger signal located at the outlet end of the block and controlled by the switch member at the entrance end to be lighted and extinguished thereby, and means located at the entrance end of the block and co-operating with said switch member to permit the latter to light the danger signal at the outlet end of the block and set it against cars entering the block at the outlet end when the initial car of a predetermined number of cars enters the entrance end of

the block, and to be momentarily extinguished and again lighted by each succeeding car of said predetermined number when each of said succeeding cars enters the block.



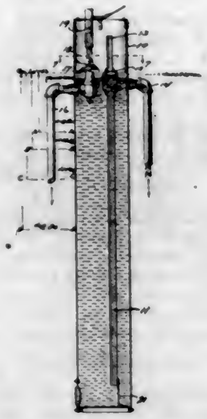
1,624,088. COMPOSITION OF GUM CHICLE DISPERSED IN AN AQUEOUS COLLOID. ARTHUR BIDDLE, Trenton, N. J., assignor to United Products Corporation of America, a Corporation of Delaware. Filed May 11, 1926. Serial No. 108,424. 12 Claims. (Cl. 134—1.)

1. A composition of matter comprising an aqueous dispersion of gum chicle and a hydrophilic colloid.

1,624,089. INSECT LIME AND METHOD OF MAKING THE SAME. ARTHUR BIDDLE, Trenton, N. J., assignor to United Products Corporation of America, a Corporation of Delaware. Filed June 24, 1926. Serial No. 118,365. 7 Claims. (Cl. 167—6.)

1. An insect lime comprising rubber dispersed in an aqueous medium, and a non-drying oil.

1,624,090. STRETCHER. JAMES G. BLAINE, Compton, and CARL B. PATTON, Los Angeles, Calif. Filed Mar. 1, 1926. Serial No. 91,390. 2 Claims. (Cl. 254—54.)

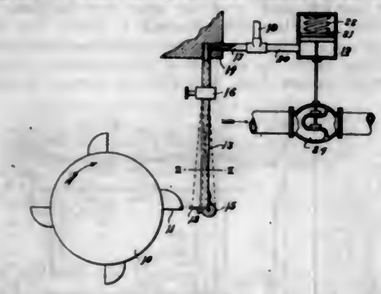


1. A device of the character set forth comprising clamp members adapted to be secured to the ends of an article to be stretched; a tube fixed to one of said clamp members, said tube projecting beyond the side of the clamp member to which it is fixed and toward the other clamp member, said tube also having a smooth bore; a link pivotally connected to said other clamp member; a screw member detachably and pivotally connected at one end

to said link, and having its threaded end extending through the smooth bore of said tube; and means threaded on said screw and being adapted to operate against said tube to force said clamp members toward each other for the purpose set forth.

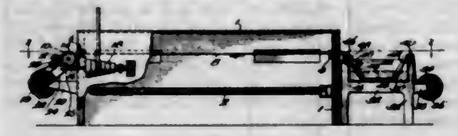
1,624,091. COATED PAPER BOARD. CHARLES C. COLBERT and GEORGE E. PRESTON, Elkhart, Ind., assignors to American Coating Mills, Elkhart, Ind., a Corporation of Indiana. Original application filed July 2, 1923 Serial No. 648,883, now Patent No. 1,514,439, and in Canada Oct. 14, 1924. Divided and this application filed Oct. 23, 1924. Serial No. 745,527. 1 Claim. (Cl. 97—68.)

Paper board composed of consolidated layers of paper material including an outer calendered liner having a finished coated surface, the fabric structure of the board being of a substantially uniform set and retaining substantially the maximum rigidity inherent in the material of which the board is composed, and the board possessing a pronounced stiffness and snappy characteristic, such fabric structure being characterized by its manufacture from the wet stock to the finished coated product without rolling up or lapping the board upon itself or subjecting it to severe flexing under tension.



1,624,092. LIQUIDS-SEPARATING DEVICE. JOHN COLEMAN, Lakewood, Ohio, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 10, 1921. Serial No. 491,096. 2 Claims. (Cl. 210—51.)

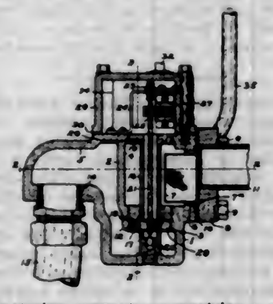
1. In a separator for removing oil from a mixture of oil and water, a tank arranged to contain water with a layer of oil floating thereon, said tank having a water outlet and an oil outlet above the level of the water outlet, an inlet arranged to deliver the mixture of oil and water above the layer of oil in the tank, and means to break up the entering mixture into relative small drops and to prevent the entry of such drops into the oil outlet.



1,624,093. AUTO-STOP GOVERNOR. DAVID C. DAVIS, Chester, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 10, 1921. Serial No. 468,310. 6 Claims. (Cl. 137—140.)

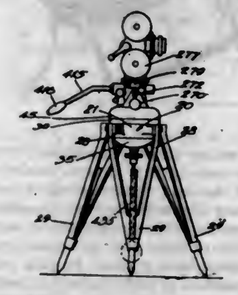
1. The combination with a rotatable member, of driving means therefor, a blade connected to said rotatable member and arranged to produce intermittent pressure waves in its ambient medium, a vibratory member disposed to be subject to said waves and tuned to a predetermined higher pitch than that corresponding to the frequency of said waves at the desired speed of said

rotatable member, and means whereby vibration of said vibratory member in excess of a certain amount de-energizes said driving means.



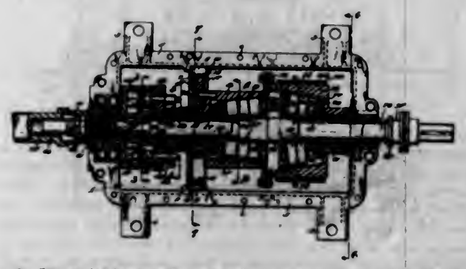
1,624,094. MACHINE FOR AND METHOD OF APPLYING VARNISH TO SHEETS OF FIBROUS MATERIAL. LOUIS T. FREDERICK, Valparaiso, Ind., assignor to Fibroc Insulation Company, Valparaiso, Ind., a Corporation of Indiana. Filed Mar. 2, 1925. Serial No. 12,497. 11 Claims. (Cl. 91—32.)

1. The method of distributing liquid uniformly upon a fibrous sheet consisting in first applying an excessive amount of liquid to the sheet and then removing the surplus by subjecting the sheet to a stripping action in which the central portion of the sheet is stretched to a greater extent than the marginal portions thereof.



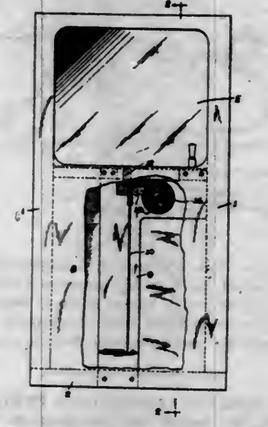
11. In a machine for applying varnish to a fabric, a bath for containing the liquid varnish, means for guiding a strip of the fabric through the bath, and a stripper for removing the surplus liquid from the strip after it leaves the bath, said stripper being arranged crosswise of the strip and being curved outward toward the strip at the mid portion, and means for yieldingly pressing said stripper against the strip, the stripper being non-rotary for making frictional contact with the strip as it passes.

1,624,095. METER. JALMAR W. G. FAIRS, Fort Wayne, Ind., assignor to S. F. Bowser and Company, Incorporated, Fort Wayne, Ind., a Corporation. Filed Oct. 11, 1923. Serial No. 667,810. 3 Claims. (Cl. 73—97.)



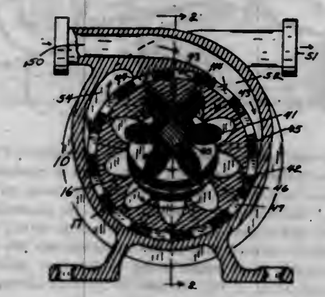
1. Fluid metering apparatus comprising a casing having inlet and outlet ports for fluid to be metered, means dividing the casing into two compartments and having a port therein to form a communication between said compartments through which the fluid flows in its passage from the inlet to the outlet port, a metering mechanism mounted on the casing, a turbine member mounted in the communicating port, a shaft connected to the turbine member and adapted to drive the metering mechanism, and a sleeve carrying fluid directing blades disposed in the port above the turbine, said sleeve being adapted to prevent contact of the fluid with the shaft and with the metering mechanism.

1,624,096. UNIVERSAL PANORAMIC TRIPOD. FRANK E. GARBUTT, Los Angeles, Calif., assignor to Famous Players-Lasky Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 2, 1925. Serial No. 54,076. 11 Claims. (Cl. 248—47.)



1. A tripod comprising: a traversing member; a tilting member supported by said traversing member; means for permitting only a harmonious motion of said traversing member; means for permitting only a harmonious motion of said tilting member; and devices for selectively disconnecting either of said means.

1,624,097. AUTOMATIC CHANGE-SPEED TRANSMISSION APPARATUS. THEODORE GENSMER, Portland, Oreg., assignor to Automatic Transmission Company, a Corporation of Oregon. Filed Feb. 23, 1926. Serial No. 89,014. 29 Claims. (Cl. 74—97.)

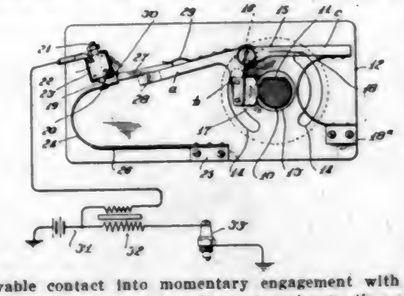


1. In variable speed transmission apparatus, a housing, a circular bearing-plate rigidly mounted interiorly of said housing, having an interior, annular chamber therein, a cylinder rotatively mounted in said bearing-plate having an axially arranged conical chamber therein, spring-pressed clutch-dogs mounted upon said cylinder and disposed within said plate-chamber engageable with the wall thereof to prevent the reverse rotation of the cylinder, a rotatable frame mounted in said cylinder-chamber and operatively connected with a driven-shaft, a plurality of rollers supported in said frame in engagement with the walls of said cylinder-chamber, a driving-member journaled axially of said housing and slidably connected to a power-driven shaft and including a cone in parallel with the walls of said cylinder-chamber, and means to resiliently engage said driving-member with said rollers.

1,624,098. WINDOW REGULATOR. BERTRAM J. GOLDSMITH and EMIL KOBB, New York, N. Y., assignors to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed May 1, 1925. Serial No. 27,211. 8 Claims. (Cl. 268—129.)

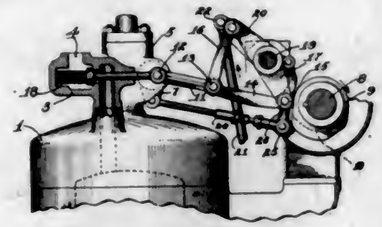
1. In a window regulator, a spring adapted to assist in the closing of the window and forming part of the mechanism for both opening and closing the window.

1,624,099. GEAR PUMP. HIRAM H. HAIGHT, Milwaukee, Wis. Filed Mar. 11, 1925. Serial No. 14,636. 19 Claims. (Cl. 103—126.)



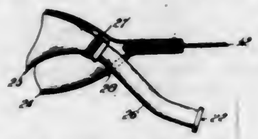
1. In a device of the character described, the combination with a pump casing and a rotary pump mechanism therein, of inlet and outlet passages communicating with opposite portions of said casing and passing each other to open in opposite directions and opposite to the portions of the casing with which they communicate, said passages being sub-divided at the point at which they pass and provided with alternating portions in staggered relation whereby a fluid passing through said casing will be distributed thereto and collected therefrom throughout the axial length of the casing with gradual change of direction and with little obstruction of flow.

1,624,100. INTERRUPTER MECHANISM. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 14, 1921. Serial No. 522,432. 7 Claims. (Cl. 200—30.)



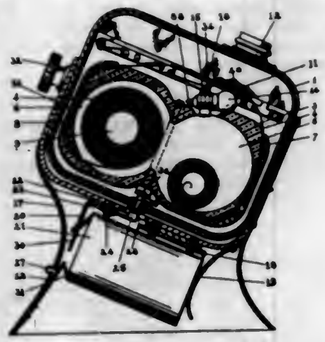
3. An ignition circuit interrupter comprising a stationary contact, a leaf spring carrying a movable contact, said leaf spring occupying a normal position with said movable contact out of engagement with said stationary con-

tact, spring operated actuating means for drawing said spring backwardly from its normal position to establish a recoil tension therein, said spring operated actuating means thereupon releasing said spring and permitting it to snap forwardly past its normal position to bring said



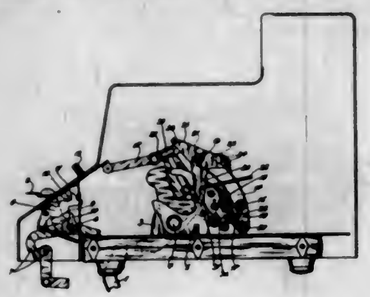
movable contact into momentary engagement with said stationary contact, said spring operated actuating means adapted to return to its initial position without causing the contacts to be brought into engagement and engine-operated means for operating said actuating means.

1,624,101. INTERNAL-COMBUSTION ENGINE. ARTHUR S. HAWKS, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 18, 1921. Serial No. 438,067. 11 Claims. (Cl. 123—90.)



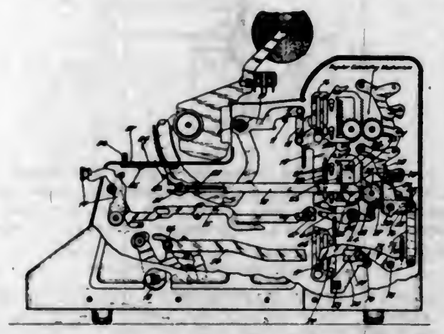
1. In a combustion engine, the combination of a valve thereof, an actuator for said valve, and a push-rod type of connector composed of links hinged to each other, one end of the assemblage of links being in operating relation to the valve and the other end in operating relation to said actuator, and means for maintaining the links in a substantially fixed relation to each other during successive actuations of the connector by said actuator.

1,624,102. SWIMMING WING. WILLIAM KENNEDY, Chicago, Ill., assignor, by direct and mesne assignments, to Airubber Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 22, 1923. Serial No. 676,215. Renewed Sept. 7, 1926. 2 Claims. (Cl. 9—17.)



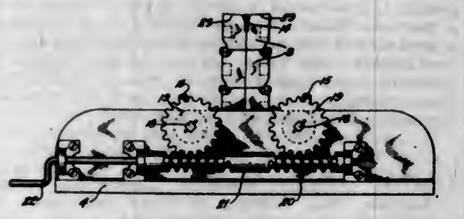
1. A swimming wing composed of a pair of separately inflatable air-holding bags having an outer surface of fabric and formed with a reduced portion or neck provided with a tube-receiving opening, an air-introducing tube disposed through said opening and having a reenforcing ferrule within the inner end thereof, a plug member insertable in the outer end of each tube, and a non-elastic strap or band secured at its ends to the air-holding bags.

1,624,103. COMBINATION MOTION-PICTURE CAMERA AND DISPLAY APPARATUS. RUDOLPH KNOPP, New York, N. Y. Filed Oct. 30, 1925. Serial No. 65,844. 1 Claim. (Cl. 88—17.)



In an apparatus for displaying motion pictures, the combination of a motion picture camera having an objective lens, a standard for said camera adapted to support said camera, a battery mounted in said standard, a pair of electrical contacts on said standard and a pair of electrical contacts on said camera and clamping means on said standard to clamp said camera to said standard with the electrical contacts of one in relative contact with the electric contacts of the other, an electric light mounted within said camera behind the moving film and adapted to illuminate said film on the operation of said switch to make the film in the camera visible thru its objective lens.

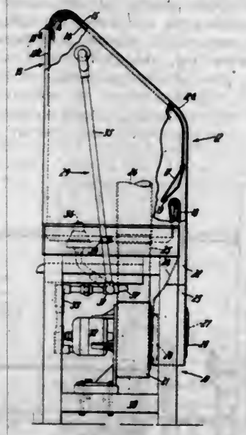
1,624,104. ADDING MACHINE. HARRY LANDSIEDEL, Norwood, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 6, 1923. Serial No. 611,057. 22 Claims. (Cl. 235—62.)



13. In a machine of the character described, the combination of a rock shaft, a manually operable part for turning said rock shaft from a starting position, a separate independently operable part for turning said shaft from said starting position while said manually operable part remains unoperated, a full stroke pawl pivotally supported by the rock shaft, a rigid segment having notches adapted to be engaged by said pawl when said shaft is turned by said manually operable part, an element settable to prevent said pawl from engaging the notches in said segment, a device operable independently of said manually operable part to set said element to prevent said pawl from engaging the notches in said segment, and means preventing operation of said manually operable part when said element is in position to prevent said pawl from engaging said notches.

1,624,105. CALCULATING AND RECORDING MACHINE. WALTER W. LANDSIEDEL, Norwood, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 9, 1924. Serial No. 712,033. 37 Claims. (Cl. 235—60.)

12. A calculating machine comprising a calculating mechanism operable from and to clear position in performance of calculations, a total key device, a block arm for preventing operation of said total key device when said calculating mechanism is out of clear position, means under control of said calculating mechanism whereby said block arm is retained in position to prevent operation of said total key device when said clearing mechanism is out of clear position, and means for moving said block arm to position to permit operation of said total key device when said calculating mechanism is in clear position.



1,624,106. LIFTING JACK. ADOLPH S. LARSON, North Lake, Wis. Filed Jan. 24, 1925. Serial No. 4,499. 2 Claims. (Cl. 254—97.)

1. In a lifting jack, the combination with a frame, of a pair of articulated chain type sections operatively connected together and movable toward and away from each other to form a collapsible lifting standard, guide means for turning the sections from horizontal to vertical, sprockets engageable with the links of each of said sections at the turn to operate the standard, the guide means extending upwardly to substantially the center line between the axes of said sprockets, and means for actuating said sprockets.

1,624,107. FUME-DISPOSAL APPARATUS FOR WORK-BENCHES. JOSEPH LINDBURG, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 8, 1923. Serial No. 667,430. 10 Claims. (Cl. 98—115.)

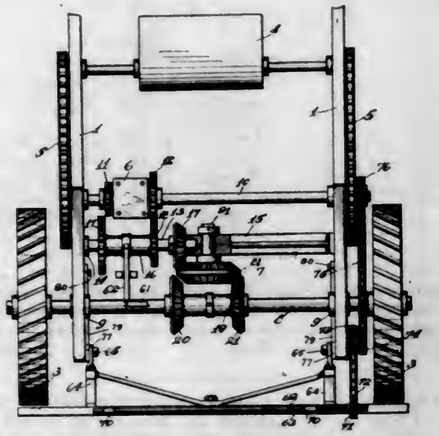
1. An apparatus for removing fumes from a work bench, some of the fumes being lighter and others heavier than air, comprising a hood having a front and a rear wall, the rear wall extending upwardly from the bench then forwardly over the bench and curved downwardly to an opening in the front of the hood, the front wall terminating within and near the top and bottom portions of the rear wall with a space intermediate the walls extending across the top of the hood, means communicating with the bottom of the hood for sucking the fumes lighter than air over the top terminal of the inner wall

downwardly between the walls and the fluid heavier than air down under the lower terminal of the inner wall and through the sucking means and a conduit for conducting the fumes away.

1,624,108. SHUTTLE MECHANISM FOR LOOMS. JONATHAN LUCAS, Savannah, Ga., assignor to Lucas-Lamborn Loom Corporation, New York, N. Y., a Corporation of New York. Filed May 16, 1925, Serial No. 30,656. Renewed Nov. 1, 1926. 11 Claims. (Cl. 139—141.)

11. In the loom, the combination of a shuttle, carriers movable toward and away from each other, supporting devices on said carrier for supporting said shuttle in alternate sequence and protecting devices mounted upon said carriers and projecting inwardly therefrom, said protecting devices in the innermost position of the carriers, cooperating to form a protecting enclosure for the shuttle and the supporting devices.

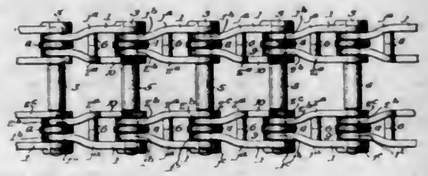
1,624,109. INCANDESCENT ELECTRIC LAMP. DUNCAN MACRAE, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 2, 1921. Serial No. 519,509. 7 Claims. (Cl. 176—16.)



3. An incandescent electric lamp of the vacuum type having a low residual gas content and an unactivated getter which on initial-burning of the filament is completely vaporized without the evolution of a harmful amount of permanent gas.

1,624,110. TRACTOR. MALCOLM MONCREIFFE, Big Horn, Wyo. Filed Apr. 12, 1920. Serial No. 373,076. 2 Claims. (Cl. 180—14.)

1. In a self propelled vehicle, the combination of a motor, a reversible power transmission gearing for propelling the vehicle in a rearward direction, a vertically adjustable pusher bar extending across the rear of the vehicle and a shaft on the pusher bar extending across the rear of the vehicle and operable from the motor.

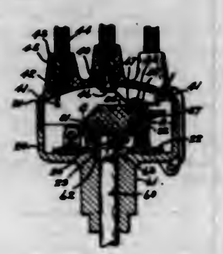


2. In combination in a vehicle having a drive wheel at one end and a guide wheel at the opposite end, means

for selectively propelling the vehicle in either direction of travel; steering mechanism for controlling the guide wheel and comprising an upright support on the vehicle, a steering column rotatably supported by said upright support, controlling means at the upper end of said column for rotating the latter and a steering gear secured to the lower end of the column, a horizontally disposed shaft for controlling said guide wheel, a gear member non-rotatably but slidably mounted on said shaft and adapted to be adjusted so as to selectively mesh with diametrically opposite sides of said steering gear, whereby rotation in one direction of the steering column may be

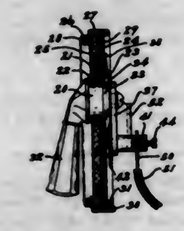
transmitted to rotation of said shaft in either direction according to the position of adjustment of said gear member and whereby the same movement of said controlling means is operable to similarly guide the vehicle in either direction of travel; a seat revolubly mounted on said support and adapted to be swung thereabout to face either forwardly or rearwardly of the vehicle, and locking means controlled by the weight of the seat for maintaining the seat in either position of adjustment; and means for effecting adjustment of said gear member and operable as an incident to swinging of said seat from one position to the other without materially varying the height of said seat or controlling means.

1,624,111. HEAVY-TENSION LAP-LINK CHAIN. WALTER J. MULLALLY, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 24, 1923. Serial No. 664,636. 4 Claims. (Cl. 74—32.)



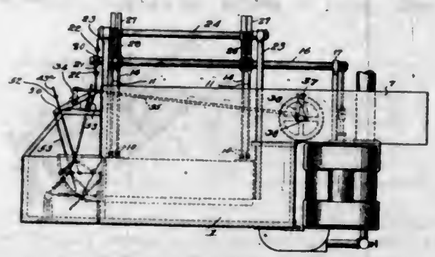
3. In heavy tension lap link chains, links composed each of two separately formed side members, deflected intermediately of their ends to vary the spacing at their respective ends, sleeves separately spacing said links at one end, and lugs on the respective side members, adjacent their intermediate deflections, abutting together to resist straightening of the side members under longitudinal strains thereon, but relatively movable to avoid loading one side member by another.

1,624,112. WHEEL AND BRAKE DRUM. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Mar. 11, 1924. Serial No. 698,400. 8 Claims. (Cl. 301—6.)



7. A vehicle wheel comprising a metal disc formed of a plurality of annular parts, the outer edge of an inner part and the inner edge of the next outer part having adjacent flanges and a third member welded to the edges of said flanges.

1,624,113. IGNITION APPARATUS. HARRY E. NORVIEL, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 20, 1923. Serial No. 675,928. 4 Claims. (Cl. 200—21.)

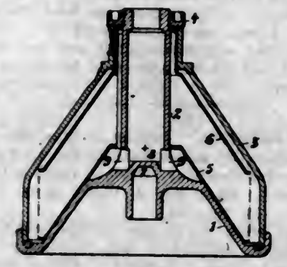


2. Ignition timing and distributing apparatus comprising, in combination, a driving shaft, a breaker lever, a distributor head, a metallic cupped member detachably engageable with the end portion of said shaft and directly driven thereby and having an annular flange shaped to provide a timer cam, a body of phenolic condensation product molded to said cupped member, and a distributing conductor attached to said body.

1,624,114. CONTROL FIXTURE. HARRY E. NORVIEL, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 12, 1924. Serial No. 731,689. 2 Claims. (Cl. 74—39.)

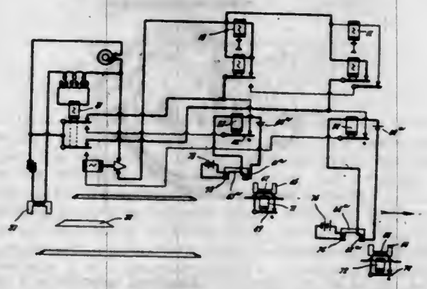
1. A manually operable controlling fixture for automobiles comprising, in combination, a plate adapted to be attached to the instrument board of the automobile; a shaft extending through the plate and having a handle adjacent the front of the plate; a washer attached to the shaft adjacent the back of the plate and having resilient fingers bearing against the back of the plate and a crank connected with the shaft adjacent said washer.

1,624,115. HYDRODYNAMIC POWER MACHINE. LEMON L. OSBORN, Los Angeles, Calif. Filed May 12, 1925. Serial No. 29,818. 14 Claims. (Cl. 253—17.)



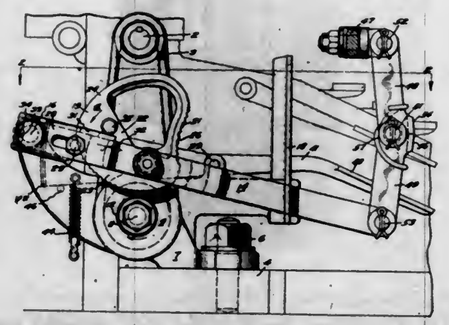
1. In a machine of the class described, the combination with a casing, of sets of operated devices in said casing, each of said sets including a float and a bucket, means for alternately supplying liquid simultaneously to a bucket in one set and to or under the bottom of the float in the same set, a shaft, means connecting each set of said devices to said shaft, whereby the shaft is rotated when liquid is supplied to said sets of devices, and valve means in said casing and controlling the supply of liquid to said sets of operated devices.

1,624,116. ARTIFICIAL BAIT. ALBERT J. PUTNAM and JOHN W. WILSON, Kalispell, Mont. Filed July 6, 1926. Serial No. 120,684. 2 Claims. (Cl. 43—42.)



1. An artificial bait having a spoon portion at its tail end provided with means for attachment of a hook, a vane portion at its head end, and a shank portion between said spoon and vane portions, said spoon and shank portions being longitudinally and transversely of concavo-convex form, and an attaching member located at the junction of said shank and vane portions, the vane portion extending upwardly and forwardly at an oblique angle to the chord of the line of longitudinal curvature of said spoon and shank portions.

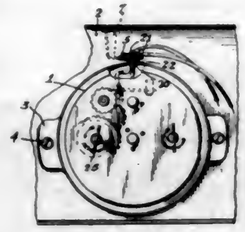
1,624,117. SELF-ADJUSTING CENTRIFUGAL BOWL. JOHANNES VALDEMAR MÄRTEN RISBERG, Sodertelje, Sweden, assignor to Aktiebolaget Baltic, Stockholm, Sweden, a Corporation of Sweden. Filed Oct. 26, 1921, Serial No. 510,648, and in Sweden Jan. 15, 1920. 1 Claim. (Cl. 233—23.)



A separator bowl freely suspended at the upper end of its driving spindle and provided with superposed conical discs, including a bottom having a central, downwardly extending socket closed at its upper end, the end wall of said socket constituting the suspension point of the bowl, and a central inlet tube, the bottom of which is formed by the end wall of said socket, said end wall being located below the inner edge of the bottom disk, said central tube being provided with openings communicating directly with the space between the bottom wall of the drum and the bottom disk and located substantially in the plane of said end wall.

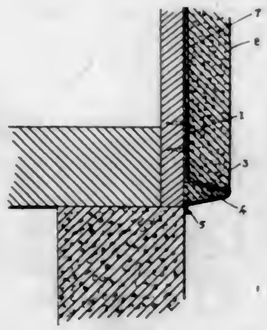
1,624,118. AUTOMATIC TRAIN CONTROL. DANIEL HERBERT SCHWEYER, Easton, Pa. Filed Apr. 21, 1925. Serial No. 24,755. 7 Claims. (Cl. 246—63.)

1. Automatic train control apparatus including a body of magnetic material on the trackway, two inductors on the trackway associated with said body and each including a control coil in an electric circuit, means controlling said circuits for different traffic conditions, and vehicle-carried control means including an inductor affected inductively when passing said body to obtain an initiating effect and one control condition, and including other inductors energized by direct current and cooperable inductively with said trackway inductors whereby when the respective aforesaid circuits are closed the initiating effect is nullified and other controlling conditions are obtained selectively.



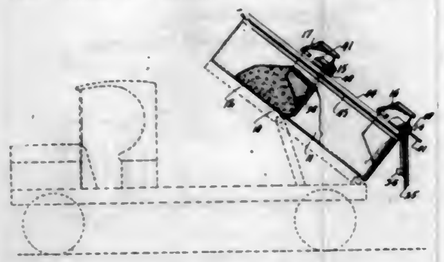
1,624,119. DEVICE FOR LIFTING ASSEMBLY ELEVATORS. CLIFFORD E. J. SIMKINS, San Francisco, Calif. Filed June 28, 1924. Serial No. 721,636. 4 Claims. (Cl. 190—31.)

1. In a device for lifting an assembly elevator, a rotatable shaft, a lifting arm connected to said elevator, a fixed stop for limiting the downward movement of said



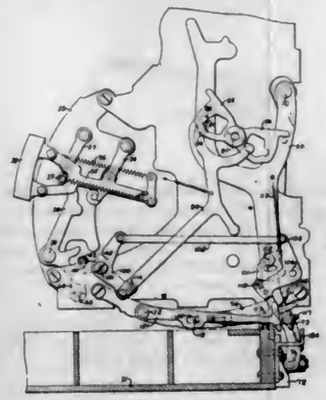
lifting arm, cam means operated by said shaft for lifting said arm from said stop, key controlled means for establishing an operative connection between said cam means and said shaft and for interrupting said operative connection automatically when said arm is lowered, and means operable within predetermined load limits for connecting said arm to said assembly elevator.

1,624,120. ELECTRIC SWITCH. JOHN E. SPRINGER and ROBERT A. HARRY, Baltimore, Md. Filed Jan. 24, 1923, Serial No. 614,642. Renewed Dec. 2, 1925. 1 Claim. (Cl. 200—35.)



A device of the character described comprising a clock mechanism at which one end of an electric circuit is grounded, a setting lever, means by which said lever is pivoted on the clock case and by which said ground is established, a contactor embodied in the clock mechanism and adapted to be vibrated thereby at a set time, a contact pin to which the other end of the circuit is connected, and means by which said pin is insulatively mounted on the lever, said lever being adapted to either sustain the pin in an engageable or non-engageable position in respect to the contactor.

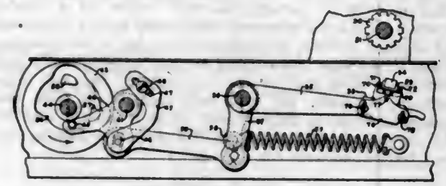
1,624,121. ANCHORING FLANGE. HERMAN C. THIEM, Rochester, N. Y. Filed Sept. 4, 1926. Serial No. 133,523. 2 Claims. (Cl. 72—123.)



1. An anchoring flange for the lower horizontal edge of stucco and plaster coatings comprising a metal base strip, a triangular hollow supporting ledge having holes in the top thereof projecting from said metal base strip and an outwardly curved flange on the underside of said supporting ledge and at the inner end thereof.

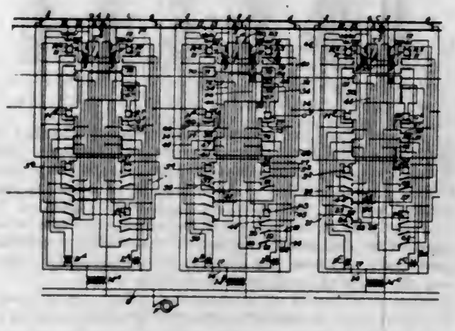
1,624,122. BATCHING APPARATUS. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Nov. 7, 1922. Serial No. 599,529. 15 Claims. (Cl. 298—8.)

1. The combination of a dumping container, and a lateral closure structure therefor, said closure structure comprising a gate for controlling the discharge from the container and also comprising an auxiliary cement compartment.



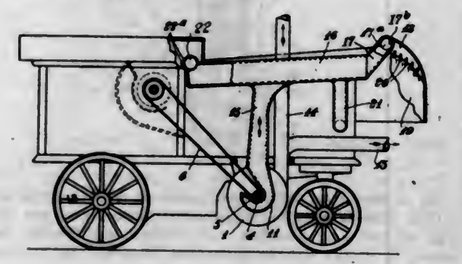
1,624,123. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 11, 1924. Serial No. 698,436. 9 Claims. (Cl. 235—22.)

1. In a machine of the class described, the combination of a cash drawer, a latch adapted to retain said drawer in inaccessible position, manipulative means for operating said latch to release said drawer, driving arms adapted to move said drawer into accessible position, a full-stroke device for said driving arms, a bracket on said cash drawer, an arm adapted to be engaged by said bracket to intercept said drawer, and means operated by said driving arms for raising said intercepting arm out of engaging position with said bracket after said full-stroke device becomes effective.



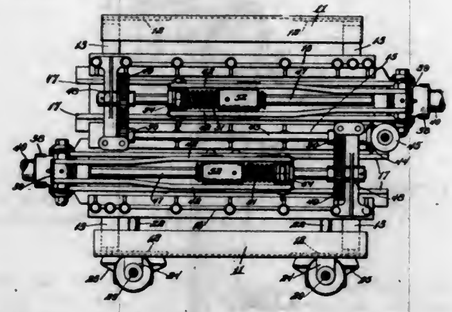
1,624,124. PRINTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed May 4, 1925. Serial No. 27,831. 8 Claims. (Cl. 101—93.)

1. In a printing mechanism, a type member, an impression hammer adapted to take impressions from said type member on record material, a driving shaft, a disk secured to said driving shaft, a groove in said disk formed concentric with said shaft, a second groove in said disk portions of which coincide with said first mentioned groove and other portions of which are eccentric, means for disabling said impression hammer, and means operatively connected to said impression hammer adapted to



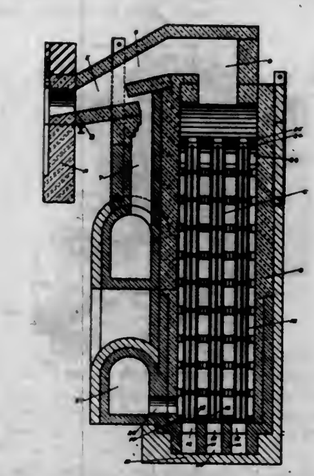
move in the concentric groove when said hammer is disabled and in a portion of the concentric groove and in the eccentric groove when said hammer is not disabled.

1,624,125. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 5, 1923. Serial No. 649,442. 32 Claims. (Cl. 246—34.)



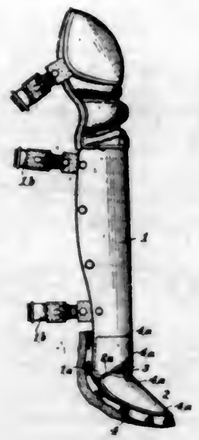
1. In combination, a stretch of railway track, a relay, a local circuit for said stretch including the track rails of said stretch in multiple and also normally including a winding of said relay, means for at times removing said relay from said circuit, and traffic governing means controlled by said relay.

1,624,126. THRASHING MACHINE. AXEL EDVARD HENRIKSON WALLENBERG, Vasteriosa, Sweden. Filed Sept. 15, 1923, Serial No. 662,812, and in Sweden June 21, 1922. 2 Claims. (Cl. 130—29.)



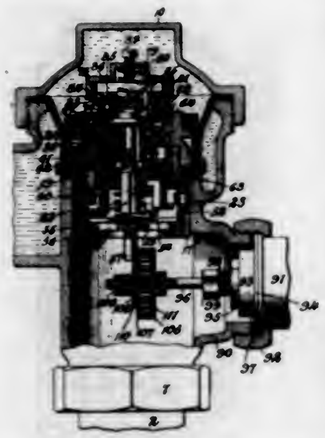
1. In a thrashing machine, the combination with a dust suction fan blower, of suction conduits leading from said blower to the feed opening, the straw outlet and the interior of the machine, and a chaff blower coaxially mounted with reference to said other blower and being separated therefrom and from said suction conduits.

1,624,127. ROAD-GRADER AXLE ASSEMBLY. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Aug. 21, 1924. Serial No. 733,406. 5 Claims. (Cl. 280—80.)



1. In a machine of the character described, an extensible rear axle section mounted for transverse movement to extend or retract the axle, a knuckle pivotally mounted upon the extremity of the axle section and carrying a wheel, means for operating said knuckle including a shaft extending parallel to the axle section and held from longitudinal movement, a worm sleeve having rotative engagement with the shaft but being longitudinally shiftable therealong, a fixed member having screw-threaded engagement with said worm sleeve to thereby cause a longitudinal movement of the worm sleeve as the worm sleeve is rotated, a member controlled by said worm sleeve and operatively connected to the knuckle, and means for manually rotating said shaft.

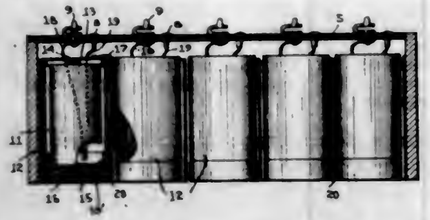
1,624,128. RECUPERATOR. WALTER O. AMSLER, Pittsburgh, Pa., assignor to The Amsler-Morton Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,980. 5 Claims. (Cl. 72—15.5.)



1. A recuperator comprising a vertical chamber having a plurality of vertical refractory pipes extending therethrough, means for introducing hot gases at the top of the chamber, means for withdrawing gases from the bottom thereof, said chamber being relatively open whereby the gases may freely circulate about the pipes and flow down through the chamber to effect an even distribution of heat.

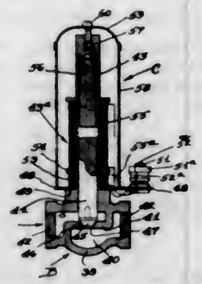
1,624,129. LEG GUARD FOR ATHLETES. WILLIAM BARRETT, Philadelphia, Pa., assignor to George A. Reach, Philadelphia, Pa. Filed July 10, 1926. Serial No. 121,655. 2 Claims. (Cl. 2—22.)

2. A protector of the class described, comprising a leg guard having a concave curved lower edge, an instep guard having a concaved upper edge, the corners at the termini of said concave edges of said parts being juxtaposed, and cushioning means of flexible moisture-proof material secured to the inner faces of the instep guard and lower end of the leg guard, and bridging the space formed by said concaved edges.



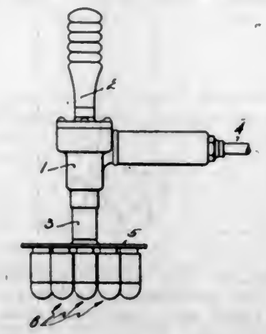
1,624,130. FLUSH VALVE. THOMAS ROBERT BEGGS, Hartford, Conn. Filed Mar. 20, 1925. Serial No. 16,960. 19 Claims. (Cl. 137—93.)

1. In a device of the character described, the combination of a housing having an inlet and an outlet, an outlet valve normally seated on said outlet, means operable by fluid pressure for unseating said valve and slowly raising it, locking means carried by said valve and controlling the application of pressure so as to temporarily prevent the return of said valve to its seat, and means for releasing said locking means when the valve has been raised a predetermined distance, said releasing means being adjustable to vary the distance through which the valve must be moved before the release of the locking means.



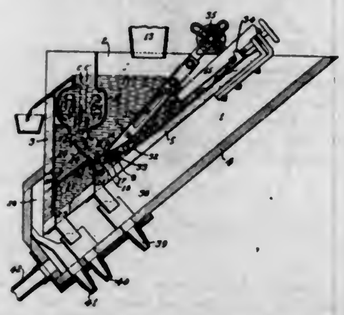
16. In a device of the character described, the combination with a vertically movable valve, of a tiltable member seated beneath said valve and having a depending stem, a slidably mounted rod having a head thereon which is movable transversely but not longitudinally with respect to said rod, means for moving the rod longitudinally to bring the head into engagement with said depending stem to actuate said tiltable member and lift the valve, and yieldable means for normally holding said head concentric with the rod.

1,624,131. BATTERY CASE. CONRAD EDISON BOBBITT, Humboldt, Tenn., assignor of one-half to Lloyd S. Adams and James D. Senter, Humboldt, Tenn. Filed Dec. 13, 1923. Serial No. 680,504. 8 Claims. (Cl. 136—108.)



1. A container for batteries comprising a plurality of electrically connected battery receiving chambers, each of said chambers having metallic end closures which are fixedly attached thereto, rings fixedly attached to the opposite ends of the chambers, said rings extending beyond the ends of the aforesaid chambers, caps removably attached to the rings, and means for testing individual battery cells without the removal thereof from the chambers in which the batteries are placed.

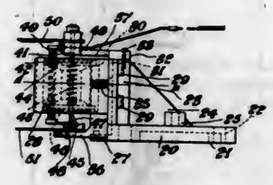
1,624,132. GAS-CONTROL APPLIANCE. JAMES WALTER BROWN, Minneapolis, Minn., assignor to Brown Engineering Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 26, 1921. Serial No. 455,931. Renewed Aug. 27, 1926. 1 Claim. (Cl. 137—139.)



In a device of the class described, the combination with a heater, including a burner, coupled with a gas supply conduit and provided with means for lighting the same, of a gas cut-off mechanism incorporated in said conduit, including a vertically floating valve member adapted, in the absence of resistance, to fall into valve closing position, a solenoid magnet for lifting said valve member, a holding magnet to retain said member in elevated position, a control station at a point removed from the heater, two circuit completing devices at said control station, a circuit for energizing the lifting and holding magnets, including one of said circuit completing devices, and a second circuit for neutralizing the attractive force of said holding magnet, including the other circuit completing device.

1,624,133. MASSAGE APPLIANCE. CHARLES W. CHENEY, Boston, Mass. Filed July 20, 1926. Serial No. 123,739. 4 Claims. (Cl. 128—56.)

1. In a mechanically operated massage appliance of the kind having a rotary supporting disk and a plurality of knobs projecting from one face of the disk, one at least of said knobs comprising telescoping cylindrical members, one of said members being secured to the disk and the other having a removable end closure, said end closure consisting of a plug of hard non-metallic material having a substantially hemispherical flesh engaging surface.

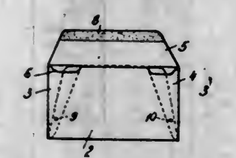


1,624,134. METHOD OF CLASSIFYING CRUSHED ORE AND THE LIKE. SAMUEL H. DOLBEAR, San Francisco, Calif., and BYRON L. EASTMAN, New York, N. Y., assignors, by mesne assignments, to Selective Treatment Company Limited, Montreal, Canada, a Corporation of Quebec, Canada. Filed Jan. 5, 1922. Serial No. 527,164. 3 Claims. (Cl. 209—157.)

1. The method of classifying crushed material which consists in bringing the same into contact with a jet of water, then diverting the course of the jet upwardly into contact with a body of relatively still water, and then causing the projected water to yield a part of its load by centrifugal effect.

1,624,135. ELECTRICAL MEASURING INSTRUMENT. CHARLES EDWIN FOSTER, Letchworth, England. Filed Apr. 16, 1925, Serial No. 23,631, and in Great Britain Jan. 16, 1925. 4 Claims. (Cl. 171—95.)

1. In an indicating or recording instrument, a one-side support for the angularly movable pointer or needle comprising in combination a base member, a vertical member carried by said base member, a member arranged



adjacent the pointer on one side thereof for supporting said pointer, and means for slidably mounting said supporting member upon said vertical member.

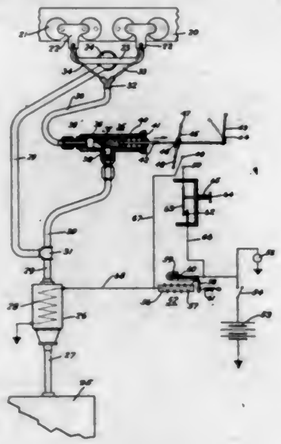
1,624,136. CUTTING TOOL. HENRY GOLDBLATT, Kansas City, Mo. Filed Nov. 22, 1924. Serial No. 751,430. 1 Claim. (Cl. 72—128.)

In a device of the kind described, a handle comprising three members disposed side by side, a U shaped blade having its arms disposed respectively between the middle member and said outer members, said arms having correspondingly disposed notches in their lateral edges, and a clamping screw extending through and connecting said outer members by which they may be made to clamp said arms against the middle member, said screw extending through and being laterally insertable in and of substantially less diameter than said notches and removable from said arms through said notches, the blade thereby being circumferentially and adjustable radially in all directions relatively to said screw.

1,624,137. ENVELOPE. GEORGE FRANCIS HOGAN, Chicago, Ill. Filed Apr. 9, 1924. Serial No. 705,195. 5 Claims. (Cl. 229—76.)

1. An envelope comprising a front portion, a bottom flap, two side flaps, a sealing flap, and means for loosely holding said bottom flap against one side flap at one point, the said bottom flap being fixed to this side flap at another point by a ruptrable connection, whereby these two flaps can be separated readily.

1,624,138. OIL GUN. PETER J. JORGENSEN and CLARENCE H. JORGENSEN, Chicago, Ill. Filed Nov. 20, 1922. Serial No. 602,244. 4 Claims. (Cl. 221—47.3.)

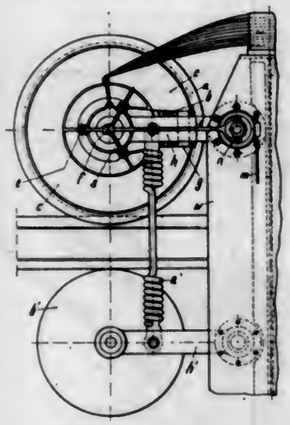


1. An oil gun comprising in combination a cylinder having a discharge port at one of its ends, an end closure member, an externally threaded gland in engagement with said closure member, a piston in said cylinder

having an externally threaded stem and means carried by said gland member adapted to be brought into and out

of engagement with the threads on the said stem, the said gland having threads of lesser pitch than the threads on the said stem.

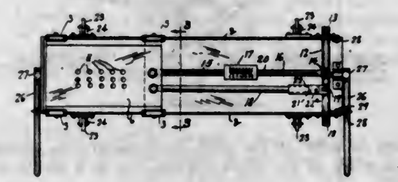
1,624,139. FUEL-SUPPLY DEVICE. CHARLES F. KETTERING, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 29, 1924. Serial No. 702,992. 8 Claims. (Cl. 123—187.5.)



1. A fuel supply device for an internal combustion engine including an intake passage, comprising in combination, main fuel supply apparatus including a fuel tank, pump and carburetor; a priming device connected to the pump and inlet passage, said device being normally inoperative; means for rendering the priming device operative and the pump inoperative; and means for reestablishing the pump operation while the priming device is operative.

1,624,140. COLLAPSIBLE TUBE. KARL KIEFER, Cincinnati, Ohio. Filed Sept. 21, 1923. Serial No. 664,079. 4 Claims. (Cl. 221—60.)

3. A collapsible tube having a self-sustaining closure consisting solely of intimately contacting portions of the tube walls having sharp folds which cross each other.

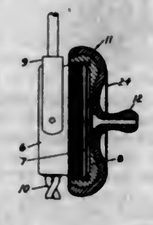


1,624,141. BRAKING ARRANGEMENT FOR HIGH-SPEED SUSPENSION RAILWAYS. FRANZ KRUCKENBERG and CURT STEDEFELD, Heidelberg, Germany; said Stedefeld assignor to said Kruckenberg. Filed Jan. 24, 1925, Serial No. 4,574, and in Germany Aug. 29, 1923. 9 Claims. (Cl. 188—42.)

1. In a braking device for a high speed suspension car the combination with the car body and one of the suspension wheels therefor, of an arm member pivoted at one end to the car body and having said suspension wheel supported at the free end, means for braking said wheel, mechanism for actuating said braking means, said actuating mechanism being disposed adjacent to the pivot of said arm.

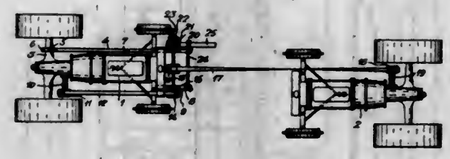
1,624,142. BRAKE GAUGE. EDWARD L. MACABEE and FABIAN E. MACABEE, Hayward, Calif. Filed Nov. 19, 1925. Serial No. 69,992. 6 Claims. (Cl. 265—1.)

1. A brake gauge of the character described, comprising a member having two parallel rails, wheels riding on the rails having a platform suspended therefrom adapted to have a vehicle wheel rest thereon, means for exerting pull on the platform and a gauge associated with the latter means allowing the force necessary to revolve the wheel against a brake applied thereto to be determined.



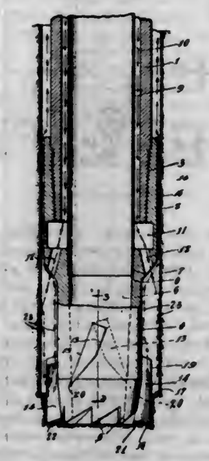
5. A brake gauge of the character described, comprising movable means for frictionally engaging the periphery of a wheel, a shaft supported transversely to the direction of travel of and at a distance from said means, a handle on the shaft for turning the same, an arm extending from the shaft and a rod connecting the said arm with the said means for exerting pull on the latter, said rod comprising two relatively movable sections with a force-measuring gauge connecting the sections and allowing the pull necessary to move the said means to be measured.

1,624,143. SHOE TONGUE AND FASTENER. BERNARD C. MCENTEE and LOUIS H. CONSTANT, Wichita Falls, Tex. Filed Mar. 25, 1926. Serial No. 97,343. 14 Claims. (Cl. 36—54.)



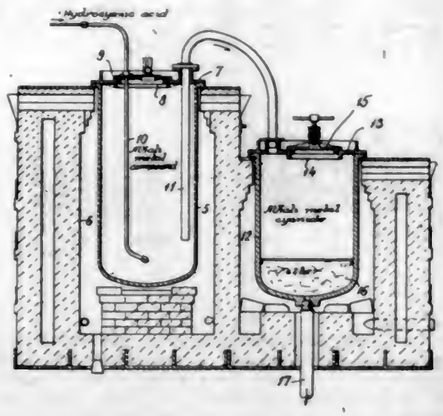
1. A shoe including a top having spaced edge portions provided with eyes, a tongue to extend beneath the spaced edge portions of said top in underlying relation to the eyes, a portion of said tongue being adapted to be disposed in overlying relation to the eyes of said top, and fasteners adapted to be passed through said eyes and releasably connect the overlying and underlying portions of said tongue.

1,624,144. SOUND-RECEIVING EARPIECE. HARRY J. MATHIEU, Oakland, Calif. Filed Feb. 16, 1925. Serial No. 9,501. 1 Claim. (Cl. 179—182.)



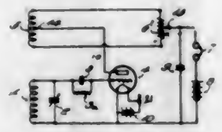
An attachment for a phone receiver comprising a cap of resilient material having a concavo-convex surface and having a major diameter adapting it to be snapped over and to grip the earpiece of the receiver, and having an apertured nipple integrally formed therewith and adapted to enter the canal of the auditor's ear when the receiver is placed to the ear; said attachment being constituted as a unitary piece of soft rubber.

1,624,145. COMBINATION POWER-TRANSMISSION DEVICE. GEORGE M. MOSHER, Jenkins Township, Mitchell County, Iowa. Filed Nov. 16, 1925. Serial No. 69,445. 2 Claims. (Cl. 180—53.)



1. In combination, independent power plants separately mounted for transportation, a driven rotatable shaft mounted on one of said power plants, power transmission devices connected between said power plants and said shaft to rotate it in one direction, and another power transmission device driven by said shaft.

1,624,146. CORE DRILL. FAY OLIVER, Whittier, Calif., assignor, by direct and mesne assignments, to Elliott Core Drilling Company, a Corporation of California. Filed Feb. 16, 1925. Serial No. 9,455. 11 Claims. (Cl. 255—72.)



1. In a rotary core drill, the combination of a hollow core drill head having an exteriorly downwardly tapered portion terminating in an annular cutter at its lower end, a plurality of initial cutting blades on said tapered portion of the head extending outwardly beyond said annular cutter, and a plurality of reaming blades on said head extending outwardly beyond said initial cutting blades, the cutting edges of the reaming blades being above the cutting edges of the initial cutting blades.

1,624,147. PROCESS OF PREPARING ALKALI-METAL CYANIDES. ROBERT W. POINDEXTER, Jr., Los Angeles, and PAUL T. DOLLEY, Los Angeles County, Calif., assignors to California Cyanide Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Apr. 17, 1926. Serial No. 102,612. 17 Claims. (Cl. 23—79.)

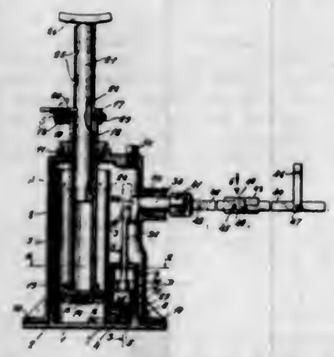
1. The process of preparing alkali metal cyanides, which comprises introducing hydrocyanic acid into a molten mass containing an alkali metal compound capable of reacting therewith.

1,624,148. SIGNAL-RECEIVING CIRCUITS. EDWIN L. POWELL, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 6, 1926. Serial No. 92,893. 11 Claims. (Cl. 250—27.)

1. An electron tube system comprising in combination with an electron tube having grid, filament and plate electrodes, an input circuit including said grid and filament electrodes, an output circuit including said plate and filament electrodes, and a differential circuit interlinking said input and output circuits comprising an inductance shunted by an impedance, said impedance becoming increasingly large in one portion of said differential circuit while said impedance decreases in another portion of said differential circuit, one portion of said differential circuit operating to facilitate regeneration in said circuits, and another portion of said differential circuit operating to reduce the tendency of said circuits to regenerate, whereby a balanced condition of operation of said circuits may be maintained in a predetermined state of regeneration or oscillation.

1,624,149. LANTERNS CALLED PERSONAL CHARACTER READERS. ALFREDO L. ROMERO, San Francisco, Calif. Filed June 19, 1925. Serial No. 38,234. 2 Claims. (Cl. 273—161.)

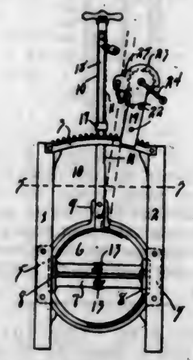
1. In personal character-reader star lanterns, twenty-four or so in number and varieties—provided with personal character readings of human beings, with the ideal colors for them to wear, as per books on zodiacs, said personal character-reader star lanterns are divided into



twelve months of the year, each lantern to correspond to each sex of the human beings for each month of the year.

1,624,150. LUMBER GAUGE. JOHN SCHERER, Marinette, Wis. Filed Mar. 20, 1926. Serial No. 96,183. 4 Claims. (Cl. 33—168.)

1. A lumber gauge comprising a body having a surface adapted to engage the side of a piece of material to be gauged, a handle secured to the opposite surface of said body, means adjacent one edge of said body adapted to abut an edge of said piece of material, said opposite edge of said body having a plurality of spaced projections thereon disposed in a line extending at an angle to said first mentioned edge and over which a finger of a hand grasping said handle may be moved to feel the top surface of the piece to be gauged, and to select the particular projection most nearly flush therewith.



1,624,151. HYDRAULIC JACK. JOSEPH P. SHEVLIN, Denver, Colo., assignor to Aladdin Hydraulic Jack Company, Denver, Colo., a Corporation of Colorado. Filed July 14, 1925. Serial No. 43,499. 8 Claims. (Cl. 138—9.)

1. A hydraulic jack comprising lifting and pump cylinders having associated pistons and piston rods, and an operative connection between the cylinders for the transfer of liquid in the operation of the jack, and a tight casing enclosing both cylinders and forming a chamber for the liquid, the cylinders being in open communication above their pistons with the chamber of the casing.

7. A hydraulic jack comprising, in combination, a base member, a casing member open at one end and adapted to be secured to the base in such a manner that the base forms a closure for the open end whereby a closed reservoir is formed for the reception of a liquid, a plunger cylinder secured at its lower end to said base, a pump cylinder secured at its lower end to said base, said plunger and pump cylinders being entirely enclosed within said casing and having their upper ends spaced from the casing, a communicating passage between said cylinders, a pump piston in the pump cylinder, a plunger in the plunger cylinder and means extending through the casing for operating the pump piston.

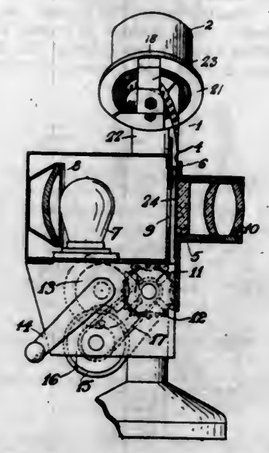
1,624,152. HEAD GATE. JAMES A. SMITHAM, San Juan, Tex., assignor to Valley Iron Works, San Juan, Tex., a Corporation of Texas. Filed June 29, 1926. Serial No. 119,505. 2 Claims. (Cl. 251—56.)

1. A head gate comprising a frame and a bell or union attached thereto, a cross-head slidably engaging said frame and a gate carrying said cross-head, means for tightening said gate against said bell consisting of a threaded plunger attached to said cross-head and a threaded clamp attached to said gate and engaging said plunger, a handle attached to said gate, a rack attached to said frame, a dog carried by said handle adapted to engage said rack, and means for locking said dog to said rack at different positions of said gate.

1,624,153. FOOD PRODUCT. EDMUND H. TWIGHT, Fresno, Calif. Filed July 27, 1925. Serial No. 46,484. 12 Claims. (Cl. 99—16.)

1. The process of making a food product from fruit juice alone, which comprises concentrating the juice to form a plastic mass, and agitating the mass to incorporate air therein until solidification is imminent.

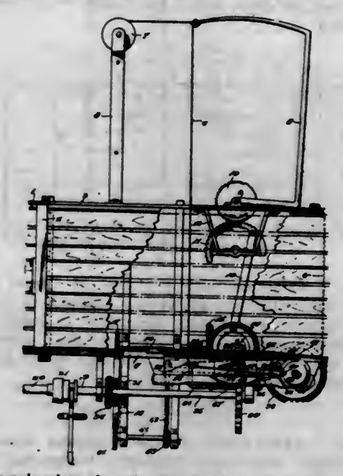
12. A candy comprising solidified fruit juice having minute bubbles of gas incorporated therein.



1,624,154. VITAMINE PREPARATION. MAX WINCKEL, Berlin, Germany, assignor to Herman G. Weicker, trustee, Montclair, N. J. Filed Aug. 11, 1925. Serial No. 49,655. 3 Claims. (Cl. 99—11.)

1. A process of preparing a vitamine preparation which comprises inoculating skim milk with a culture of sour milk bacillus, fermenting, keeping the acidity down with addition of alkaline earth metal carbonates which do not form physiologically poisonous products, continuing the fermentation until the milk congulates, adding yeast, continuing the fermentation for a few hours and neutralizing the product.

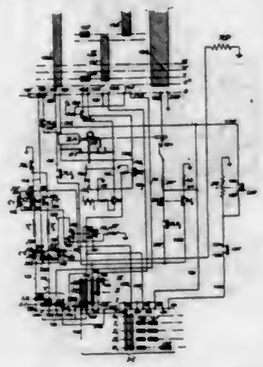
1,624,155. TOBACCO WAX AND PROCESS FOR PRODUCING THE SAME. SAMUEL AMSTER, Richmond, Ky. Filed Mar. 12, 1925. Serial No. 14,921. 1 Claim. (Cl. 87—19.)



A process for extracting the wax-like substance from tobacco leaves and stems which comprises leaching the leaves and stems with hot water at a temperature below 212° F. for approximately 48 hours, then draining the hot liquid from the leached leaves and stems, and removing the water from the hot liquid by evaporation, whereby the wax-like substance is recovered as a residue therefrom.

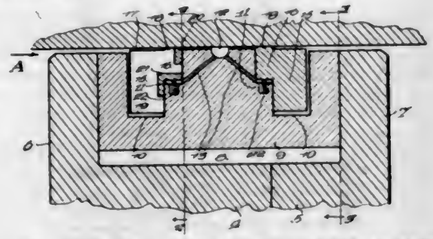
1,624,156. FILM PROJECTOR. PERCY DOUGLAS BREWSTER, East Orange, N. J., assignor to Wyko Projector Corporation, a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,511. 3 Claims. (Cl. 88—18.7.)

1. In a film magazine for moving picture machines, comprising a cylindrical container open at its lower end and having a radial flange at its open end, a stationary ring forming a base engaging said flange to support the container and permit rotation thereof about its axis, and means carried by the base and extending into the flanged open end of the container for guiding the film through said base.



1,624,157. BALING-WIRE TIER. JAMES O. CARROLL, Pittsfield, Ill., assignor of fifty-one per cent to Charles P. Carroll, Kansas City, Mo. Filed July 8, 1925. Serial No. 42,382. 9 Claims. (Cl. 100—20.)

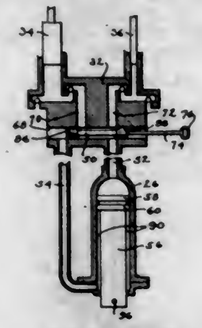
1. A mechanism for the purpose set forth comprising a tubular twister body mounted in fixed bearings on the side of a baling press and having an open side, a longi-



tudinally disposed rib fixed in the twister body and extending diametrically across the same to the open side thereof, means for disposing a wire to be tied at opposite sides of the rib and longitudinally within the body, yieldable means near one end of the body and in constant axial alinement therewith for forming a bight in the wire and holding the wire at the bight, and means for rotating the twister body.

1,624,158. ELECTRICAL CONTROL SYSTEM. PAUL CHARPENTIER, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Societe Anonyme, Paris, France, a French Joint Stock Company. Filed June 29, 1925, Serial No. 40,332, and in France Aug. 2, 1924. 15 Claims. (Cl. 172—179.)

3. An electric control system, comprising a master switch, a plurality of contactors, means for selecting the contactors to be operated, means for operating said contactors when selected, means for locking said contactors when operated, and means for locking in non-operated position the contractors not selected, said selecting, operating and locking means being controlled by said master switch.



1,624,159. PISTON PACKING. CHARLES LEE COOK, Louisville, Ky., assignor to C. Lee Cook Manufacturing Company, Louisville, Ky., a Corporation of Kentucky. Filed Jan. 19, 1925. Serial No. 3,433. 5 Claims. (Cl. 74—109.)

1. The combination with a piston, of spaced packing rings carried thereby and having portions of their interior surfaces respectively accessible to motive fluid from opposite sides of the piston and vent passageways opening from the inner sides of the rings to the periphery of the piston between the rings.

1,624,160. HYDRAULIC PRESS. ROBERT CRAIG, Dayton, Ohio. Filed May 10, 1926. Serial No. 107,011. 18 Claims. (Cl. 138—17.)

1. In a hydraulic press, in combination, a cylinder, a plunger arranged for forward and back motion in said cylinder, a pump operable to discharge a uniform volume of liquid, and settable means comprising a single valve to regulate the flow of liquid from said pump to said cylinder to impart to said plunger either a slow or fast forward speed or a fast return speed.

16. In a press, in combination, a vertical plunger, means to supply power to said plunger to move it up and down, a work table, means for supporting said table in various positions relatively to said plunger, and devices connecting said table and said plunger whereby the motion of said plunger may be utilized to move said table from one of said positions to another.

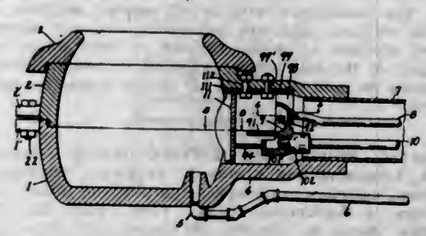
1,624,161. SPIRIT LEVEL. JACOB DAY, Duluth, Minn. Filed Mar. 1, 1926. Serial No. 91,605. 2 Claims. (Cl. 33—214.)

1. A level including a stock having a slot therein and provided with a sight opening extending transversely of the slot and intersecting the same, a clip formed from a strip of material folded to provide coacting wings, the clip being snugly accommodated in said slot whereby the wings thereof are held in abutting relation, said wings being formed with registering openings alined with the sight opening of the stock and being crimped to form a sleeve intersected by the registering opening, a bubble glass clamped between the sleeve forming portions of said wings and extending across the sight openings of the clip and stock, means pivotally mounting the clip upon the stock, and means adjustable upon the stock for engaging the clip at opposite sides of the pivot means and rocking the clip to adjust the position of the bubble glass relative to the stock.

1,624,162. PROCESS FOR CONVERTING HAFNIUM AND ZIRCONIUM PHOSPHATES. JAN HENDRIK DE BOER, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed June 19, 1925, Serial No. 38,359, and in the Netherlands Aug. 13, 1924. 8 Claims. (Cl. 23—24.)

1. A process for converting hafnium and zirconium phosphates into other hafnium and zirconium compounds, characterized in that complex hafnium and zirconium compounds are formed by adding the hafnium and zirconium phosphates in a basic medium at least one organic compound in which two adjacent carbon atoms are bound to hydroxyl groups.

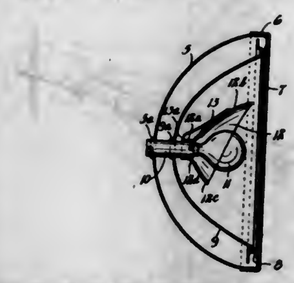
1,624,163. METHOD OF CONCENTRATING FIBROUS MATERIALS. SAMUEL H. DOLBEAR and VICTOR ZACHERT, San Francisco, Calif., assignors, by mesne assignments, to Selective Treatment Company Limited, Montreal, Canada, a Corporation of Quebec, Canada. Filed Feb. 16, 1921. Serial No. 445,470. 3 Claims. (Cl. 209—165.)



3. The method of separating fibrous substance into divisions according to length which includes aerating an aqueous mixture thereof to recover short fiber separately from long fiber.

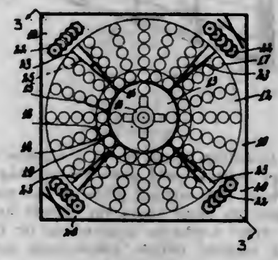
1,624,164. EDIBLE-FAT COMPOSITION. HARRY E. DUBIN, New York, N. Y., assignor, by mesne assignments, to H. A. Metz Laboratories, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 19, 1925. Serial No. 10,407. 12 Claims. (Cl. 167—7.)

1. An edible composition comprising a plurality of products each comprising or containing an odd-carbon fatty acid, said composition having a melting point not higher than 37° C. and being substantially free from therapeutically inactive material, objectionable odor and objectionable taste.



12. A composition as set forth in claim 9 in which the ethyl margarate comprises at least fifty per cent of the composition.

1,624,165. OIL BURNER. ALFRED C. EMERSON, Omaha, Nebr. Filed Mar. 13, 1926. Serial No. 94,426. 9 Claims. (Cl. 158—28.)

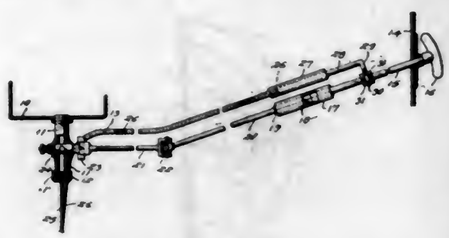


1. An oil burner comprising a combustion chamber, an air passage communicating therewith through a hollow tangentially-disposed connection, a burner head in said hollow connection portion centrally disposed to permit the flow of air past the same, comprising a fuel pipe with a cup-shaped delivery part for the fuel opening forwardly and a horizontally disposed corrugated main distributer plate beneath, said cup being provided with a forwardly-directed air jet opening formed through the said burner delivery part, a pilot chamber beneath the said distributer plate with an auxiliary distributer plate parallel with and beneath the main distributer plate, a pilot baffle in front of said pilot burner with passages directing flame beneath the auxiliary distributer plate, a pilot burner with a perforated extension shield disposed beneath the fuel oil delivery, and a corrugated baffle of angular form suspended within said hollow connection with its angle disposed toward said burner head to spread, distribute and mix the air and fuel to promote combustion, coacting as specified.

1,624,166. AUXILIARY REFLECTOR FOR AUTOMOBILE HEADLIGHTS. ERNST ENDERES, Albert Lea, Minn. Filed Nov. 30, 1925. Serial No. 72,196. 2 Claims. (Cl. 240—48.6.)

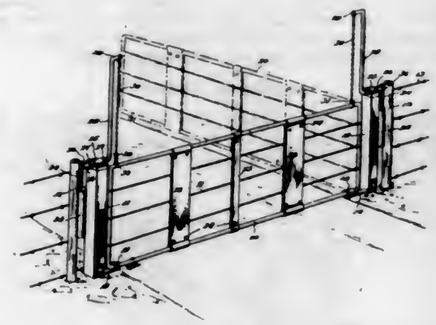
2. An article of manufacture comprising an auxiliary reflector of a single sheet of material, said reflector having an integral cylindrical sleeve projecting from its convex surface, said sleeve and reflector being split at one side of said sleeve and for a short distance therefrom, said reflector being elongated and having a comparatively long and flat portion at one side of said sleeve and a shorter more sharply curved portion at the opposite side of said sleeve, said long portion being disposed upwardly and the plane of the front edge of said reflector extending at an angle to the vertical with its lower portion inclined toward the rear of said headlight.

1,624,167. CROSS GAME DEVICE. MARCELINO Y. GARCIA, New York, N. Y. Filed Apr. 22, 1926. Serial No. 103,716. 5 Claims. (Cl. 273—131.)



1. In a checker game, a flat element provided with a raised circular portion having its center removed, to permit a raised circular rim with openings and provided with a figure located at the center of the said flat element, said raised circular portion provided with a plurality of circular figures arranged in radial rows, and in line with second raised circular figures located between the inner edge of the said raised circular portion and the said raised circular rim.

1,624,168. COOLING-SYSTEM DRAIN COCK. HERMAN A. GSCHWIND, El Paso, Tex. Filed June 3, 1926. Serial No. 113,570. 1 Claim. (Cl. 137—139.)



A combined operating and cleaning device for drain cocks comprising a bracket mounted on the drain cock, a tube connected with and supported at one end on the bracket, a cleaning needle slidable in the drain cock, a wire in the tube connected with the needle, a shaft operatively connected with the plug of the drain cock for rotating the latter, said shaft having an angular terminal, a casing fitted on the terminal for slidable movement thereon and for turning the same, a stem on the casing

for manipulating the same, a casing on the other end of the said tube, and an operating rod slidable in the last-named casing and connected with the adjacent end of the

wire and having its other end connected with the said stem whereby upon sliding movement of the first casing the rod will be operated to move the cleaning needle.

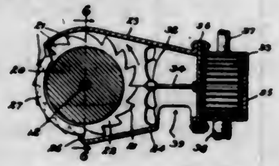
1,624,169. GATE. GLENN M. HORNER, Minneapolis, Kans. Filed July 10, 1925. Serial No. 42,824. 3 Claims. (Cl. 39—5.)

1. A gate including spaced posts, a closure mounted at its lower edge between said posts for rocking movement to either side of the vertical plane of the posts, shafts journaled upon the posts above the closure and provided with crank arms normally upstanding in the vertical plane of the closure, flexible connections between said crank arms and the top of the closure, and counter-weights carried by and depending from the shafts whereby said weights swing in the opposite direction to the closure when the closure is rocked.

1,624,170. WINDSHIELD. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Oct. 21, 1925. Serial No. 63,987. 2 Claims. (Cl. 296—84.)

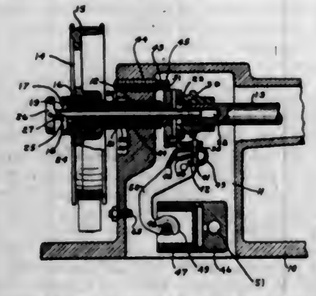
1. A windshield for motor vehicles comprising a frame, a fixed section and a laterally slidable section in said frame, and a sheet metal strip bent over the free edge of said slidable section and forming a closure between the sections at one side of the shield and at its other side being rolled to form a longitudinal hand-grip, substantially as set forth.

1,624,171. TOE ADJUSTER. EMELYN O. JOHNSON, Brooklyn, N. Y. Filed Oct. 3, 1925. Serial No. 60,145. 1 Claim. (Cl. 128—81.)



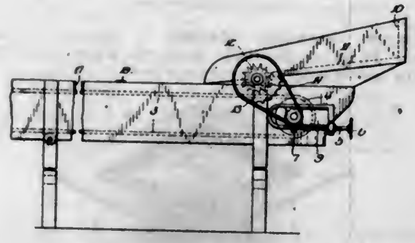
In a toe adjusting device having a main plate and a lateral support to the toe vertically arranged on said main plate, the combination of a strip of stiff material extending rearwardly from and integral with said main plate, and an inner sole formed with a channel engageable with said strip member.

1,624,172. PROCESS OF RECOVERING METALS FROM SOLUTIONS. GASTON J. LEVY, Los Angeles, Calif., assignor to Hollywood Chemical Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 23, 1925. Serial No. 77,365. 5 Claims. (Cl. 75—18.)



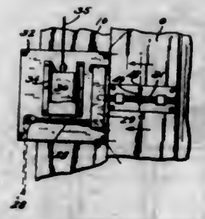
1. A process of treating waste hypo solutions containing silver, comprising adding a metal hydrosulphite to said solutions to precipitate the silver in the metallic form and separating the silver precipitate from said solution.

1,624,173. FISH-CLEANING APPARATUS. PHILIP W. LINDQUIST, Seattle, Wash. Filed Oct. 13, 1925. Serial No. 62,227. 3 Claims. (Cl. 17—3.)



1. The combination with a fish cleaning machine, of a fish cleaning apparatus comprising a rotary scraper wheel arranged to engage the fish on lines which are tangent to the said scraper wheel at its outer surface, a casing for said wheel, and air suction means for said casing.

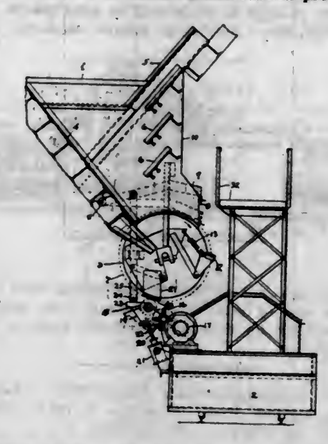
1,624,174. POWER-TRANSMITTING DEVICE. JOSEPH M. LUCARELLE and VICTOR L. FAYKMAN, Bridgeport, Conn., assignors to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed May 29, 1924. Serial No. 716,696. 30 Claims. (Cl. 192—18.)



1. In combination, a housing; a driven-shaft supported by the housing; clutch-controlling means mounted within the housing; and a cylinder and piston mounted within the housing for operating said clutch-controlling means,

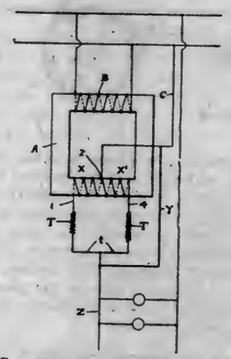
1,624,175. FEEDER. JOHN J. NEVILLS, Sacramento, Calif., assignor to Libby, McNeill & Libby, Chicago, Ill., a Corporation of Maine. Filed July 11, 1924. Serial No. 725,376. 1 Claim. (Cl. 198—211.)

An olive feeder comprising, in combination, an endless belt, a sloping delivery floor mounted adjacent to said belt, a drum having its axis of rotation parallel with said floor and transversely to the direction of slope of said floor, said axis being disposed slightly below the upper surface of said floor, said drum being longitudinally ribbed to provide a plurality of elongated recesses spaced circumferentially of said drum, means for moving said belt in a direction such that the upper surface thereof moves away from said floor, and means for driving said drum in a direction such that the upgoing side of said drum is toward the upper portion of said slope.



1,624,176. BURGLAR ALARM. THOMAS E. O'CONNOR, Minneapolis, Minn. Filed Nov. 28, 1924. Serial No. 752,601. 1 Claim. (Cl. 177—314.)

The combination with an element to be tripped and a tripping member applicable to a door or window of tripping mechanism for the element including a support hinged for swinging movement in a vertical plane, a latch releasably holding the support in a horizontal position and extending in the path of movement of the tripping member, a weight loosely resting on the support, and a connection from the weight to the element to trip said element when said latch is operated by the tripping element to release said support and drop the weight therefrom.

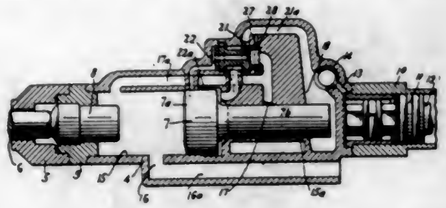


1,624,177. MECHANISM FOR OPERATING ORE-BIN GATES. WILLIAM S. ORR, Massillon, Ohio, assignor, by mesne assignments, to Central Alloy Steel Corporation, Massillon, Ohio, a Corporation of New York. Filed Sept. 21, 1925. Serial No. 57,552. 12 Claims. (Cl. 214—41.)

1. In mechanism of the character described, the combination of a bin having a movable guard and a means whereby material may be discharged from said bin; a car adapted to receive such material when properly posi-

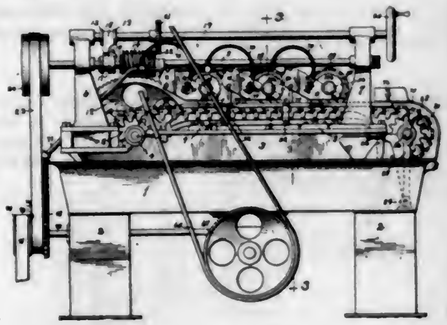
tioned beneath said bin; and means for displacing said guard and means for actuating said discharge means carried by and operable from said car.

1,624,178. ALTERNATING-CURRENT METER. LOUIS A. PAINE, Toronto, Ontario, Canada, assignor to Lincoln Meter Company, Limited, Toronto, Ontario, Canada. Filed Feb. 20, 1922. Serial No. 538,116. 3 Claims. (Cl. 171—34.)



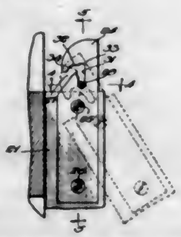
2. In an A. C. meter, the combination with the current coil of a thermal watt meter a pair of heaters differentially connected therewith and connected together, said coil having a current connection mid-way of its length, of a shunt of a predetermined capacity and resistance arranged between the mid point of the current coil and a mid point between the heaters.

1,624,179. FLUID-PRESSURE TOOL. ERNEST PENBERTHY, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 27, 1925. Serial No. 5,002. 12 Claims. (Cl. 121—18.)



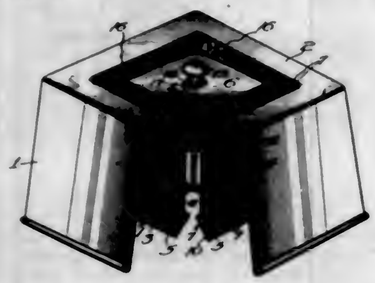
1. In combination in a fluid pressure percussive tool having a cylinder, a hammer piston reciprocable therein having two pressure areas for driving it in one direction and an opposed pressure area for returning it, one of said first named areas being continuously subjected to pressure fluid and the other areas to intermittent pressure, said piston controlling a main exhaust port for both said intermittent areas and also a supply passage to one of said intermittent areas, a valve controlling the supply

of motive fluid to the other of said intermittent pressure areas, said valve being shifted in one direction when said supply passage is uncovered by said piston, a passage continuously supplying motive fluid in limited



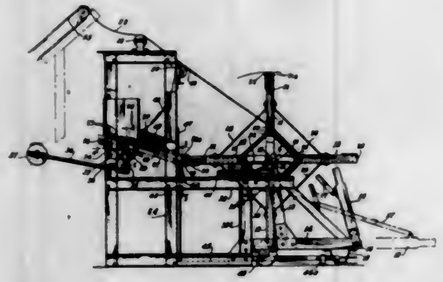
amount to one end of said valve, and a vent passage from said end of said valve controlled by said piston whereby a built up pressure shifts the valve in the opposite direction.

1,624,180. CASTELLATING MACHINE. CHARLES E. PELLOW, Detroit, Mich. Filed Oct. 2, 1924. Serial No. 741,145. 11 Claims. (Cl. 10—72.)



3. In a castellating machine, a series of saws, all in the same plane, an endless chain passing below the saws and formed of links, a guide to support the chain, nut carriers rotatably mounted on the links of the chain and formed with recesses to receive the nuts, means to turn the carriers between the saws, a frame at each saw, and a group of bifurcated spring held fingers slidable within each frame at an oblique angle to the plane of the chain to press down on the nuts on each side of the saw while being acted upon by the saw.

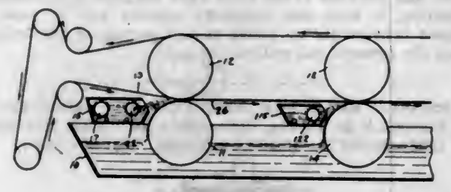
1,624,181. SCREEN HANGER. WILLIAM F. RAPP, Chicago, Ill. Filed May 2, 1924. Serial No. 710,522. 1 Claim. (Cl. 16—172.)



The combination of a window frame having pins in the opposite sides of said frame, with an auxiliary frame for a screen or the like, hangers at the upper ends of the side edges of said auxiliary frame, said hangers having entering slots adapted to receive said pins, locking slots extending downwardly from the said entering slots and adapted to receive said pins when the auxiliary frame is swung inwardly and moved upwardly into closed position in said window frame and camming surfces forming sides of said locking slots to draw said auxiliary frame into said window frame as said pins enter said locking slots.

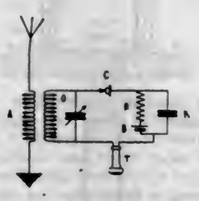
1,624,182. TOASTER. STEPHEN F. REBORA, Chicago, Ill. Filed Apr. 20, 1925. Serial No. 24,383. 5 Claims. (Cl. 53—5.)

1. A toasting device comprising a shell open at the bottom, the top of the shell being depressed to form a deep endless trough opening upwardly and spaced apart from the sides of the shell, and the side walls of said trough being perforated.



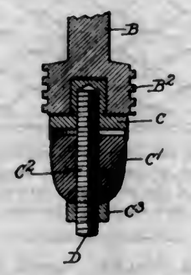
1,624,183. APPARATUS FOR REELING STRIP MATERIAL. CHARLES M. RICHARDSON and ZACCHEUS E. SARGISSON, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1923. Serial No. 658,104. 3 Claims. (Cl. 242—55.)

1. In apparatus for reeling strip material, the combination of a reel having substantially radial spacer rod guides on the inner faces of its end members, said guides turning forward at their outer ends, and means for holding successive spacer rods in position to be picked up by the forwardly-turned end portions of said guides as the latter rise in the rotation of the reel.



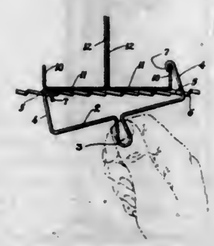
1,624,184. MOTTLING DEVICE FOR PAPER MAKING. HARRY M. ROSS, Indianapolis, Ind., assignor of one-half to Beveridge Paper Company, Indianapolis, Ind., a Corporation. Filed Oct. 26, 1925. Serial No. 64,885. 4 Claims. (Cl. 92—41.)

1. The combination with a paper making machine having a vat containing a solution of paper pulp, and a rotating screen cylinder, of means for applying a mottled color to the paper as it is formed and passed through said machine comprising a vessel containing a colored solution, an agitating roller mounted in said vessel for maintaining the distribution of said solution, and a rotatable roller having a plurality of projections about the



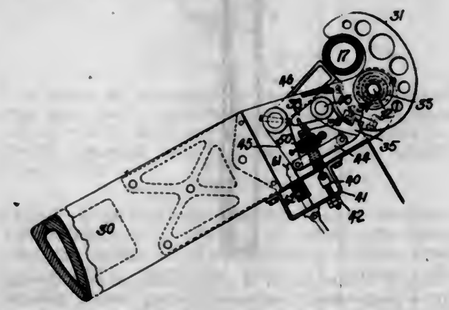
surface thereof adapted to engage and throw the particles of said solution from the vessel onto the film of pulp carried by said cylinder.

1,624,185. WIRELESS RECEIVING CIRCUITS. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 21, 1923, Serial No. 640,291, and in Great Britain May 31, 1922. 2 Claims. (Cl. 250—20.)



1. A wireless receiving circuit comprising, an antenna circuit, a receiving circuit coupled thereto, a crystal detector associated with said receiving circuit, a resistance of the order of 100,000 ohms in series with said crystal detector, a battery connected in series with said resistance, said battery serving as a biasing means for said detector, a condenser adapted to pass both audio and radio frequency currents shunted around said resistance and battery, and means for receiving the detected signals from said receiving circuit.

1,624,186. VALVE. JOHN J. RYAN, Chicago, Ill. Filed Feb. 14, 1921. Serial No. 444,719. 3 Claims. (Cl. 251—152.)

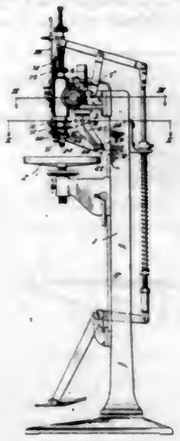


3. In a valve, a narrow valve seat, a stem adapted to be moved toward and away from said seat, a yielding valve member adapted to be seated upon said seat to close said valve, and a positive stop on which the valve member is mounted, said stop being rotatably mounted in the inner end of said stem, adapted to move with said stem and to contact a portion of the interior of said valve thereby to limit the closing movement of the valve.

1,624,187. METAL-LATH-ATTACHING CLIP. JULIUS H. SCHLAFLY, Canton, Ohio, assignor to Central Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1921. Serial No. 494,508. 10 Claims. (Cl. 72—118.)

1. A clip for fastening metal lath or the like to spaced supports, comprising an elongated body with a loop intermediate its ends, legs on the ends insertible through openings in the lath beyond the edges of one support to bring the elongated body portion of the clip substantially parallel with the plane of the lath, and hooks on the legs for engaging the edges of said support, the loop being adapted to be twisted when the hooks are thus engaged to clamp the lath to the support and to stretch it between adjacent supports.

1,624,188. DEVICE FOR LAUNCHING AND LANDING AIRPLANES FROM AND UPON SUSPENDED POSITIONS. ROBERT SIMON, Farmingdale, N. Y., assignor to The Lawrence Sperry Aircraft Company, Farmingdale, N. Y., a Corporation of New York. Filed June 13, 1925. Serial No. 36,776. 23 Claims. (Cl. 244—2.)

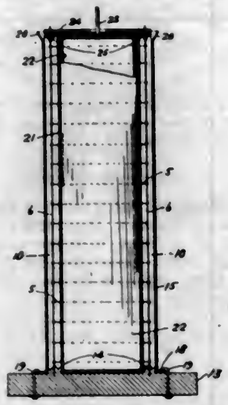


22. In a device for launching and landing aircraft, the combination of means for supporting an aircraft, said means including a yielding member, and yielding means carried by said aircraft for engaging said member and capable of yielding to a degree sufficient to release said supporting means.

1,624,189. SCREW-DRIVING MACHINE. JAMES C. STEEN, Massillon, Ohio, assignor to The Reynolds Machine Company, Massillon, Ohio, a Corporation of Ohio. Filed Apr. 18, 1922. Serial No. 555,134. 1 Claim. (Cl. 144—32.)

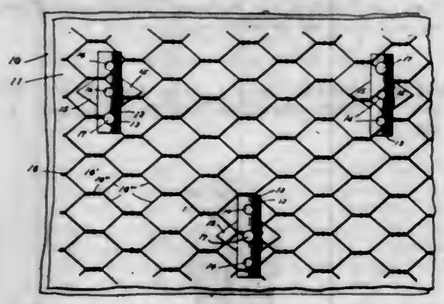
A screw driving machine including a bifurcated step for receiving and holding a single screw for a driving operation, supporting means for the screw including a swinging

bracket, a bearing bar upon one end of which the bracket is journaled, a supporting bracket in which the other end



of the bearing bar is secured, the axis of one end of the bar being eccentric to the axis of the other end for adjusting the shoe by a turning of the bar in its support.

1,624,190. FOUNTAIN PEN. IVAN D. TEFFT, Chicago, Ill., assignor to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 10, 1922. Serial No. 551,121. 7 Claims. (Cl. 120—46.)



1. In a fountain pen, in combination, a shell provided with a longitudinally extended opening therein, fashioned at its lateral marginal edges to provide a support for a pivot pin and locking members, a closure cap for one end thereof, a pressure bar fashioned with longitudinally extending grooved portions therein and with a lateral depression extending into the slotted way to form a stop for a lever member, a pivot member associated with said pivot supports, positioned below said slot, and a lever fashioned for engagement with said pivot members and for shiftable relation with respect to the grooves in the pressure bar, provided with resilient members thereon, fashioned with respect to the locking members on the shell, to co-act therewith to cause the lever to be locked in closed position, and means including the relationing of the cap closure member, the pressure bar, the pivot member with respect to the shell, and the outward end wall of the slot, to facilitate, when the lever is in open position, a coincident abutment of the rear end of the pressure bar with the cap member of the shell, and the lever with the forward end of the slot, whereby strain from the pivoting parts is minimum, and whereby the relative positioning of the pin with respect to the rear end wall of the slot, and the form of the lever when the lever is in closed position, is such that abutment relation will be established between the arcuately shaped portion of the lever and the forward end wall of the slot.

1,624,191. MOLD FOR CEMENTITIOUS CONDUITS. FREDERICK M. VENZIE, Philadelphia, Pa. Filed July 22, 1925. Serial No. 45,163. 2 Claims. (Cl. 25—127.)

2. A form for molding cementitious conduits comprising a base, a separable outer and rigid casing mounted thereon, an inflatable core comprising a pair of relatively thin rubber cylinders fitted one within the other said core being arranged within and spaced from the side walls of the outer casing, a removable cap for the top of said casing, the said cap and base each being provided with an annular V-shaped portion projecting into the space between said casing and core, and means for inflating said core.

1,624,192. WALL CONSTRUCTION. GEORGE F. VOIGHT, Oakland, Calif., assignor to Economy Products Corporation, a Corporation of California. Filed Aug. 7, 1922. Serial No. 580,169. 6 Claims. (Cl. 72—118.)

1. In means of the character described, the combination with a sheet of paper, of a spacing rib disposed against the face of the paper and having a portion penetrating the paper and engaging the rear side thereof.

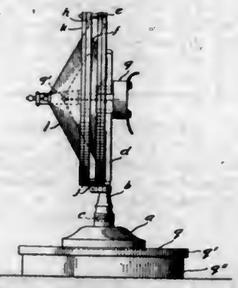
1,624,193. LATH SPACER. GEORGE F. VOIGHT, Oakland, Calif., assignor to Economy Products Corporation, a Corporation of California. Filed Mar. 22, 1924. Serial No. 701,204. 4 Claims. (Cl. 72—118.)

1. In means of the character described, a spacing clip having a spacing member extending parallel with a co-

operating nail shank, the lower end of said spacing member terminating in a supporting base penetrated by said shank, the upper end of said spacing member extending

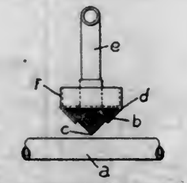
into a lath seat also penetrated by said shank, said lath seat and supporting base disposed substantially at right angles with said spacing member one end of said lath seat bent upwardly.

1,624,194. FOUNTAIN PEN. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed July 15, 1922. Serial No. 575,320. 2 Claims. (Cl. 120—46.)



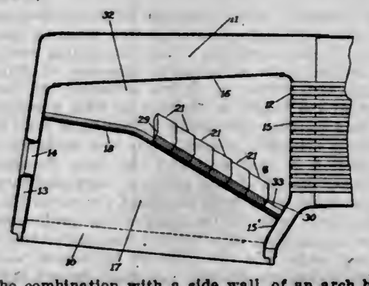
1. In a fountain pen, a thin metal casing provided with a longitudinally extending slot, a lever extending through said slot and pivotally mounted therein, a disc adapted as a closure for one end of the casing, a slotted resilient member extending forwardly into the casing from said disc and integral therewith, a presser bar fixed to the movable end of said resilient member, and projections on said disc extending on either side of said resilient member for engaging the inner surface of the casing, one end of said lever being adapted to extend through the slotted resilient member for pressing against said pressure bar.

1,624,195. METHOD OF PRODUCING PHOSPHATE FERTILIZER. UTLEY WEDGE, Ardmore, Pa., assignor to I. P. Thomas & Son Company, Camden, N. J., a Corporation of New Jersey. Filed Feb. 7, 1923. Serial No. 617,602. 1 Claim. (Cl. 71—7.)



The method of treating phosphate rock to render its phosphoric acid contents soluble which consists in making a dry mixture of phosphate rock with potassium chloride and sodium carbonate, charging said dry mixture into a furnace and heating it to a temperature at which the reaction takes place and carbon dioxide is liberated.

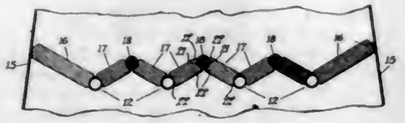
1,624,196. COMBINED RADIO AND PHONOGRAPH LOUD SPEAKER. ALFRED WIEHL, Brooklyn, N. Y. Filed Nov. 29, 1926. Serial No. 151,286. 6 Claims. (Cl. 179—100.1.)



1. A loud speaker for alternate radio or phonograph sound emission, comprising a stand with a bracket supported to freely turn on a vertical axis, a diaphragm mounted in fixed position thereon and having a radio receiving sound translating means operatively secured thereto, a second sound diaphragm mounted on said support and a hinge adapted to permit said second diaphragm to be inclined laterally, a phonograph needle operatively connected with the focus of said diaphragm and having a support rigidly connected with the frame of the diaphragm, whereby the weight of said diaphragm is carried on the frame when the needle is supported to move on and with the surface of a phonograph disc.

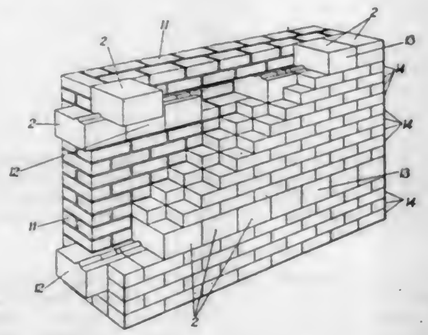
1,624,197. DEVICE FOR CUTTING GLASS TUBES OR RODS. ERNST ABELT, Karnap, near Essen-on-the-Ruhr, Germany, assignor to The Libbey Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1926. Serial No. 145,007, and in Germany Mar. 10, 1926. 3 Claims. (Cl. 49—48.)

1. A device for automatically severing a continuously moving glass tube or rod into separate sections comprising a cutting tool or hard and porous material, means for resiliently mounting said tool, and means for keeping said tool moist.



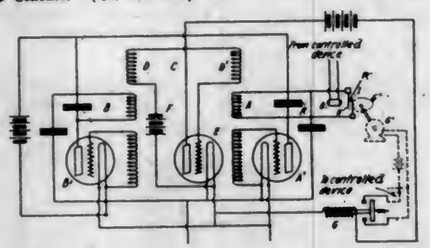
1,624,198. FIRE-BOX ARCH BLOCK. LYLE STOCKTON ABBOTT, Chicago, Ill., assignor to Chicago Fire Brick Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1925. Serial No. 67,915. 7 Claims. (Cl. 110—87.)

1. The combination with a side wall, of an arch having an upwardly inclined supporting member extending longitudinally of said side wall and spaced therefrom, and a



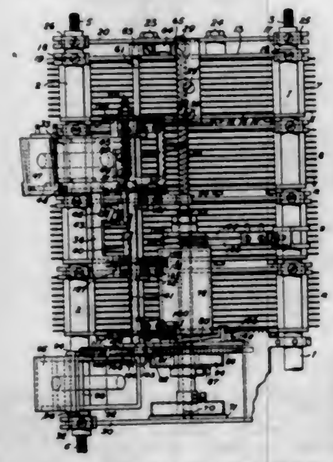
block of refractory material supported by said side wall and said supporting member and inclined upwardly from said supporting member to said side wall with its lower edge substantially parallel to said supporting member, the major portion of said block extending upwardly in the direction of inclination of said supporting member at an angle to a line drawn perpendicular to said lower edge in the plane of said block.

1,624,199. SECTIONAL FIRE-BOX ARCH. LYLE STOCKTON ABBOTT, Chicago, Ill., assignor to Chicago Fire Brick Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1925. Serial No. 67,916. 11 Claims. (Cl. 110—87.)



1. In a fire arch construction, a pair of supporting members, a pair of refractory blocks supported each at one end by said supporting members and a refractory pivot member connecting said blocks at their adjoining ends, and closing the space between said blocks, said pivot member permitting a swinging movement of said blocks without changing the area of contact.

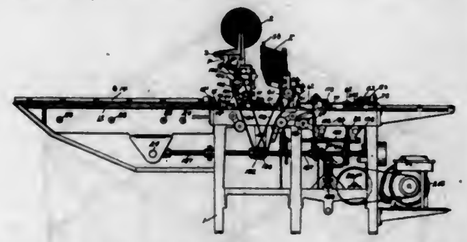
1,624,200. FIRE-RECEIVING WALL. LYLE STOCKTON ABBOTT, Chicago, Ill., assignor to Chicago Fire Brick Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 15, 1926. Serial No. 102,320. 9 Claims. (Cl. 72—102.)



1. A composite wall of the character described consisting of two sections, an outer section made of brick-like elements to constitute the weight supporting section, an inner section made of brick-like elements of refractory material, and refractory means arranged at intervals throughout the height of the wall to form a cross-tie between said sections, said means consisting of rows of complementary brick-like elements, one row anchored in the outer section of said wall and the other forming part of the inner section of said wall, the complementary brick elements of the rows being arranged one above the other and the rows each having interlocking projections and recesses cooperating with recesses and projections in the other row where said two rows are juxtaposed, said complementary elements forming a shelf to support the superposed refractory elements constituting the said inner section.

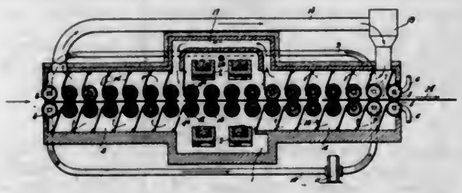
1,624,201. RADIOSIGNALING. CHARLTON STANFORD AGATE, Chelmsford, and PETER WILLIAM WILLANS, London, England, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Sept. 28, 1921, Serial No. 503,797, and in Great Britain Oct. 12, 1920. 9 Claims. (Cl. 250—8.)

1. In electrical controlling or indicating circuits, the combination of two oscillatory circuits tuned to the same frequency, means for maintaining oscillation therein, a current actuated controlling agency for changing the magnitude of the current in one of said oscillation circuits, an untuned circuit coupled to the two circuits and a relay actuated by currents in this third circuit to control or indicate changes in the controlling agency.



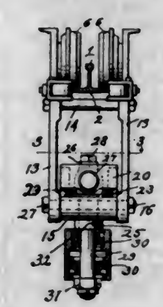
1,624,202. ELECTRICAL SWITCH. FRITZ ALDENDORFF, Wilmersdorf, near Berlin, Germany. Filed Mar. 9, 1925, Serial No. 14,107, and in Germany Mar. 11, 1924. 12 Claims. (Cl. 179—27.5.)

1. A switch comprising a series of groups of trunk line terminals, brushes adapted to trail over said terminals, numerical means for effecting a cooperation of said brushes with a desired series of groups of trunk line terminals, a power device for moving the brushes continuously at a high speed past all busy groups of trunks until a group in which there is a free trunk is reached, non-numerical means for controlling said power device, and means for rotating the brushes at a lower speed after the brushes have reached a trunk group in which there is a free trunk.



1,624,203. PACKAGE-WRAPPING MACHINE. JOHN P. ALDRICH and HOWARD A. MORRIS, Toledo, Ohio, assignors to The Automat Molding & Folding Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 22, 1923. Serial No. 676,231. 28 Claims. (Cl. 93—7.)

23. In a packaging machine, a guideway, reciprocatory article-feeding means, means for partially folding a wrapper about an article leaving projecting end flaps, relatively movable means operable by and during move-



ment of the feeding means for folding certain end flaps, and means operable during movement of the feeding means for completing the folding of the end flaps.

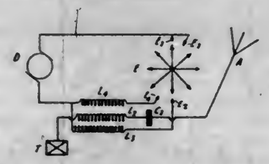
1,624,204. ANNEALING MACHINE. THADDEUS F. BAILY, Alliance, Ohio. Filed June 6, 1925. Serial No. 35,456. 25 Claims. (Cl. 263—7.)

1. A furnace including an elongated chamber, a plurality of feeding rolls for passing sheets continuously through the chamber, the distance between adjacent rolls being less than the diameter of each roll and electric heating means above and below the rolls for impinging heat directly upon the rolls.

1,624,205. SUSPENDED CARRIER. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane and Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Aug. 4, 1926. Serial No. 127,079. 9 Claims. (Cl. 105—154.)

3. A carrier comprising spaced supporting trucks each having wheels adapted to travel on the opposite flanges of a monorail track, each truck having a pair of opposed depending side members and a bottom member connecting said side members below the track, a block supported for vertical movement between the side members of each truck, springs interposed between the blocks and the bottom members, and a load bar suspended from said blocks.

1,624,206. PROCESS OF EXTRACTING HYDROCARBONS FROM GAS. AUGUST P. BJERREGAARD, Okmulgee, Okla., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 17, 1922. Serial No. 529,915. 22 Claims. (Cl. 23—3.)



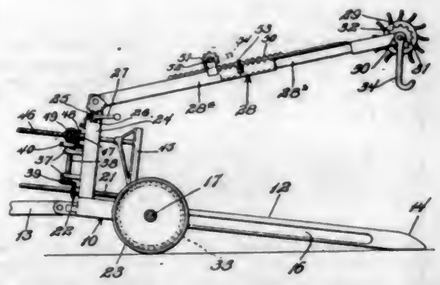
2. In the art of gas purification a process which comprises, first, washing and cooling the gas; second, removing ammonia and pyridine from the gas; third, continuously removing emulsifying agents from the gas; and fourth, removing the aromatic hydrocarbons present in the gas.

1,624,207. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1926. Serial No. 139,303. 11 Claims. (Cl. 108—5.4.)

1. A car roof comprising side plates, roof sheets extending from side plate to side plate and supported thereon, outside carlines covering adjacent margins of said sheets and rigidly secured to said side plates, and members extending from carline to carline at the ridge and rigidly secured to said carlines, said members being located above said sheets, and means for connecting said sheets to said members, said side plates and said members constituting the sole supporting means for said sheets.

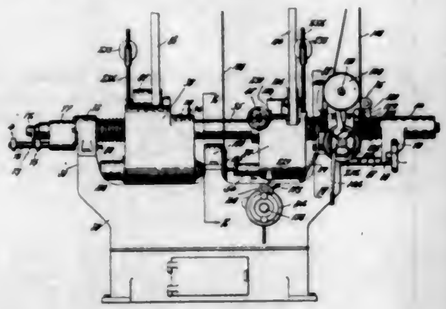
1,624,208. HIGH-FREQUENCY SIGNALING. PAUL MARIE JOACHIM BOUCHEROT, Paris, France. Filed Aug. 29, 1921, Serial No. 496,692, and in France Aug. 27, 1915. 4 Claims. (Cl. 250—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In high frequency generator signaling systems, the combination of a circuit containing a source of power, a sparker adapted to interrupt said source at a radio frequency, a circuit connected to said sparker tuned to substantially said frequency of interruption, and an antenna tuned to substantially the same frequency coupled to said last mentioned circuit.



1,624,209. PUMP. GEORGE A. BROWN and FRANK G. DENNISON, Bridgeport, Conn., assignors to Bridgeport Brass Company, Bridgeport, Conn. Filed Nov. 11, 1920. Serial No. 423,358. 12 Claims. (Cl. 74—109.)

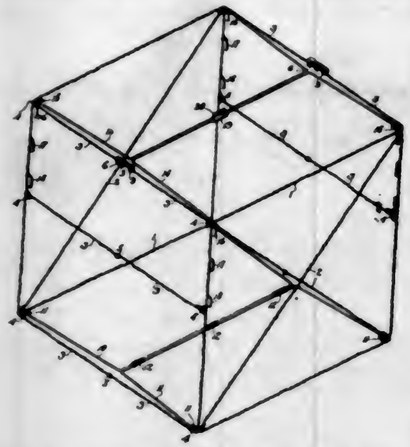
1. In a fluid pump, a cylinder, a piston operating therein, said piston being provided with a flexible pump packing cup, and a spring pressed member in engage-



ment with said packing cup to expand the same, and having provision, independent of the spring, for permitting the passage of air around the cup on the return stroke of the piston.

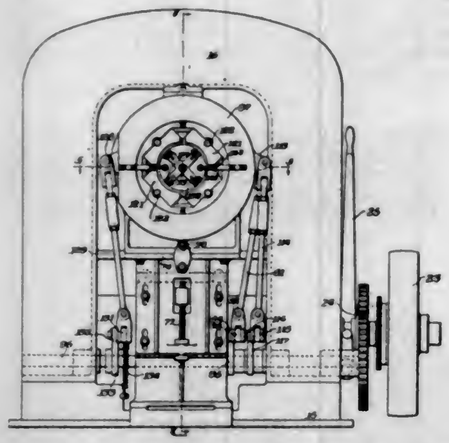
1,624,210. FERTILIZER DISTRIBUTOR. WILLIAM E. BRUCE, Mirando City, Tex. Filed Nov. 14, 1925. Serial No. 69,149. 10 Claims. (Cl. 275—1.)

2. In a device of the type described, a platform, means for moving the platform in opposite directions, means operated by reversal of movement of the platform for causing one end of the platform to move into or out of engagement with the ground including a wheel supported axle for the platform freely shiftable from one end of the platform to the other thereof, a buck board movable from end to end of the platform and an operative connection between said buck board and said axle for shifting said buck board in either direction on the platform during movement of the platform in either direction over the ground.



1,624,211. MULTI-SPINDLE INTERNAL-GRINDING MACHINE. WILLIAM LE ROY BRYANT, Springfield, Vt. Filed Aug. 18, 1923. Serial No. 658,057. 53 Claims. (Cl. 51—40.)

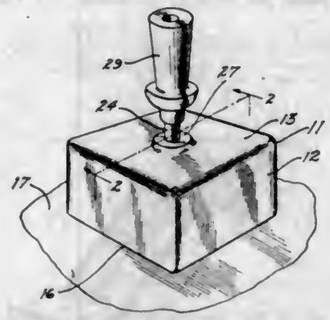
1. A grinding machine comprising longitudinally-spaced spindles, grinding wheels thereon, a reciprocatory main tool slide, carriers for said spindles affixed to said slide so as to be moved thereby, and mechanism for actuating said slide.



1,624,212. COLLAPSIBLE CRATE. JOHN P. BUTCHER, Canton, Ohio. Filed Aug. 9, 1923. Serial No. 656,508. 3 Claims. (Cl. 150—49.)

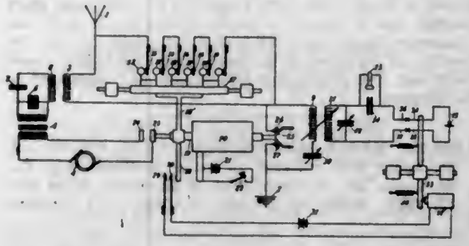
1. A collapsible crate including two rigid side frame members, rods hingedly connected together and to the side frame members, two bottom members hingedly connected together and to the lower edges of the side frame members, two cover members arranged to be hingedly connected to the side frame members at different heights,

means for connecting the free edges of the cover members together and a flexible covering upon the frame arranged to be stretched when the frame is opened.



1,624,213. CAN-BODY-MAKING MACHINE. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 14, 1925. Serial No. 62,424. 27 Claims. (Cl. 113—12.)

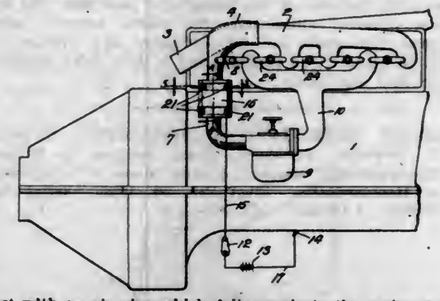
1. A flanging mechanism comprising, means for holding a can body adjacent the end to be flanged, and means supported outside the perimeter of said body and movable radially of the body for forming a flange thereon.



1,624,214. BROILER. JAMES H. CANNON, Los Angeles, Calif., assignor to Cannon Electric Development Company, Los Angeles, Calif., a Corporation of California. Filed July 13, 1926. Serial No. 122,136. 4 Claims. (Cl. 53—5.)

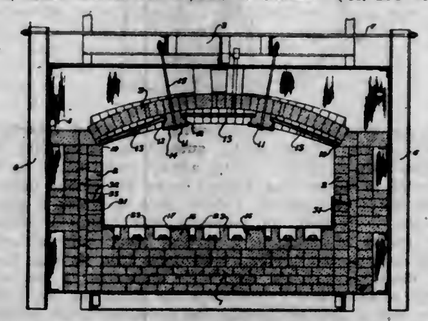
3. A broiler comprising: a hood arranged to be supported on a heating element, said hood being arranged for enclosing a piece of meat being cooked on said heating element, thus preventing an escape of flavor; a plate in said hood adapted to pressurally engage said meat in

order to hold said meat flatly against said heating element; and means connected to said plate whereby said plate and said hood may be lifted.



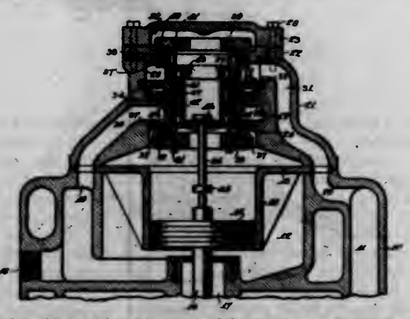
1,624,215. RADIO SIGNALING SYSTEM. GEORGE H. CLARK, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 27, 1922. Serial No. 571,247. 5 Claims. (Cl. 250—13.)

4. In radio signal apparatus, a combination of an antenna circuit, a transmitting inductance and a receiving inductance permanently connected in said circuit, an interruptor arranged to normally short circuit said transmitting inductance, means normally inoperative to short circuit said receiving inductance, a single means to render said interruptor inoperative as a short circuit for said transmitting inductance and simultaneously to render the receiving inductance short circuiting means operative, whereby the apparatus is changed from a receiving to a transmitting system, a receiving circuit coupled to said receiving inductance, said receiving circuit including a detector, and means governed by said single means to control the operation of the detector.



1,624,216. ELECTRICAL HEATER FOR THE AIR-SUPPLY PIPES OF CARBURETORS. WILLIAM F. CLEARY, Hawthorne, N. J., and WILLIAM J. WAGENER, New York, N. Y. Filed Oct. 15, 1925. Serial No. 62,533. 1 Claim. (Cl. 219—38.)

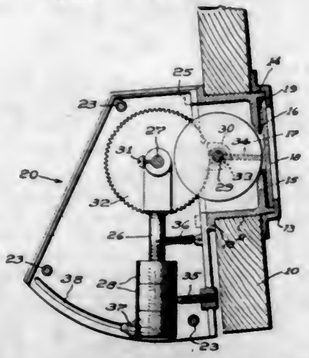
In a heater for warming the air supply passing to a carburetor or other device, the combination of two recessed hollow sections with curved edges adapted to fit around an air pipe, said sections being closed together to provide a tight heater chamber, pairs of bolts passing through openings in said sections for holding the sections together, one bolt projecting beyond the casing, parallel external connecting strips for said bolts, each of said strips connecting together the two members of a pair of bolts, parallel internal coiled heater springs connecting together the bolts, each of said springs connecting one member of one pair of bolts with one member of another pair of bolts, said heater springs lying in a direction at right angles to the direction of the external strips, a binding screw on the projecting bolt, a strip inside the casing attached to one bolt and also adapted to be in con-



tact with an air pipe which delivers air to the carburetor, all arranged to provide an electric circuit through which a heating current may pass.

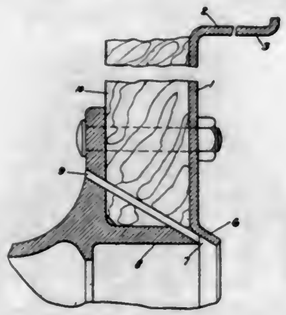
1,624,217. ELECTRIC FURNACE. FRANK T. COPE, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a Corporation of Ohio. Filed Nov. 9, 1925. Serial No. 67,810. 9 Claims. (Cl. 204—64.)

1. An electric furnace including a refractory base, a hearth spaced above said base and comprising a plurality of plates having lugs at opposite edges for engagement under the edges of adjoining plates and a resistor mounted in the space between the hearth and base.



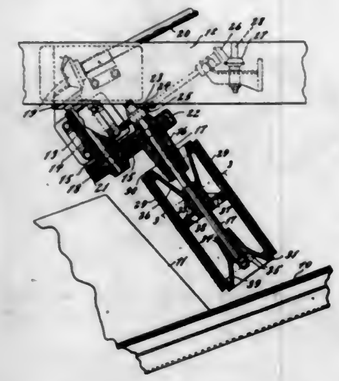
1,624,218. VALVE. FREDERICK F. COUCH, New Brunswick, N. J., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Mar. 13, 1925. Serial No. 15,252. 9 Claims. (Cl. 121—157.)

1. A valve mechanism comprising a casing formed with two cylinders of respectively different bore and having inlet and outlet passages communicating respectively with said cylinders, a hollow piston member formed with two pistons adapted respectively to fit said cylinders and



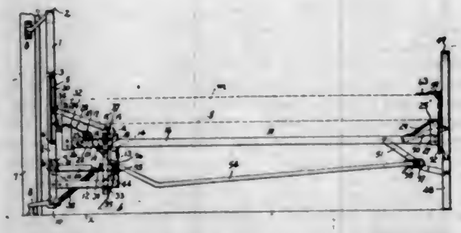
reciprocate therein, a flexible disk valve at each end of the piston member, seats for said valves formed on the casing, said valves serving to close communication between the interior of the casing and said inlet and exhaust passages alternately, the piston member being formed with ports for the admission and exhaust of fluid to actuate said member, and a slide valve operable to control said ports.

1,624,219. BRAKE-TESTING INSTRUMENT. CHARLES F. COWDREY, Fitchburg, Mass., assignor to Muther Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 20, 1925. Serial No. 10,522. 4 Claims. (Cl. 264—1.)



4. An instrument for indicating the speed retarding effect of the brakes of an automobile, comprising in combination, a casing having a part constructed to be mounted in an opening formed in an automobile instrument board and having a front face in which a sight opening is formed, an indicator disk mounted within said casing to rotate in a vertical plane adjacent said sight opening and having graduations upon its edge that are displayed through said sight openings to indicate brake retardations, a pendulum for actuating the indicator disk, a stop for holding the pendulum in its normal inactive position, and manually operable means extending across the path of the pendulum and movable into engagement with the pendulum to hold it inoperative.

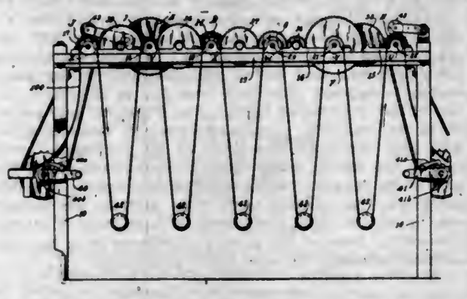
1,624,220. BRAKE-DRUM OIL GUARD. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1924. Serial No. 752,566. 5 Claims. (Cl. 301—6.)



1. A wheel assembly comprising, in combination, a hub, a wheel portion, and a brake drum having a part arranged to catch oil from the end of the hub, the wheel portion being formed to conduct the oil from the base of said part to the outside of the assembly.

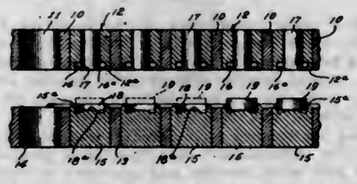
1,624,221. SCREEN-CLEANING APPARATUS. WILLIAM L. D'OLIER, Philadelphia, Pa. Filed Feb. 8, 1924. Serial No. 691,417. 3 Claims. (Cl. 15—21.)

1. A cleaning device including a support, a rotatable sleeve in said support, said sleeve having an arm at one end, a brush shaft bearing in said arm with its axis parallel to but out of alinement with the axis of said sleeve, a brush shaft having one end in said brush shaft bearing, and a cylindrical brush on said brush shaft and connected thereto, said brush shaft being supported by the bearing at one end only, means to rotate said brush shaft and means whereby said sleeve may be turned in its support.



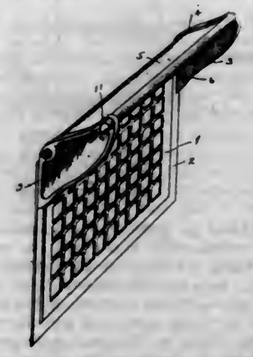
1,624,222. METAL FOLDING BED. WILLIAM J. DUVALL, St. Louis, Mo., assignor to Smith & Davis Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Nov. 15, 1923. Serial No. 675,001. 1 Claim. (Cl. 5—164.)

In a folding bed, a head frame, an anchor frame rigidly secured thereto, a bed-bottom pivotally mounted on said anchor frame, a draft frame pivoted to the head frame, connecting means between the draft frame and bed-bottom for swinging said draft frame upon its pivot when the bed-bottom is moved upwardly, means for imposing tension on said draft frame, a foot frame pivotally connected to the bed-bottom, and suitable connection between the foot frame and the draft frame for causing the foot frame to move into parallelism with the bed-bottom with an upward movement of the latter.



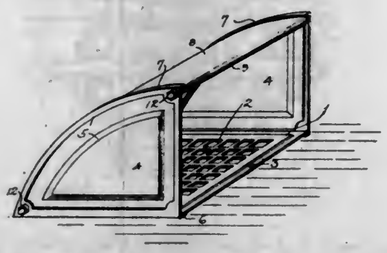
1,624,223. FESTOONING RACK. WILLARD D. EAKIN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1924, Serial No. 757,459. Renewed Mar. 2, 1927. 8 Claims. (Cl. 271—2.3.)

1. A festooning rack comprising a series of rolls adapted to engage respectively in successive loops of a continuous strip of material to feed the same longitudinally through the succession of loops, means common to said rolls for driving them in a determinate speed ratio, means common to said rolls for driving



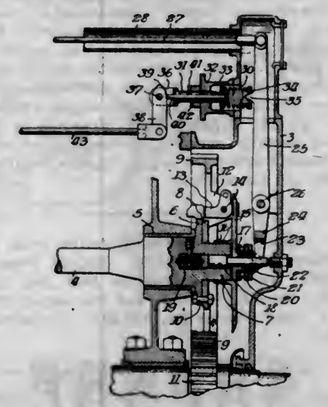
them in a speed ratio differing from that of the first said means, and means for integrating the driving effects of the two said means upon the rolls.

1,624,224. APPARATUS FOR MAKING CAPS FOR TYPEWRITER KEYS AND THE LIKE. DOUGLAS L. EASTERLIN, New York, N. Y., assignor to Lincoln Rubber Key Company, New York, N. Y., a Copartnership composed of Douglas L. Easterlin and Ada L. Easterlin. Filed Mar. 16, 1925. Serial No. 15,917. 17 Claims. (Cl. 18—42.)



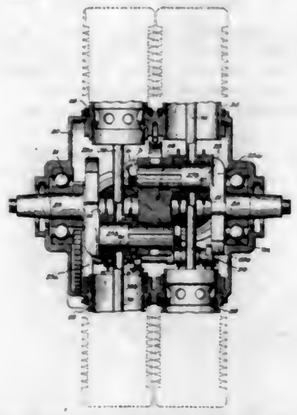
1. In apparatus for making caps for typewriter keys and the like, in combination, a die member having therein a recess provided with undercut side walls, and a second die member movable relative to said first die member and having a recess substantially coaxial with said first recess, the mouth of said second recess being of greater diameter than the mouth of said first recess and said die members having coacting parts about said recesses.

1,624,225. REGISTER HOOD. WILLIAM S. ELTERS, Dayton, Ohio, assignor, by direct and mesne assignments, to The Gem City Sheet Metal Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 1, 1922. Serial No. 533,204. 6 Claims. (Cl. 98—108.)



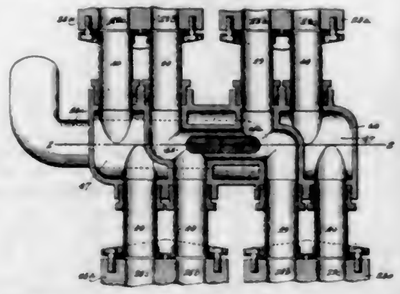
1. A hood for wall registers comprising a shelf like deflector of substantially ogee form, detachably engageable with the top edge of the register plate and extending outwardly and upwardly therefrom and end brackets detachably engaged with said deflector and bearing against the forward face of the register plate.

1,624,226. REGISTER HOOD. WILLIAM S. ELTERS, Dayton, Ohio, assignor, by direct and mesne assignments, to The Gem City Sheet Metal Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 1, 1922. Serial No. 533,205. 2 Claims. (Cl. 98—103.)



1. A register hood comprising two spaced substantiall sector shaped heads, an arcuate roof sheet interposed between the heads, the margin of the roof sheet being in turned to form a rolled edge, and a tie rod connectin the heads and extending through the rolled edge of the roof sheet to detachably connect the parts one with another.

1,624,227. GOVERNOR CONTROL. JAMES B. FISHER, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Feb. 26, 1925. Serial No. 11,689. 5 Claims. (Cl. 264—3.)

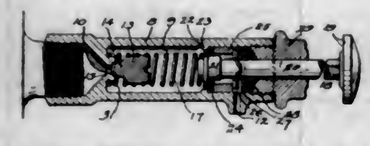


2. In combination, an explosive engine, an intake valve therefor, a governor member connected with said intake valve, means driven by said engine in proportion to the speed thereof tending to move said governor member to cause closure movement of said valve, a normal setting member, a compression spring between said setting member and said governor member held under normal compression by said setting member to resist operation of said governor member to cause checking of said engine until the speed has reached a certain predetermined normal maximum, an additional setting member, and means operable from a distance for setting said additional setting member to increase the resistance of said spring without disturbing the position of said normal setting member.

1,624,228. CRANK-SHAFT FORMATION. HENRY FORD, Dearborn, Mich. Original application filed Aug. 2, 1920, Serial No. 400,638. Divided and this application filed Sept. 21, 1922. Serial No. 589,534. 2 Claims. (Cl. 74—38.)

1. In crank shafts for internal combustion engines, a pair of end members of similar formation, each member having a journal member and a pin offset with respect to the journal axes and extending in the opposite direction to that of the journal, the pin being of greater length than the axial length of the connecting rod assembly with which the pin co-operates, a member removably carried by and connecting the free ends of the pins to produce a two-throw crankshaft assembly, with the connecting member of a thickness corresponding to the excess length of either pin, the member having an opening for each pin extending throughout the thickness of the member, the wall of each opening and the pin portion which extends therethrough having complemental means for maintaining the member openings and pin assembly against relative movement rotatively, and means carried by and extending axially of the pin for preventing movement of the connecting member in a direction to release the member from the pin, movement of the member on a pin in the opposite direction being prevented by the connecting rod assembly, whereby the member is held from applying bending strains on a pin through relative movement of pin and the member.

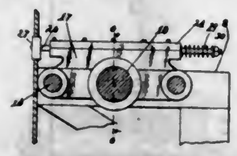
1,624,229. MANIFOLD CONSTRUCTION FOR INTERNAL-COMBUSTION ENGINES. HENRY FORD, Dearborn, Mich. Original application filed Aug. 2, 1920, Serial No. 400,638. Divided and this application filed Sept. 21, 1922. Serial No. 589,536. 3 Claims. (Cl. 123—52.)



1. A manifold structure adapted for internal combustion motors wherein the cylinders served by the structure are spaced apart with the manifold structure located therebetween, a casing having an intake chamber and an exhaust chamber elongated in the direction of length of the casing and of the crank shaft of the motor, an admission port for the intake chamber and an outlet port for the exhaust chamber, said chambers and ports being permanently positioned relatively one to the other with the chamber and its corresponding port in permanently open communication, said casing also carrying service ports leading in opposite directions from and in directions lateral of the direction of length of said chamber and adapted to be connected in permanently-open communication with the corresponding ports of the cylinders being served, the service ports being located intermediate the ends of the chamber and arranged in a succession in which the intake and exhaust ports for a cylinder are located side by side to permit symmetrical connection of service connections between the ports and cylinder with the connections extending in substantial parallelism.

1,624,230. WATER GRATE. JOHN G. GIBSON, Ventnor, N. J. Original application filed July 5, 1923, Serial No. 649,487. Divided and this application filed Oct. 24, 1924. Serial No. 745,548. 3 Claims. (Cl. 122—374.)

1. In a grate construction of the character stated a plurality of hollow grate-bars arranged side by side the meeting faces of said grate-bars being provided with registering, vertical grooves cooperating to provide air ducts, the top wall of a grate-bar adjacent one set of grooves being recessed and bevelled and the top wall thereof overlying the opposed set of grooves and flanged to seat within the recessed part of a companion grate-bar, the flanged part being bevelled and apertured in communication with registering grooves.

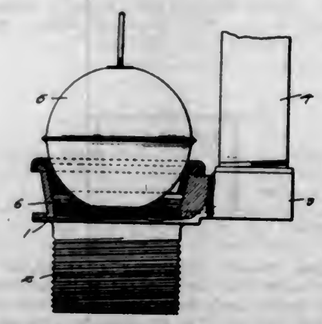


1,624,231. LIQUID-SOAP DISPENSER. ALBERT R. GOLDRICK, Cleveland, Ohio, assignor to The Gerson Stewart Corporation Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 2, 1921. Serial No. 449,066. 8 Claims. (Cl. 221—102.)

1. In a liquid dispenser, the combination of a valve body provided with a displacement chamber having an inlet and an outlet, a valve seat surrounding said inlet, a valve member disposed within the displacement chamber and adapted to rest on said seat and close said inlet, a spring member acting on the valve member to maintain it unseated and a plunger acting on the spring to indirectly move the valve member, whereby said valve member may be caused to rest on said seat and close the inlet at a predetermined movement of the plunger and spring.

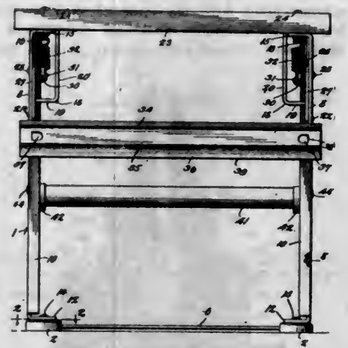
5. In a valve of the character described a metallic body member having a displacement chamber provided with inlet and outlet ports surrounded by valve seats, a valve stem having a head adapted to close the outlet port, a metallic valve member disposed within the displacement member, a spring between said valve member and the valve head of the stem, said metallic valve member being carried solely by the spring adapted to close the inlet by metal to metal contact upon a predetermined inward movement of the valve stem.

1,624,232. LINE SPOOLER. ADONIRAM J. GRAHAM and LOUIS O. TEKELL, Whittier, Calif., assignors to Gra-Kell Line-Spooler Company, Los Angeles, Calif., a Partnership composed of Adoniram J. Graham, Louis O. Tekell, Harry Maxwell, Harry P. Davis, J. E. Wallis, A. R. Chandler, Charles T. Butler, and David H. Cannon. Filed Jan. 19, 1926. Serial No. 82,225. 13 Claims. (Cl. 242—158.)



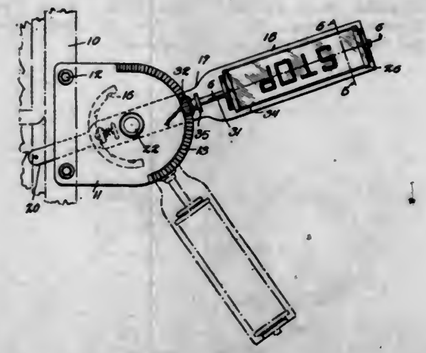
1. A line spooler comprising in combination a rotatable drum adapted to reel a line thereon, a spooling device having means engaging a line, means to traverse the engaging means lengthwise of the drum and resilient means mounted at the end of travel of the engaging means to give a return impulse and a slide to cause the engaging means to follow the line as the winding diameter of the drum increases and decreases due to the winding of the line.

1,624,233. CONTAINER FOR ARTIFICIAL BAIT AND THE LIKE. GEORGE BREWER GRIFFIN, Pittsburgh, Pa. Filed Nov. 28, 1925. Serial No. 71,938. 7 Claims. (Cl. 43—32.)



1. A device for mounting and containing artificial bait and the like comprising a bulbous container having an opening therein and a compressible stopper removably seated in said opening and having a bait-mounting member projecting inwardly therefrom.

1,624,234. FLUSH-TANK BALL SEAT. PRATT B. HALE, Albany, Ala. Filed Oct. 27, 1923. Serial No. 671,175. 1 Claim. (Cl. 4—57.)

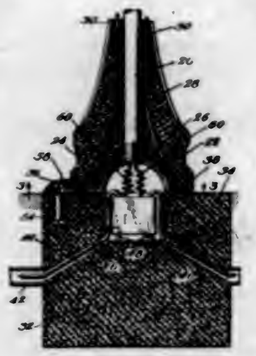


A flush tank fixture comprising an upwardly and outwardly flaring annular wall provided with attaching means, said wall having an outer marginal flange at its upper edge, a lateral extension integral with said wall adapted for connection of an overflow pipe thereto, and a removable valve seat substantially of rubber screw threaded to the inner surface of said wall and having a flange adapted to hook over said flange, said valve seat being adapted to receive a ball valve.

1,624,235. PAPER CUTTER. BERNARD E. HALL, Martinsville, Ind., assignor to The Davis Lumber Co., Martinsville, Ind. Filed May 27, 1925. Serial No. 33,245. 4 Claims. (Cl. 211—32.)

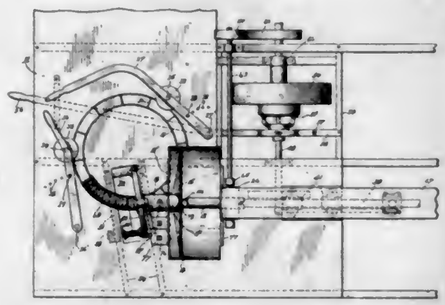
1. In a device of the class described, a frame comprising posts in the form of channel members including reinforcing flanges, bearings on the inner surfaces of the posts and adapted for the support of a paper roll, and a cutter frame adapted for cooperation with a paper roll supported by the bearings, the cutter frame comprising arms, and means for mounting the arms pivotally on the posts, one flange of each post being cut away entirely at the upper end of each post to permit the arms of the cutter frame to work close to the posts, and to facilitate the mounting of a paper roll in the bearings.

1,624,236. VEHICLE SIGNAL. WALTER M. HAMMERSLEY, Dayton, Ohio. Filed Dec. 3, 1925. Serial No. 73,008. 3 Claims. (Cl. 116—46.)



1. A signal comprising a support plate, means for securing the plate upon a vehicle body, a signal arm pivotally connected upon the plate and arranged to swing in a vertical arc, a rotatable signal casing carried by the outer projecting portion of the arm, signal plates mounted on the casing arranged to display various signals at various positions of the arm, means formed on the plate and casing for operating the casing, and a spring urged lug secured to the arm engageable with an arcuate flange mounted on the plate adapted to retain the arm at various angular positions.

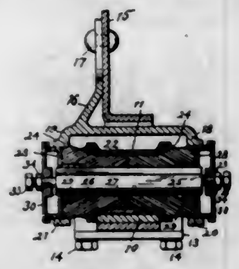
1,624,237. STREET-LIGHTING EQUIPMENT. DAVID B. HANNA, Park Ridge, Ill. Filed June 10, 1925. Serial No. 36,176. 4 Claims. (Cl. 240—84.)



1. A street lamp comprising a foundation and a post mounted thereon, said post comprising a base and a

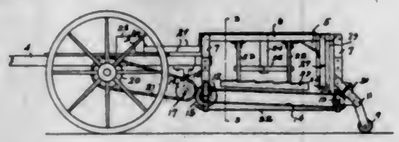
superstructure, said base having a spider with a central dome, said post having a bore extending up from the top of said dome, said foundation having a recess under said dome and passageways extending from said recess outward and downward to drain said recess, an underground conduit level with the ends of said passages and communicating with them, electrical conductors in the bore of said post, transmitting means in said recess es-

tablishing operative electrical connection between said conduit and post conductors, said spider being of metal and having a plurality of peripherally spaced lugs extending out beyond said base, hold-down means fastening said lug to said foundation, and grouting covering said lugs and hold-down means, said hold-down means being detachably connected with said lugs, and said post conductors having coiled extensible portions in said dome.



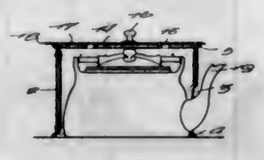
1,624,238. MACHINE FOR PREPARING MOSSED FRAMES FOR FLORAL WREATHS. HANS PETER HANSON, Chicago, Ill. Filed Nov. 20, 1925. Serial No. 70,236. 19 Claims. (Cl. 41—3.)

1. A machine for applying moss or the like to wreath frames, comprising a support for the frame, means for compacting the moss and placing the same on said frame, and mechanism automatically operable adjacent said means for binding said moss to said frame as it is placed thereon by said means.



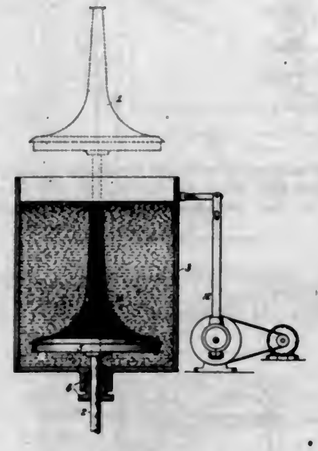
1,624,239. PIVOTAL CONNECTION. HOWARD C. HARRIS, Akron, Ohio. Filed Apr. 16, 1926. Serial No. 102,435. 9 Claims. (Cl. 267—54.)

1. In pivotal connections, the combination of a bracket having spaced arms provided with aligned bores, a member which is arranged between said arms and has a bore that is coaxial with the bores in said arms, a pintle extending through said bores, a rubber bushing between said pintle and said member and through which the member and pintle are connected, axially movable mem-



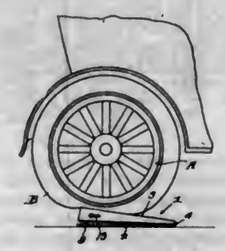
bers fitting the bores in said arms and non-rotatably connected with said pintle, and means whereby said axially movable members are moved to compress said rubber bushing axially and non-rotatably secured to said arms.

1,624,240. INSECT DESTROYER. WILLIAM W. HARWOOD, Grannis, Ark., and GEORGE HARWOOD, Dickinson, Tex. Filed May 22, 1925. Serial No. 32,068. 4 Claims. (Cl. 43—138.)



1. An insect destroyer including a carriage, a revolving electro-conducting apron carried thereby, a contact member spaced from said apron, and means for connecting said apron and said contact member to the opposite poles of a source of electricity.

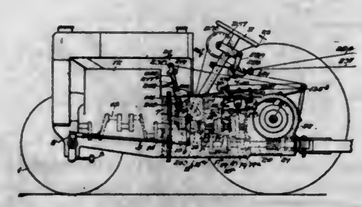
1,624,241. HEAT RETAINER. PAUL A. HASSELBLATT, Brooklyn, N. Y. Filed Nov. 10, 1924. Serial No. 748,991. 1 Claim. (Cl. 53—11.)



A kitchen utensil comprising a cylindrical member formed of inner and outer spaced walls of sheet metal, the edges of the inner wall being curled outwardly and engaged with the edges of the outer wall, insulating material disposed in the space between the walls of said member, said member being cut inwardly from one end thereof to provide a longitudinal opening therein adapted to receive therethrough projecting portions of utensils over which said member may be applied, said member being also capable of reversal to position the opening at the top or bottom thereof, and a cover for one end of said cylindrical member provided with a plurality of openings, as and for the purposes described.

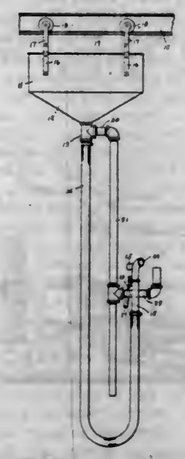
1,624,242. SOUND-AMPLIFYING HORN. JESSE B. HAWLEY, Wilmette, Ill. Original application filed Feb. 23, 1923, Serial No. 620,579. Divided and this application filed Feb. 24, 1925. Serial No. 11,145. 25 Claims. (Cl. 181—27.)

1. A sound horn comprising a layer of felt and a layer of pulp.



1,624,243. VEHICLE-WHEEL JACK. HENRY J. HOFF and GEORGE B. BUSH, York, Pa. Filed Mar. 2. 1926. Serial No. 91,809. 4 Claims. (Cl. 254—88.)

1. A vehicle wheel jack comprising a base, a rearwardly inclined runway hingedly secured at its forward end on said base, vertical side walls secured to said runway, a vertical wall secured between said side walls adjacent the rear ends thereof, the lower edge of said vertical wall being disposed flush with the lower edges of the side walls, a block adapted for slidable movement on the inner face of the vertical wall between said side walls, and means for moving said block downwardly into engagement with said base whereby the inclined runway may be held in its raised position.

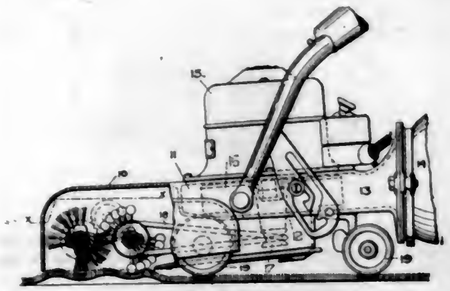


1,624,244. GEAR-CHANGING MECHANISM. LUDWIG HOLLAND-LETZ, Oak Park, Ill. Filed July 7, 1921. Serial No. 483,091. 38 Claims. (Cl. 74—58.)

1. In an apparatus of the class described, the combination with a gear changing element movable to a plurality of different operative positions to control the speed, of a selecting member movable to different positions to determine how the gear changing element shall be moved, a line, and connections between said line and

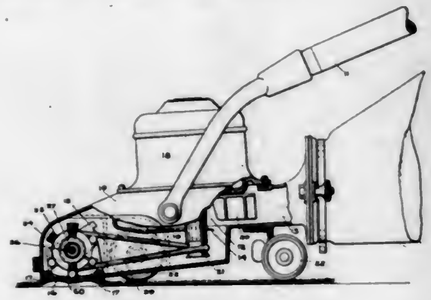
the selecting member whereby by pulling on the line in different ways the selecting member can be moved to its different selective positions.

1,624,245. SYSTEM OF FEEDING POULTRY AND LIVESTOCK. ARTHUR W. HOLMES, Veedersburg, DONALD E. JAQUES, Thorntown, and HENRY B. COATS, Veedersburg, Ind. Filed Feb. 2, 1926. Serial No. 85,506. 4 Claims. (Cl. 221—67.)



1. In a stock and poultry feeding device, the combination of an overhead trackway, a depending liquid feed-containing tank adapted to travel thereon, a rigid guide bar extending downward from the tank to render the same accessible for moving the tank on the trackway, a flexible depending discharge tube, and a valve-controlled nozzle on the free end of said tube, whereby the tank is easily moved and at the same time the discharge tube is readily manipulated for discharging the feed.

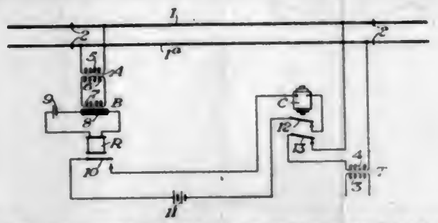
1,624,246. SUCTION CLEANER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Oct. 21, 1922. Serial No. 595,900. 2 Claims. (Cl. 15—6.)



1. In a suction sweeper, a main casing having a suction mouth, means for drawing a current of air through said mouth, support means maintaining the mouth at a distance above the floor covering to be cleaned, means

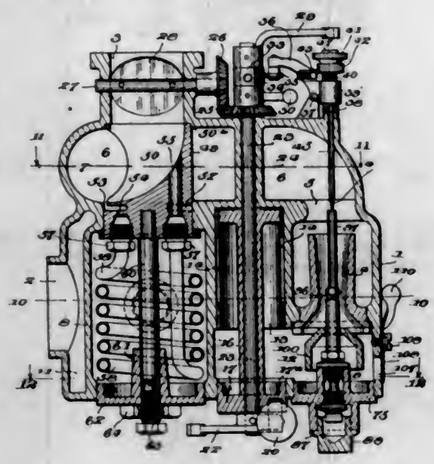
for sweeping the floor covering, means for vibrating the floor covering while it is drawn up to the mouth by the air, the sweeping means comprising a rotatable body having separated rows of sweeping elements thereon,

the vibrating means comprising a rotatable body having thereon rigidly mounted striking members having fixed orbits of travel, and means producing rotation of the sweeping means and vibrating means in a positive angular relation.



1,624,247. SUCTION CLEANER. HOWARD EARL HOOVER, Glencoe, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Nov. 1, 1922. Serial No. 598,251. 2 Claims. (Cl. 15—6.)

2. In a suction cleaner, the combination of a casing provided with a suction mouth and means for supporting said casing with the plane of the suction mouth a substantial distance above the surface of the object to be cleaned, a series of guard fingers carried by said casing and extending across said suction mouth, and means for suspending said object to be cleaned against said guard fingers and for moving a current of air past said object and thru said casing, a rotor mounted in the casing, rigid beating elements having orbits of travel extending beyond the surface defined by the guard fingers fixed to the rotor and extending substantially from end to end thereof and brush members secured to the rotor.

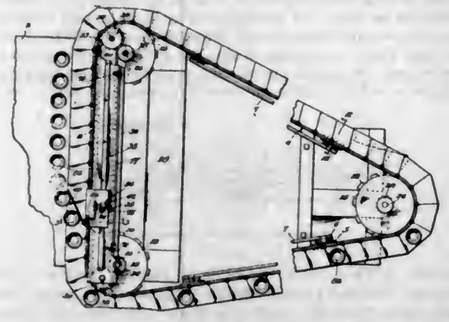


1,624,248. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LEMUEL F. HOWARD, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 21, 1926. Serial No. 117,324. 9 Claims. (Cl. 246—34.)

5. Railway traffic controlling apparatus comprising a track circuit including track rails and a source of current, a track relay, means for periodically interrupting the supply of current from said source to the track rails when said track relay is open but not when it is

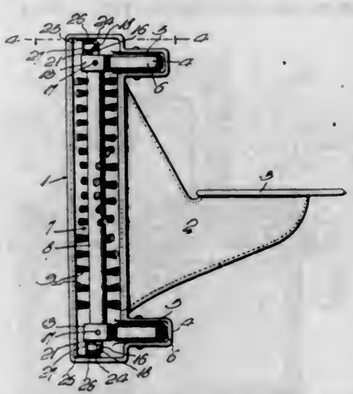
closed, and energy integrating means interposed between the rails and said relay for causing the relay to become energized by the periodically interrupted current.

1,624,249. LIQUID-FUEL VAPORIZER. JON HUTCHINSON, Saugerties, N. Y. Filed Mar. 17, 1925. Serial No. 16,232. 14 Claims. (Cl. 123—122.)



3. The combination with an internal combustion engine, of an attachment therefor comprising a carbureter, a horizontally extending chamber communicating therewith at one end, and with the engine intake at the other end whereby a constant flow of gaseous fuel mixture is set up through said chamber, said engine intake opening upwardly therefrom from the highest point thereof, the walls of said chamber being so shaped as to cause the gaseous mixture from the carbureter to flow in a horizontally curved path, whereby any liquid particles are separated therefrom by centrifugal force and thrown against the outer walls of said chamber, and a vaporizing device located directly below said chamber beneath the engine intake, and communicating with the lowest point of the chamber, whereby any separated liquid, accumulating at the bottom of said chamber, flows by gravity downwardly into said device, while the gas passes upwardly through the engine intake.

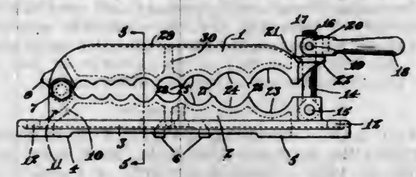
1,624,250. LEER-CHARGING APPARATUS. FRED H. JOHNSON and SHERMAN R. LATHROP, Sapulpa, Okla. Filed Mar. 19, 1925. Serial No. 16,834. 13 Claims. (Cl. 198—31.)



1. In an apparatus for the purpose set forth, the combination of a main conveyer, a carrier arranged in proximity to the main conveyer, an unloader blade

pivoted at one end to the carrier and extending laterally therefrom across the conveyer whereby to push articles laterally from the conveyer, means for causing travel

of the carrier longitudinally of the conveyer, and means mounted upon the carrier and connected with the unloader blade for yieldably holding it across the conveyer.

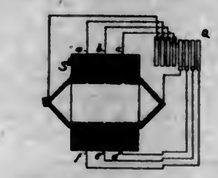


1,624,251. VACUUM CLEANER. WALTER L. KEEFER, Chambersburg, Pa., assignor to Harry G. Wolf, Chambersburg, Pa. Filed Mar. 16, 1925. Serial No. 15,941. 2 Claims. (Cl. 15—8.)

2. In a combined sweeper and vacuum cleaner the combination of an elongated nozzle, brush-driving friction wheels offset from the longitudinal center thereof, a brush in the nozzle engaging said wheels and having spindles, and spring pressed arms pivotally mounted in the nozzle for forcing the brush toward the wheels, each arm having an upper and a lower spindle-receiving notch so positioned that when the brush spindles are in the lower notches the bristles of the brush will project outside of the nozzle to sweep a rug while in contact with the floor, and when the brush spindles are in the upper notches, the brush bristles will be entirely within the nozzle and gently brush the upper surface of the rug while it is lifted above the floor by suction.

1,624,252. PIPE VISE. JOSEPH E. KNERSON, Saugus, Mass., assignor to Trimont Manufacturing Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1926. Serial No. 86,415. 8 Claims. (Cl. 81—21.)

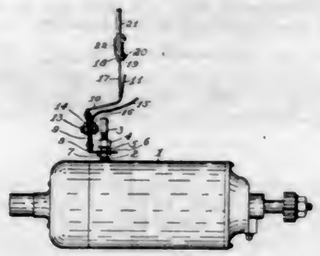
1. In a vise of the kind described, a base having a jaw integral therewith, a movable jaw hinged to the first jaw, reinforcing webs extending longitudinally of each jaw each of said jaws having arcuate depressions cooperating to form graduated pipe clamping recesses, and a projecting lug at the rear of said movable jaw to limit the opening thereof, said base having three sup-



porting portions, formed arcuate to permit application to a rounded support, said base being also provided with means to apply said vise to a flat surface.

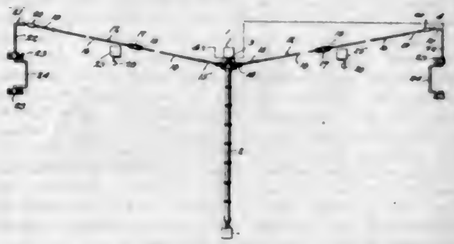
1,624,253. CLASP. ANGUS MCISAAC KILBY, Bangor, Me. Filed July 19, 1926. Serial No. 123,504. 1 Claim. (Cl. 24—258.)

A device of the class described comprising a U-shaped body to straddle an article of apparel, one arm of said body having a longitudinal slot and being formed in its inner side with two alined grooves at one end of and at right angles to the length of said slot, the sides of said grooves diverging from the groove bottoms to the open sides of said grooves, a clamping lever having an angular end passing through said one end of said slot, said angular end of the lever being provided with laterally projecting axially alined trunnions rockably seated in said grooves, the common axis of said trunnions being slightly oblique to the length of the lever, necessitating canting of said lever as it is forced to closed position into said slot, said canting causing lateral sliding of the trunnions on the groove sides away from the groove bottoms, whereby the outward pressure of the clamped article on said lever will tend to force said trunnions again toward the groove bottoms and will consequently exert a swinging tendency on the lever toward one wall of the slot, causing said lever to frictionally engage said slot wall and prevent accidental swinging of the lever to released position, and a spring member carried by the aforesaid U-shaped body and engaging the lever to yieldably urge its trunnions toward the groove bottoms.



1,624,254. HIGH-SPEED DYNAMO-ELECTRIC MACHINE FOR CONTINUOUS CURRENT. MICHAEL KOSTENKO and NICOLAS JAPOLSKY, London, England. Filed Mar. 19, 1923, Serial No. 626,132, and in Switzerland Feb. 5, 1923. 1 Claim. (Cl. 171—252.)

A high speed dynamo electric machine for continuous current of the type generator, motor, converter, comprising a stationary armature with ventilating passages, a rotating inductor, two commutators rigidly connected with each other, one formed of a set of insulated rings and the other of a set of insulated segments, leads con-

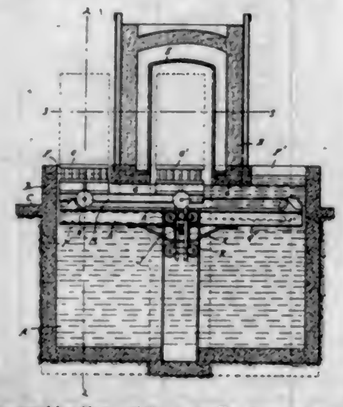


necting the rings with the corresponding segments, and two sets of brushes, one set contacting with the insulated rings and connected with the armature winding by leads passing through, said passages in the armature, and the other set contacting with the commutator segments, and means for rotating the commutator at a speed which is a sub-multiple of that of the inductor, so that the two sets of brushes act to transmit direct current.

1,624,255. STARTING SWITCH FOR ELECTRIC STARTING MOTORS. EMIL KYHL, Britt, Iowa. Filed Dec. 3, 1925. Serial No. 72,972. 4 Claims. (Cl. 200—59.)

1. A device of the character described, comprising an electric terminal, an elastic plate of insulation bracketed on said terminal, another electrical terminal mounted on said insulating device at an angle to the first-mentioned terminal, and a reciprocable member movable for laterally shifting said insulating device to effect contact between said terminals.

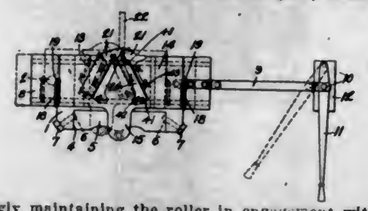
1,624,256. AUTOMATIC DRIVE GATE. JEREMIAH LANDIS, Brookville, Ohio. Filed Sept. 2, 1925. Serial No. 54,093. 1 Claim. (Cl. 39—56.)



In a device of the class described, a support, a gate pivotally mounted at its upper inner corner on the support for vertical and horizontal swinging movement, a bracket on the support and provided with a V-shaped slot, a depending finger on the lower inner corner of the gate and received slidably in the slot, shafts mounted for rocking movement and located on opposite sides of the gate, the shafts being provided with vehicle engaging cranks, and having arms, an operating member connecting the arms, the operating member being pivotally mounted intermediate its ends, on the finger of the gate, and a lateral support having an inclined edge, the gate having a projection which cooperates with said inclined edge, when the gate is lifted in an open position, thereby to start the gate rapidly toward a closed position.

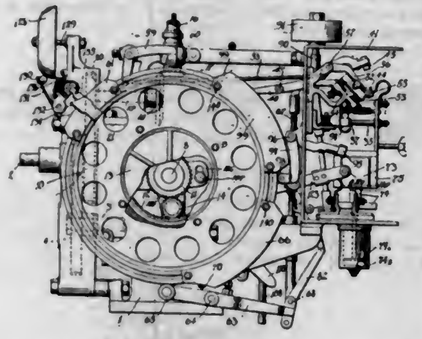
1,624,257. CARTON-END-CLOSING DEVICE FOR PACKAGING MACHINES. JOHN D. LANE, Cambridge, Mass. Filed Mar. 17, 1925. Serial No. 16,155. Renewed July 7, 1926. 8 Claims. (Cl. 93—2.)

1. In a packaging machine adapted to act on a carton having major walls, an extension on one major wall forming an end wall and a tucking flap, and minor walls having end tabs, said machine, including an intermittently moving carrier adapted to convey an opened carton edgewise in a predetermined path, and carton-forcing means, adapted to move the carton endwise toward said carrier; a carton end-closing device, adapted to turn inward one of the lower end tabs, when the carton is moved endwise and the carrier is at rest, and to turn inward the opposite end tab when the carrier moves, said device comprising a fixed track including a primary section, having an inclined portion which turns inward one of the end tabs, when the carton is moved endwise, and a secondary section separated from the primary section by a slot into which the other end tab is forced by the endwise movement of the carton, said secondary section turning inward the last-mentioned tab when the carrier moves, and converting means acting after the successive turning of the end tabs, to convert the extension into an end wall and a tucked flap.



1,624,258. NONOXIDIZING ANNEALING FURNACE. VICTOR E. LANE, Detroit, Mich. Filed Feb. 15, 1926. Serial No. 88,325. 6 Claims. (Cl. 214—18.)

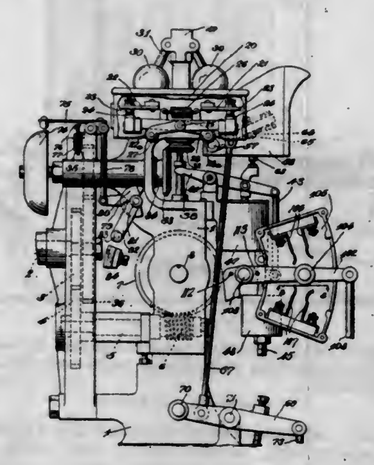
1. The combination with a muffle furnace having an opening at the bottom, of a water filled pit beneath said furnace extended to provide openings thereto on opposite sides of the furnace, an elevator within said pit having a beam extending to the opposite sides thereof, a carriage mounted to travel on said beam and spaced work supports on said carriage for registering with said muffle respectively when said carriage is at opposite ends of said beam the work supports not in registration with said muffle being registered with one or the other of said external openings to the pit.



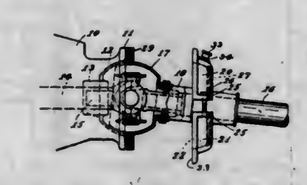
1,624,259. TOOL-GRINDING MACHINE. SIMON LANGLAIS, Montreal, Quebec, Canada. Filed May 22, 1922. Serial No. 562,764. 2 Claims. (Cl. 51—100.)

1. A grinding machine consisting of a supporting frame; a stationary base member fixed upon the supporting frame and having in its top a longitudinal guideway and a recess, the recess being located at the front of the member; a templet mounted within said recess and disposed parallel to the guideway the front face of the templet being irregular; a grinding element located adjacent the rear side of the base member; a carriage supported upon the base member and movable longitudinally within the guideway; said carriage having a transverse guideway in its top; a second carriage mounted upon the first mentioned carriage and movable transversely in the transverse guideway, the said second carriage having a fixed downwardly extending shaft; a roller rotatably mounted upon said shaft and adapted to bear against the irregular face of the templet; means for

yieldingly maintaining the roller in engagement with the templet; means for moving the first mentioned carriage longitudinally, and means mounted upon the second carriage for detachably securing a tool thereon; said last-mentioned means consisting of a device, means rigidly securing the device to the top of the carriage, and a clamping device for clamping the tool in contact with the said rigidly mounted device.



1,624,260. HOIST CONTROL. WILLIAM J. LILLY, Tacoma, Wash., and HENRY H. LOGAN, Chicago, Ill. Filed Oct. 9, 1922. Serial No. 593,466. 22 Claims. (Cl. 192—140.)

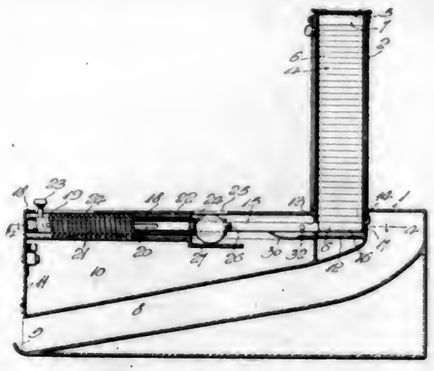


6. A hoisting engine controller of the character described comprising a cam operated limit switch and an over-speed switch, a governor for operating said over-speed switch, a shaft arranged for synchronism with the hoist drum of a mine hoist, said shaft being connected by means of a gear train with said governor, a movable cam supporting member, a cam carried by said member arranged to actuate said cam operated switch when moved into engagement therewith, means associated with said shaft and with said movable cam supporting member for moving said cam supporting member at a speed directly proportional to the speed of said shaft and consequently said hoist drum, and other means associated with said named means for varying at will the relative position of said movable member and said shaft, thereby to hasten or retard the engagement of said cam with said cam operated switch.

1,624,261. HOISTING-ENGINE CONTROL. WILLIAM J. LILLY, Tacoma, Wash., and HENRY H. LOGAN, Chicago, Ill. Filed Mar. 24, 1923, Serial No. 627,504, and in Canada May 5, 1924. Renewed Aug. 16, 1926. 8 Claims. (Cl. 192—139.)

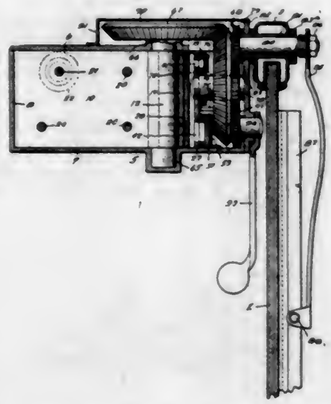
1. In a hoist engine controller of the type described, an over-speed switch comprising a pair of insulating members pivotally connected with one another, a contact member on each of said insulating members arranged for contact when said members are substantially in registration with one another, a governor arranged to be driven by the hoist drum of a mine hoist, a push rod arranged for actuation by said governor and further arranged to engage with one of said insulating members when said governor is expanded beyond a predetermined degree, so as to cause the movement of said last named insulating member away from the remaining insulating member, and cam operated means for moving said insulating members as a unit toward said push rod, thereby hastening the actuation of said over-speed switch by expansion of said governor.

1,624,262. SEPARABLE COVER FOR UNIVERSAL BALL-JOINT CASES. ALFRED A. LINLEY, Fairfield, Conn. Filed June 1, 1923. Serial No. 642,739. 2 Claims. (Cl. 64—89.)



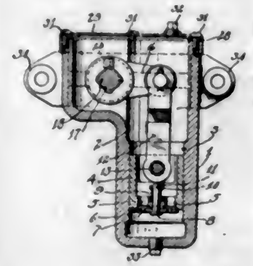
2. A collar for universal ball joints comprising a pair of semi-annular and interiorly spherical-shaped members having their corresponding adjacent ends detachably connected to each other, and each of said members having one edge provided with a laterally extending flange for detachable connection with the corresponding flange of the transmission casing, and adjustable means for taking up wear.

1,624,263. VENDING MACHINE. WALTER LOYD LINTON, Independence, Kans. Filed Dec. 8, 1924. Serial No. 754,599. 2 Claims. (Cl. 211—8.)



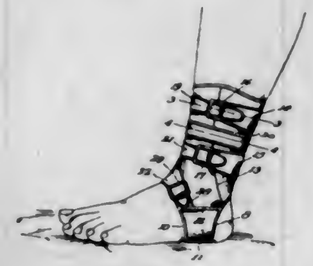
1. A vending machine comprising a magazine for articles of merchandise, an ejector having a straight wire-like terminal extending in the direction of movement of said ejector and normally disposed under the magazine

to engage the central portion of the lowermost article, said ejector also having a thrust shoulder to engage the article, and means for operating said ejector to pro-



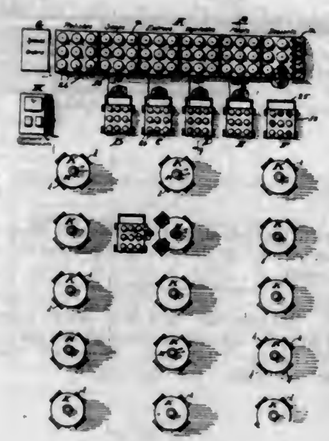
ject said wire-like terminal and the article beyond the magazine, permitting such article to tilt and fall from said terminal.

1,624,264. MOTOR-DRIVEN WINDSHIELD CLEANER. SAMUEL LIPPERT, Garfield Heights, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 26, 1923. Serial No. 676,971. 10 Claims. (Cl. 121—97.)



1. In a motor of the class described, the combination of a casing, a partition dividing the same into an operating chamber and a valve space, a vane mounted to oscillate within the operating chamber and dividing the same into two compartments, the casing enclosing a pressure fluid chamber adjacent said partition, the partition having a main port leading into the pressure fluid chamber and ports spaced laterally therefrom leading into the respective compartments of the operating chamber, a main valve cooperating with said ports and by means of which when it is moved in opposite directions said compartments are, in alteration, placed in communication with the pressure fluid chamber, pressure fluid means for operating the main valve, the partition having passageways leading to the pressure fluid means and a second port opening into the pressure fluid chamber, a relay valve through which said passageways are, in alteration, placed in communication with the pressure fluid chamber, and operative connections between the vane and the relay valve.

1,624,265. SHOCK ABSORBER. HENRY HAVELOCK LOGAN, Chicago, Ill. Filed Apr. 12, 1926. Serial No. 101,496. 6 Claims. (Cl. 188—88.)



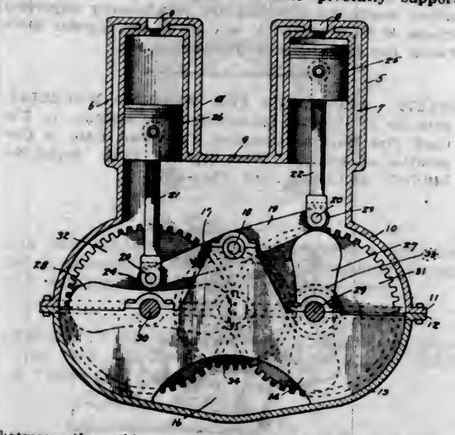
1. A shock absorber comprising a casing having a single compartment therein adapted to contain a liquid, a portion of said compartment being fashioned into a cylinder, a piston movably disposed in said cylinder, and having a plurality of relatively large openings therein, and a spring-pressed plate disposed over the openings, said plate being adapted to move free from said piston, whereby the liquid may flow through the openings in said piston during the movement of the piston upwardly, said plate having relatively small openings therein, whereby the speed of the piston is limited during the downward movement of the piston.

1,624,266. ANKLE BRACE. MAUDE LUDER, Asbury Park, N. J. Filed Sept. 21, 1925. Serial No. 57,738. 1 Claim. (Cl. 128—166.)

An ankle brace comprising a flexible body including an upper ankle embracing portion and a lower foot embracing portion, the upper portion consisting of a back and sides, one of the sides being integral with the back and having a top and two lower short straps and an intermediate long strap, the back having narrow openings opposite the short straps adjacent the long strap, and the other side being stitched to the back by a longitudinally curved seam and having two long straps to pass through the said narrow openings and receive the short straps in line with said openings to which they are adapted to be buckled, and the lower foot embracing portion forming a part of the back and an extension of the integral side and stitched to the lower end of the stitched on side by a straight seam, the lowermost short strap being adapted to extend over the instep and be buckled to the outer forward corner of the lower foot embracing portion adjacent the straight side seam.

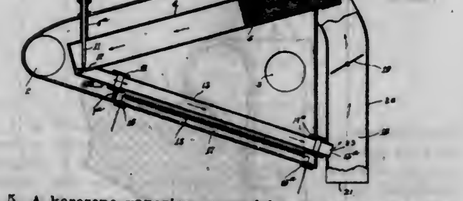
1,624,267. SYSTEM AND MEANS FOR DISPENSING FOODS AND COMMODITIES. LAMAR LYNDON, New York, N. Y., and RAYMOND IVES BLAKESLEE, Los Angeles, Calif. Filed Aug. 16, 1924. Serial No. 732,583. 11 Claims. (Cl. 186—1.)

1. The improved method of service to customers at one or more points in an establishment, of wares to be selected accompanied by inspection, consisting in providing a plurality of movable conveying and displaying units each stocked with certain wares, and a main dispensing unit for re-stocking such display units, whereby attendants assigned to such respective display units may upon receipt of notice or signal repair to such point or points and permit selection and purchase thereat.



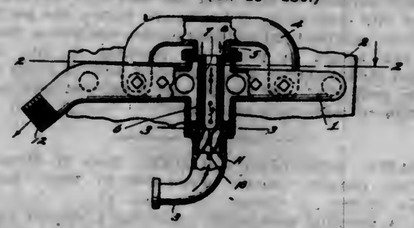
1,624,268. POURING-SPOUT CONTAINER. DONALD G. MAGILL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 16, 1922. Serial No. 568,760. 6 Claims. (Cl. 221—11.)

1. A pouring spout for salt and like containers, comprising three walls shaped from a single blank, the free edges of two of said walls joining each other and forming a pouring chamber closed at the top when the spout is moved in pouring position.



1,624,269. MOTOR. PAUL MARCHETTI, San Francisco, Calif. Filed Jan. 20, 1926. Serial No. 82,540. 3 Claims. (Cl. 74—14.)

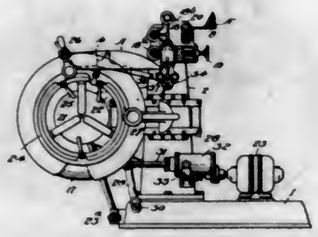
1. A motor having a plurality of cylinders arranged in parallel rows, each of said cylinders having a piston and a piston rod, a plurality of engine shafts arranged in parallel relation and connected together at one end, oblong cam members secured to said engine shafts and arranged so as to extend one at an angle to the other and disposed so as to bear constantly upon the free ends of said piston rods, a beam member pivotally supported



between the said cylinders of the motor and having its opposite ends pivotally connected to the end portions of said piston rods.

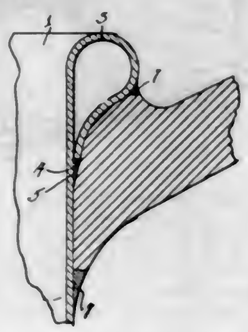
1,624,270. KEROSENE VAPORIZER. JOHN A. MATHES, San Diego, Calif. Filed Sept. 27, 1920. Serial No. 413,040. 8 Claims. (Cl. 48—103.)

5. A kerosene vaporizer comprising a casing having an inlet and an outlet for exhaust gas, two downwardly inclined vaporizing tubes supported in said casing, the upper end of the primary vaporizing tube having a valve controlled inlet and the lower end having a valve controlled outlet communicating with the upper end of the secondary vaporizing tube, the outlet of which is unobstructed.



1,624,271. FUEL VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. HARRY E. MAY, Kansas City, Mo., assignor, by direct and mesne assignments, to Economy Vaporizer Company, Kansas City, Mo., a Corporation of Missouri. Filed Apr. 1, 1926. Serial No. 99,052. 8 Claims. (Cl. 48—180.)

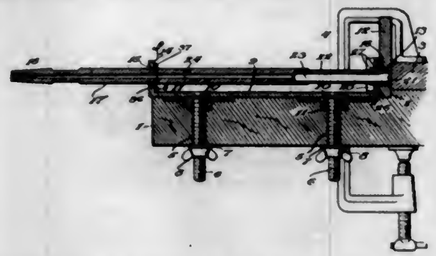
1. A vaporizer for internal combustion engines, comprising concentrically arranged tubular members, form-



ing concentrically arranged passageways in an exhaust manifold, connections with the combustible fuel supply line and with the manifold to the engine cylinders, independent means for directing the insufficiently vaporized portions of the combustible mixture to the annular space between the concentrically arranged tubes.

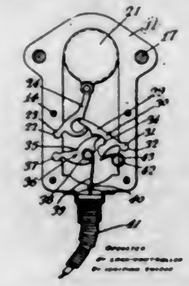
1,624,272. APPARATUS FOR WINDING MATERIAL. HOWARD I. MORRIS, Lakewood, Ohio, assignor to The Cord Tire Machine Company, Cleveland, Ohio, a Corporation of Arizona. Filed Sept. 30, 1924. Serial No. 740,750. 21 Claims. (Cl. 154—10.)

1. In apparatus of the class described, the combination with a supply means for material and a rotating member on which the material is wound, of a guide device for the material between said supply means and said member having openings in its surface, and means for supplying a fluid for discharge through said openings.



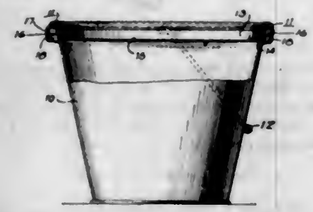
1,624,273. RECEPTACLE. DANIEL C. MURPHY, Scobey, Mont. Filed Dec. 21, 1925. Serial No. 76,936. 1 Claim. (220—94.)

A receptacle comprising a body portion open at one end, a bead on said body portion adjacent to said opening, said bead being bent outwardly, downward, and inwardly in arcuate paths, the lower edge of said bead being welded to said body portion, the material of said welded portion being smoothed so as to cause the outer arcuate surfaces of said bead and said body portion to taper into each other, and a handle having the portion adjacent said bead and said body portion conforming thereto and welded in place, the material of said last named welded portion being smoothed so as to cause the outer surface of said handle, said bead, and said body portion to taper into each other.



1,624,274. DOWELING MACHINE. JOHN M. MYRDAL, Trail, Ontario, Canada. Filed Feb. 25, 1926. Serial No. 90,664. 3 Claims. (Cl. 144—12.)

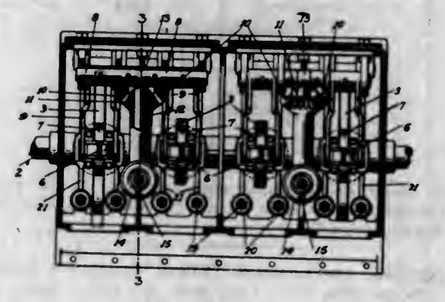
1. A doweling mechanism comprising a support for a body from which dowels are to be formed, a base plate mounted upon said support and having upright members at its ends, said members being provided with axially alined openings therethrough and one of said members being arranged to bear against the body from which



dowels are to be formed, and a hollow bit fitted through and supported and guided by the openings in said upright members.

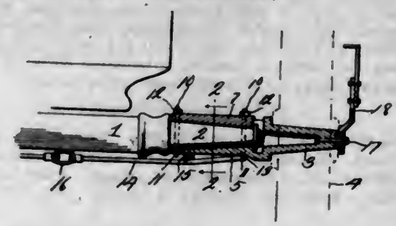
1,624,275. MANIFOLD CUT-OFF FOR INTERNAL-COMBUSTION ENGINES. NORA N. NEHER, Los Angeles, Calif. Filed June 9, 1926. Serial No. 114,638. 8 Claims. (Cl. 137—139.)

1. A device for controlling the supply of fuel to an internal combustion engine comprising a valve adapted to be inserted in the fuel conduit leading to the engine, an actuating member, and means connecting said actuating member to the valve whereby the valve may be opened and closed by the actuating member, said means being so constructed that if the actuating member is moved to a position beyond the full open position of the valve, the valve will automatically return to its closed position.



1,624,276. SANITARY COVER AND STRAINER FOR MILK PAILS. CHRISTY NELSON, Square Butte, Mont. Filed Sept. 29, 1925. Serial No. 59,386. 2 Claims. (Cl. 210—155.)

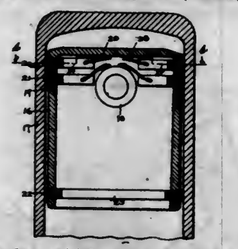
1. A milk pail cover and strainer comprising a frame adapted to fit in the upper end of a pail, a strainer cloth carried in the frame and having its edge portion extending upwardly for engagement over the upper edge of the pail, and a bendable wire threaded about the edge portion of the cloth to weigh the same down and



hold it over the edge of the pail, said bendable wire being adapted to be bent inwardly against the side of the pail to crush the edge portion of the cloth thereabout and maintain the cloth taut over the pail.

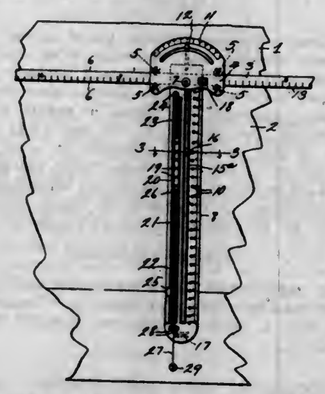
1,624,277. INTERNAL-COMBUSTION ENGINE. HENRY A. NORDWICK and PAUL J. MARCHETTI, Stockton, Calif., assignors, by direct and mesne assignments, to Duplex Motor Company, San Francisco, Calif, a Corporation of Nevada. Filed Jan. 19, 1925, Serial No. 3,252. Renewed June 8, 1926. 11 Claims. (Cl. 123—197.)

1. A fluid engine including a shaft, a pair of cylinders disposed in longitudinal alinement therewith, pistons in the cylinders, drive means between the pistons and shaft arranged to cause the pistons to reciprocate in oppositely timed relation to each other, and means between the pistons independent of the drive means whereby pressure applied to one piston in one direction is transmitted to the other piston to act on the latter in the opposite direction.



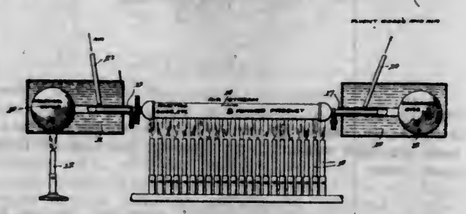
1,624,278. AXLE ATTACHMENT. OSCAR OLSON, Boyceville, Wis. Filed Mar. 8, 1926. Serial No. 93,189. 2 Claims. (Cl. 301—128.)

1. An extension skein for an axle skein, said extension skein being disposed in axial relation to the axle skein, an inwardly extending integral casing carried by the extension skein and having a longitudinally disposed chamber extending inwardly from one side thereof and in which the axle skein is received through the side of the extension casing, a tapered clamping block disposed in the casing chamber and engaging the upper side of the axle skein, U-shaped bolts arching the casing, the arms of said U-shaped bolts being connected to the block at opposite sides of the casing.



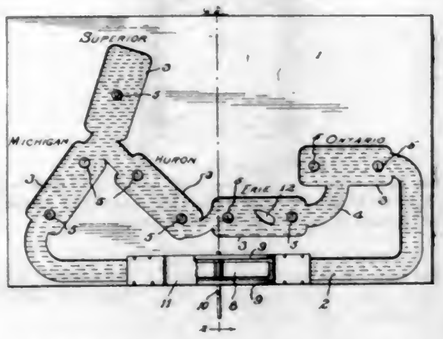
1,624,279. PISTON RING. ELDREDGE H. PACKER, San Francisco, Calif. Filed Feb. 8, 1926. Serial No. 86,768. 3 Claims. (Cl. 74—109.)

1. The combination with a cylinder and a piston operating in the cylinder, which piston is provided with a piston ring groove and with openings extending through the back of the groove, of a piston ring mounted in said groove and means interiorly of the piston for holding said piston ring in yielding engagement



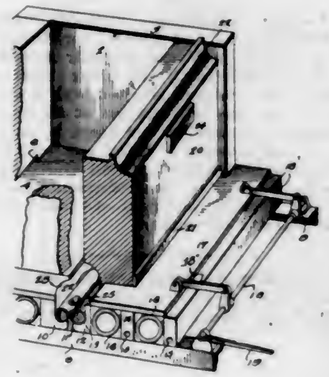
with said cylinder, which means includes a split ring and projections on said split ring extending through said openings and engaging said piston ring.

1,624,280. T SQUARE. ANDREW M. RASMUSEN, Montrose, Colo. Filed Mar. 16, 1925. Serial No. 15,873. 3 Claims. (Cl. 33—26.)



1. A T-square comprising a vertically disposed support, a horizontally disposed scaled bar carried by said support, a T-square head longitudinally movable on the scaled bar, a downwardly extending blade pivotally connected to the head and provided with a scale and a plurality of apertures adjacent one of its edges, a vertically disposed channel on said blade, a plate slidably mounted in said channel, a spring arm carried by said plate and positioned whereby it will overlie any of the apertures in the blade to urge a marking element therethrough, and a roller carried by the lower end of the blade and engaging the support.

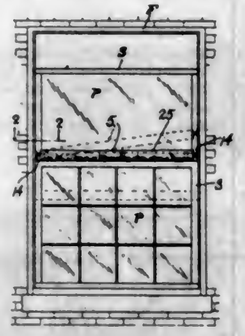
1,624,281. PROCESS OF PRODUCING ARSENIC COMPOUNDS. EUGENE R. RUSHTON, Madison, Wis. Filed May 28, 1924. Serial No. 716,441. 45 Claims. (Cl. 23—53.)



1. The process which consists in subjecting a substance contributing to the formation of an arsenic compound to an arsenical gas in the presence of oxygen and heat.

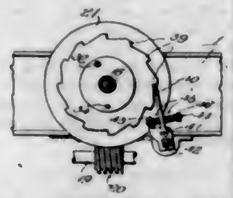
1,624,282. GAME. LEON L. RUSSELL, Livermore Falls, Me. Filed Aug. 11, 1926. Serial No. 128,630. 2 Claims. (Cl. 273—132.)

1. A game comprising a game board having a water way formed therein, said waterway being endless and having one portion parallel with and adjacent an edge of the game board and another portion simulating lakes and canals connecting the lakes, a paddle wheel arranged within that portion of the water-way adjacent an edge of the board and adapted to cause circulation of water in the water-way, buoys placed in the several lakes in spaced relation to the sides thereof, and a buoyant object to be caused to travel through the water-way by the circulation of water therein.



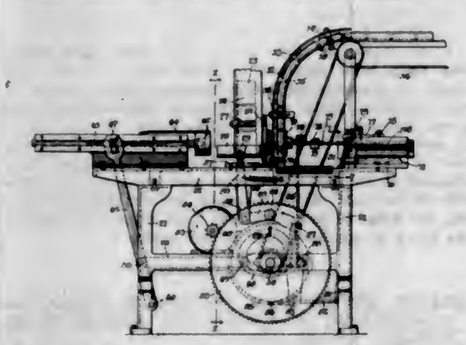
1,624,283. APPARATUS FOR MAKING TRANSPARENT SHEET GLASS. GEORGE A. SHIELDS, Columbus, Ohio. Filed Feb. 3, 1926. Serial No. 85,763. 7 Claims. (Cl. 49—3.)

1. In an apparatus of the character described, a flow chamber having an opening in the bottom thereof, and a pair of stationary cylindrical fluid cooled forming members arranged beneath said opening and spaced from each other.



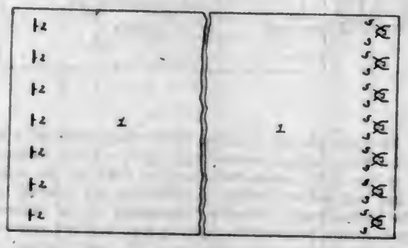
1,624,284. WINDOW-CLEANING DEVICE. ELMER E. SHIPLEY, Washington, D. C. Filed Apr. 30, 1925. Serial No. 26,922. 4 Claims. (Cl. 15—250.)

1. A window cleaning device adapted to be secured laterally of a window frame, comprising a telescopic bracket, feet disposed at the ends of the bracket, universal couplings connecting the feet to the bracket, a brush, clips connecting the brush to the bracket, a wiper over



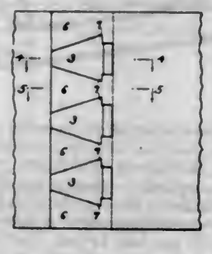
th brush, and fastening elements carried by the wiper and securing the same around the brush and co-related elements thereof.

1,624,285. LOG-LOADING TRUCK. CHAUNCY A. SIDERS, Twelve Mile, Ind. Filed Sept. 10, 1925. Serial No. 55,557. 2 Claims. (Cl. 254—185.)



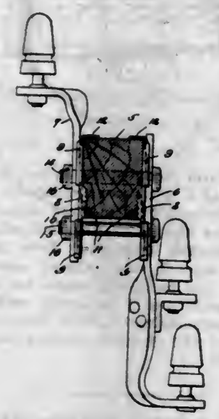
1. In a log loader, cable winding means comprising a pair of drums having ratchet teeth, means for rotating either or both of said drums in one direction, pivoted independently operable spring-pressed dogs mounted for coaction with the two sets of ratchet teeth, and spring means for yieldably exerting a releasing force on both dogs and means for actuating said spring means.

1,624,286. CAPPING MACHINE. JULIUS A. STOCK, Cicero, Ill., assignor to W. C. Ritchie & Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1924. Serial No. 726,581. 5 Claims. (Cl. 113—26.)



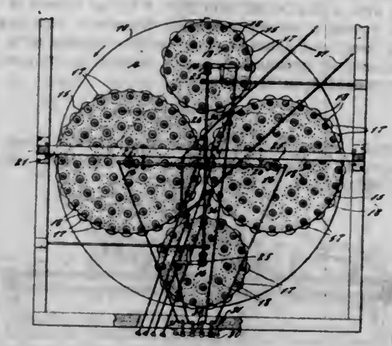
1. In a can-capping machine, the combination of means to support a can, means to support a flanged cap in register with the can, a series of resilient guiding fingers, means to project said fingers into the cap, an abutment against which the cap is adapted to bear during the assembly of cap and can, means to force the can through the group of guiding fingers into the cap, and means to permit said abutment to recede during said assembly, whereby the can and cap are telescopically assembled sufficiently gradually to permit the substantially simultaneous escape of air between them thus preventing dislodgment of the cap by trapped air in the capped can.

1,624,287. SCREEN WALL FOR CENTRIFUGAL BASKETS. EDWARD N. STONE, Ogden, Utah, assignor of one-half to Cresson-Morris Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1923. Serial No. 626,582. 6 Claims. (Cl. 210—76.)



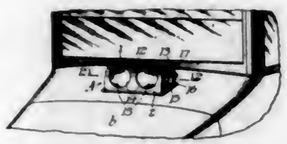
1. A screen for a centrifugal basket consisting of a sheet of material adapted to be bent into annular form, said sheet being provided, adjacent one end, with a series of transverse slots, and being provided, adjacent the other end, with a corresponding series of inwardly pointing fingers adapted to enter into and be engaged by the transverse slots and means carried by said fingers for preventing their accidental withdrawal from the said transverse slots.

1,624,288. SCREEN WALL FOR CENTRIFUGAL BASKETS. EDWARD N. STONE, Ogden, Utah, assignor of one-half to Cresson-Morris Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1923. Serial No. 626,583. 4 Claims. (Cl. 210—76.)



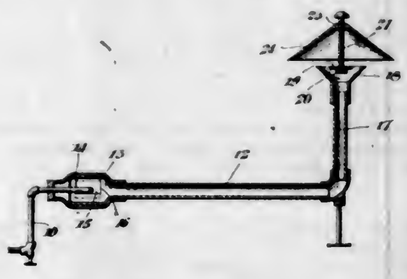
1. As an element of centrifugal machines, a sheet of foraminous metal, said sheet, at one end being provided with a series of transverse slots and at the other end with a corresponding series of longitudinally extending tongues stamped from but not extending past the sheet and having bases wider than the length of the slots, the bases forming side wings adapted to be folded back to enable the tongues to be passed through the slots and to be unfolded to hold the tongues in locking engagement in the slots, the said longitudinally extending tongues defining complementary tongues which form a substantially continuous surface with the ends of said first-named tongues when the element is assembled and the wings of said first-named tongues are unfolded.

1,624,289. BRACE PLATE. MARK TAYLOR, Gainesville, Ga., assignor of eleven-twentieths to Arthur W. Beaupre, Atlanta, Ga. Filed Apr. 14, 1926. Serial No. 102,054. 1 Claim. (Cl. 173—321.)



A plate for use with transposition brackets including a body portion having an elongated inwardly extended flange formed along the upper edge thereof and adapted to rest on the upper edge of a cross arm, the ends of the flange extending appreciable distances beyond the side edges of the body portion, flanges extending downwardly from the elongated flange and disposed on opposite sides of the body and adapted to rest against the outer face of a cross arm, said body having bolt openings to receive securing bolts, and means on the body portion for securing a transposition bracket against lateral movement with respect to the body portion.

1,624,290. METHOD OF AND APPARATUS FOR POLISHING. WILLIAM TAYLOR and FRANCIS WILLIAM PRESTON, Leicester, England. Filed Feb. 21, 1922. Serial No. 538,283. 9 Claims. (Cl. 51—118.)

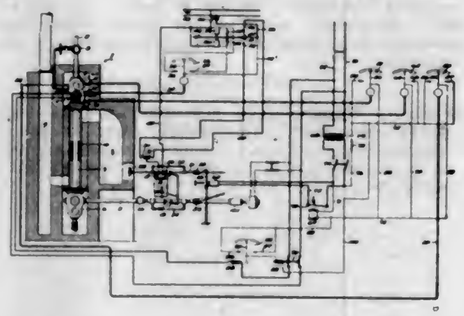


1. The method of controlling the supply of polishing material in polishing a surface by means of a polishing member, said polishing member and the work being moved relatively to one another to effect the polishing, which method comprises utilizing the variation of frictional resistance between the surfaces of the work and polishing member to cause the operation of an indicator, and manually varying the supply of polishing material according to indications of the indicator.

1,624,291. VENTILATOR. HOWARD E. TROUTMAN, Chicago, Ill. Filed Aug. 25, 1923. Serial No. 659,377. 7 Claims. (Cl. 98—2.)

1. In a ventilator adapted to induce suction at an exhaust opening of a space to be ventilated, the combination of a movably supported member comprising a cover plate for covering and uncovering said exhaust opening, a wall which depends from said cover plate in close proximity to a side of said exhaust opening provided with an opening, and an ejector nozzle the admission end of which is secured to said depending wall with its admission end in communication with the opening therein and its discharge end directed laterally with respect to its admission end.

1,624,292. GAS BURNER. CHARLES HENRY UPRIGHT, Edmonton, Alberta, Canada. Filed May 14, 1926. Serial No. 109,118. 1 Claim. (Cl. 67—87.)



A gas burner comprising in combination with a gas supply pipe, a funnel for said pipe, a spider formed in the funnel having a threaded opening therein, a pin formed with a bead and adapted to adjustably engage with the spider, and a substantially cone shaped cover member rigidly mounted on said pin.

1,624,293. RUG-RENOVATING MACHINE. TODD L. WAGONER, Salina, Kans. Filed Jan. 28, 1924. Serial No. 689,063. 3 Claims. (Cl. 15—4.)

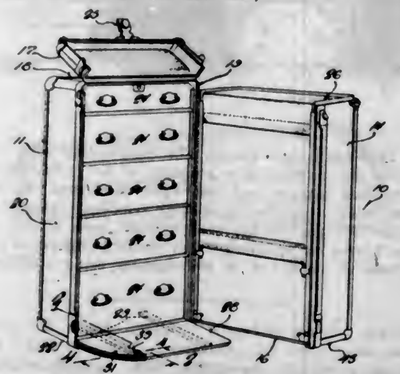
1. In a carpet cleaning machine, a supporting frame, an endless conveyor carried thereby for conveying a carpet, upright supports at opposite sides of said frame, means arranged in rear of the supports in the direction of travel of the carpet for preliminarily removing the dust from the carpet, a scrubber reciprocably mounted on the supports for action upon the carpet, and means disposed between the supports and the first-named means for supplying a cleansing liquid to the carpet.

1,624,294. CONTROL SYSTEM. GEORGE W. WALLACE, San Francisco, and HARRY K. IHRIG, Berkeley, Calif.; said Ihrig assignor to said Wallace. Filed Sept. 17, 1923. Serial No. 663,032. 31 Claims. (Cl. 196—132.)

9. In a system for cracking liquid hydrocarbons, a still for the hydrocarbon, means for supplying the hydrocarbon to the still, means for applying heat to the still, a thermal responsive element arranged at the desired level of the hydrocarbon, whereby it responds to the difference in temperature between the hydrocarbon and the vaporized matter above the hydrocarbon as the level varies, and means for simultaneously controlling the supplying means and the heating means in accordance with the thermal condition of the element.

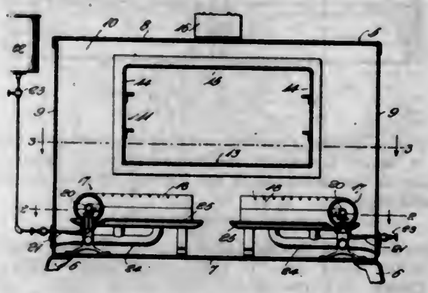
16. A cracking still having a passageway for hydrocarbon to be treated, a chain in the passageway arranged to be constantly driven to prevent the accumulation of deposits, an electric motor for driving the chain, and means responsive to load conditions on the motor for deenergizing the motor.

1,624,295. WEATHER STRIP. OWEN C. WATKINS, Festus, Mo. Filed Mar. 15, 1926. Serial No. 94,880. 3 Claims. (Cl. 20—67.)



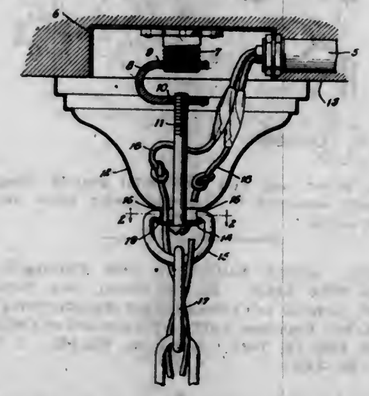
1. A weather seal adapted for mounting on a casement window sash for coaction with an upstanding sill carried bead extending throughout the length of the sill and projecting above the sill to form a water stop, said seal comprising an elongated metal strip having a tubular bead along one of its longitudinal edges, said bead being formed near its ends with notches, having another notch at one of its ends, and being formed with an additional notch between its ends, bearings in the notches near the ends of said bead having attaching means for anchorage to the sash, a coiled torsion spring in the notch between the ends of the bead, one end of said spring engaging the strip while the other end thereof is adapted to engage the sash, a rod passing loosely through the entire length of said tubular bead and spanning all of its notches, said rod passing through said bearings and said spring, and a bell crank having an eye received in the notch at the end of said tubular bead, said eye being mounted on one extremity of said rod, one arm of said bell crank being secured to said strip while the other arm thereof is adapted to coaction with the still-carried bead to offset lowering of the strip against the action of the aforesaid spring.

1,624,296. METHOD OF TREATING SUGAR. HENRY C. WELLE, Crockett, Calif. Filed Oct. 1, 1923. Serial No. 665,949. 4 Claims. (Cl. 127—63.)



1. The process of adding small quantities of a solution containing phosphate ions to soft sugar not in solution, and thoroughly mixing the sugar with the solution to obtain a uniform mixture.

1,624,297. BAGGAGE CARRIER. GEORGE HENRY WHEARY, Racine, Wis., assignor to Wheary Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed June 10, 1925, Serial No. 36,223. Renewed Sept. 4, 1926. 17 Claims. (Cl. 190—13.)



1. In a baggage carrier having sections hinged together for relative movement in a horizontal plane, the combination with one of the sections, of a traveling support connected with the lower portion thereof, and means carried by the other section for lifting and independently supporting the first-mentioned section to hold said traveling support above the floor level during a part of the closing movement of the sections.

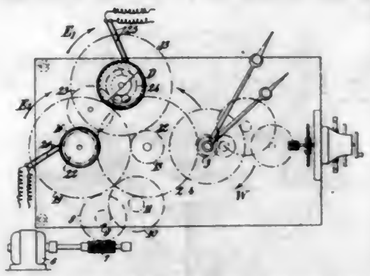
1,624,298. STOVE. OSCAR WHITE, St. Louis, Mo. Filed May 4, 1926. Serial No. 106,760. 1 Claim. (Cl. 126—44.)

A combined cooking and baking stove comprising an outer casing having a top, a bottom, a back wall, opposed end walls and a front wall, said front wall being formed with a door, a vent from the upper portion of said casing, an inner casing within said outer casing and comprising a top spaced downwardly from the top thereof, a bottom spaced upwardly a relatively great distance from the bottom of the outer casing, and two opposed end walls inwardly spaced from said opposed walls of said outer casing, the back of said inner casing being formed by a portion of the back of said outer casing and the front of said inner casing being formed by the aforesaid door; and burners mounted in lower corner portions of the outer casing, said burners being of U-shape in plan view and having their arms extending under said inner casing, the arm-connecting portions of said burners being disposed longitudinally of and below the existing spaces between said opposed end walls of the inner and outer casings.

1,624,299. LIGHTING FIXTURE. JAMES WILLIAMSON, Chicago, Ill. Filed July 31, 1924. Serial No. 729,290. 2 Claims. (Cl. 240—85.)

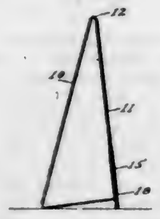
1. The combination with a member of an electric wiring installation, as a junction box, for supporting a lighting fixture, of an adapter consisting of a plate bent U-shape in the form of a yoke with the bend extended outward from the ends of the arms and with the ends of said arms separated but disposed in parallel relation relatively close to each other, each of said arms having a screw threaded opening, one to receive a threaded adjusting bolt and the other for threaded engagement with a threaded stud of the junction box, one arm of the yoke being engaged with the member, a canopy having a tip with a closed end, a bolt threadedly engaged with the other arm of the adapter yoke and passing through said closed end of the canopy tip, the adapter being bendable to adjust the fixture relative to the member, and the head of the bolt engaging the closed end of the canopy tip to hold the canopy in place.

1,624,300. REFLECTOR-JEWEL MOUNTING. JOSEPH E. WOOD, Chicago, Ill., assignor of one-half to Harland K. Delahanty and one-half to Stewart Brown, Chicago, Ill. Filed Aug. 15, 1925. Serial No. 50,474. 2 Claims. (Cl. 88—1.)



1. The combination with a reflector jewel, of a casing therefor having an opening, a U-shaped clamping member having one arm arranged to enter the opening, an intermediate dish-shaped disc between the jewel and said arm for holding the jewel and the arm against portions of the casing, and a set screw carried by the other arm movable toward and away from the rear of the casing.

1,624,301. ELECTRICALLY-OPERATED AUTOMATIC WINDING DEVICE. MASAJI YOKOYAMA, Setagaya-Mura, Japan. Filed Jan. 30, 1926, Serial No. 85,060, and in Japan Jan. 31, 1925. 7 Claims. (Cl. 185—40.)

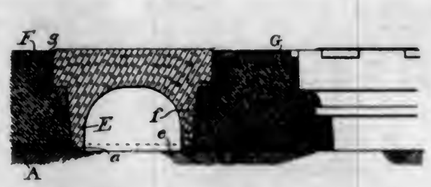


1. A winding device for a spring motor operable by an electric motor, comprising a differential gearing, the

housing of which is provided with electrical conducting and insulating portions, an electric motor, brushes engaging said housing adapted to close the circuit through the

electric motor, and said differential gearing being mechanically connected to both the spring motor and the electric motor.

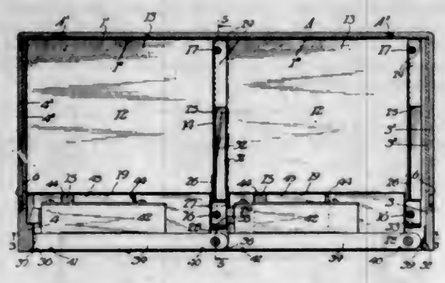
1,624,302. EASEL MOUNTING FOR PHOTOGRAPHS AND THE LIKE. JULIUS YOUNG, San Francisco, Calif., assignor to California Card Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed July 18, 1923. Serial No. 652,463. 1 Claim. (Cl. 40—149.)



A mounting for photographs and the like, comprising an intermediate panel forming a frame for the photograph, a panel hinged to the upper end of the intermediate panel and movable from a position overlying the front thereof to a position behind the intermediate panel, whereby to constitute one leg of an easel, a short panel hinged at the lower end of the intermediate panel and movable from a position overlying the other end panel to a position where it will form a base for the easel, and means for interlocking said end panels both in folded and extended positions, said interlocking means comprising a tongue hinged to the end of the short panel, a pocket in the free end of the opposite end panel formed by separating the plies thereof to receive said tongue when the parts are extended, and a tab on said last-named panel, beneath which said tongue is adapted to lie when the parts are folded.

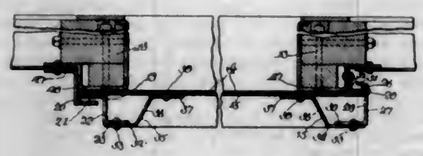
1,624,303. MAINSPRING TESTER FOR 12 AND 16 SIZE WATCHES. WILLIAM R. ZESINGER, South Bend, Ind., assignor to South Bend Watch Company, South Bend, Ind. Filed Aug. 30, 1924. Serial No. 735,165. 1 Claim. (Cl. 73—51.)

A tester for 12 and 16 size watch mainsprings made of flat metal or other suitable material of which the thickness may vary, having an aperture the shape of a spiral not over .490 inch in diameter and not less than .465 inch in diameter having a notch cut outside of spiral at its largest diameter.



1,624,304. FORM FOR SETTING VAULT LIGHTS. EMANUEL J. ALFIERES, New York, N. Y. Filed July 18, 1924. Serial No. 726,806. 4 Claims. (Cl. 94—29.)

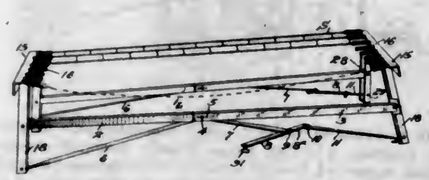
1. In a vault light setting, the combination with a removable flat support, of a plurality of flat forms carried by the said support and removable therefrom, the said forms being arranged in contact one with another to make a covering for the said support, each of the said forms having an opening, which opening engages a lens, the axes of same and of the opening being coincident



---

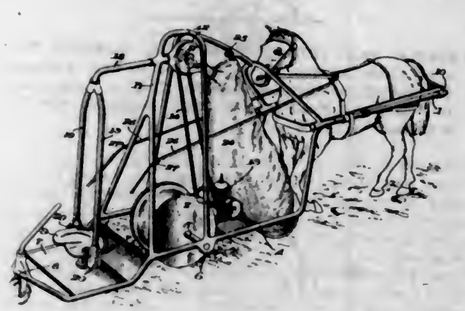
1,624,305. SAFE-DEPOSIT VAULT. EDGAR W. ANDERSON, Manitowoc, Wis., assignor to Invincible Metal Furniture Company, Manitowoc, Wis., a Corporation of Wisconsin. Filed Apr. 16, 1923. Serial No. 632,406. 27 Claims. (Cl. 109—12.)

7. A casing for a safe deposit unit as specified in claim 5, in which a separate reinforcing plate is rigidly secured to the underside of the bottom plate of the rear casing section.



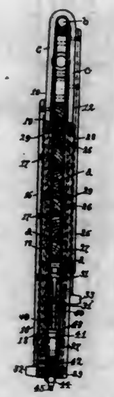
1,624,306. CAR DOOR. ALLAN S. BARROWS, Los Angeles, Calif. Filed Aug. 7, 1925. Serial No. 48,815. 6 Claims. (Cl. 189—46.)

1. In a car door, the combination with a door body portion; of means providing a tubular formation along one



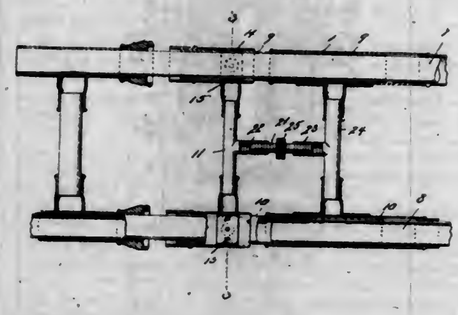
edge of said body portion, said means including a reinforcing member in the form of a commercial bar, secured to the body portion along the edge thereof and extending at an angle to the plane of said portion, and an element in the form of a strip secured to said body portion inwardly of said member in spaced relation thereto, said element extending at an angle to the plane of the body portion and connected with portions of said member remote from said body portion.

1,624,307. FOLDING BED. WILLIAM J. BROOME, Los Angeles, Calif., assignor to Kunkel Stamping & Manufacturing Co., a Corporation of California. Filed Jan. 27, 1925. Serial No. 5,123. 8 Claims. (Cl. 5—114.)



1. A collapsible bed including a pair of foldable side rails, rigid end stiles having pivoted legs, a mattres support connecting the stiles, means for detachably connecting the legs to the ends of the rails, rigid, contractable and extensible support tensioning means including levers connected to the lower ends of the legs and to the rails.

1,624,308. COTTON PICKER. ARCHIE EDWARDS BROWN, El Paso, Tex. Filed Sept. 24, 1924. Serial No. 739,453. 3 Claims. (Cl. 302—27.)

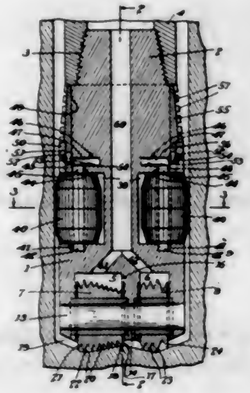


1. A suction nozzle for cotton pickers comprising a tubular flexible casing, said casing having a cut-out portion at the forward end permitting the palm of the operator's hand to form one side of the nozzle, and straps secured to the open end of the casing in position to receive the operator's fingers, and an additional strap around the wrist of the operator for securing the flexible casing in position to be actuated and controlled by the operator.

1,624,309. WORK SUPPORT FOR LEATHER-WORKING MACHINES. OSCAR H. BROWN, Salem, Mass., assignor to The Turner Tanning Machinery Company, Peabody, Mass., a Corporation of Maine. Filed Aug. 26, 1922. Serial No. 584,450. 6 Claims. (Cl. 149—19.)

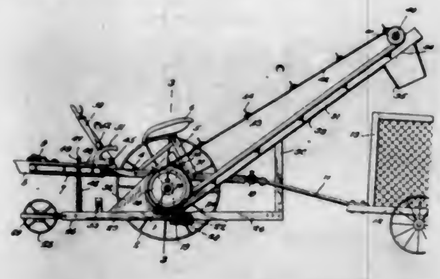
1. A work support for hide and leather working machines comprising a table, a bolster extended over the top of the said table and having members cooperating with the opposite sides thereof to support the work, rack bars attached to said bolster members, and a toothed wheel carried by said table and engaging said rack bars to positively move one of said rack bars and its bolster member in the same direction as said table when the latter is moved lengthwise of the other of said rack bars.

1,624,310. SLIDE TROMBONE. FERDINAND A. BUESCHER, Elkhart, Ind. Filed Jan. 21, 1925. Serial No. 3,820. 6 Claims. (Cl. 84—396.)



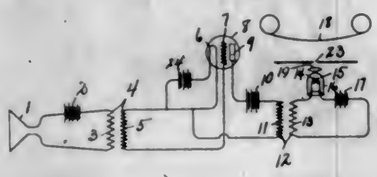
4. In a trombone, a slide comprising tubes, pistons of the same uniform cross section diameter throughout telescoping within said tubes, these latter having frictionally secured to the inner faces thereof, at their inner terminal portions, lengthwise extending sleeves constituting bearings for the pistons and fluid tight seals between the pistons and tubes, and means carried by the slide for adjusting said sleeves relative to the tubes and pistons for changing the pitch of the instrument.

1,624,311. TUBING BLEEDER. GROVER C. BUSHONG, Whittier, Calif. Filed Apr. 2, 1925. Serial No. 20,179. 12 Claims. (Cl. 103—221.)



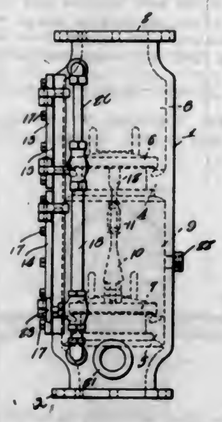
1. A tubing bleeder comprising tubing having a port opening therethrough, and a split sleeve adapted for wedging engagement in said tubing to close said port and releasable for movement to uncover said port.

1,624,312. ROCK DRILL. ANTHONY E. CARLSON, Los Angeles, Calif. Filed Dec. 14, 1925. Serial No. 75,377. 4 Claims. (Cl. 255—71.)



1. A drill bit including a mounting, a pair of double conical cutters journaled in the lower end of said mounting, one of said cutters being positioned to cut the bottom of the bore downwardly and outwardly from the center thereof at an angle and upwardly further outwardly a short distance at an angle, the other cutting being positioned to cut the bottom of the bore for a short distance on a downward angle from a point spaced outwardly from the center of the bore and to cut the bottom of the bore for a short distance further outwardly on an upward angle, and other cutters journaled in the lower end of the mounting for cutting the bottom of the bore upwardly and further outwardly on an upwardly extending angle.

1,624,313. COTTON HARVESTER. PEET CARLSON, Manor, Tex. Filed Mar. 9, 1925. Serial No. 14,245. 1 Claim. (Cl. 56—34.)



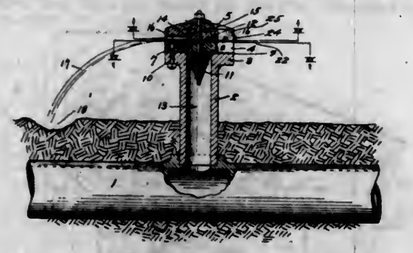
In a cotton harvester a wheel supported axle mounted for rotation, a riding frame tiltably mounted thereon, beams supported from the axle and extending forwardly therebeyond, wheels supporting the forward ends of the beams, plant combing tines supported between the beams, an incline extending from and tiltable with the beams, side boards along the longitudinal edges of the incline, endless belts actuated by the axle and extending longitudinally above the incline, means carried by the belt for slidably engaging the incline and dragging material thereabove from the bottom to the top of the incline, a lever on the riding frame under the control of the operator, means for holding said lever against movement, rods extending from the beams, means actuated by the lever for varying the relative positions of the riding frame and the rods and beams when the lever is moved in one direction said means being movable downwardly relative to the rods when the lever is moved in the opposite direction, and springs for transmitting thrust from said rod engaging means to the beams normally to yieldingly maintain in contact with the ground the wheels at the forward ends of the beams, the tines being extended under the axle thereby to transfer harvested material directly from the tines to the belts at the bottom of the incline.

1,624,314. ELECTRICAL APPARATUS. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed Jan. 25, 1923. Serial No. 614,762. 4 Claims. (Cl. 176—122.)

1. In an apparatus for producing a photographic record of light wave variations corresponding to electrical variations, a bulb containing a pair of electrodes spaced apart a distance not substantially greater than one-eighth of an inch, and a gas within the bulb at such a pressure that a concentrated glow is produced about the negative electrode separate from the anode glow at an operating voltage not substantially greater than 400 volts direct current.

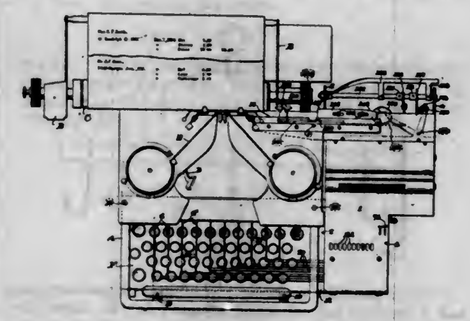
1,624,315. DRY-PIPE VALVE. THOMAS W. CAUDLE, Dayton, Tenn. Filed Sept. 10, 1923. Serial No. 661,922. 1 Claim. (Cl. 169—21.)

A valve of the class described comprising a casing, superimposed valve seats within the casing, valves adapted to engage the valve seats to cut off the passage of fluid through the casing, said valve members being arranged one above the other, the upper valve member having a rack formed along its under surface, an adjustable latch member carried by the lower valve member and adapted to engage the rack to adjustably connect the valve members, and said valve members adapted to move to their open positions by water pressure directed to the under surface of the lower valve member.



1,624,316. DOUGH-DEPOSITING MACHINE. ALEXANDER W. COPLAND, Detroit, Mich. Filed Jan. 22, 1923. Serial No. 614,238. 3 Claims. (Cl. 107—29.)

2. In a dough depositing machine, the combination with a hopper, of a measuring chamber below said hopper having a discharge end in substantial alignment therewith, and inwardly inclined walls for decreasing the cross sectional area of the hopper towards said discharge end, a cut off blade movable between said hopper and measuring chamber, means for alternately contracting and expanding said chamber with the greatest movement at the entrance end, a valve at the discharge end of said chamber, and means for operating said cut off blade, contracting means and valve in timed relation to measure, cut off and deposit a predetermined quantity of dough.



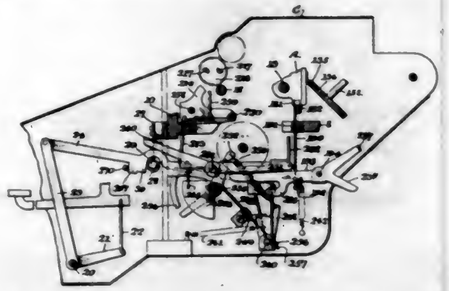
1,624,317. IRRIGATION HYDRANT. CHARLES E. CROWNOVER, Yakima, Wash. Filed Jan. 12, 1925. Serial No. 2,025. 1 Claim. (Cl. 137—13.)

A hydrant comprising a vertical tube, a head above said tube, a cap above said head, passageways extending upwardly from the bore of said tube through said head and said cap, a rotatable disk having a plurality of apertures, said disk being disposed between said head and said cap and adapted to control the flow of water through said

passageways, said cap having radial ducts, one for each said passageway, said ducts communicating with said passageways below the tops of the latter.

1,624,318. ADDING ATTACHMENT FOR TYPEWRITING MACHINES. GUSTAVE O. DEGENER, Brooklyn, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 9, 1925. Serial No. 14,315. 126 Claims. (Cl. 235—59.)

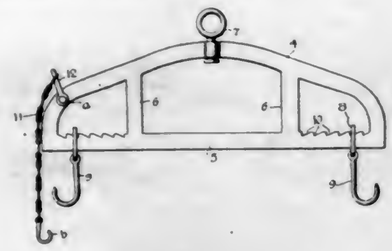
3. A computing mechanism comprising a column totalizer, a grand totalizer, means for setting up a number in either totalizer, and automatic means for clearing the column totalizer after a number has been set up in the grand totalizer.



61. A computing mechanism comprising a totalizer including a master wheel and pawl therefor, a plurality of keys for setting up numbers in the totalizer, indicating means for showing which key has been last depressed sufficiently to enter the number into the totalizer, means operated by the keys for moving said indicating means and means controlled by the master wheel pawl for retaining the indicating means in operated position and releasing the indicator previously set.

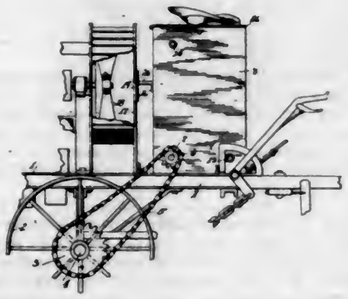
79. A combined typewriting and computing mechanism comprising a travelling totalizer, means for entering numbers in said totalizer when it is in a certain zone, and error check means which becomes automatically effective when the totalizer is moved to another zone and interferes with the action of the typewriting mechanism unless the correct total is written digit by digit.

1,624,319. ADDING ATTACHMENT FOR TYPEWRITING MACHINES. GUSTAVE O. DEGENER, Brooklyn, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Original application filed Mar. 9, 1925. Serial No. 14,315. Divided and this application filed Aug. 14, 1925. Serial No. 50,262. 22 Claims. (Cl. 235—59.)



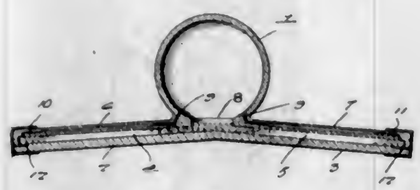
1. A combined typewriting and computing mechanism comprising a travelling totalizer, key operated means for

entering numbers in said totalizer when it is in a certain zone, and error check mechanism rendered effective by



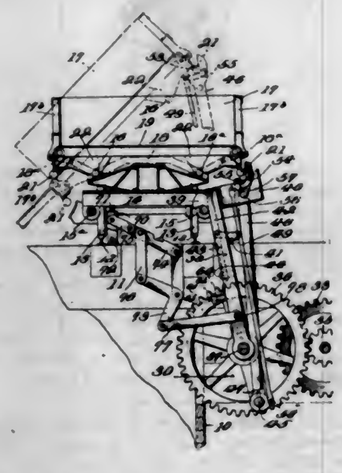
the movement of the totalizer to a different zone which prevents the complete return movement of an incorrect key if depressed.

1,624,320. BUTCHER'S GAMBREL. GEORGE DEMMER, Herndon, Kans. Filed Apr. 19, 1926. Serial No. 103,165. 4 Claims. (Cl. 17—44.)



1. In a gambrel, a frame including a supporting-plate and a truss, a pair of loops mounted on the supporting-plate, a pair of hooks each mounted on a loop, a bracket pivoted to an end of the truss, a flexible member provided with a hook and connected with the bracket, and a swivel mounted on the truss midway between the ends thereof.

1,624,321. INSECT DESTROYER. ALBERT L. DUNNAGAN, Waco, Tex., assignor to David D. Deutsch, New York, N. Y. Filed Sept. 1, 1925. Serial No. 53,782. 8 Claims. (Cl. 43—148.)

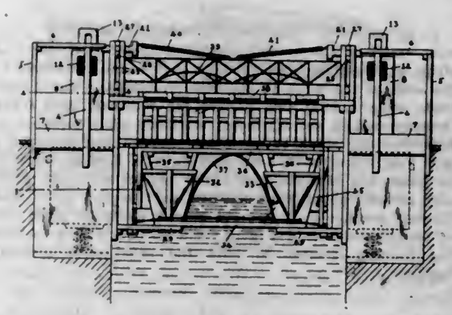


1. In an insect destroyer, the combination with a wheeled supporting frame of a poison receptacle mounted on said frame having an aperture therein; of a suction fan spaced from said receptacle having an aperture alined from said first mentioned aperture; of means within said poison receptacle to elevate poison to a level with its aperture, of means to direct exhausted air from said fan behind said aperture and elevating means as an auxiliary poison discharging means, with means for uniformly discharging said poison from said fan after being withdrawn from said receptacle thereby.

1,624,322. FUSE. CHARLES W. ENGLEMAN, Abilene, Kans. Filed May 4, 1925. Serial No. 27,909. 1 Claim. (Cl. 200—113.)

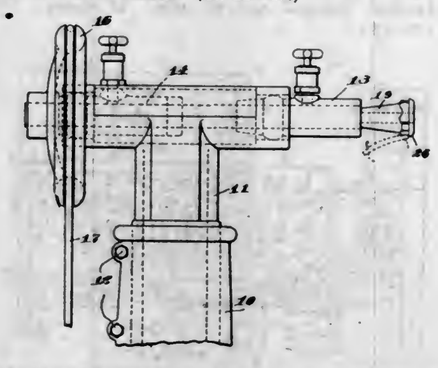
A fuse of the class described comprising a hollow ball which is open at its bottom, a pair of branch pipes extending laterally from the bottom of the ball in opposite directions and being inclined slightly downwardly toward their outer ends, the inner opposed ends of the branch pipes communicating with the open portion of the hollow ball, caps fitted over the ends of the pipes, said pipes being adapted to contain a quantity of mercury, contacts carried by the caps and extending into the respective ends of the pipes, the mercury normally bridging said contacts each of said branch pipes being provided with a longitudinally extending air passage which communicates with the outer end of the respective pipe, the hollow ball being provided with ducts which afford communication between the inner end of the air passages and the interior of the hollow ball.

1,624,323. DUMPING DEVICE. HENRY FORT FLOWERS, Findlay, Ohio. Filed Nov. 19, 1925. Serial No. 70,076. 23 Claims. (Cl. 214—64.)



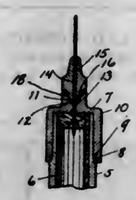
3. A dumping device for vehicles having an underframe and a body carried thereby and adapted to be tilted for dumping, comprising devices for engaging the underframe and holding the same from movement during the relative tilting of the body, devices for engaging and raising the body to dumping position, and means to simultaneously position said holding and raising devices.

1,624,324. ATMOSPHERIC COOLING TOWER. JOHN SIMON FLUOR, Santa Ana, Calif. Filed Mar. 22, 1923. Serial No. 626,846. 6 Claims. (Cl. 261—114.)



6. An atmospheric cooling tower including supporting posts, horizontal tie members connecting said supporting posts and extending outwardly therefrom, braces extending upwardly and outwardly from said supporting posts and connected intermediate their ends to the ends of said tie members, and louvers resting against the upper ends of said braces and having their lower ends resting upon said tie members against said posts.

1,624,325. BRIDGE CONSTRUCTION. ARMINIO FOLINO, Rochester, N. Y. Filed Sept. 24, 1926. Serial No. 137,405. 5 Claims. (Cl. 14—42.)

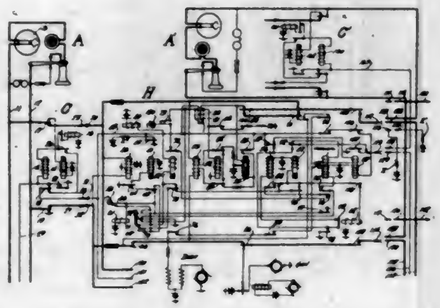


1. In a bridge construction, the combination of end piers, means for guiding said end piers in a limited vertical movement, bridge connecting means carried by said piers and floating bridge sections connected by said bridge connecting means.

1,624,326. SHANK-BEATING AND STITCH-RUBBING MACHINE. LOUIS G. FREEMAN, Cincinnati, Ohio. Filed Dec. 15, 1923, Serial No. 680,875. Renewed Apr. 28, 1926. 4 Claims. (Cl. 12—17.)

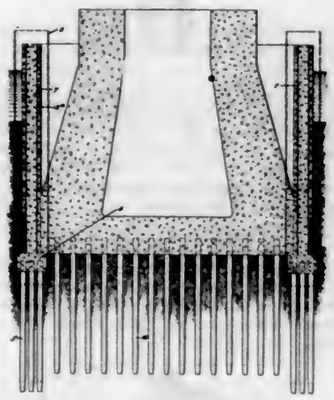
1. In a shank beating and stitch rubbing machine, the combination of a beating iron and channel flap guard formed integral with each other, and arranged end to end, and a guide secured to the beating iron at the end remote from the channel flap guard.

1,624,327. NEEDLE MOUNTING FOR HYPODERMIC SYRINGES. BENJAMIN FRIEDMAN, New York, N. Y. Filed May 8, 1926. Serial No. 107,811. 5 Claims. (Cl. 128—221.)



1. A needle mounting for hypodermic syringe barrels comprising a cap detachably connected to the discharge end of said barrel, said cap having a socket and a concave seat therein, a needle nozzle and a needle detachably connected within the tapered seat of the socket of the cap, said needle extending through the nozzle and cap and into the end of the barrel.

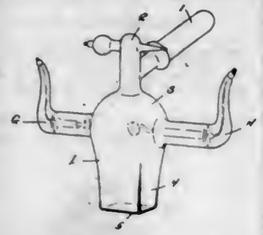
1,624,328. RAZOR-STROPPING MEANS. HENRY J. GAISMAN, New York, N. Y., assignor to Autostrop Patents Corporation, Dover, Del., a Corporation of Delaware. Filed Jan. 31, 1923. Serial No. 616,006. 4 Claims. (Cl. 30—12.)



1. A safety razor comprising a frame provided with means to rock a blade, a handle, a guard movably carried by the frame, and operative relatively to the handle, means pivotally connecting the handle with the frame, and means cooperative between the guard and the handle to retain the frame and handle from relative movement when the blade is in shaving position respecting the guard.

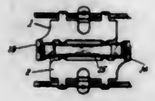
1,624,329. AUTOMATIC TELEPHONE SYSTEM. JOHN E. GARDNER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 7, 1922, Serial No. 541,780. Renewed Aug. 12, 1926. 15 Claims. (Cl. 179—18.)

1. In a telephone system, an automatic switch, telephone lines and trunk lines accessible to said switch, means for seizing said switch and for operating it in accordance with the digits of a called number to connect with one of said telephone lines, and means automatically operative responsive to an operation of said switch in accordance with a predetermined number for releasing said switch and for causing it to select an idle one of said trunk lines.



1,624,330. COFFER AND METHOD OF MAKING THE SAME. BEN C. GERWICK, Berkeley, Calif. Filed Feb. 20, 1924. Serial No. 694,001. 5 Claims. (Cl. 61—34.)

5. The method of forming a subaqueous wall comprising forming a concrete shaft in situ and embedding a pair of anchoring members embedded in the concrete, attaching form members to said anchoring members, and filling the forms with concrete.



1,624,331. VACCUM TUBE. FRANK R. GEYER, New York, N. Y. Filed Mar. 19, 1924. Serial No. 700,423. 2 Claims. (Cl. 250—35.)

1. A vacuum tube of the type indicated having a window portion adapted to be moved about an afflicted surface for treating said surface, the contact surface of said window portion being of substantially square contour whereby to avoid necessity for overlapping treatment of

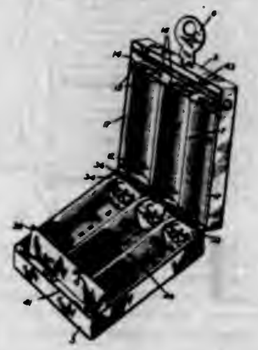
any portion of the afflicted surface while yet enabling treatment of the entire afflicted surface as and in the manner set forth.

1,624,332. ELECTRICAL CONDENSER. PRESTON E. GILLING, East Orange, N. J. Filed Feb. 25, 1925. Serial No. 11,489. 5 Claims. (Cl. 250—16.)

1. For a condenser of the class described, a clamping member having parts for embracing the stack with means for retaining the member in position on the stack in combination with means for attaching a conductor to said member comprising, a pair of eyelets arranged in substantial alignment at opposite ends of said members, a spring member arranged between said eyelets and having a portion to engage a conductor inserted through said eyelets to act as a grip thereon.

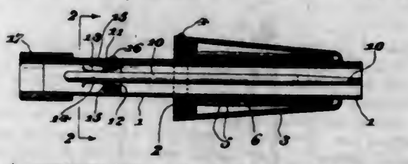
1,624,333. ELECTRICAL CONDENSER. PRESTON E. GILLING, East Orange, N. J. Filed Mar. 13, 1925. Serial No. 15,230. 14 Claims. (Cl. 175—41.)

1. An electrical condenser including a stack of alternate strips of metal foil and dielectrics, alternate foil strips having their ends joined together and bent over at the ends of the stack in opposite directions, a metal electrode plate having side flanges for receiving said stack therebetween, a second metal electrode plate adapted to pass over the stack between said flanges and to contact with one set of said bent over ends, a binding member of insulating material over said second electrode plate and means cooperating between said second plate and binding member to keep said second electrode plate out of contact with said flanges, said flanges acting to grip the binding member to hold the said parts securely together.



1,624,334. ELECTRICAL CONDENSER. PRESTON E. GILLING, East Orange, N. J. Filed Mar. 13, 1925. Serial No. 15,231. 7 Claims. (Cl. 175—41.)

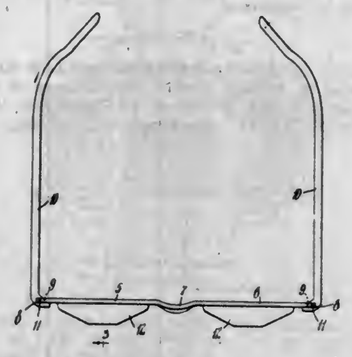
1. An electrical condenser comprising a stack of the character described, having the protruding ends of one group of foils bent over the end of the stack in one direction and the ends of the other group bent over the other end of the stack in an opposite direction, a condenser element plate on each side of the stack engaging respectively said bent over foil ends, a pair of binding members over said plates, portions of said plates acting



as fastening means to draw and clamp the binding members against the stack and terminal connecting means on said plates.

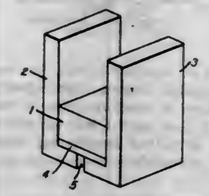
1,624,335. SAVINGS BANK. BUTLER F. GREER, San Francisco, Calif. Filed Nov. 25, 1924. Serial No. 752,113. 7 Claims. (Cl. 232—4.)

1. A savings-bank comprising two lids hinged together, each lid comprising a sheet having flanged edges which abut to form the sides of the savings-bank, and a channel having its bottom member secured to one of the lids opposite the hinged edge, one of the side members of the channel forming with the flanged edge of the lid a casing for lock mechanism, and the other side member of the channel extending beyond the edge of the lid to interlock between the sides of the other lid when the lids are closed.



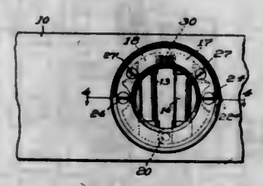
1,624,336. PERMANENT-HAIR-WAVING DEVICE. WILLIAM A. GROFF, Philadelphia, Pa. Filed Nov. 29, 1924. Serial No. 752,842. 7 Claims. (Cl. 132—36.)

1. A permanent hair waving device comprising a central tube having means stationarily secured therein at a distance from either end thereof for automatically engaging a hair curler when the same is inserted within the said tube and holding the same therein.



1,624,337. ANTIGLARE GOGGLE. HARRIS KING HALIKMAN, Benchmont, Mass. Filed Sept. 26, 1925. Serial No. 58,945. 1 Claim. (Cl. 2—12.)

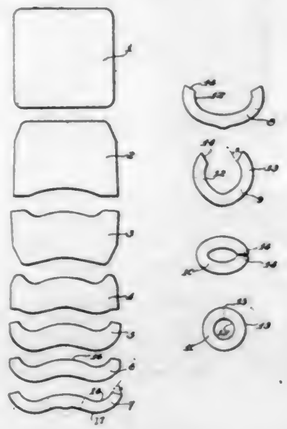
An anti-glare goggle embodying semi-circular rims, a bridge connecting the rims, and semi-circular concavo-convex shields extending forwardly and downwardly from said rims, the opposite ends of said rims terminating approximately in the same horizontal plane, and the forward edge of each of said shields comprising an approximately straight portion extending from the outer portion of its rim inwardly and upwardly, another approximately straight portion extending from the inner portion of its rim outwardly and upwardly at the same angle as that of



the first-named straight portion, and a concave arcuate portion joining the proximate ends of the straight portions through which an unobstructed view may be obtained.

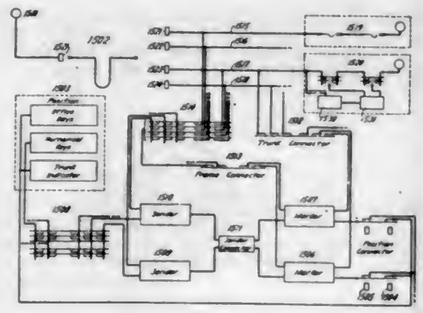
1,624,338. TELEPHONE RECEIVER. CLINTON R. HANNA, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 28, 1924. Serial No. 734,604. 6 Claims. (Cl. 179—119.)

1. A telephone receiver device, comprising a diaphragm and a magnetic circuit, including pole pieces, air gaps, said diaphragm and a permanent magnet, the length of said permanent magnet being no greater than the distance between portions of said pole pieces adjacent said diaphragm.



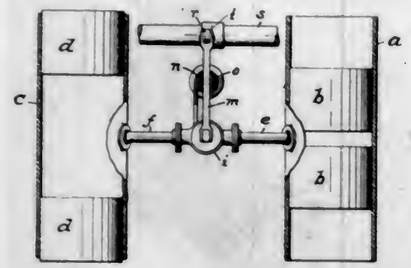
1,624,339. LEVEL. OSCAR D. HAPGOOD, Montague, Mass., assignor to Goodell-Pratt Company, Greenfield, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1926. Serial No. 89,331. 9 Claims. (Cl. 33—214.)

1. A spirit level, comprising in combination, a level stock having an annular bore, a ring mounted in the bore at one side of the stock and provided with a lug that engages a portion of the stock to prevent the ring from rotating in said bore, a level carrier pivotally mounted upon said ring for swinging adjustment within the bore, a



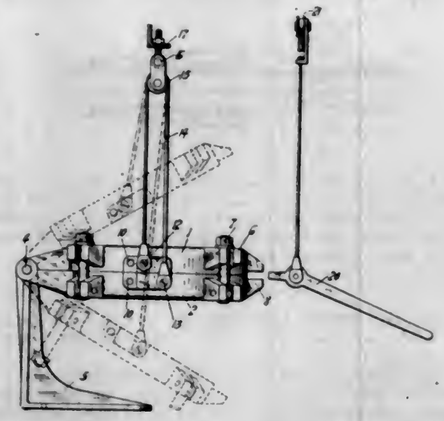
level tube mounted upon the carrier, a second ring mounted in the bore at the opposite side of the level, and adjusting means for rocking the level carrier about its pivotal mounting and for retaining the same in the desired position of adjustment.

1,624,340. METHOD OF ROLLING HOLLOW ROUNDS. ALBERT W. HEINLE, Crafton, Pa., assignor of one-half to Henry F. Gilg, Pittsburgh, Pa. Filed Feb. 19, 1926. Serial No. 89,341. 12 Claims. (Cl. 80—62.)



1. The method of forming blanks for use in the manufacture of thick walled tubing which comprises passing a blank in billet form through a series of rolls successively changing the shape of said billet by different operations to develop the co-related lengths or dimensions of the inner and outer circumferences of an unjoined circular section.

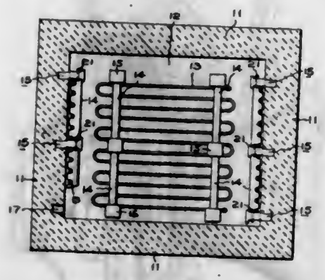
1,624,341. SEMI-AUTOMATIC TELEPHONE SYSTEM. EDWARD E. HINRICHSEN, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 27, 1925. Serial No. 11,960. 7 Claims. (Cl. 179—27.)



4. In a telephone system, an operator's position, groups of trunks leading from said position, switches in which said trunks terminate, a sender, a controlling marker common to all of said groups of trunks, means controlled by the operator for causing the registration of a designation in said marker, means for selectively connecting said marker in accordance with the designation recorded therein to the trunks of any group, said marker including a series of test relays for testing the individual trunks of the group to determine an idle one, means controlled by the sender for operating the switch associated with the selected idle trunk, and means at the operator's position for identifying said trunks.

1,624,342. RETARDING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ALFRED A. HOWITZ, Chester, Pa., assignor to Sun Shipbuilding & Dry Dock Company, Chester, Pa., a Corporation of Pennsylvania. Filed Nov. 30, 1923. Serial No. 677,618. 6 Claims. (Cl. 123—97.)

1. Braking mechanism for internal combustion engines comprising the combination of two cylinders and their respective pistons, the latter being so set that the expansion stroke of one occurs during the compression stroke of the other, outlets from both cylinders arranged to communicate, a valve normally closing such communication, but adapted to be opened to allow air compressed in one cylinder to escape into the other cylinder.



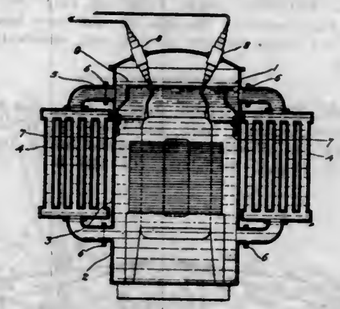
1,624,343. MOLD CONSTRUCTION. FRANK L. JOHNSON, Akron, Ohio. Filed Sept. 23, 1925. Serial No. 58,072. 4 Claims. (Cl. 18—2.)

1. A mold for the vulcanization of tires, comprising upper and lower chambered mold sections, a horizontal

hinge for said sections, and means to interconnect the sections so that they will move in unison and the weight of the lower section will be opposed by the weight of the upper section.

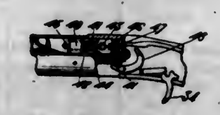
1,624,344. ELECTRIC FURNACE. ALVIN D. KEENE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,670. 13 Claims. (Cl. 204—64.)

1. In an electric furnace, the combination with a wall having an opening therein, of a resistor-unit-supporting member having a portion projecting loosely into said opening, supported by said wall and removable laterally therefrom by an upward arcuate movement.



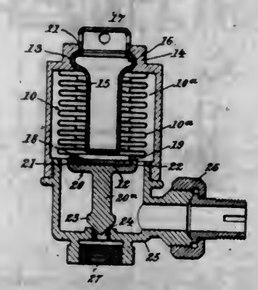
1,624,345. HEATING-UNIT TERMINAL. ALVIN D. KEENE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 26, 1925. Serial No. 18,424. 4 Claims. (Cl. 201—63.)

4. A terminal member for an embedded heating element having a resistor wire of substantially non-oxidizable material insulatedly mounted in a layer of compressed heat-and-electric-conducting material, comprising an elongated member, of substantially non-oxidizable material, having a portion extending into said layer of material and having a plurality of turns of the resistor wire wrapped thereabout, a plurality of turns of wire of a material that swells permanently upon being heated, wrapped around said elongated member intermediate the turns of the resistor wire, and a coating of powdered, electric-insulating material around the embedded portion of the elongated member and the wire wrappings thereon.



1,624,346. TRANSFORMER-COOLING SYSTEM. CHARLES LEROY KNOTTS, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 10, 1924. Serial No. 736,847. 3 Claims. (Cl. 175—361.)

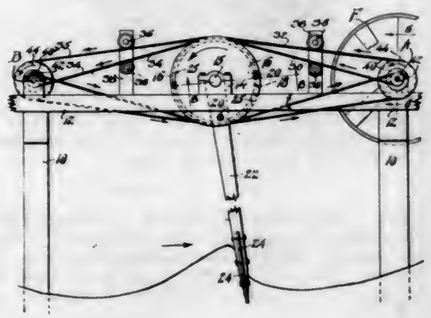
1. In combination, a container having openings therein, an electrical translating device therein, an insulating fluid surrounding the translating device, a cooling member attached to the container at said openings for circulating the fluid and a barrier substantially flush with the upper surface of the highest of said openings for controlling



the amount of fluid traversing the cooling member in accordance with the amount of expansion of the fluid under the influence of the translating device.

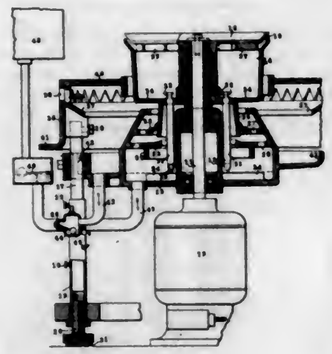
1,624,347. SIGHTING INDICATOR FOR FIREARMS. JOHN WILLIAM FRASER LAMONT and HERBERT DICKINSON, London, England; said Dickinson assignor to said Lamont. Filed May 22, 1926, Serial No. 110,990, and in Great Britain May 26, 1925. 6 Claims. (Cl. 240—6.4.)

1. A sighting indicator for fire-arms comprising an electric lamp connected in circuit with a source of current, a pair of contact blades also connected in the circuit, a guide, a slidable bodily movable weight associated with said guide and adapted to be actuated by the mechanism of the gun when released by the operating trigger to close the contacts and an optical system to project the light from the lamp so as to momentarily produce a spot of light upon the target.



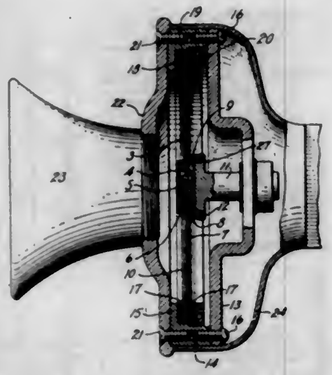
1,624,348. EXPANSIBLE COLLAPSIBLE ELEMENT. HARRY C. MALLORY, deceased, late of Bellport, N. Y., by Sue R. Mallory, administratrix, Bellport, N. Y. Original application filed June 7, 1916, Serial No. 102,115. Divided and this application filed Jan. 30, 1924. Serial No. 689,401. 4 Claims. (Cl. 137—156.)

1. An expansible-collapsible element comprising a shell having a circumferentially corrugated body portion, a closed end, a member disposed within said end to reinforce



the same and engaged at the edge thereof by a portion of said shell, and a one piece reinforcing member including an intermediate portion engaging the outer side of said end and peripheral means extending over the portion of said shell engaging the edge of said inner member to secure said outer member to said end, substantially as specified.

1,624,349. WAVE MOTOR. JOHN J. MANN and WILLIAM J. MANN, Oakland, Calif., and MARSHALL H. VAN COEVERDEN, San Marcial, N. Mex. Filed July 9, 1925. Serial No. 42,415. 2 Claims. (Cl. 253—6.)



1. A wave motor comprising an oscillating member, a pair of drive shafts driven thereby, a pair of clutches for driving each shaft, pulleys of different diameters connected with the clutches of each pair for driving the same, and cables connecting said member with said pulleys for driving both shafts continuously in the same direction.

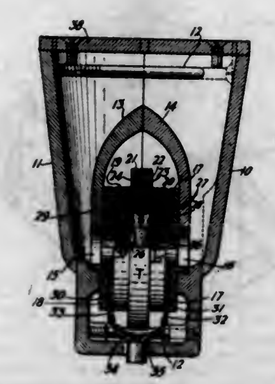
1,624,350. OIL BURNER. GEORGE STANLEY MEIKLE and HENRY D. MACKAYE, Detroit, Mich. Filed Feb. 9, 1925. Serial No. 7,818. 15 Claims. (Cl. 158—77.)

1. In an oil burner structure, the combination with an oil well, of a rotatable nozzle having oil lifting means projecting into said well displaced from the axis of said nozzle arranged to move with the rotation of said nozzle and to raise an oil supply therefrom by the relative velocity of said means with respect to said well, means for rotating said nozzle, and means for atomizing the lifted oil by impact disposed in operative conjunction with said oil-lifting means.

1,624,351. TELEPHONE TRANSMITTER. CHARLES R. MOORE, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 23, 1923. Serial No. 614,356. 4 Claims. (Cl. 179—122.)

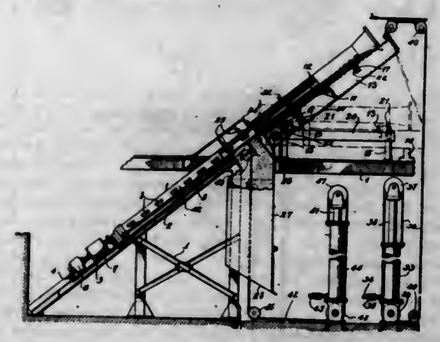
1. In a transmitter, a diaphragm comprising a pair of discs of substantially equal diameter each having a central laterally extended portion, an annular electrode fitted in each portion, and an insulating plate disposed between said electrodes and movable as a unit with said discs, said plate having a central aperture of less diameter than the inside diameter of either electrode.

1,624,352. TELEPHONE TRANSMITTER. CHARLES R. MOORE, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1924. Serial No. 708,116. 4 Claims. (Cl. 179—124.)



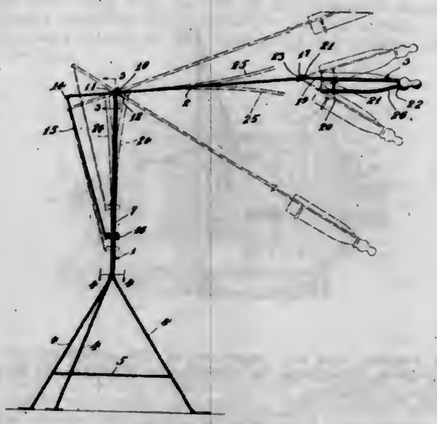
1. In a telephone transmitter, a structure comprising immovable concentric conducting sections separated by insulation and having depressions formed in said structure at the point of junction of said sections and insulation, a resistance varying medium in said depressions for bridging said insulation, and an agitating member of insulating material directly in contact with said resistance varying medium and spaced from all of said conducting sections.

1,624,353. DOUBLE DIAPHRAGM TRANSMITTER. CHARLES RUBY MOORE, Maplewood, N. J., and JOHN M. HAYWARD, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 30, 1924. Serial No. 729,010. 1 Claim. (Cl. 179—122.)



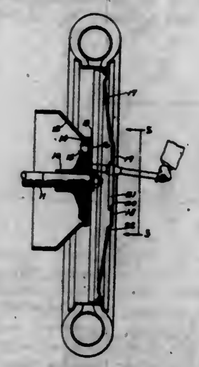
A telephone transmitter comprising a mouthpiece formed by the registry of two substantially identical

shaped parts, said parts having walls forming a housing, a plurality of air passages formed by said walls and the mouthpiece, a microphone, a pair of insulating apertured discs for supporting the microphone in said housing, and



conducting spring discs interposed between the microphone and the insulating discs for holding the microphone against lateral movement in said housing and for securing the conducting wires of said transmitter.

1,624,354. METHOD AND APPARATUS FOR FREEING CENTRIFUGALLY-CAST CASTINGS FROM MOLDS OR FLASKS. WILLIAM D. MOORE, Birmingham, Ala., assignor to Sand Spun Patents Corporation, Wilmington, Del., a Corporation of Delaware. Filed Dec. 16, 1925. Serial No. 75,725. 18 Claims. (Cl. 22—190.)



17. In apparatus of the class described, disintegrating mechanism mounted to operate on an incline, means for aligning flasks with the said mechanism, including a frame mounted to move from horizontal to inclined position, rails extending transversely of the frame for supporting the flasks, the frame and rails having cooperating seats in which the flasks rest, and skidways at each side of the frame, including abutments engaged by the rails as the frame moves into horizontal position to lift the rails and flasks to the level of the skidways.

1,624,355. NURSING-BOTTLE HOLDER. VINCENT J. MURRAY, Jr., Philadelphia, Pa. Filed May 12, 1925. Serial No. 29,733. 5 Claims. (Cl. 248—65.)

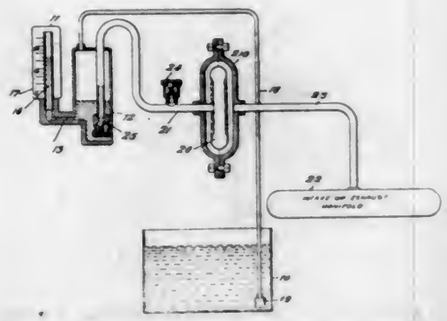
1. A bottle holder including a stand, an arm fulcrumed on the stand to swing vertically and laterally; means connected with the stand and with the arm at one side of its fulcrum for swingably adjusting the arm vertically, and a bottle clamping member mounted on the arm at the other side of its fulcrum.

1,624,356. LIFTING LEVER FOR DISK WHEELS. EMIL A. NELSON, Abington, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 29, 1924, Serial No. 734,835. Renewed Feb. 10, 1927. 14 Claims. (Cl. 29—84.)

1. A device of the type described comprising a lifting tool having a pair of spaced substantially parallel arms adapted to be inserted through spaced openings of a wheel and a hub member, and a yoke portion rigidly connecting said arms.

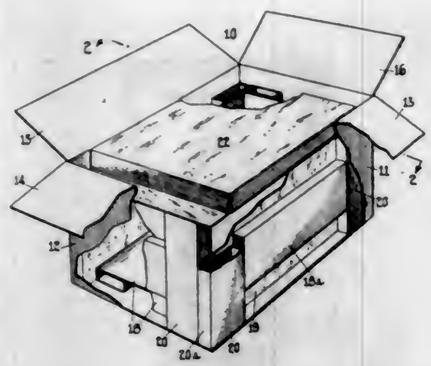
1,624,357. PHONIC DIAPHRAGM. ALEXANDER M. NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 15, 1923. Serial No. 645,617. 6 Claims. (Cl. 181—32.)

1. A large direct acting diaphragm having a vibratile periphery, a driving element connected thereto, said dia-



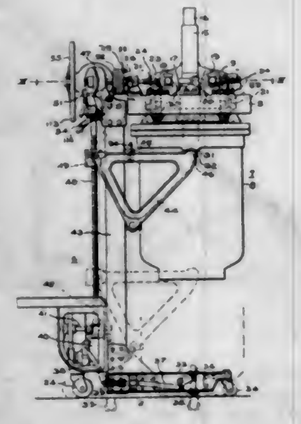
phragm having a plurality of corrugations therein whereby the impedance of the diaphragm at the point of connection substantially equals the impedance of the driving element, and the impedance of the peripheral portion of the diaphragm is substantially less than at said point of connection.

1,624,358. PRESERVATION OF OILS. FERDINAND W. NITARDY, Brooklyn, N. Y., assignor to E. R. Squibb and Sons, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1924. Serial No. 687,619. 2 Claims. (Cl. 167—7.)



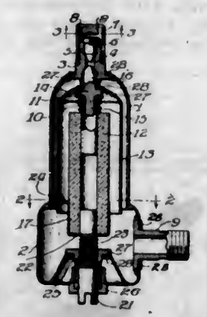
1. The product comprising castor oil from which the odor and taste have been removed and containing a relatively small amount of ethyl alcohol which acts to prevent such change in the composition of the oil as would cause recurrence of the odor and taste.

1,624,359. LIQUID-LEVEL GAUGE. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 17, 1925. Serial No. 23,796. 10 Claims. (Cl. 73—54.)



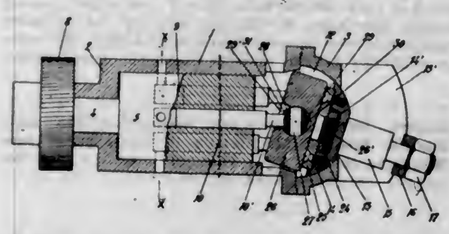
1. In a device for indicating the depth of liquid in a tank, a conduit extending into the tank and having an opening communicating with the liquid therein so as to be subjected to the head of liquid on said opening, indicating means connected to be responsive to the pressure in the conduit, means for automatically introducing air into said conduit, comprising an operative connection between a source of air under pressure and said conduit, a non-return valve in said connection, and means constituting a chamber containing liquid in which said non-return valve is submerged.

1,624,360. CONTAINER. FERDINAND S. OPPENHEIM, New York, N. Y. Filed Sept. 10, 1924. Serial No. 736,805. 5 Claims. (Cl. 229—14.)



1. A packing and shipping box comprising an outer casing, and a plurality of removable spacing partitions arranged to abut one another and to form the inner walls of the box, at least one of said partitions having a body portion and a pair of parallelly extending infolded tubular sections at the opposite ends of said portions, said tubular sections being formed by folding successively edge portions of said partition to extend down, inward, up and along the rear surface of said body portion, the side walls of said sections serving to support and space said body portion from the adjacent walls of the outer casing.

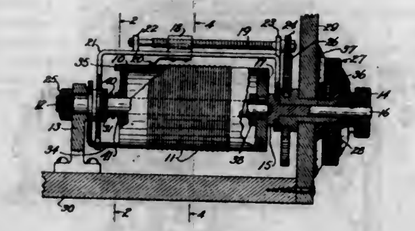
1,624,361. LIFTING TRUCK FOR CIRCUIT-BREAKER TANKS. JOSEPH W. W. OW, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 15, 1925. Serial No. 23,400. 11 Claims. (Cl. 200—150.)



6. The combination with a disconnecting switch and clamping means for a circuit interrupter, of interlocking means for controlling the operation of the clamping means in accordance with the position of the disconnecting switch.

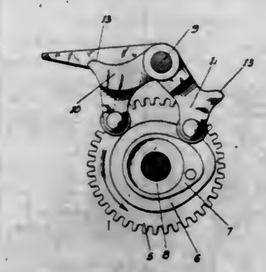
1,624,362. RADIATOR RELIEF VALVE. EMIL O. H. POEPPEL, Chicago, Ill. Filed May 20, 1926. Serial No. 110,450. 5 Claims. (Cl. 236—62.)

1. A radiator relief valve comprising a housing having a valve therein, a thermostatic element, said valve having a hood depending therefrom and surrounding the thermostatic element, means interposed between the valve and the thermostatic element adapted to prevent distortion of the thermostatic element during its expansion, and a member embracing the thermostatic element and having a plurality of radially disposed outwardly projecting tongues adapted to slidingly engage the inner side of the hood during the inter-relative movement of the thermostatic element and the hood.



1,624,363. PUMP. AUGUSTIN REY, Sains, France. Filed Oct. 6, 1924, Serial No. 741,988, and in France Oct. 8, 1923. 3 Claims. (Cl. 103—162.)

1. In a pump barrel, the combination with a pump casing of a pump barrel having chambers therein parallel to the axis thereof, a rotatable member suitably supported within the pump casing for rotation about an axis coincident with the axis of the pump barrel, said member having spherical sockets therein, pistons working in the chambers of the said pump barrel and having attachment heads which fit within corresponding sockets of the rotatable member, a pin in each socket passing loosely through the attachment head fitted therein, ball-segments at the ends of the pin and free to slide relatively to the socket, said ball-segments being spaced from the attachment head to allow the same to slide on the said pin, means for adjusting the rotatable member so that the inclination of its axis may be varied in relation to the axis of the barrel, and means for rotating the pump barrel.

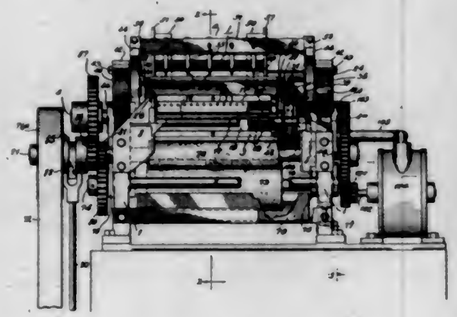


1,624,364. COIL WITH MULTIPLE ADJUSTMENTS. CHARLES D. RICHARD, West New Brighton, and GUY T. MORRIS, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,684. 9 Claims. (Cl. 171—119.)

1. A variable inductance comprising a grooved rotatable insulating cylinder, a helical winding on said cylinder, a yielding member aasociated with said winding for making electrical contact therewith, a rotatable shaft which rotates independently of said cylinder, means including said shaft for causing said yielding member to move from turn to turn of said coil, and separate means including said cylinder for making complete adjustment around the turn upon which said yielding member rests.

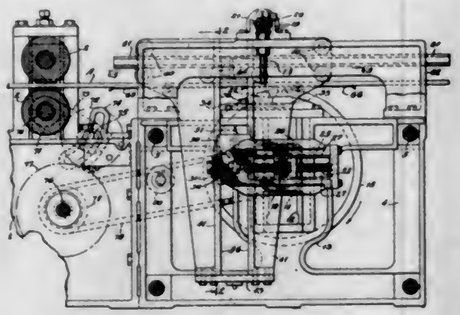
2. An electrical coil comprising a rotatable insulating cylinder, a helical winding thereon, a movable contact member electrically connected to said winding, means for making continuous adjustment of the contact of said member with any turn of said coil, and a mechanism for limiting the angular revolution of said cylinder comprising a lug on said cylinder and a dog capable of limited movement, adapted to engage said lug.

1,624,365. VALVE-OPERATING STRUCTURE FOR MOTOR CYCLES. ANGELO ROSSI, Santa Rosa, Calif. Filed Sept. 8, 1925. Serial No. 55,183. 2 Claims. (Cl. 123—90.)



1. An operating structure for an adjacent pair of transversely alined motorcycle valve tappets, comprising a pair of opposed rocker arms pivoted independently of each other, the upper and opposite ends of said arms being in common transverse alinement to bear against the tappets, rollers projecting from the same side of the arms at their lower opposed ends and arranged so as to be laterally offset, and independent cams to engage the rollers mounted on a common axis, said cams being of different diameters and the larger cam being the farthest from the plane of the arms whereby to enable the rollers being of the same size while preventing the apex of one cam from striking the arm of the other roller at any period in its rotation.

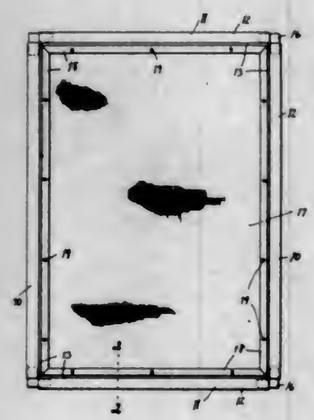
1,624,366. LABELING MECHANISM. GEORGE B. SCHEFFEY, Weehawken, N. J., assignor to William Lunsford Long, Roanoke Rapids, N. C. Filed Nov. 19, 1925. Serial No. 70,029. 12 Claims. (Cl. 216—55.)



1. Labeling mechanism for applying labels to relatively thin, flat articles such as cloth boards, comprising

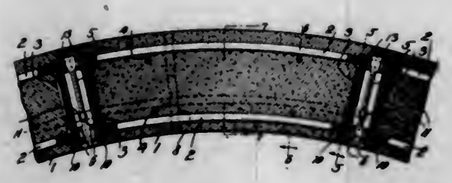
a rotary turret, a labeling pocket in the periphery thereof, formations at opposite sides of the pocket mouth to receive and hold a label extending across said mouth,

and means within the pocket for folding and applying a label across the edge and upon opposite faces of the article as the same is advanced through the pocket mouth into the pocket and then retracted.



1,624,367. CUT-OFF MECHANISM. GEORGE B. SCHEFFEY, Weehawken, N. J., assignor to William Lunsford Long, Roanoke Rapids, N. C. Filed Nov. 19, 1925. Serial No. 70,030. 13 Claims. (Cl. 164—49.)

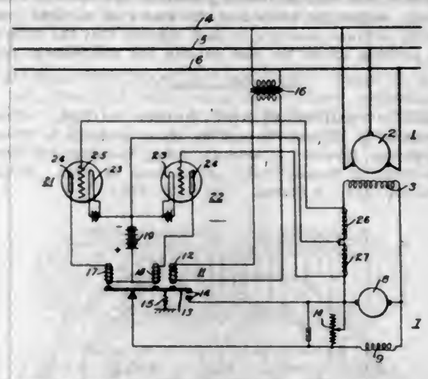
2. Cutting mechanism comprising a carriage, a cutter thereon, means supporting the carriage for reciprocation, a rotary driver, an adjustable crank thereon, another cutter connected to the crank, and a connection between the crank and the carriage to reciprocate the latter as the crank revolves.



1,624,368. WINDOW SCREEN. ERNEST M. SCHWARZ, Philadelphia, Pa. Filed Apr. 23, 1925. Serial No. 25,185. 2 Claims. (Cl. 156—14.)

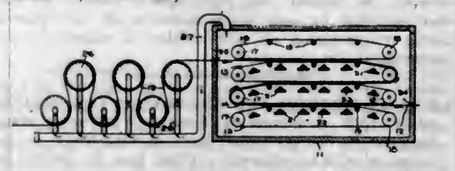
1. A window screen consisting of frame members produced from sheet metal and fashioned to provide a hollow body portion of rectangular shape in cross section, a rib of two thicknesses of said metal, one thickness terminating short of the other, the longer thickness being bent over to provide a tongue and said rib bent back upon itself to produce an enlargement with said tongue between two double thicknesses of metal, said enlargement having holes therethrough, a screen fabric having its edges disposed across the enlargements of all of the frame members, retaining strips of channel

sections overlying the edges of the screen fabric in the region of the enlargements of the frame members, said retaining strips having holes therein and screws passing through the holes in the enlargements for threaded engagement with the retaining strips whereby the latter are removably held in place to clamp the screen fabric.



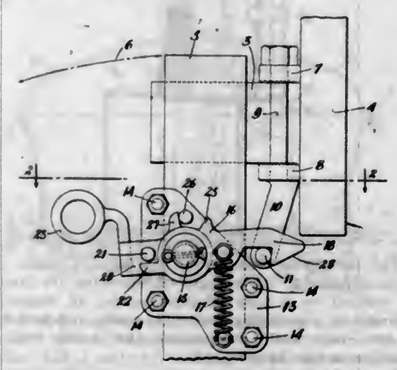
1,624,369. CONCRETE WALL CONSTRUCTION AND BLOCK THEREFOR. JULIUS H. SEARA, West New Brighton, N. Y. Filed Nov. 21, 1923. Serial No. 675,979. 8 Claims. (Cl. 72—40.)

1. A wall construction composed of units of plastic material, each having at its ends metallic reinforcing elements adapted to contact endwise and form butt joints with similar elements in abutting units, and means for frictionally and positively forcing the ends of such elements together to provide tight butt joints between the units and to provide a rigid metallic skeleton for each row of units.



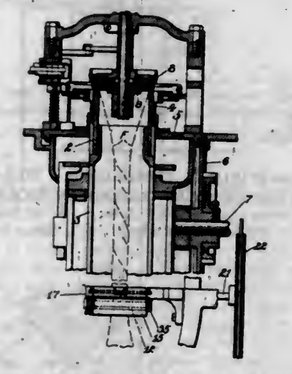
1,624,370. VOLTAGE REGULATOR. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1924. Serial No. 707,844. 5 Claims. (Cl. 171—229.)

1. In a regulator system, a dynamo-electric machine having a field winding, regulating means for controlling the excitation of said field winding in accordance with the electrical conditions of said machine, anti-hunting means therefor comprising a pair of thermionic valves,



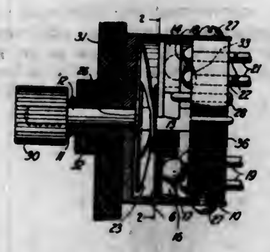
and means for sensitizing said valves to permit current flow therethrough in accordance with changes in field excitation.

1,624,371. DRYING MACHINE. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 4, 1925. Serial No. 27,672. 6 Claims. (Cl. 34—48.)



1. In a drier system, the combination with a plurality of drier drums, of an auxiliary drier unit, heating means therein for transforming a part of the water in said web into steam, and means for conducting said steam into and through said drums to heat the same.

1,624,372. SWITCH LOCK. CHARLES L. STOELTZLEN, Erie, Pa., assignor to Burke Electric Company, a Corporation of Pennsylvania. Filed Oct. 1, 1924. Serial No. 740,973. 5 Claims. (Cl. 200—169.)

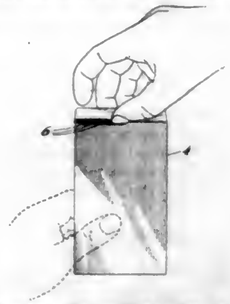


5. The combination with a switch comprising a stationary and a movable part, a stationary locking member, a clamping means comprising two complementary plates adapted to clamp the movable member therebetween, a spring pressed locking member carried by said clamping means, and an operating member carried by said clamping means and engaging said movable locking member to release said lock when moved in one direction to open the switch and releasing said movable member for locking action when moved in the opposite direction.

1,624,373. KNITTING MACHINE. PAUL G. STROUD, Belmont, and WALTER A. SIMOND, Franklin, N. H., assignors to Acme Knitting Machine & Needle Company, Franklin, N. H., a Corporation of New Hampshire. Filed Nov. 4, 1922. Serial No. 599,024. 6 Claims. (Cl. 66—150.)

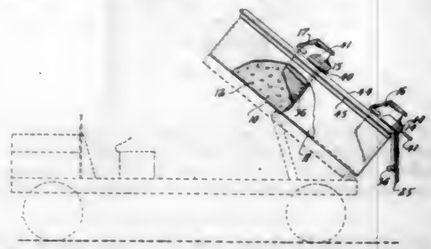
1. In a circular knitting machine, the combination with knitting instrumentalities including a circular series of needles, of means operative during circular knitting to twist and simultaneously tension the knitted web of fabric.

1,624,374. SWITCHING DEVICE. ADOLPH R. SWOBODA, Newark, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 3, 1925. Serial No. 6,618. 5 Claims. (Cl. 200—6.)



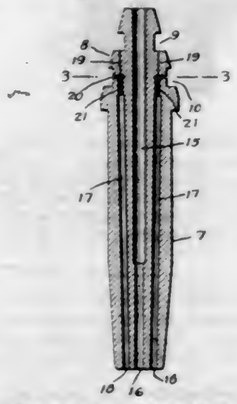
1. In a switch, a base of insulating material, a bank of sets of fixed contacts inserted therein, a rotatable shaft, an insulating disc containing a plurality of notches carried by said shaft, and a ball associated with each of said sets of contacts carried in each of said notches of said disc for contacting with its associated set when said shaft is rotated.

1,624,375. CONTAINER OPENER. JAMES C. THOM, Chicago, Ill., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 9, 1925. Serial No. 1,459. 3 Claims. (Cl. 229—51.)



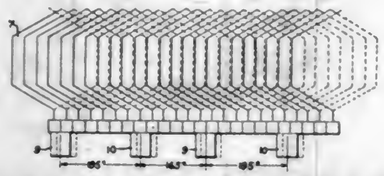
1. A commodity package including an enclosing wrapper of paper, or the like, and an opener at one end of the package underlying the wrapper, said opener having an area substantially that of the cross-section of the package,

and presenting a resistant cutting-edge coextensive with a wall of the package, which, upon the application of external pressure upon said wall of the package at the



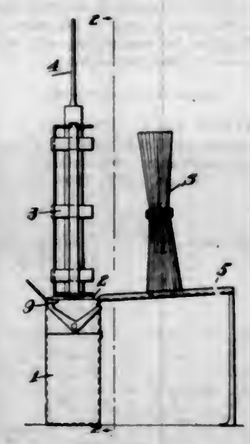
said end, will cause the cutting edge of the opener to sever the wrapper along said wall to facilitate opening of the package.

1,624,376. BATCHING APPARATUS. WILLIAM MAYO VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Mar. 7, 1924. Serial No. 697,483. 9 Claims. (Cl. 298—8.)



1. The combination of a dumping container and an auxiliary compartment, with gate means for simultaneously controlling their discharge combined for movement together relative to both container and compartment.

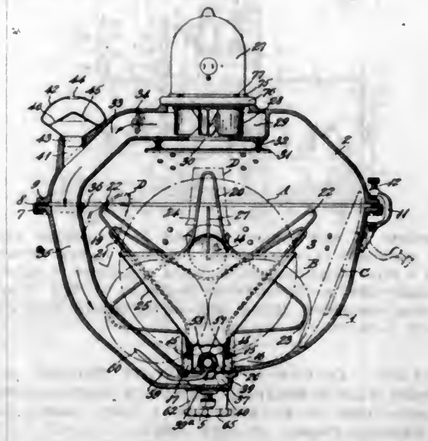
1,624,377. CUTTING TIP OR THE LIKE. GEORGE L. WALKER, New York, N. Y., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 12, 1925. Serial No. 62,183. 2 Claims. (Cl. 158—27.4.)



1. A cutting torch tip or member having one or more preheating mixture passages, with a restricted oxygen jet bore in line with each preheating mixture passage, said member being formed with a narrow transverse slot to afford inlet for combustible gas, the delivery ends of said oxygen jet bores terminating at the rear face of said slot, said slot intervening between the delivery ends of said oxygen jet bores and the rear ends of said preheating mixture passages, in such manner that the oxygen jets striking across the slot entrain the combustible gas.

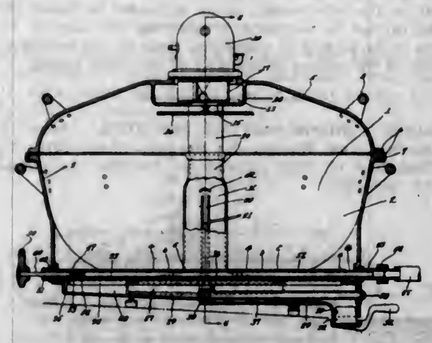
1,624,378. ALTERNATING-CURRENT MOTOR. CLIFFORD A. M. WEBER, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 14, 1923. Serial No. 645,238. 9 Claims. (Cl. 172—276.)

1. A dynamo-electric machine comprising a member having a winding consisting of a plurality of coils, a commutator connected to said winding and a plurality of brush members co-operating with said commutator, the number of coils short-circuited by said brush members varying with the positions of the commutator during the rotation thereof, said brush members being spaced unevenly around the commutator, whereby the difference between the largest and the smallest number of coils short-circuited by said brush members at any moment during the rotation of said member is substantially a minimum.



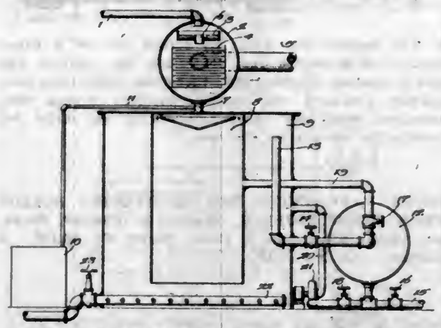
1,624,379. METHOD AND APPARATUS FOR DIPPING SHINGLES. CHARLES M. ABBOTT, Watertown, Mass., assignor to Samuel Cabot, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Aug. 17, 1925. Serial No. 50,631. 6 Claims. (Cl. 91—46.)

1. The method of dipping bundled shingles which consists in supporting the shingle bundle with its laminations vertical to a body of liquid stain, in immersing the bundle by a swinging motion to enter and withdraw from the stain while maintaining the bundle with its laminations vertically disposed.



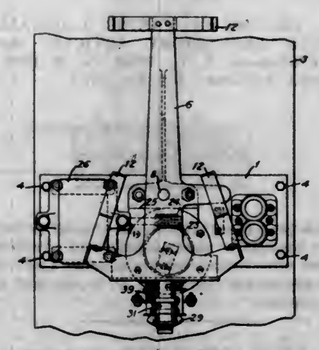
3. In a shingle dipping machine, a dipping tank, a bundle cage pivoted to said tank and adapted to support a bundle of shingles with its laminations at right angles to the line of pivot and means for rocking the cage on its pivot to enter the bundle laterally into the said tank and to withdraw it therefrom to erected position, and a counter balance angularly attached to said cage and so disposed as to have its maximum effective length when the bundle is in substantially horizontal position.

1,624,380. DISHWASHING MACHINE. PERCY E. BARKER, Cleveland, Ohio, assignor, by mesne assignments, of one-half to Arthur B. Betz, Shaker Heights Village, Ohio. Filed Apr. 30, 1923. Serial No. 635,604. 7 Claims. (Cl. 141—9.)



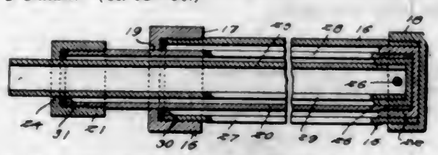
1. A dishwashing machine, comprising a casing provided in its lower portion with an air trapping chamber communicating with the space in said casing through an inlet orifice, the edges of said orifice being extended and lying at a lower level than the top of said chamber, whereby air may be trapped and held in said chamber by the sealing effect of water in said space, and means for causing air to enter said chamber and thereby pass the edges of said orifice and rise through the water in said space.

1,624,381. DISHWASHING MACHINE. PERCY E. BARKER, Cleveland, Ohio, assignor of one-half to Arthur B. Betz. Filed June 15, 1923. Serial No. 645,587. 6 Claims. (Cl. 141—9.)



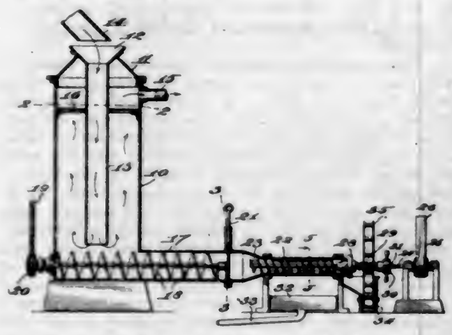
1. A dish washing machine, comprising a hollow casing provided with a chamber adapted to receive articles to be washed and a body of cleaning liquid, air moving means having an inlet communicating with the upper portion of said chamber and an outlet communicating by a passage with the lower portion of said chamber and adapted to circulate air upwardly through the liquid body, said passage having an opening to the atmosphere at such a level as to establish a predetermined definite liquid level in said chamber and which opening also serves as a breather vent to the atmosphere.

1,624,382. WATER-SOFTENING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed June 7, 1920. Serial No. 387,146. 34 Claims. (Cl. 210—14.)



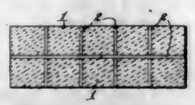
1. Water softening apparatus including a source of water that is to be treated; means for heating the water coming from said source; a settling tank having one chamber receiving the water to be treated and discharging at its lower end into a second chamber of the tank; means for introducing softening chemical into the water that enters the first aforesaid chamber of the tank; a filter; a pipe connecting the second chamber with the filter to pass softened water to the filter and having a valve for interrupting the flow of softened water therethrough; a service pipe through which filtered water passes from the filter and having a valve for interrupting the flow of filtered softened water therethrough; piping connecting the first aforesaid tank chamber with the filter through which water may be passed from the filter to said first chamber and having a valve for interrupting flow of water therethrough; and a pump for forcing the flow of water that passes through the latter piping.

1,624,383. MERCURY ARC RECTIFIER. EDWARD BECK, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 4, 1924. Serial No. 753,851. 13 Claims. (Cl. 176—41.)



1. A tilting mechanism for a vapor rectifier, comprising a pivotally mounted rectifier holder, a member pivoted to swing around the pivotal axis of said holder, driving means for imparting a swinging motion to said member, and means for detachably coupling said member to said holder.

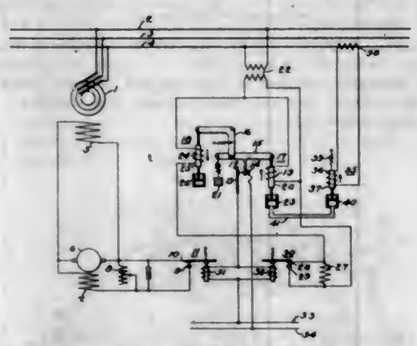
1,624,384. TELESCOPE AIR JET. FRANK BEDARD, Flint, Mich. Filed Aug. 14, 1925. Serial No. 50,249. 3 Claims. (Cl. 92—50.)



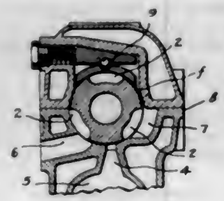
1. The combination with the screen belt of a paper machine, of a device for projecting air against the screen to remove adhering pulp therefrom comprising telescopically arranged and spaced chambers having communication with each other and having an outlet for directing the air against the belt.

1,624,385. APPARATUS FOR RECOVERING SOLIDS FROM PRESS LIQUIDS. HAROLD E. BERGEN, Berkeley, Calif. Filed Nov. 2, 1925. Serial No. 66,197. 6 Claims. (Cl. 210—149.)

1. The combination with a press liquid settling tank having uniform internal diameter throughout its length, of a tubular member extending outwardly from the lower portion of said tank, a conveyor arranged for operation within said tubular member and extending entirely across the bottom of the chamber within said settling tank, a gate at the outer end of said member, an independently operable conveyor leading from said gate and a screen surrounding said last-mentioned conveyor.



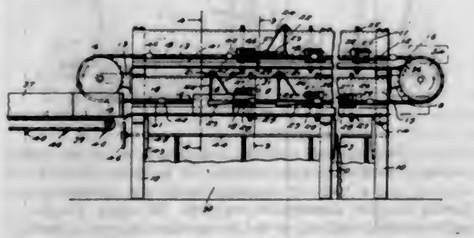
1,624,386. PROCESS OF MAKING A METALLIC REENFORCED REFRACTORY ARTICLE. ANSON G. BETTS, Kinderhook, N. Y. Filed Apr. 6, 1925. Serial No. 21,230. 2 Claims. (Cl. 25—157.)



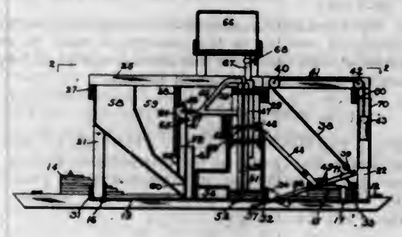
1. Process of making metallic reenforced refractory article which consists in molding powdered refractory grain and metallic wire with a soluble bonding agent, and curing at a temperature below that at which said wires are seriously injured.

1,624,387. REGULATOR SYSTEM. CLARENCE A. BODDIE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1924. Serial No. 693,637. 7 Claims. (Cl. 171—229.)

1. In a regulator system, the combination with an electrical circuit and means responsive to a quantity of said circuit, of a regulator for said circuit comprising cooperating contact members, electroresponsive means for causing said contact members to engage and disengage and the circuit of which is controlled thereby, a second electroresponsive means for adjusting the periods of engagement of said contact members in accordance with the variations of an electrical condition of said circuit, and a third electroresponsive means responsive to sudden changes only in the electrical condition of said circuit to close the circuit of said cooperating contact members.

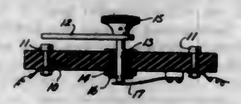


1,624,388. INTERNAL-COMBUSTION-ENGINE ROTARY VALVE MEMBER. EUGENE M. BOURNONVILLE, Jersey City, N. J. Filed Apr. 1, 1925. Serial No. 19,766. 1 Claim. (Cl. 123—190.)



An internal combustion engine rotary valve member formed with pockets in its sides for the transfer of the gases, and with curved sealing portions between the pockets of a hardness approximately twice or more as great as the valve-casing, so as to render harmless particles carried by the gases, by shearing the same by the edges of its pockets or embedding them by the burnishing action of its surface in the wall of the valve casing.

1,624,389. SHOOK-SORTING MACHINE. JOHN N. BRATTON and WALTER N. BRYANT, Chase City, Va. Filed May 17, 1926. Serial No. 109,580. 14 Claims. (Cl. 209—90.)

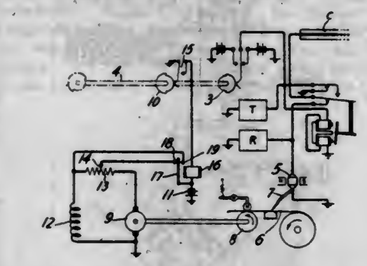


1. A sorting machine including a carrier, a support for articles moved by the carrier, means for holding vertically adjustable articles engaged with the carrier, article actuated means, and kickers associated with the article actuated means for actuation upon an article upon actuation of the latter by an article.

1,624,390. ROAD-REPAIRING MACHINE. CHRISTIAN B. CHRISTIANS, Jr., San Antonio, Tex. Filed Feb. 24, 1926. Serial No. 90,357. 19 Claims. (Cl. 94—46.)

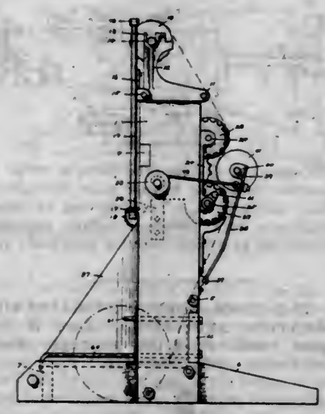
1. In a device of the class described, a receptacle for road repairing material and means actuated by depressions in a road for distributing said material upon said road.

1,624,391. ELECTRIC SWITCH. HENRY P. CLAUSEN, Mamaroneck, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 9, 1923. Serial No. 673,645. 5 Claims. (Cl. 200—11.)



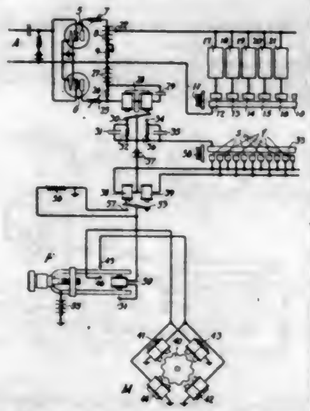
1. A switching device comprising a bushing, a rotatable shaft loosely mounted in said bushing, and a switch arm carried by said shaft and freely rotatable in one vertical position of said shaft, said switch arm being flexed when the shaft is depressed to lock the shaft against said bushing.

1,624,392. FIXING FOR POLES AND THE LIKE. EDWIN GEORGE CLEVERLY, London, England. Filed July 31, 1924, Serial No. 729,362, and in Great Britain Aug. 1, 1923. 3 Claims. (Cl. 16—14.)



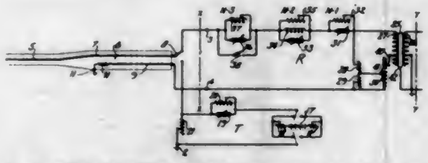
1. In a fixture for stair and curtain rods and the like, the combination of a base member having a transverse passage to receive a rod and formed with a perforation extending at right angles to said passage for receiving a securing means whereby said base may be anchored to a support, with a separate cap slidably applied to said base in a direction at right angles to the axis of the rod and having one side wall slotted at an angle to said transverse passage so as to straddle the portion of the rod extending in said base member and having its opposed side wall of unbroken area to prevent the endwise movement of the rod in that direction, said cap overlying said perforation.

1,624,393. TELEGRAPH SYSTEM. ALLISON A. CLOKEY, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1926. Serial No. 112,464. 4 Claims. (Cl. 178—63.)



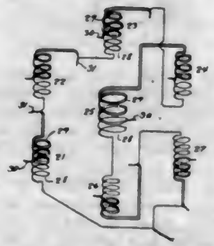
1. In a telegraph terminal system arranged to operate in alternate transmitting and receiving periods, a recorder for use during one of said periods, a tape on which a record is made by the operation of the recorder, a tape pulling motor, switching mechanism for controlling the direction operation of said system and means controlled by said switching mechanism for reducing the speed of said motor during the other of said periods of operation.

1,624,394. NETTING HANDLER. DAVID JAMES CRONK, Poughkeepsie, N. Y. Filed Dec. 8, 1924. Serial No. 754,520. 3 Claims. (Cl. 242—75.)



3. In a machine of the class described and in combination with a supporting frame comprising two uprights, having friction rolls mounted therein and a delivery roll adjacent thereto and driving means for the same, of arms having their inner ends pivoted to said upright, a tension roller journalled in the outer ends of said arms, a shaft rotatably mounted in said uprights and having its ends extending therefrom, wheels mounted on the ends thereof, cables carried by said wheels and attached to said arms and adapted to be wound upon said wheels for the purpose of swinging said arms toward the frame and bringing the tension roll into contact with the friction rolls to hold the netting therebetween during its passage through the machine.

1,624,395. SIGNALING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1924. Serial No. 733,458. 6 Claims. (Cl. 178—53.)



1. A signaling system including a plurality of amplifying devices for amplifying received signal impulses involving waves of a plurality of frequencies, and means individual to each of said devices and responsive to waves of frequencies, which are in part, at least, identical, for performing different operations.

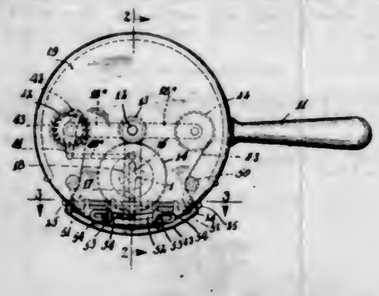
1,624,396. SUBMARINE SIGNALING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1925. Serial No. 56,825. 22 Claims. (Cl. 178—63.)

1. A cable signaling system comprising a cable, an impulse transmitter connected to said cable through a sending condenser, and a path to earth having an impedance low in comparison with the characteristic impedance of the cable connected at a point between said cable and said condenser.

1,624,397. ELECTROMAGNETIC THERAPEUTIC-COMPRESS-HEATING APPLIANCE. JOHN H. DEQUER, Los Angeles, Calif. Filed Dec. 15, 1925. Serial No. 75,567. 5 Claims. (Cl. 219—41.)

1. In therapeutic compress heating appliances, the combination of a shallow casing embodying spaced top and bottom walls, coiled insulated wiring so housed within said casing as to provide for establishing an electromagnetic heating zone entirely and uniformly thereabout, a junction conduit handle unit for said casing in open communication therewith, and electrical circuit leads extending from the terminal ends of said coiled wiring and through said handle unit to the exterior of said casing.

1,624,398. FIRE-EXTINGUISHING COMPOSITION. FREDERICK L. DUNLAP, Chicago, Ill., and NATHANIEL T. EWER, Swarthmore, Pa., assignors to Amdyco Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1926. Serial No. 103,631. 15 Claims. (Cl. 23—248.)



1. A fire-extinguishing composition comprising ingredients capable of reacting in the presence of water to produce foam, a foam stabilizer and inert material to avoid deterioration of the composition in storage.

1,624,399. CLAMPING DEVICE. WALTER R. ELLIS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 3, 1925. Serial No. 60,286. 7 Claims. (Cl. 24—136.)

1. A conductor-supporting clamp comprising a body member, an outer holding member, a plurality of similar clamping members disposed between said members and automatically movable relatively thereto to compensate for reduction in the cross-sectional area of the conductor caused by load forces, and means for locking said body and holding members against longitudinal relative movement in both directions.

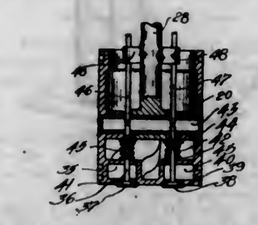
1,624,400. SANDPAPER AND RUBBING MACHINE. LOUIS FERRARA, Brooklyn, N. Y. Filed Dec. 11, 1925. Serial No. 74,712. 3 Claims. (Cl. 51—170.)

1. A sandpapering machine comprising an electric motor, a casing for said motor, a lever fulcrumed on the motor casing at the central part thereof, means within the casing forming an operative connection between the motor shaft and the lever to oscillate the lever, a sandpaper holding foot rigidly mounted on said lever, a pair of drums supported by said lever, a strip of sandpaper extending from said drums across the face of said holding foot, means for clamping said sandpaper, and means for releasing said clamping means and advancing said sandpaper.

1,624,401. BRISANT EXPLOSIVE. BERNHARD JACQUES FLÜRSCHEIM, Fleet, England. Filed Oct. 9, 1924, Serial No. 742,518, and in Great Britain Oct. 26, 1923. 25 Claims. (Cl. 52—13.)

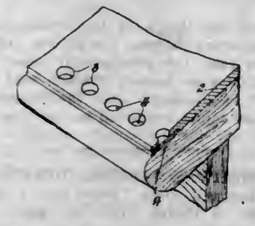
1. A process for producing an explosive composition impervious to water from a material consisting of a crystalline nitro-compound which cannot conveniently be fused which process consists in causing the material to be permeated by such a proportion of a fusible nitro-compound which has solidified in the mass that the mixture cannot readily be poured when it is at a temperature which is only slightly above the temperature at which this fusible compound melts in the mass.

1,624,402. ELECTRICAL HEATING APPARATUS. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1925. Serial No. 55,902. 6 Claims. (Cl. 126—304.)



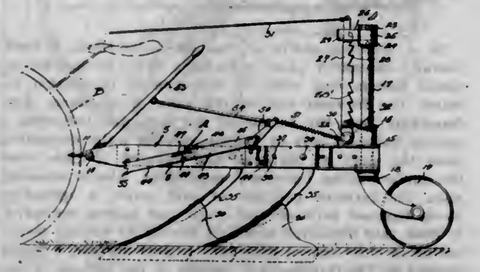
1. In combination, a casing having a plurality of depressed portions each connected thereto by a plurality of bridges integral therewith, and a casing-supporting device having a plurality of resilient members integral therewith which is firmly held between the depressed portions by reason of the resiliency of the members.

1,624,403. PROCESS OF TREATING ROCK ASPHALT FOR SHIPMENT AND LAYING. JOHN W. FRAZIER, San Antonio, Tex., assignor to Uvalde Rock Asphalt Company, San Antonio, Tex. Filed Aug. 29, 1924. Serial No. 735,021. 4 Claims. (Cl. 106—31.)



1. A process of preparing limestone rock asphalt in condition for shipment ready to lay, comprising first, crushing and pulverizing a quantity of porous limestone, then mixing with said limestone a small quantity of solvent; then introducing a small proportion of fluxing agent, finely crushing limestone rock asphalt and mixing it with the prepared limestone in the proportion of about four parts of the rock asphalt to one of the prepared limestone dust.

1,624,404. INTERNAL-COMBUSTION ENGINE. FREDRICK W. FRESE, Spokane, Wash. Filed Mar. 2, 1925. Serial No. 12,562. 1 Claim. (Cl. 123—47.)

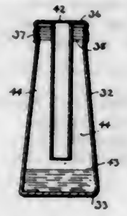


In a valved piston construction, a hollow wrist pin, a connecting rod connected thereover, said wrist pin having guide slots formed therein at opposed points and in registry on opposite sides of said connecting rod, valve stems disposed through certain of the slots from the piston head, brackets projecting laterally from opposite sides of said connecting rod, push rods carried through said brackets for longitudinal movement relative to said connecting rod, said push rods extending through other of the wrist pin slots to engage said valve stems within the wrist pin, and means on said push rods for timed operative engagement with an engine crank shaft.

1,624,405. STAIR TREAD. HERBERT FROOD, Chapel-en-le-Frith, England, assignor to Ferodo Limited, Chapel-en-le-Frith, England. Filed Aug. 27, 1921, Serial No. 496,095, and in Great Britain Dec. 31, 1919. 2 Claims. (Cl. 20—79.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

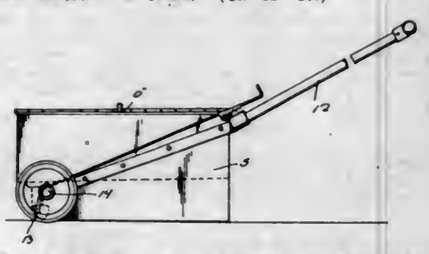
2. A replaceable wear receiving covering for stair treads having along the forward edge portion a row of perforations with material visible through the perforations in strong color contrast with the material of the upper surface of the covering, for indicating the forward edge of the tread.

1,624,406. TRACTOR PLOW. CHARLES HAFFKE, Washington, Ark. Filed Apr. 21, 1923. Serial No. 633,676. 3 Claims. (Cl. 97—47.)



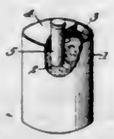
1. The combination with a tractor including a draw bar, of a tractor plow including a frame, the forward end of the frame being supported on the rear end of the tractor on a horizontal pivot thereby permitting swinging movement thereof in a horizontal plane, a vertically disposed sleeve carried by the rear end of the frame, a post slidably mounted in said sleeve, and mounted for rotary movement therein, a castor wheel carried by the post, means for raising and lowering the frame on the post, plow bottoms carried by the frame, stops carried by the sleeve, stops carried by the post adapted to engage the stops formed on the sleeves when the frame is in its lowermost position for preventing rotary movement of the post therein, as and for the purpose specified.

1,624,407. FLOWER HOLDER AND STAND. JAMES HAMILTON, Detroit, Mich. Filed Sept. 24, 1924. Serial No. 739,737. 1 Claim. (Cl. 47—41.)



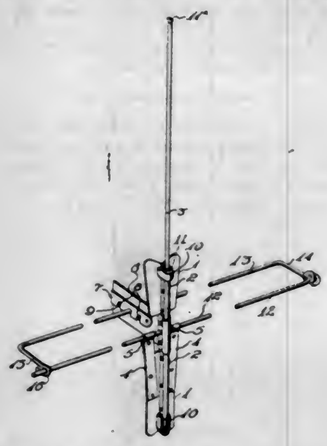
A device of the class described comprising a vase, affording a reservoir for a liquid within its lower portion and including a bottom having a frusto-conical wall riding

therefrom, a closure for the upper end of the wall, means for detachably mounting the closure on the wall, said closure provided with an opening, and a rigid imperforated tube fixed to the closure in registry with said opening, then extending downwardly into the vase in spaced rela-



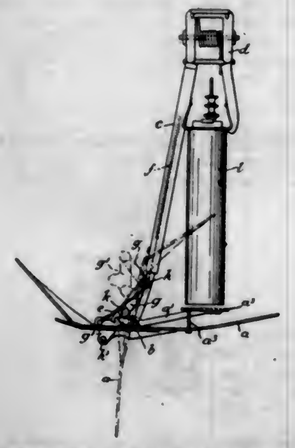
tion throughout its length to the frusto-conical shaped wall and terminating between the bottom and the central portion of the vase, the arrangement being such that a flower having its stem passing through said opening and said tube will be displayed over the closure while said stem dips in the liquid contained in the vase.

1,624,408. HIGHWAY-MARKING DEVICE. ISAAC E. HANSON, Blackwell, Okla. Filed July 1, 1926. Serial No. 119,889. 1 Claim. (Cl. 41—39.)



In a marking device of the class described, a horizontally elongated paint containing tank having an inclined bottom wall with its direction of inclination towards the forward end of the tank, a discharge pipe depending from the bottom of the tank and including a control valve, a pair of spaced parallel walls depending from the sides of the tank and adapted to glide over the surface being traversed, supporting wheels mounted upon the forward portions of said walls, a spreading block disposed between said walls and spaced rearwardly from said discharge pipe and having its bottom terminating in close spaced proximity to said surface, a brush carried by the intermediate portion of the bottom of the tank and disposed between said depending walls, and a pressing roller disposed between the rear end portions of said walls and spaced rearwardly from said brush.

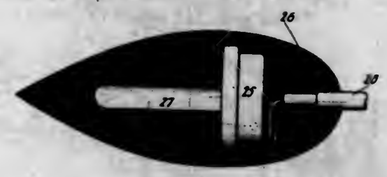
1,624,409. DRY CELL AND ELECTRODE THEREFOR. GEORGE W. HEISE, Bayside, N. Y.; HARRY H. THOMPSON, Cleveland, Ohio; and NEWCOMB K. CHANEY, Kew Gardens, N. Y., assignors to National Carbon Company, Inc., a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,750. 6 Claims. (Cl. 136—107.)



1. In a galvanic cell, a metallic electrode, a body of depolarizing material, and an electrode of opposite polarity having a relatively small volume and extending through not substantially more than one-half of said body, whereby the space available for active materials is increased.

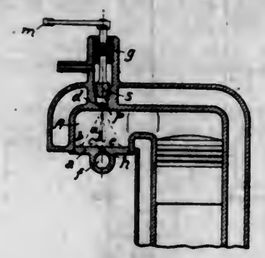
1,624,410. BROOM PROTECTOR AND STAND. ALBERT J. HENNES, Cincinnati, Ohio. Filed Dec. 22, 1925. Serial No. 77,162. 4 Claims. (Cl. 248—49.)

1. A device of the character specified, comprising a pair of rods pivotally secured together at an end of each, said rods being adapted to fit around the straw of a broom, means for securing together the free ends of said rods, a spreader plate for spreading said rods intermediate their ends, a supporting rod for supporting said broom, and means for slidably securing said supporting rod to said first mentioned rods, whereby it may be adjusted into or out of supporting position.



1,624,411. LANDING LIGHT OR FLARE FOR ATTACHING TO AIRCRAFT. HAROLD EDWARD SHERWIN HOLT, Farnborough, England. Filed Feb. 14, 1924. Serial No. 692,902, and in Great Britain Feb. 20, 1923. 3 Claims. (Cl. 240—1.)

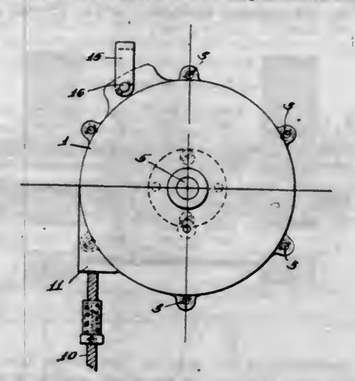
1. A landing light or flare for air-craft, comprising a depending bracket for holding the burning composition or flare proper, a depending arm on the bracket, a



pivoted shade supported by said arm near the lower end of the flare, a spring tending to pull the shade into the operative and substantially vertical position, means arranged to hold the shade normally out of action and in a substantially horizontal position so that it projects below the lower end of the flare, and means operated by the gases given off by the flare upon ignition to release the shade-holding means and permit the shade to be swung into operative position by the spring.

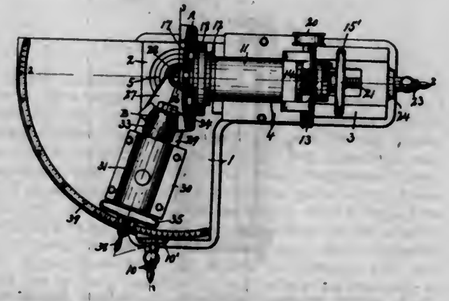
1,624,412. SUBMARINE SIGNALING. JOSEPH W. HORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1919. Serial No. 334,684. 9 Claims. (Cl. 177—386.)

3. In a vibration responsive device, a circuit-varying means completely surrounded by a body of resilient energy-absorbing non-metallic material.



1,624,413. FUEL-ADMISSION DEVICE FOR HEAVY-OIL ENGINES. FRITZ HUBER, Mannheim, Germany, assignor, by mesne assignments, to Heinrich Lanz Aktiengesellschaft, Mannheim, Baden, Germany, a Corporation of Germany. Filed Nov. 24, 1924, Serial No. 752,058, and in Germany Feb. 2, 1924. 8 Claims. (Cl. 123—32.)

1. A fuel admission device for internal combustion engines, including a cylinder forming a nozzle and having a chamber, means for admitting fuel to said nozzle, and a regulator shaped as a truncated cone movable in said chamber and having a lateral clearance with respect to the wall thereof to vary the size of said chamber whereby the acceleration of the fuel through the nozzle is in inverse ratio to the size of said chamber.

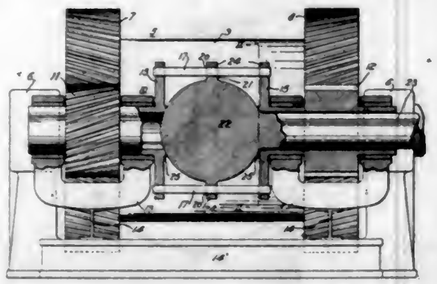


1,624,414. COUNTERBALANCING DEVICE. LESTER M. LLEWELLYN and HAROLD G. PEDERSON, Syracuse, N. Y.; said Llewellyn assignor to said Pederson. Filed Oct. 23, 1923. Serial No. 670,349. 1 Claim. (Cl. 242—98.)

A counter-balancing device comprising a casing, a reel mounted in the casing, the casing having a downwardly extending outlet on the lower side thereof, substantially tangent to the reel, a part carried by the casing and extending axially into the reel, a spiral spring secured at one end to the reel and at its other end to said part, a cable for supporting an article on the reel and extending through the tangential outlet, and a link adapted to receive suspending means at its upper end and pivotally secured at its lower end to the casing above the tangential outlet at a point between the axis of the reel and the axis of the tangential outlet, and

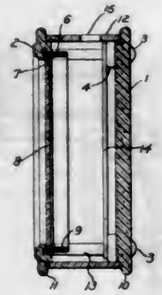
providing a flexible connection for the casing and permitting a floating action of the device as a unit on the said pivot below the link suspending means.

1,624,415. BEVEL-GEAR-TESTING MACHINE. CHARLES H. LOGUE, Syracuse, N. Y., assignor to The Gleason Works, Rochester, N. Y., a Corporation of New York. Filed May 8, 1924. Serial No. 711,903. 5 Claims. (Cl. 73—51.)



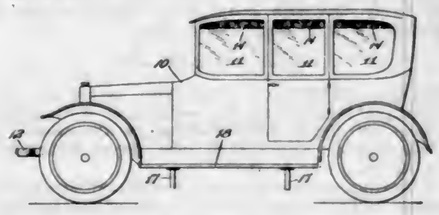
1. In a machine for testing bevel gears, a frame, a support mounted on said frame, a spindle adapted to carry a bevel gear journaled in said support, a second support pivotally mounted on said frame for movement about an axis intersecting the axis of said spindle, a spindle, adapted to carry a second bevel gear, journaled in said last-named support, means for adjusting said last named support axially on its pivotal axis to move the second spindle bodily in parallel planes, means for rolling the gears together and cooperating means on said second support and frame for indicating the amount of any pivotal movement of the second support caused by imperfection in the mesh of the gears.

1,624,416. REDUCTION GEARING. ALLIS M. MACFARLAND, Wilkinsburg, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed Oct. 30, 1920. Serial No. 420,719. 4 Claims. (Cl. 74—7.)



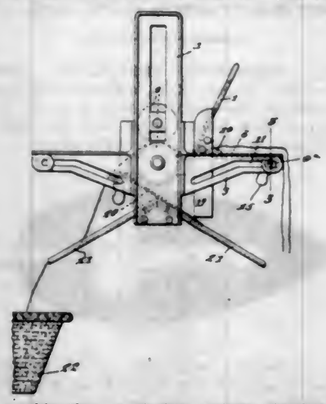
1. Gearing comprising a gear having two sets of oppositely inclined helical teeth, a pair of separate pinions mounted for relative rotary movement and relative axial movement, provided with oppositely inclined helical teeth adapted to engage separate sets of teeth on the gear, the teeth being inclined so that the pinions are

moved toward one another by the longitudinal thrust of the inclined teeth, a shaft extending through one of the pinions and having a thrust member adapted to limit the longitudinal movement of the pinions and per-



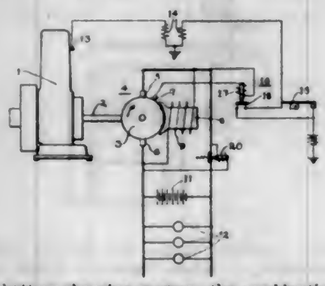
mit movement of the axis of the pinion into angular relation with the axis of the shaft, and a driving connection pivotally connecting the pinions permitting relative rotary movement of the pinions and pivotally engaging the shaft at a point between the pinions.

1,624,417. METER CASING. PAUL MACGAHAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 26, 1922. Serial No. 532,056. 8 Claims. (Cl. 171—34.)



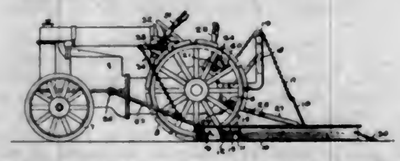
3. A meter casing comprising a molded insulating cover member having a window opening and a metal pane-supporting rim member having a perimetral portion greater in diameter than said opening embedded in said cover member to provided an insulating shoulder for the pane.

1,624,418. COLLISION SHIELD FOR VEHICLES. WELLINGTON W. MARSH, Long Beach, Wash. Filed Dec. 17, 1925. Serial No. 76,042. 4 Claims. (Cl. 180—83.)



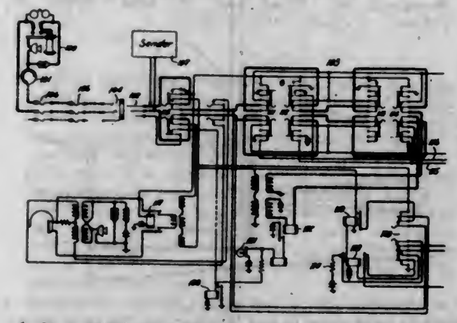
3. In a vehicle, a shield having two positions, a restraining element for the shield normally maintaining it in one of said positions, the shield, when released, automatically moving to the other of said positions, a control for said shield including an inertia operated switch and a control circuit for said restraining element including said inertia operated switch.

1,624,419. CLOTHES-WRINGER ATTACHMENT. ROBERT LEE MCCOUBRIE, Philadelphia, Pa. Filed Mar. 18, 1926. Serial No. 95,608. 3 Claims. (Cl. 68—32.)



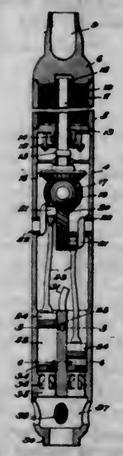
1. In combination, a clothes wringer having rolls, a clothes supporting table at approximately the level of the rolls, and means to feed clothes while supported on said table comprising a pusher element having guides straddling said table.

1,624,420. BATTERY-CHARGING SYSTEM. WILLIAM E. MENZIES, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1922. Serial No. 574,737. 1 Claim. (Cl. 290—35.)



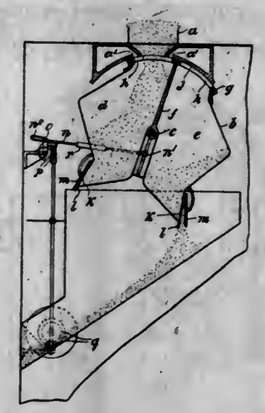
In a battery-charging system, the combination with a storage battery, a generator connected thereto having an armature and main and auxiliary brushes co-operating therewith, and a prime mover for said generator, of electroresponsive means for terminating the operation of said prime mover, said means being energized from said auxiliary brush and one of said main brushes.

1,624,421. ROAD DRAG. HENRY D. MEYER, Milford, Ill. Filed July 15, 1925. Serial No. 43,827. 3 Claims. (Cl. 37—152.)



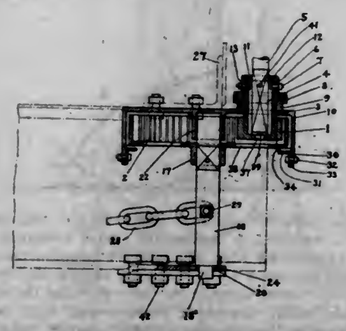
1. The combination with a tractor having a rearwardly projecting draw bar at the rear end thereof, of a road drag attachment therefor including a pair of drag sections, rigid draft bars secured to the forward outer ends of the drag sections and to opposite sides of the tractor, a draft bar having one end rigidly attached to the inner adjacent ends of the drag sections and its opposite end pivotally secured to the draw bar of the tractor, a rigid connecting strip having its opposite ends secured to the inner adjacent ends of the drag sections, and means carried by the tractor and associated with the rigid connecting strip for raising and lowering the said drag sections.

1,624,422. DIAL TESTING CIRCUIT. ROBERT B. MILLER, Jackson Heights, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1926. Serial No. 119,579. 13 Claims. (Cl. 179—175.)



1. In a telephone exchange system, an operator's position, a test circuit available to said position, a telephone circuit, an impulse transmitter associated therewith, means at said position for connecting said test circuit with said telephone circuit, means in said test circuit controllable over said telephone circuit to determine the speed of pulsing by said transmitter, and means to transmit a signal to said telephone circuit to indicate said speed.

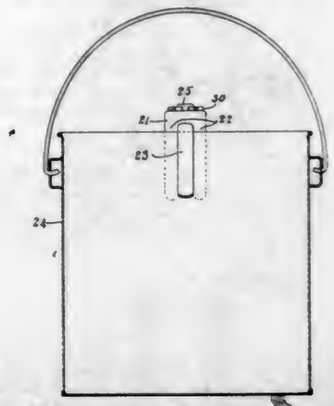
1,624,423. SUBMERGED PUMPING UNIT. MELVIN L. MILTON, Denver, Colo. Filed May 14, 1926. Serial No. 109,111. 3 Claims. (Cl. 103—46.)



1. A pumping unit comprising a casing having a closed upper end and provided at its lower end with a piston block having an inlet opening, the upper end of said casing being provided with a liquid receiving chamber, a motor housed in the upper portion of the casing, a pump housed in the casing and connected with the motor and having a piston slidably mounted in the block, and a pipe connected at one end with the piston block and at its other end with the liquid receiving chamber, the intermediate portion of said pipe passing through the side wall of the casing and disposed exteriorly of the casing along the motor housing portion thereof.

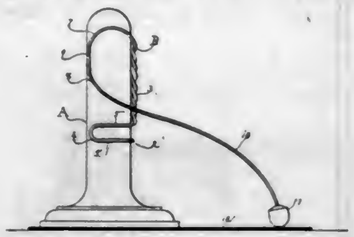
1,624,424. PNEUMATIC ELEVATOR. ALFRED HILLYARD MITCHELL, deceased, late of Plumstead, England, by Henry Ormsby Burge, executor, Brentwood, England, assignor to Henry Simon Limited, Manchester, England. Filed Sept. 2, 1921, Serial No. 498,071, and in Great Britain Nov. 20, 1913. 4 Claims. (Cl. 302—62.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The combination with the mouth of a grain hopper, of an arcuate valve seat formed at said mouth and provided with an exhaust port, a tipper provided with an arcuate upper end fitting said seat and having spaced inlet ports, said tipper being divided into a pair of compartments into which said inlet ports respectively open, each of said compartments having a valve at its lower end, and mechanical means connected to the tipper for oscillating it at a definite rate regardless of the kind of grain being handled to bring each inlet port alternately into registration with the mouth and exhaust port and then out of such registration and permitting intervals of rest of said tipper between movements.



1,624,425. HAND-BRAKE MECHANISM FOR RAILWAY CARS. YUSKE MIYASAKI, Kansas City, Mo. Filed July 23, 1926. Serial No. 124,508. 7 Claims. (Cl. 74—112.)

1. A hand brake mechanism comprising, in combination, a housing provided with an outstanding tubular bearing, a pinion within the housing having a trunnion

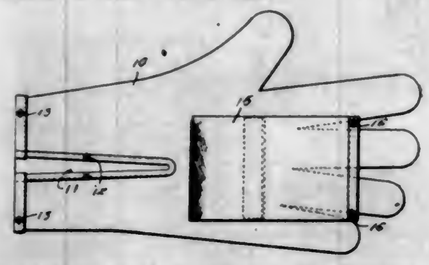


extending through the bearing of the housing, a cap secured to the trunnion of the pinion and contacting with the outer end of the bearing of the housing, the top of the cap having contact with the outer end of the trunnion of the pinion, a brake shaft extending through the cap and engageable with the pinion, a gear within the housing meshing with the pinion, and a winding shaft rotatable with the gear, the under surface of the top of the cap sloping toward the brake shaft so that moisture passing through the clearance of the cap surrounding the adjacent portion of the brake shaft will be received within the trunnion.

1,624,426. BRUSH HOLDER. JOHN H. MUMAW, JOHN B. SCHNIEDERS, and WALTER G. HAAS, Dayton, Ohio, assignors, by mesne assignments, to Universal Specialty Company, a Partnership composed of Hugo J. Purpus and Walter G. Haas, Dayton, Ohio. Filed Dec. 26, 1924. Serial No. 758,088. 2 Claims. (Cl. 248—49.)

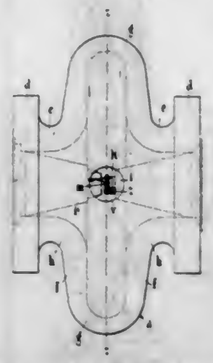
2. In combination, a spring clip support having spaced arms for engaging the outside and inside of the upper edge of a receptacle, an eye on the upper end of the clip, a universal brush holder pivoted in said eye, a shoulder on the upper edge of said clip for supporting said brush holder in horizontal position over the receptacle, said brush holder consisting of U-shaped substantially parallel spring arms having outwardly flaring ends and oppositely disposed V-shaped portions for receiving brush handles.

1,624,427. PAPER HOLDER. JOHN C. MURDOCK, Binghamton, N. Y. Filed Apr. 16, 1926. Serial No. 102,571. 3 Claims. (Cl. 120—82.)



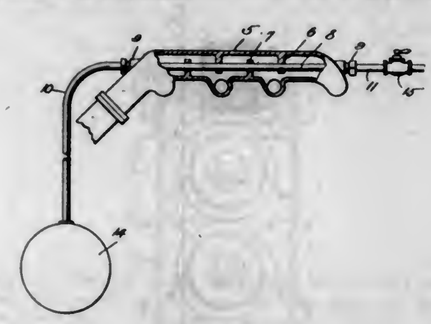
1. In a telephone message blank holder, the combination of a standard A, having the spring collars 4 and 9 formed of a single wire, the collar 9 gripping the standard A and the lower collar 4 resting against the standard A, the two curved ends of the wire forming the sides of the upper collar projecting inward and then outward and downward terminating in feet spaced apart from each other and from the base of the standard and adapted to press down upon layers of paper or other material.

1,624,428. HAIR CLIP. HIDE NAITO, Portland, Oreg. Filed June 12, 1926. Serial No. 115,628. 3 Claims. (Cl. 132—50.)



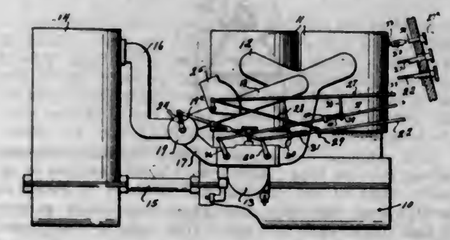
1. A hair clip constructed of resilient material having most material central of its ends and tapering uniformly toward either end, folded about its central position to form two legs, one of which said legs is substantially straight, the other of which is crimped to engage the oppositely opposed leg only at the infold of each crimp

1,624,429. AUTOMOBILIST'S GLOVE. ESSIE R. PALMER, Savannah, Ga. Filed Aug. 10, 1926. Serial No. 128,440. 1 Claim. (Cl. 2—162.)



A signaling device for vehicle drivers comprising a glove of light color having a legend on the back thereof of a color contrasting with that of the glove, a flap secured at one end to the palm of the glove and having a similar legend theron in a dark color, and means for detachably securing the free end of the flap at the wrist portion of the glove whereby to cover the closure of the glove, to retain the closure in closed position, and to display the legend on said flap.

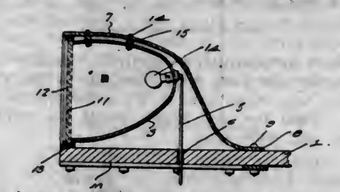
1,624,430. DEVICE SUITABLE FOR MEASURING THE AXIAL THRUST OF ROTATABLE SHAFTS. CHARLES ALGERNON PARSONS and STANLEY SMITH COOK, Newcastle-on-Tyne, England; said Cook assignor to said Parsons. Filed Mar. 11, 1925. Serial No. 14,659, and in Great Britain Apr. 3, 1924. 10 Claims. (Cl. 265—1.)



1. Apparatus for measuring thrust, comprising in combination a shaft having a hollow deformable member apertured to permit access to the interior thereof of a beam of light; an optical device for measuring deformation of said member due to thrust, said optical device including light-reflecting means disposed within said deformable member, and means for operatively connecting said optical device with said shaft.

1,624,431. GAS GENERATOR. EARL P. PERCEY, Jerome, Idaho. Filed Mar. 1, 1926. Serial No. 91,538. 1 Claim. (Cl. 48—102.)

In a liquid fuel vaporizer and gasifier, a heated gas chamber having spaced upwardly extended fingers and spaced depending fingers, said fingers having openings, a gas generating pipe extended through the heating chamber and held within the openings of the fingers, a solid core formed of asbestos material supported within the gas generating pipe, said core including a length of wire wound helically around the asbestos material, said core and wire being spaced from the inner surface of the gas generating pipe to provide a liquid fuel gasification space, and an inlet pipe for directing liquid fuel to the gas generating pipe.

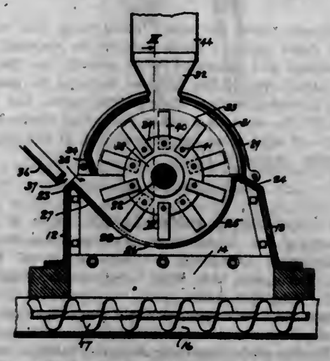


1,624,432. INTERNAL-COMBUSTION ENGINE. VINTON U. D. PIERCE, Asheville, N. C.; Josiah Pierce executor of said Vinton U. D. Pierce, deceased. Filed Oct. 10, 1923. Serial No. 667,768. 13 Claims. (Cl. 123—119.)

1. In combination with an internal combustion engine embodying the usual intake manifold and carburetor, a pump delivering to the engine cylinders at each cycle of the engine through said manifold and through said carburetor an amount of air equal to the piston displacement of the engine during such cycle, including a discharge branched to form two conduits, one communicating with the intake manifold and the other with the intake of the carburetor, and a valve in the first named conduit operable to open the conduit to permit passage of air therethrough or to by-pass air to the atmosphere and to close said conduit.

1,624,433. AUTOMOBILE SIDE LIGHT. JOSEPH RAIL and HENRY E. SPROW, Rockville, Ind. Filed Nov. 11, 1926. Serial No. 147,744. 1 Claim. (Cl. 240—8.2.)

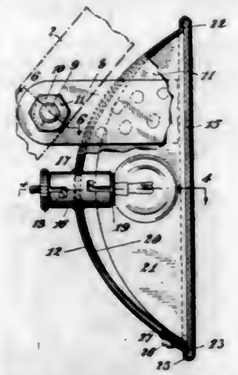
In a side light structure of the class described, in combination, a running board, a substantially elliptical reflector, a source of illumination supported on the interior of the reflector on a plane above the horizontal center of the reflector, a housing in which said reflector is located, said housing having a portion shaped to conform to a part of the reflector, and having another portion shaped to provide an attaching flange secured to said running board, a lens for the open side of the said



reflector located in said housing, and a retaining wire for said lens, together with means for supporting said reflector in an inclined position in said housing.

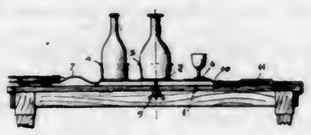
1,624,434. TYPOGRAPHICAL MACHINE. WILLIAM C. REDFIELD, Cincinnati, Ohio. Filed Apr. 17, 1924. Serial No. 707,244. 4 Claims. (Cl. 199—47.)

1. In a type casting machine wherein selective molds are carried by a rotatable mold disc and register at different levels with a reciprocating matrix carrying elevator, the registration being completed by a forward motion of the mold disc, the combination of lever mechanism and an abutment, the lever mechanism being operatively attached to the vise frame to engage and raise the elevator above its lowest position and the abutment being provided on the mold disc in association with a mold registering at a higher level and positioned to contact and operate the lever mechanism as the mold disc moves forwardly to raise the first elevator to registering position when the higher level mold is in operative position.



1,624,435. DELINTER. JAMES E. REDUS, Memphis, Tenn. Filed Nov. 29, 1926. Serial No. 151,312. 7 Claims. (Cl. 19—44.)

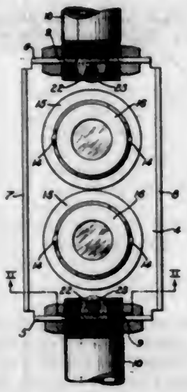
1. The method of delinting cotton seed hulls, comprising carrying them in an upwardly flowing current of air



and subjecting them to an oppositely moving abrading action whereby the lint will be abraded therefrom and removed by such air current.

1,624,436. AUTOMOBILE LIGHT. GEORGE MARTIN ROSEMIER, New York, N. Y., assignor to The Protectolite Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 21, 1922. Serial No. 595,932. 1 Claim. (Cl. 240—8.2.)

The combination with a vehicle, of a mudguard positioned in relation to one of the wheels of the vehicle and a relatively high narrow lamp secured beneath the mudguard in a position to the rear of and below the apex thereof and laterally outside of the wheel, said lamp comprising a parabolic reflector having flat, vertical, parallel sides positioned within a casing of substantially similar form, and means for securing the lamp adjacent the outer edge of the mudguard, whereby lateral spread of the beam of light from the lamp toward the centre of a roadway will be masked by the wheel and upward spread of the beam will be masked by the mud-guard.



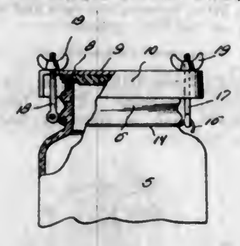
1,624,437. DINNER TABLE ON SHIPS. IGNAZIO SAVIO, Genoa, Italy. Filed Apr. 3, 1925. Serial No. 20,540, and in Italy Feb. 11, 1925. 2 Claims. (Cl. 45—75.)

2. A dinner table for ships comprising the combination of a fixed table, a plate detachably secured on the center thereof and provided with vessels for the reception of containers, spring latches secured to said plate and each provided with a cleft at the outer end for the reception of the stem of a glass and arms secured to the plate, each of said arms being provided at the outer end with a plate engaging clasp.

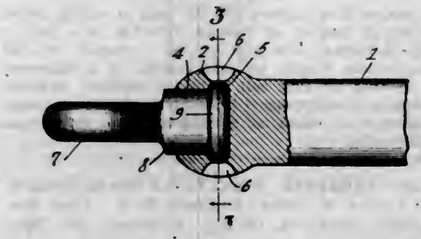
1,624,438. INCLOSED RECEPTACLE. GUY F. SCOTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,106. 2 Claims. (Cl. 200—133.)

1. A fuse receptacle comprising a metal bottom portion formed of sheet metal and having oppositely disposed integral flanges and oppositely disposed integral side portions provided with openings for receiving wiring conduits, and a cover portion formed of sheet metal and having opposite integral side walls fitting within and overlapping the flanges and constituting a cover of U-shape conforming in contour to and closely fitting the edges

of the walls of the bottom portion to constitute with the bottom portion a complete two-piece enclosure for the fuse devices.



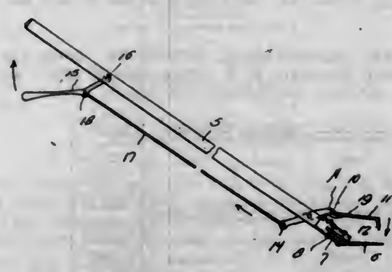
1,624,439. BOX. HERBERT D. SENAT, Glen Olden, Pa. Filed July 13, 1926. Serial No. 122,073. 2 Claims. (Cl. 229—52.)



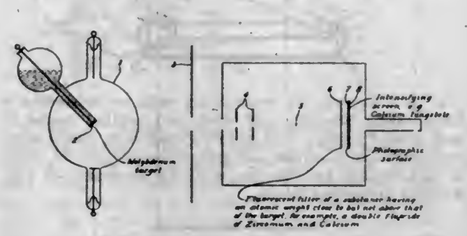
1. A shipping box of stiff folded cardboard material having two top flaps respectively hingedly secured to opposite edges of the opening into said box to swing on parallel axes, said flaps each being substantially as wide as said opening into said box so that when they are closed they will lie flat one on the other and the top flap will provide a smooth uninterrupted surface for said box, each of said flaps being provided with an elongated hand opening near and extending substantially parallel to the free edge of its flap, the edge of said hand opening nearest the free edge of the flap being provided with a stiff tongue normally lying flat within and filling said opening and flexibly connected to said edge of said hand opening, the width of the tongues in the two flaps being alike and such that when the free edges of the said flaps are brought together the free ends of either of said tongues may be first forced inwardly out of the plane of its flap and its free edge brought into abutting relationship with the opposite flap, and retained in the angle formed by the opposite flap and the tongue connected therewith, and the other tongue may be similarly forced inwardly to lie flat against the underside of the first tongue with its free edge below the outer surface of the opposite flap.

1,624,440. COVER FOR JARS AND THE LIKE. GEORGE JOHN SPEICHER, Miners Mill, Pa. Filed June 1, 1926. Serial No. 112,971. 2 Claims. (Cl. 215—88.)

1. A device of the class described including a band of a general annular formation having its intermediate portion provided with an eye and at its ends provided with hooks, an eye bolt engaged with the eye of the band, and a second eye bolt engaged with the hooks, a disk, a casing over the disk having an opening for receiving one bolt, and a slot for receiving the other bolt, and nuts for the bolts.

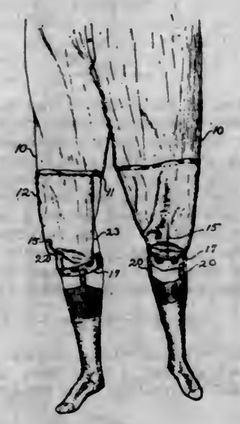


1,624,441. SWIVEL LINK. EUGENE C. STACY, Tiffin, Ohio. Original application filed July 2, 1924, Serial No. 723,773. Divided and this application filed Jan. 2, 1925. Serial No. 190. 1 Claim. (Cl. 59—95.)



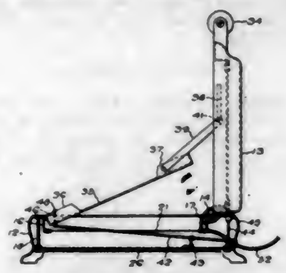
A swivel link for load binders and the like including a cylindrical stem, an annular rib upon the stem, a link member formed of a casting having a recess, the wall of said recess extending continuously around the stem and rib and fitting snugly upon but rotatable relative to the stem and rib, there being openings formed in the link member by casting, the said openings extending to the periphery of the rib.

1,624,442. DANDELION GRUBBER. RUDOLPH B. STASTNY, Wilber, Nebr. Filed July 15, 1926. Serial No. 122,588. 1 Claim. (Cl. 55—148.)



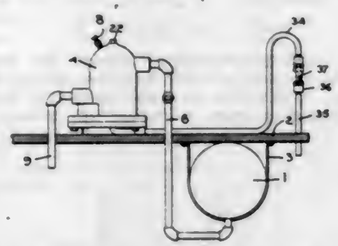
A dandelion grubber of the class described including a handle, a blade having a shank extending at an obtuse angle therefrom and imbedded in one end of the handle and fixed thereto, a picker formed from a single piece of material providing a straight shank piercing a slot in the handle adjacent the blade and pivoted intermediate its ends therein, one end of the straight shank being twisted to merge into a plate, said plate terminating in annularly extending teeth, means for swinging the straight shank and the plate for engaging the teeth thereof with the blade, a leaf spring bent over upon itself intermediate its ends, one end of the spring being fixed to the handle and the other end impinging against the straight shank to normally hold the plate and its teeth away from the blade.

1,624,443. X-RAY FILTER. ANCEL ST. JOHN, Brooklyn, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Oct. 20, 1921. Serial No. 509,174. 8 Claims. (Cl. 250—34.)



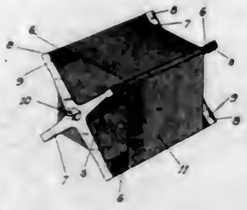
1. A filter for use with X-rays, comprising a fluorescent zirconium compound.

1,624,444. UNDERGARMENT. ROBERT LEE STRONG, Louisville, Ky., assignor to Mildred Speed Strong, Louisville, Ky. Filed May 28, 1924, Serial No. 716,467. Renewed Aug. 31, 1926. 2 Claims. (Cl. 2—78.)



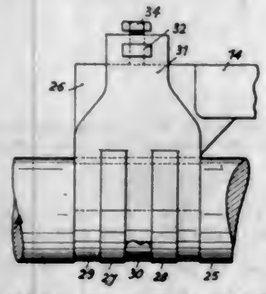
1. An undergarment comprising leg portions, the backs of which terminate a substantial distance above the knees, a front extension carried by each leg portion and extending to a point a substantial distance below the knee, the opposite edges of each extension being substantially straight throughout their length, said extensions being narrowest at their lower ends and being provided with intermediate bulged portions overlying and adapted to snugly fit the knees of the wearer when in a sitting position, a garter band secured to the lower end of each extension and loosely surrounding the leg and hosiery securing means carried by the lower edge of each extension adjacent opposite sides thereof.

1,624,445. ELECTRIC TOASTER AND GRILL. ERNEST E. SUTHERLAND, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 7, 1926. Serial No. 114,108. 9 Claims. (Cl. 219—19.)



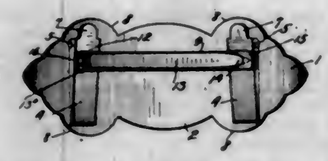
1. In a toaster, the combination with an upper and a lower casing pivotally connected, and heating means in each of said casings, of a material-supporting means associated with said casings, and means actuated by the other of said casings for effecting a tilting movement of said material-supporting means.

1,624,446. TRAP. WILLIAM R. TEMPLETON, Roslindale, Mass. Filed Dec. 2, 1921. Serial No. 519,350. 3 Claims. (Cl. 137—78.)



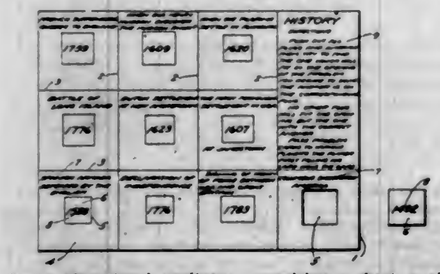
1. In a system for automatically removing liquid from a tank containing gaseous fluid under pressure, the combination with said tank, of a trap assembly situated above the tank and provided with a float chamber, of conduit connecting the bottom of the tank with the upper portion of the float chamber, said float chamber having a continuously open port which allows a slow but continuous flow of compressed gaseous fluid from the tank to the float chamber sufficient to carry with it any liquid which tends to accumulate in the tank, and a float-controlled discharge passage leading from the float chamber.

1,624,447. INDUCTANCE-COIL FRAME. GEORGE A. TURNER, Stockton, Calif. Filed Sept. 28, 1925. Serial No. 59,007. 2 Claims. (Cl. 175—359.)



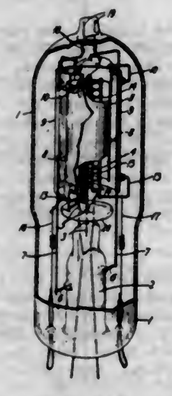
1. A coil frame comprising end spiders each having a plurality of arms radiating from a common center, transversely spaced and parallel ears turned inwardly from the outer ends of the arms, and rigid strips of insulation material, to form supports for a coil winding and to connect the spiders, fitted between the ears and extending between the arms of the two spiders.

1,624,448. ROLLING MACHINE. KARL FRIEDRICH UNGERER, Pforzheim, Germany. Filed June 11, 1925, Serial No. 36,440, and in Germany Dec. 21, 1923. 1 Claim. (Cl. 153—54.)



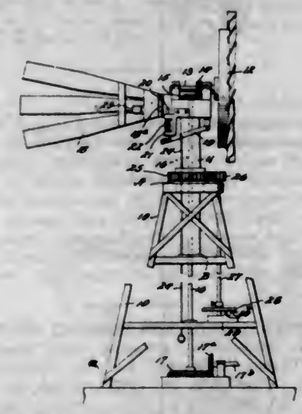
An intermediate support for the rolls of rolling mills, comprising a journal of reduced diameter in a roll, a bearing extending over part of the perimeter of said journal, collars formed on said journal of a diameter equal to that of said roll, caps of resilient material extending over said journal where it is exposed between said collars, and means for holding said caps in position on said journal.

1,624,449. BARRETTE. DELLA L. VAN SICKLE, Cranford, and WALTER H. CAVIN, Elizabeth, N. J. Filed Nov. 23, 1926. Serial No. 150,201. 6 Claims. (Cl. 132—48.)



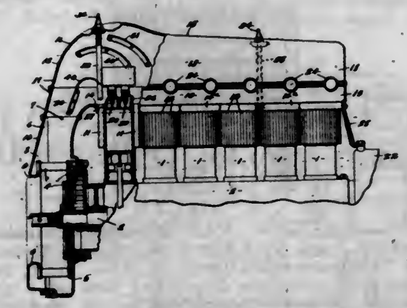
1. A barrette comprising an ornamental bar, means attached thereto for engaging the hair at the back of the head and clip members at each end of the bar, under which long tresses from the front and sides of the head may be drawn back and secured under said clips, said securing means and clips being concealed by said bar.

1,624,450. EDUCATIONAL APPLIANCE. DAVID VERSHBINSKY, Brooklyn, N. Y. Filed June 7, 1926. Serial No. 114,146. 10 Claims. (Cl. 35—2.)



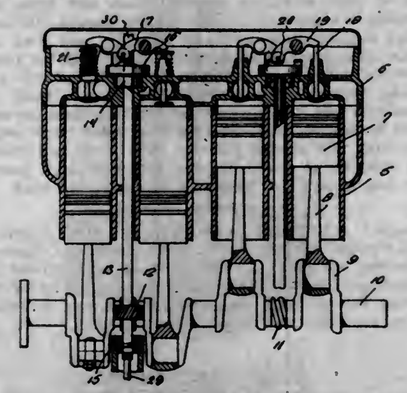
1. An educational appliance comprising a sheet, a plurality of openings therein of approximately the same shape and of different size, pieces fitting into said openings, and data on said sheet and pieces, the size of said openings and pieces being so slightly different as not to be readily distinguishable.

1,624,451. VACUUM TUBE. HOWARD W. WEINHART, Elizabeth, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1921. Serial No. 459,846. 10 Claims. (Cl. 250—27.5.)



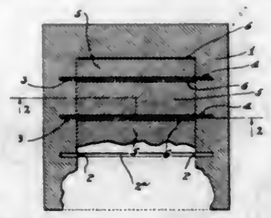
1. An electron discharge device comprising a vessel, a tubular insulating member, metallic means for supporting said member within said vessel out of contact therewith, and a plurality of electrodes within said member, said electrodes being solely supported by said member.

1,624,452. WINDMILL. GEORGE W. WHITEHEAD, Vincennes, Ind. Filed June 26, 1924. Serial No. 722,589. 4 Claims. (Cl. 170—41.)



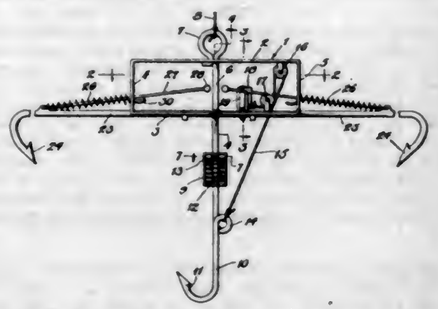
1. In a windmill, a tower, a pedestal rotatably supported thereon, a horizontal shaft carried by the upper end of said pedestal, a wind wheel secured to said shaft, a vertical shaft arranged in said pedestal, gear mechanism between said shafts, a vane pivotally connected to said pedestal and normally free to move relative to said pedestal horizontally, means for locking said vane to said pedestal in a plane parallel to the plane of said wind-wheel, a gear wheel secured to said pedestal, a pinion for said gear wheel rotatably supported on said tower, means for moving said pinion into or out of mesh with said gear wheel and means for rotating said pinion to cause rotation of said pedestal in the tower.

1,624,453. COOLING SYSTEM FOR AIR-COOLED MOTOR VEHICLE ENGINES. JOHN WILKINSON, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed Aug. 31, 1922. Serial No. 585,333. 29 Claims. (Cl. 123—171.)



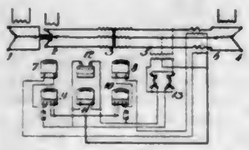
1. In an air cooled internal combustion engine, the combination of a plurality of cylinders, a centrifugal fan connected to the crank shaft, the fan casing having upright outlet, passages around the cylinders and individual thereto and an air conduit connected to the fan outlet at the bottom of one end of the conduit, the air conduit being closed at its outer end and extending over the heads of the cylinders and having a free and unobstructed passage above the cylinders whereby air can pass the full width of the air conduit and the cylinders to both sides of and between the cylinders, said passages at their tops being of greater diameter than the cylinders and opening directly through the bottom of the conduit and the conduit being of as great width as the diameter of the passages and means at the entrance end of the conduit for distributing the air to the cylinders throughout the length of the unobstructed passage of the conduit.

1,624,454. INTERNAL-COMBUSTION ENGINE. JOHN H. WILSON, Scottsbluff, Nebr., assignor of one-half to H. Leslie Smith and one-half to August Dormann, jr., Scottsbluff, Nebr. Filed Aug. 27, 1925. Serial No. 52,808. 1 Claim. (Cl. 123—90.)



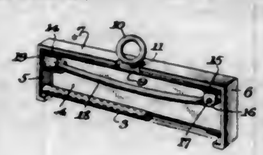
In an internal combustion engine, a cylinder, a pair of valves associated with the cylinder, a rocker arm associated with each valve for operating thereof, a single disc, means for rotating the disc, a pair of cams on the disc for actuating the rocker arms, one cam being located closer to the center of the disk than the other, and means for pivotally mounting the rock arms to extend substantially tangentially to the disc, obliquely to each other, and so that one rocker arm engages one cam and the other rocker arm engages the other cam.

1,624,455. DRY BATTERY. VICTOR YNGVE, South Orange, N. J., assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed May 3, 1924. Serial No. 710,789. 3 Claims. (Cl. 136—111.)



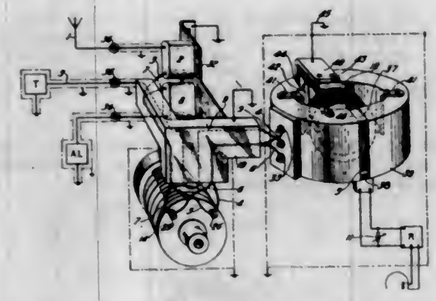
3. In a dry battery, a box of insulating material, a plurality of zinc plates held in said box and dividing it into watertight compartments, a paste coated paper lining covering one side of each zinc plate and a carbon electrode and depolarizing material in each compartment.

1,624,456. FISHING DEVICE. NATHANIEL YOUNG, Hickman, Ky. Filed July 14, 1926. Serial No. 122,401. 2 Claims. (Cl. 43—89.)



1. In a fishing device of the class described, an elongated supporting frame, a sectional bait hanging hook, a pair of jaws swingably mounted upon said frame and movable in a direction at right angles toward said hook, spring means for automatically actuating said jaws, said frame being provided at its bottom with slots for accommodating portions of said jaws, a retaining device comprising links pivotally mounted upon said frame and cooperable with the jaws for maintaining them normally in an ineffective state, a pivotally mounted latch cooperable with said retaining device, pulleys on said frames, and a flexible element connected with said latch, passing over said pulleys, and connected with said bait hook.

1,624,457. METHOD AND MEANS FOR TESTING ELECTRIC MACHINERY. ARLE YTTERBERG, Vasteras, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed Feb. 18, 1921. Serial No. 446,076, and in Sweden Dec. 11, 1920. 11 Claims. (Cl. 175—183.)



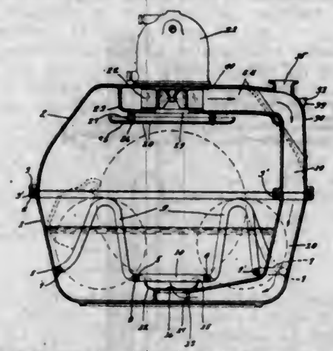
2. Method of testing dynamo-electric machinery consisting in impressing thereupon a voltage composed of two voltage components the frequencies of which differ from each other by a low number per second.

1,624,458. JEWELRY. SAMUEL KURTZ ZOOK, Lancaster, Pa. Filed June 18, 1926. Serial No. 116,892. 1 Claim. (Cl. 40—1.5.)

A plate, sides and a top for the plate, a ribbon carrying an insignia depending from the plate, a rod mounted on the rear of the plate near the top, a sleeve rotatably mounted on the rod at its middle, an eye on the sleeve so as to rest against the back of the plate or to project through an aperture in the top, a second sleeve rotatably mounted on the rod at one end, an arm on the second sleeve carrying a pin, a third sleeve rotatably mounted on the rod at its other end, a keeper for the pin on the third sleeve so that the pin and keeper may rest against the rear of the plate and be hidden or project rearwardly of the top.

1,624,459. SHIELDING AND BALANCING MEANS. WILLIAM J. ADAMS, Irvington, N. Y., and ARTHUR HADDOCK, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1920. Serial No. 430,429. 7 Claims. (Cl. 250—9.)

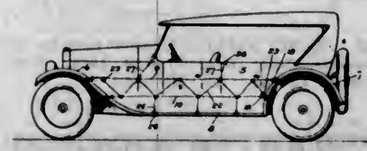
1. Means for preventing sidetone in a duplex high frequency system comprising a single open-circuit antenna a transmitter and a receiver operatively connected to said antenna, said receiver including means for balancing the electrostatic effect of the transmitter circuit on the receiver circuit with an equal and opposite electrostatic effect, and means for simultaneously balancing the electromagnetic effect of the transmitter circuit on the receiver circuit with an equal electromagnetic effect.



1,624,460. DEPOLARIZER FOR PRIMARY BATTERIES. GEORGE W. ARMSTRONG, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 28, 1925. Serial No. 12,453. 8 Claims. (Cl. 136—116.)

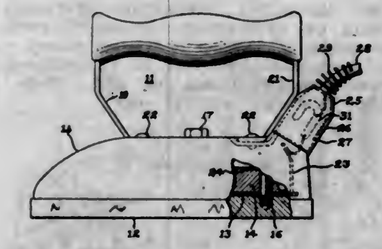
1. A depolarizing substance for electric batteries comprising copper oxid and sulfur combined therewith in a form insoluble in the electrolyte, said substance being substantially free from sulfur compounds soluble in the electrolyte.

1,624,461. DISHWASHING MACHINE. PERCY E. BARKER, Cleveland, Ohio, assignor, by mesne assignments, of one-half to Arthur B. Betz, Shaker Heights Village, Ohio. Filed Dec. 17, 1921. Serial No. 523,117. 10 Claims. (Cl. 141—9.)



2. A dish washing machine comprising a casing for holding dishes, means in the upper part thereof for

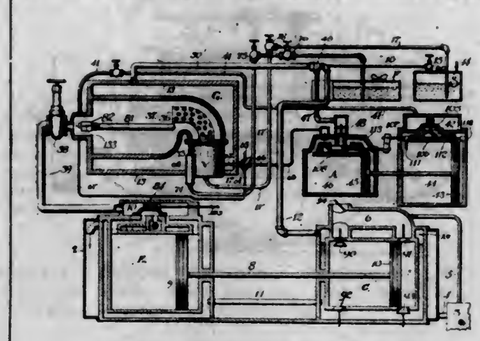
withdrawing air from the upper part of the casing, and a conduit communicating with the discharge side of said



means and open to atmosphere and communicating with the lower part of the casing for the passage of vapor or air therethrough.

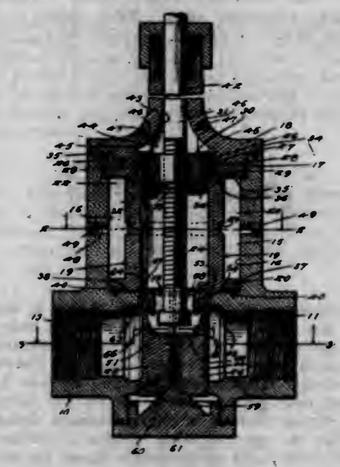
1,624,462. LUGGAGE CARRIER FOR AUTOMOBILES. JOHN W. BEMENT, Venice, Calif. Filed Nov. 3, 1924. Serial No. 747,623. 9 Claims. (Cl. 224—29.)

9. A luggage carrier for automobiles comprising two longitudinal members, cross members in sliding connection with the longitudinal members and extending in a zigzag manner between the same, and means for fastening the carrier to an automobile in cooperative relation to the running board thereof.



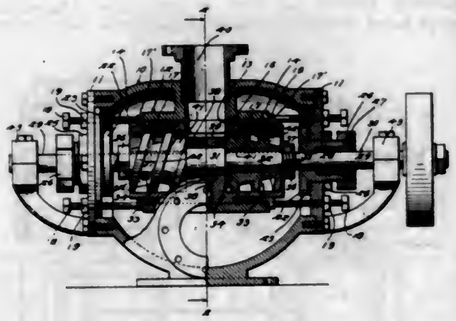
1,624,463. INDICATING FLUID-CIRCUIT INTERRUPTER. HERMAN M. BIEBEL, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 10, 1922. Serial No. 559,691. 4 Claims. (Cl. 200—167.)

1. A circuit-interrupter comprising a closed transparent tube, a normally continuous column of conducting fluid therein, and neon gas in said tube for luminously indicating a break in said column of conducting fluid.



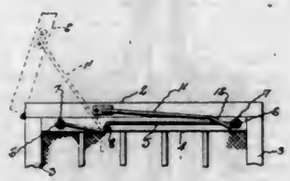
1,624,464. MOTIVE-FLUID GENERATOR. MILTON EUGENE BIGELOW, Warren, Ariz. Filed July 14, 1920. Serial No. 396,167. 29 Claims. (Cl. 60—46.)

1. A device of the character described comprising a generator for forming a motive fluid, an engine cylinder and valve mechanisms for controlling the flow of said fluid into the engine, the engine including a piston, an air compressor operated by the engine piston including an air and water intake manifold with valve mechanism leading into the compressor cylinder, means for automatically shifting the valve of the engine cylinder, a water jacket enveloping both cylinders and the motive fluid



generator including a compartment into which the air compressor forces water and air in which they are separated for subsequent use in the motive fluid generator, an air jacket in communication with said water jacket to receive the compressed air, and a duct and bore respectively in the air jacket and generator establishing communication between the air jacket and the generator.

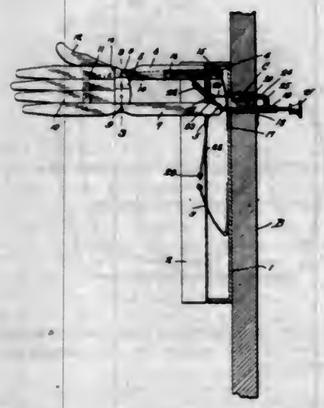
1,624,465. GATE VALVE. LEE J. BLACK, Beaumont, Tex. Filed July 13, 1926. Serial No. 122,261. 11 Claims. (Cl. 251—72.)



1. In a gate valve, a casing having a seat, a gate for coacting with the seat, the casing having a recess into which the gate may be withdrawn, a stem for shifting the gate from the seat to the recess, said gate being formed in two separable sections having a compressible gasket arranged therebetween, the sections of the gate and the walls of the recess having engagement with one another whereby the sections of the gate are forced into engagement with one another to thereby compress the gasket and seal the space between adjacent faces of the gate as the gate is drawn into the recess.

1,624,466. SCREW PUMP. LEE J. BLACK and ERNEST E. SWOPE, Beaumont, Tex. Filed Sept. 16, 1926. Serial No. 135,871. 8 Claims. (Cl. 103—92.)

1. In a screw pump, a barrel having heads at least one of which is removable, a shaft rotatably directed through said heads, a liner support within the barrel and surrounding the shaft, a liner sleeve supported by the liner support and likewise surrounding the shaft and having engagement with the support centrally thereof whereby it is held against rotation with relation to the support, the adjacent faces of the end portions of the sleeve and support being spaced to provide packing spaces, followers engaged in the ends of the packing spaces, means adjustable through said heads for shifting the followers and spaced opposed worms mounted upon the shaft within the sleeve.

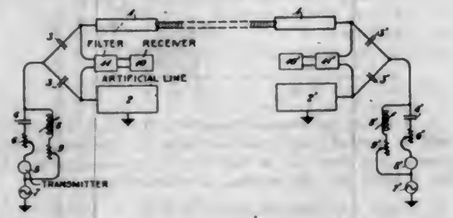


1,624,467. TOP SUPPORT FOR CRIBS. CHARLES H. BOARDMAN, Columbus, Ohio. Filed June 1, 1925. Serial No. 33,929. 1 Claim. (Cl. 217—60.)

The combination with a container having a hingedly connected top, of a rod having eyes upon its ends serving to secure the rod upon one end of the container in lateral spaced relation thereto, said rod having a shoulder formed intermediate its ends, an arm having one end pivotally connected with the top and having its other end formed with an angularly disposed closed loop for confining the rod and being capable of sliding from end to end thereon and to intimately engage the shoulder when it is desired to hold the top in an open position.

1,624,468. AUTOMOBILE SIGNAL. ELMER ELLSWORTH BOWER, Rochester, Minn. Filed Feb. 5, 1926. Serial No. 86,270. 5 Claims. (Cl. 116—41.)

1. A device of the class described including a housing, a door therefor, a foldable signal arm pivotally mounted within and normally extended laterally from the housing, an operating member slidably and pivotally mounted, means actuated by the sliding movement of said member for folding the signal arm into the housing, independently of the movement of the door, means operated by the pivotal movement of the member for closing the housing, said member when brought to the limit of its

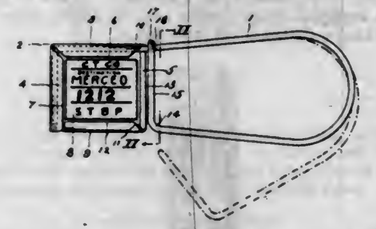


swinging movement in one direction constituting means for locking the arm in folded position and for holding the housing closed.

1,624,469. GAME BOARD. GEORGE EDWARD BROWN, Los Angeles, Calif. Filed June 24, 1926. Serial No. 118,273. 3 Claims. (Cl. 273—85.)

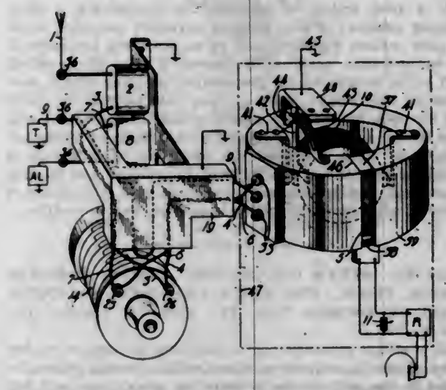
1. In combination, a game board simulating, in miniature, the game of hockey, having fixed obstructions positioned thereon and having provided a mobile game piece known as a puck together with suitable minature sticks or clubs designed to move or manipulate said puck, also having provided a transparent top or cover with suitable space provided between said top or cover and obstructions and sides of game board inclosure to allow for the restricted movement or manipulation of said sticks or clubs.

1,624,470. SIGNALING CONDUCTOR SYSTEM AND METHOD OF OPERATION. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1922. Serial No. 582,875. 27 Claims. (Cl. 178—45.)



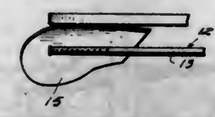
1. The method of duplex operation of a signaling conductor having variability of impedance as a function of current, which comprises applying a sending voltage so low that it brings unbalanced interference down to the same order of magnitude as external interference.

1,624,471. PROCESS FOR FORMING ARTICLES FROM COMMINUTED MATERIAL. HILLHOUSE BUEL, Seattle, Wash., assignor of one-half to William P. Hammond, Scarsdale, N. Y. Filed Oct. 10, 1917. Serial No. 195,726. 13 Claims. (Cl. 92—54.)



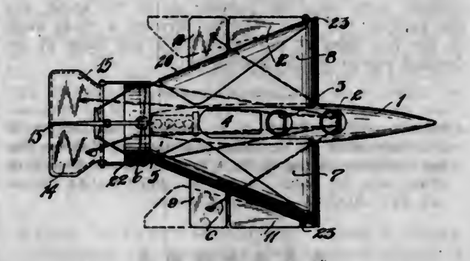
1. The process of making articles from comminuted material the first step of which consists in forcing a fluid mass against a foraminous mold wall to deposit thereon the comminuted material in said mass to form the wall of the article, the second step of which consists in introducing gas into the mold to maintain the comminuted material in position on the mold and to abstract a material percentage of the original moisture therefrom, and the third step of which consists in increasing the pressure of said gas to further compact the deposited material.

1,624,472. BAGGAGE-CHECK HOLDER. ROBERT M. BUNCE, Portland, Oreg., assignor to Hancock Bros., San Francisco, Calif., a Corporation of California. Filed Oct. 13, 1926. Serial No. 141,285. 5 Claims. (Cl. 40—17.)



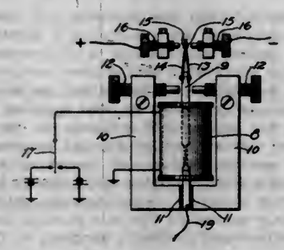
1. A baggage holder comprising a plate adapted to hold a check; a spring loop having one of its ends fixed to said plate and its other end adapted to detachably engage said loop adjacent said plate and retain said check in said plate.

1,624,473. HIGH-FREQUENCY SIGNALING SYSTEM. LEWIS MASON CLEMENT, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1921. Serial No. 520,846. 13 Claims. (Cl. 250—9.)



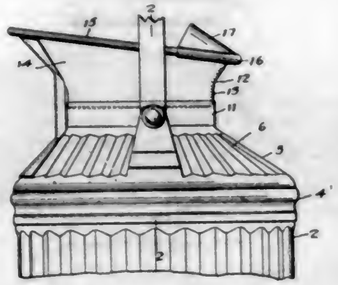
1. In a duplex system, a hollow annular shield enclosing a primary winding, means for spacing the primary from said shield, a slot in the said shield to prevent short-circuit currents therein and a ground connection connected to said shield diametrically opposite to said slot.

1,624,474. GRASS AND WEED DESTROYER. JOHN H. CLIPPERTON, Windom, Minn. Filed Feb. 25, 1926. Serial No. 90,624. 1 Claim. (Cl. 111—7.)



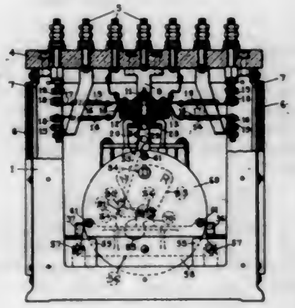
A grass and weed destroyer including a soil turning implement having a moldboard, and a perforated steam discharging pipe disposed longitudinally of and within the curvature of the moldboard and spaced therefrom whereby the grassy face of the turf will slide over the steam emitting portion of said pipe as said turf is turned by the moldboard.

1,624,475. FLYING MACHINE. LEONARD F. COE, Veradale, Wash. Filed June 12, 1926. Serial No. 115,663. 3 Claims. (Cl. 244—18.)



1. The combination in a flying-machine with its central longitudinally extending fuselage of lateral supporting planes forming funnels at the sides of the fuselage and provided with open front and rear ends, said rear ends merging into a single opening, and a propeller casing formed at the rear of the opening as an extension of the funnels.

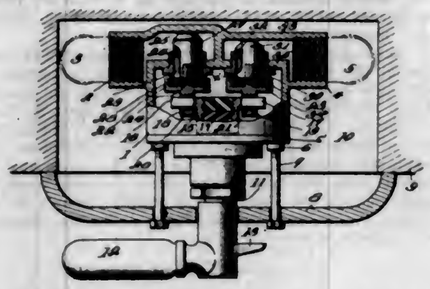
1,624,476. CONTACT DEVICE. GEORGE C. CUMMINGS, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 8, 1922. Serial No. 550,708. 8 Claims. (Cl. 200—87.)



1. In an electromagnetic mechanism, a contact device comprising a movable element, and a pair of spring members secured to said element and having their free ends in frictional engagement with each other to prevent their vibration at their natural periodicity upon the operation of said movable element.

1,624,477. MEASURING BUCKET OR VESSEL. AUGUSTINE DAVIS, Jr., Cincinnati, Ohio. Original application filed Nov. 16, 1925, Serial No. 69,358. Divided and this application filed Oct. 5, 1926. Serial No. 139,579. 3 Claims. (Cl. 221—1.)

1. In a bucket, a straight pouring neck of elliptical area, and a flaring spout, the straight neck joining by a gradual curve with the pouring lip of the spout, and the flare of the spout varying between a steep angle at the two sides of the ellipse to a low angle at the forward portion of the pouring lip.



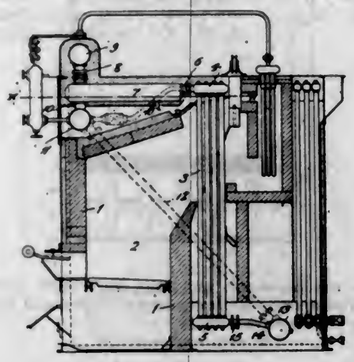
1,624,478. UNIVERSAL A. C. RELAY. SALISBURY M. DAY, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Aug. 30, 1922. Serial No. 585,212. 11 Claims. (Cl. 177—311.)

1. In a combined relay and indicator, the combination of an electro-responsive device including a member biased to a neutral position and adapted to be actuated in one direction or the other when said electro-responsive device is energized depending on the manner in which it is energized, contacts controlled by said member, an indicator, means for biasing said indicator to one extreme position, which extreme position does not correspond with said neutral position, and means associated with said electro-responsive device engaging said indicator in a manner to positively operate it in one direction only for urging the indicator against its bias to a position corresponding to the position said member is assuming at the time.

1,624,479. MIXING VALVE. EDWARD L. DELANT, Brooklyn, N. Y. Filed Mar. 6, 1925. Serial No. 13,644. 6 Claims. (Cl. 277—18.)

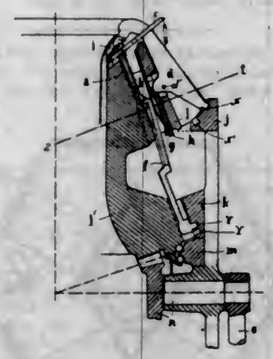
1. A mixing valve comprising a housing having hot and cold water inlets and an outlet, valves controlling the communication between the hot and cold water inlets and the outlet, a removable trunnion connection between the

valves and the operating means, and the hot water inlet so constructed that the cold water valve can not be placed therein and seat itself.



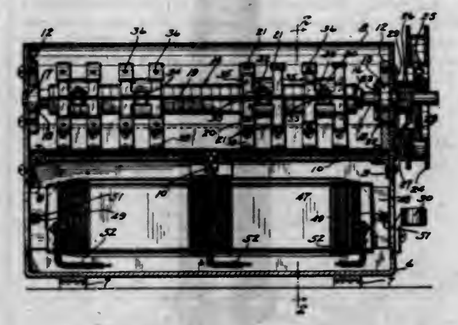
1,624,480. SHOE-SHINING CABINET. JAMES P. DUNN, San Francisco, Calif. Filed Jan. 19, 1926. Serial No. 82,313. 4 Claims. (Cl. 15—265.)

1. A new article of manufacture comprising a shoe-shining cabinet; a foot support pivotally mounted within said cabinet and arranged to be projected horizontally to an operative position to support a shoe being shined and to be moved to an inoperative position within said cabinet; and means mounted upon said support for holding an open box of shoe polish accessible when said support is in an operative position said support being arranged to move and hold the open end of said box of polish against one of the walls of the cabinet and thereby close said box to prevent evaporation of the contents thereof, when said support is in an inoperative position.



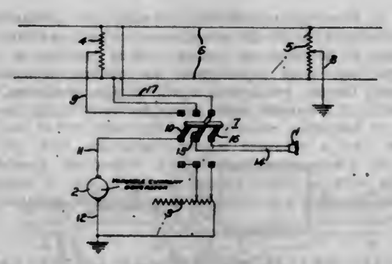
1,624,481. STEAM GENERATOR. CAMILLE DUQUENNE, Paris, France. Filed July 6, 1926. Serial No. 120,719, and in Germany Oct. 13, 1924. 1 Claim. (Cl. 122—336.)

In a steam generator, in combination a furnace, vaporizing elements comprising substantially vertical tubes located in the path of the combustion gases from said furnace, upper and lower headers to which the said vaporizing elements are connected, horizontal, longitudinal cylindrical members, each of said cylindrical members extending both above and below the normal water line connected to the upper headers of the vaporizing elements, the said members receiving the whole of the water and steam mixture produced in the vaporizing elements, a steam chamber arranged transversally above the cylindrical members and connected therewith, a water chamber arranged transversally below the cylindrical members and connected therewitn and a return connection between the said water



chamber and the lower headers of the vaporizing elements, said transversely arranged steam chamber and water chamber and said cylindrical members being located above said furnace and forwardly of said vertical tubes.

1,624,482. CIRCULAR-KNITTING MACHINE. EUGÈNE HENRI MARIE EMILE DURAND, Paris, France. Filed Aug. 24, 1923, Serial No. 659,230, and in France Aug. 31, 1922. 13 Claims. (Cl. 66—34.)



1. A circular knitting machine for shaped tubular articles, comprising a plurality of needles; means for imparting reciprocatory movements thereto; means for guiding the needles during their movements; means for moving half of the needles rearwardly during the lower portion of their reciprocatory movement to the exclusion of the other half; and means for inclining any one of the rearwardly-moved needles laterally so as to cause it to pass behind its neighbor in the excluded half.

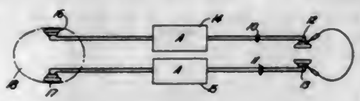
1,624,483. CONTROLLING SWITCH. JOHN P. ELLENBECKER, St. Cloud, Minn., assignor to Granite City Electric Company, St. Cloud, Minn., a Corporation of Minnesota. Filed Mar. 5, 1925. Serial No. 13,173. 7 Claims. (Cl. 200—8.)

2. The combination with a housing having in its ends bearings, of a controlling switch including a rotor assembly, said assembly comprising an angular shaft having at one of its ends a short trunnion and at its other end a long trunnion, said trunnions being mounted in said bearings, the length of said shaft being such as to permit the assembly to be moved endwise to withdraw said short trunnion from its bearing, an insulating sleeve that is square in cross section mounted on said shaft, and clamps applied around said insulating sleeve and having contact plates.

1,624,484. BALANCE INDICATOR. ROBERT D. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 19, 1922. Serial No. 589,271. 2 Claims. (Cl. 179—175.)

2. In combination, a variable-current generator, an indicating device, a circuit, an impedance bridged across said circuit, and means for connecting said generator to the midpoint of said impedance and said device to said circuit, said means also permitting the independent connection of said device to said generator through a local circuit of variable resistance.

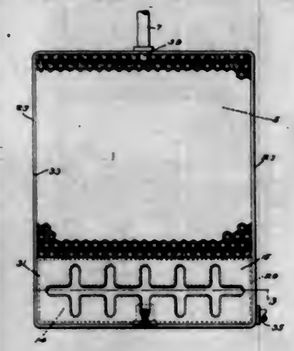
1,624,485. PIPE PROTECTOR. HOWARD J. FERRIS, Harvard, Ill., assignor to Hunt, Helm, Ferris & Company, a Corporation of Illinois. Filed Nov. 30, 1925. Serial No. 72,194. 2 Claims. (Cl. 189—32.)



2. In a stall construction for use in a barn and the like, a pipe adapted to have its lower end partially incased in concrete, a sleeve surrounding the lower portion

of said pipe and having inwardly inclined ends one of which tightly fits said pipe to retain said sleeve in place thereon, the central portion of said sleeve being spaced

from said pipe to form an annular space and a port into said space through which a protective liquid may be passed into said space.

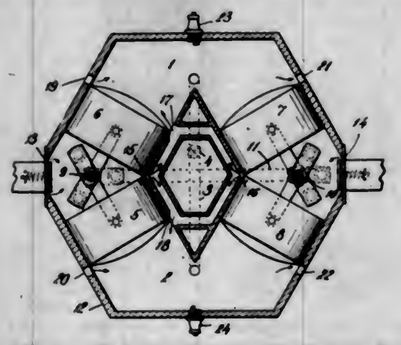


1,624,486. BINAURAL TELEPHONE SYSTEM. HARVEY FLETCHER, New York, N. Y., and LEON J. SIVIAN, Bloomfield, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 15, 1925. Serial No. 37,050. 16 Claims. (Cl. 179—1.)

1. A binaural transmission system for transmitting sound substantially distortionlessly and for enabling the listener to perceive the sounds both in relation to their source and with naturalness as though transmitted through the air, comprising a pair of pick-up transmitters mounted in a dummy head, means for amplifying sound, a pair of telephone receivers, one for each ear of said listener, and a separate circuit connecting each of said pick-up transmitters through a respective amplifying means with a corresponding receiver, each of said elements affording substantially distortionless operation.

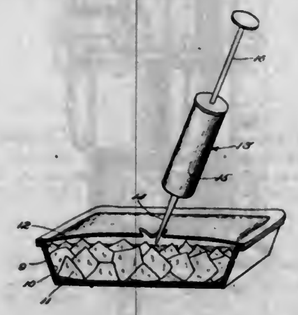
1,624,487. HEAT-INTERCHANGE APPARATUS. GEORGE A. FOISY, Lowell, Mass., assignor, by mesne assignments, to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Feb. 13, 1926. Serial No. 88,132. 1 Claim. (Cl. 257—128.)

A condenser having a condensing chamber formed by a plurality of thin walled tubular members with enlarged closely fitting hexagonal ends bonded together to form front and rear walls and having a liquid receiving chamber below the condensing chamber formed by front and rear plates with inturned flanged edges, the upper flanged edges of the plate being bonded to the enlarged ends of the lowermost tubular members, said plates being corrugated to increase their strength, a continuous band extending around the condenser binding said tubular member and plates together and forming the side walls of the condenser, said band being bonded at its edges to the enlarged ends of the tubular conduits and to the end and bottom flanged edges of said plates thereof to avail of the tensile strength of the band in preventing rupture of the bonded joints under the effect of fluid pressure



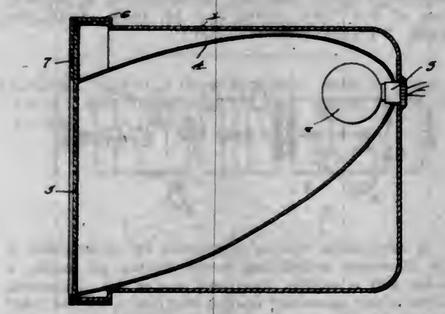
within the condenser, and inlet and outlet orifices in said band opening into said condenser and said liquid receiving chamber respectively.

1,624,488. DIBBLE. GEORGE L. FORD, Java, Va. Filed Aug. 6, 1925. Serial No. 48,500. 2 Claims. (Cl 55—67.)



1. A dibble comprising a frame member having depending ridge forming members contacting with the ground, said frame member having lug members forming a journal, parallel bars journaled in said lugs, a revoluble dibble wheel journaled between the open ends of said bars, and yieldable means carried by said frame for urging said dibble wheel to contact with the ground.

1,624,489. INTERNAL-COMBUSTION ENGINE. ERICH JUNGE, Staten Island, N. Y. Filed Feb. 18, 1925. Serial No. 9,935. 4 Claims. (Cl. 123—53.)

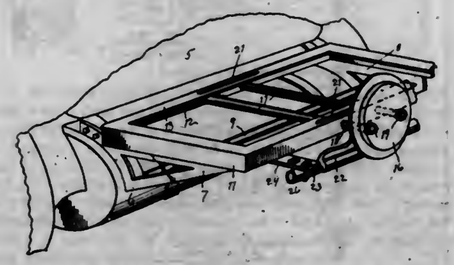


4. An internal combustion motor comprising a plurality of cylinders set at an angle one to the other in substantially annular arrangement, a piston working in each of said cylinders, a common crank shaft for the piston of each pair of cylinders, combustion chambers between one piston of each pair and the adjacent piston of the adjacent pair, separate fuel and air inlet ports at one end, respectively, of each of said combustion chambers, exhaust ports at the other ends thereof, said ports being arranged to open and close by the movement of said pistons, compression chambers formed by the piston of each pair, and passages from said compression chambers to the air inlet ports of said combustion chambers.

1,624,490. METHOD OF MAKING PIES. WILLIAM J. KASEN, Chicago, Ill. Filed Dec. 10, 1925. Serial No. 74,491. 5 Claims. (Cl. 107—54.)

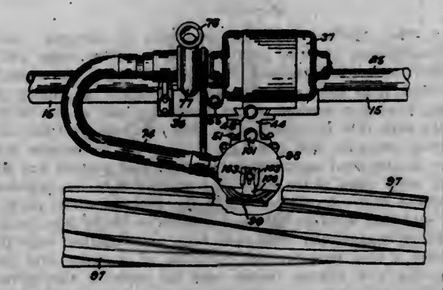
1. The hereindescribed method of making a pie which consists in removing juice from a filler, thereafter baking the filler within a crust, and then supplying the juice to the filler.

1,624,491. AUTOMOBILE HEADLIGHT. LEO N. KENWARD, Lakewood, Ohio. Filed May 18, 1926. Serial No. 109,918. 1 Claim. (Cl. 240—41.)



In a headlight and in combination, a reflector closed at its rear end and open at its forward end and tapered toward said rear end and generally inclined downwardly and forwardly, a lamp in the rear end portion of the reflector, and a lens opposed to and arranged about the forward open end of the reflector and having an upper fully transparent vertical central portion, the upper part of which is in the same horizontal plane as the horizontal center of the lamp, and also having a major portion below and at opposite sides of the fully transparent portion; the said major portion being of a character to retard the passage of light rays with a view to averting glare, and the combined area of the fully transparent portion and the said major portion of the lens corresponding to the area of the forward end of the reflector, with a lens holder mounted on the forward portion of the casing and having a front flange, said flange tapered in width from the upper portion of its vertical median line to the lower portion of said vertical median line and having the lower edge of its upper portion flush with the forward end of the upper portion of the reflector.

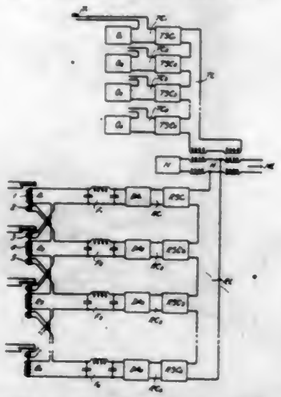
1,624,492. PAPER MANUFACTURE. ARTHUR D. LITTLE, Brookline, and CARROLL E. CARPENTER, Melrose, Mass., assignors to Arthur D. Little, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1925. Serial No. 19,283. 12 Claims. (Cl. 92—3.)



1. The method of making newsprint paper from a fiber furnish consisting of southern gumwood ground pulp and southern pine sulphate pulp, which consists in modifying said furnish by incorporating colloidal cellulose therewith, in substantially the proportions specified, and then forming said modified furnish into a paper web.

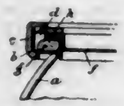
1,624,493. LUGGAGE CARRIER. WALTER R. MALM, San Francisco, Calif. Filed Mar. 11, 1926. Serial No. 93,964. 2 Claims. (Cl. 224—29.)

1. In a luggage carrier adapted to be attached to a vehicle, a substantially rectangular frame constructed of angle iron and having downwardly extending webs, a pair of spaced re-enforcing elements extending between said webs and to a point beyond the outer margin of one of said webs, said reenforcing elements comprising bars and spacer tubes placed thereover and extending between said webs, a tubular spacer positioned on each of said bars with said bars extending beyond said webs, a tire-carrying element positioned on said bars, and means for drawing said tire-engaging elements against said tubular spacer, for the purpose specified.



1,624,494. GRINDING MECHANISM. HOWARD MASON, Framingham, and WALTER BIXBY and HUGH LEWIS BOGAN, Jr., Boston, Mass., assignors to Shawmut Engineering Company, Dorchester, Mass., a Corporation of Massachusetts. Filed Jan. 30, 1926. Serial No. 84,939. 7 Claims. (Cl. 51—249.)

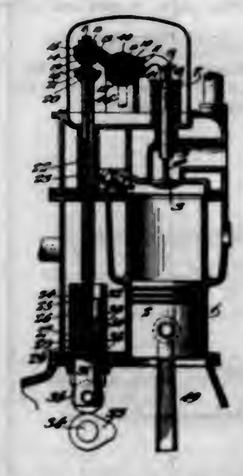
1. In combination with a tuft fabric loom having a pair of opposed knives and a cross shaft adjacent and substantially parallel with the latter, mechanism for grinding said knives, comprising an elongated tubular supporting element, a track extending along and secured to said element, a plurality of brackets readily detachably securable to said cross shaft, means connecting each bracket to said supporting element in a manner permitting adjustment of the latter transversely of said shaft,



and a grinder carriage having a grinder thereon, said carriage mounted for movement along said track with said grinder in working engagement with one or the other of said knives selectively.

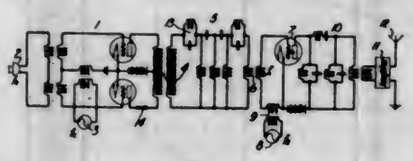
1,624,495. CARRIER-WAVE SIGNALING. ROBERT C. MATHES, Wyoming, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 3, 1925. Serial No. 20,376. 8 Claims. (Cl. 178—51.)

1. In a multiplex carrier wave signaling system, a circuit for receiving carrier waves of different frequencies, a plurality of receiving channels associated therewith, a translating device in each of said channels controlled in accordance with waves of a particular frequency, and means associated with the translating device of each channel for preventing the actuation thereof by waves of another frequency.



1,624,496. METHOD OF FORMING COVER-HOLDING RING SEATS FOR CONTAINERS. ALFONS MAUSER, Cologne-Marienberg, Germany. Filed Dec. 12, 1925, Serial No. 75,133, and in Germany Sept. 7, 1925. 6 Claims. (Cl. 113—116.)

1. The herein described method of shaping and strengthening the end portion of a container body, provided with longitudinal corrugations and contracted toward such end portions, which consists in placing a ring having a predetermined profile on one of its faces with said face in engagement with said end portion, applying pressure and a drawing operation to smooth out the longitudinal corrugations on such end portion and at the same time shape such end portion into an annular profiled shape corresponding to the predetermined profile of said ring whereby said end portion is forced into interlocking engagement with said ring, and together with it, forms a ring seat for the reception of a cover with its packing and locking means and the ends of the corrugations adjacent to said end portion form a shoulder against which the inner edge of said inner ring abuts.

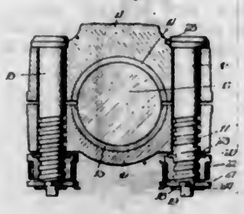


1,624,497. AUTOMATIC VALVE ADJUSTER AND SILENCER. ELLIS H. MCALLISTER, Moorestown, N. J. Filed Mar. 27, 1926. Serial No. 97,825. 7 Claims. (Cl. 123—90.)

1. In a device of the character stated, a valve, a valve stem therefor, a rocker arm tube, a rocker arm on said tube, a cam shaft, a valve tappet composed of a plurality of pistons having a lubricant chamber between their juxtaposed ends, actuated by said cam shaft hollow connec-

tions intermediate said rocker arm and said pistons and forming a continuous internal passage from said rocker arm tube to said lubricant chamber between said pistons and a check valve arranged in said passage.

1,624,498. MODULATING SYSTEM. FRANKLIN MOHR, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 15, 1925. Serial No. 2,486. 5 Claims. (Cl. 179—171.)

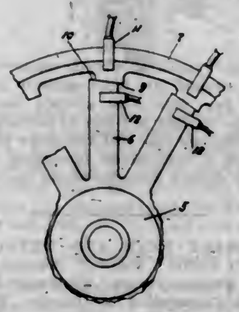


1. A modulating system comprising in combination, a space discharge modulating device having an anode, a cathode and a control electrode, means for impressing simultaneously upon said control electrode a carrier wave and a band of signal waves, whereby there are generated in the space path of said device side bands of waves having frequencies differing from the carrier wave frequency by the frequencies of the signal waves, and a broad band wave filter connected to said anode and said cathode adapted to transmit selectively one of said side bands to a load impedance, said wave filter being so arranged as to present substantially zero impedance to waves of the frequencies of said carrier wave and said signal waves and to present to the selected wave modulation products a resistance substantially equal to the normal internal resistance of the modulating device.

1,624,499. WEAR-COMPENSATING BOLT. GUSTAV C. MONCKMEIER, Chicago, Ill. Original application filed May 14, 1924, Serial No. 713,151. Divided and this application filed Mar. 12, 1926. Serial No. 94,136. 5 Claims. (Cl. 85—32.)

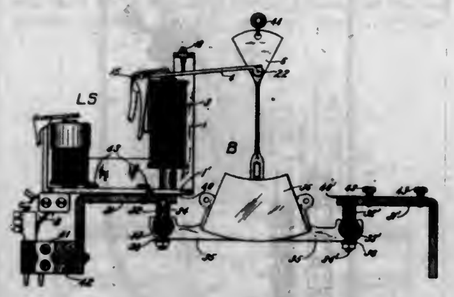
3. In a device of the class described, a bolt having a threaded portion, a non-circular portion beyond the threaded portion and a circular portion beyond the non-

circular portion, a nut positioned on the threaded portion, a washer positioned on the non-circular portion and having a non-circular bore which will rotate on the circular portion but will interfit with the non-circular portion, a coil spring secured at its opposite ends to the



nut and washer, and a cotter pin passing through a transverse aperture in the circular portion for holding the washer in position on the non-circular portion after it has been rotated on the circular portion to tension the spring.

1,624,500. COMPOSITE RUBBER SOLE. ALBERT LINN MURRAY, Auburn, Ind. Filed May 28, 1925. Serial No. 33,423. 3 Claims. (Cl. 36—14.)

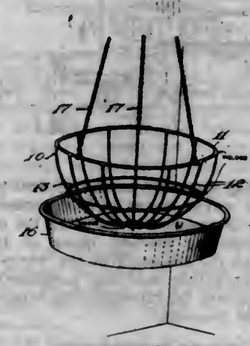


1. A rubber sole for boots and shoes consisting of a rubber tread having a backing formed of raw milled rubber inseparably secured to the tread, the exposed face of the backing being adapted to be readily attached by the solvents in rubber cement for securing the sole of the leather sole of the boot or shoe.

1,624,501. METHOD OF WELDING. EMIL A. NELSON, Detroit, Mich. Filed Mar. 17, 1926. Serial No. 95,179. 1 Claim. (Cl. 78—92.)

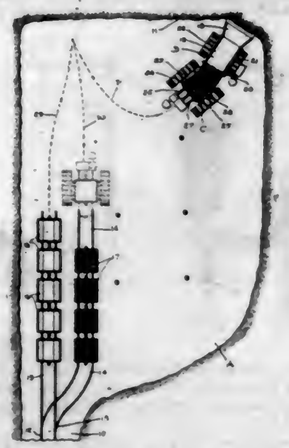
The method of welding a plurality of wheel spokes to a wheel rim which consists of providing lugs on the rim with diagonal faces, providing a spoke and hub assembly, the spokes rigid with the hub, and providing the ends of the spokes with diagonal faces, providing the spokes and lugs of such length that when one of the units is rotated to align the spokes and lugs the contacting diagonal faces as they come together will slide upon each other under pressure due to the resulting wedging action, and heating the faces of the lugs and spokes and rotating them relative to each other into alignment.

1,624,502. AUTOMATIC SWITCH MOUNTING. HERBERT F. OSBORNELL, River Forest, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 11, 1925. Serial No. 29,298. 7 Claims. (Cl. 179—27.5.)



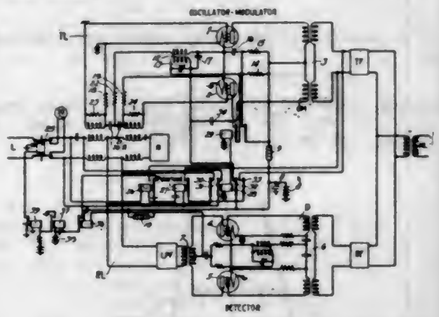
1. In an automatic telephone system, a line switch bank and a line switch arranged to plunge into said bank to establish connections therein, a common mounting plate on opposite sides of which are mounted said line switch and bank, said bank being mounted by means of a grooved rod into which a member of the bank slips and by means of which the bank is located in one direction, and a means comprising a spacing washer and machine screw for locating said rod in another direction with respect to said mounting plate.

1,624,503. TEMPLE ROLL. JOHN J. O'CONNELL, Milford, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed May 18, 1926. Serial No. 109,873. 5 Claims. (Cl. 139—296.)



1. A temple roll having a body covered with a layer of cork.

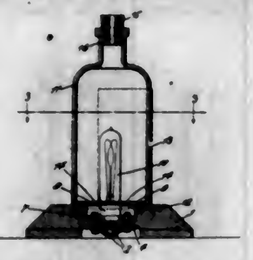
1,624,504. FLOWER HOLDER. JOHN H. PFARR, Newark, N. J. Filed Oct. 21, 1925. Serial No. 63,809. 3 Claims. (Cl. 47—35.)



1. A flower holder comprising a wire cup-like cage and a flat cup-like receptacle of larger diameter than the cage, the cage being secured with its bottom on the bottom of the receptacle.

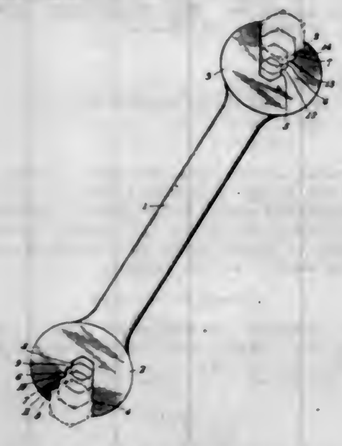
1,624,505. METHOD OF MINING COAL. ERNEST C. PRATT, Minneapolis, Minn. Filed Mar. 20, 1926. Serial No. 96,221. 6 Claims. (Cl. 214—152.)

1. The method of mining coal which consists in accumulating coal in a loader at the face of a room having a number of tracks, in removing an empty pit car from one track and moving it to a position remote from said tracks and adjacent said loader, discharging the coal from said loader directly into said pit car, and of moving such loaded pit car to a second track.



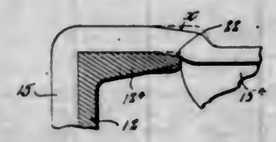
1,624,506. CARRIER-WAVE SIGNALING SYSTEM. HAROLD M. PRUDEN, Wyoming, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1925. Serial No. 18,125. 10 Claims. (Cl. 179—4.)

1. In a signaling system, a carrier channel including a source of carrier waves, means in said channel for suppressing a range of frequencies including the carrier and for freely transmitting another range of frequencies, means for shifting the frequency of the waves from said source to a point within said last mentioned range of frequencies, and means for intermittently interrupting the waves of changed frequency.



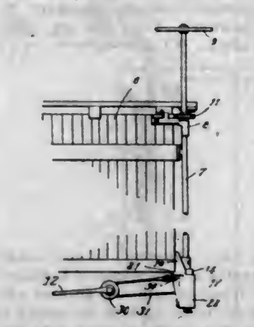
1,624,507. ADVERTISING DISPLAY DEVICE. FRED A. REID, St. Louis, Mo. Filed Feb. 24, 1925. Serial No. 11,249. 2 Claims. (Cl. 40—126.)

1. An advertising device comprising a base having a recess in its upper side, a lamp socket secured to said base in said recess, a lamp extending upwardly from said socket, a removable cover for said recess and for said socket supported by the base at the sides of said recess



and extending to said socket, and a bottle having an open lower end supported by the base and enclosing said cover and said lamp.

1,624,508. WRENCH. FRANK C. REILLY, New York, N. Y. Filed Oct. 2, 1925. Serial No. 60,002. 2 Claims. (Cl. 81—119.)



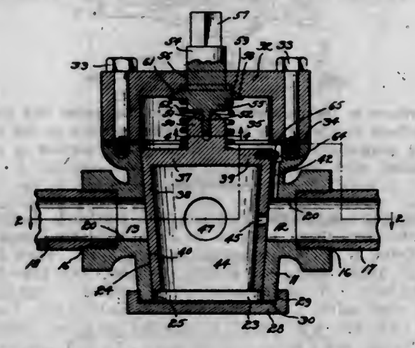
1. A fixed jaw ratcheting wrench comprising a straight jaw face and stepped jaw faces opposite and parallel to said straight jaw face, said stepped jaw faces being spaced from the straight jaw face to accommodate a series of nuts of increasing size and the steps connecting said jaw faces being of successively increasing length toward the end of the wrench accommodating the nuts of larger size.

1,624,509. BRAKE BEAM AND METHOD OF CONSTRUCTING SAME. ALBIN P. RISSLER, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 16, 1925. Serial No. 15,936. 10 Claims. (Cl. 188—231.)

1. In a brake beam construction, the combination of a flanged beam member having transverse depressions in the toe portions of the flanges thereof, and a U-shaped strut member embracing said beam member and having depressed portions seated in said depressions of said beam member, thereby preventing lateral movement of said strut member relatively to said brake beam member.

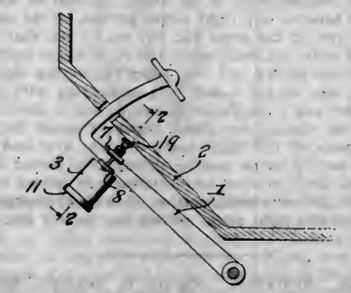
1,624,510. HAND BRAKE FOR RAILWAY CARS. FRANK C. RUTZ, Rockford, Ill. Filed Feb. 6, 1926. Serial No. 86,398. 6 Claims. (Cl. 254—149.)

1. A hand brake for railway cars comprising, in combination, a drum adapted to be rotated by the brake shaft, a wire rope cable connected to the drum and adapted to be connected to the brake rigging, and means including a housing for causing the cable to wind spirally on the drum when it is rotated for applying the braking force and for confining the cable, when the brake shaft is released, from expansion around the drum within a limit within which the cable is positively maintained in operative spiral relation to the drum so that one coil cannot cross another.



1,624,511. MICROPHONIC RELAY. HELMUT SELL, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, Germany, a Corporation of Germany. Filed May 6, 1925, Serial No. 28,447, and in Germany Sept. 13, 1924. 10 Claims. (Cl. 179—171.)

1. In a microphonic relay a radially stretched metal foil diaphragm, a disc-shaped iron armature centrally located upon the foil, an operating magnet comprising an outer annular pole and an inner pole stud, the inner pole being spaced from the outer pole so that only a narrow annular air gap separates the poles, said armature being of sufficient size to bridge said annular gap.

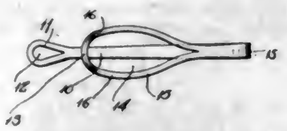


1,624,512. HIGH PRESSURE COCK HAVING AUTOMATIC SEATING PLUG. MARION R. SHIPLEY, Manhattan Beach, Calif., assignor, by mesne assignments, to Oil Appliance Manufacturing Corporation, Los Angeles, Calif., a Corporation of California. Filed Feb. 2, 1925. Serial No. 6,299. 1 Claim. (Cl. 251—98.)

A cock comprising: a body having a central chamber in the side walls of which is formed a frusto-conical seat, inlet and outlet ports being formed in said body and opening from said seat; a frusto-conical plug shell adapted to fit said seat to close the opening of said ports into said chamber, there being openings in said shell which by the rotation of said shell may be brought into registry with said ports to set up a passage between said ports through said shell, said shell being open at its end of smaller diameter, a passage being formed in the wall of said shell which communicates directly between the interior of said shell and said inlet port when said shell is rotated to place said openings out of registry with said ports; a head provided upon said plug shell to close its end of larger diameter; a closure provided upon said body for closing said central chamber at its end of smaller diameter; a cap provided upon said body to

close said central chamber at its end of larger diameter, said cap being shaped to provide a plug shell seating pressure chamber co-extensive with the larger end of said central chamber, there being a duct formed in said body to communicate between said inlet port and said pressure chamber; a valve stem rotatably disposed in a central opening in said cap and by which said shell plug may be rotated.

1,624,513. CLUTCH CONTROL. ANDREW SMITH, Milwaukee, Wis. Filed May 1, 1926. Serial No. 106,014. 5 Claims. (Cl. 192—109.)

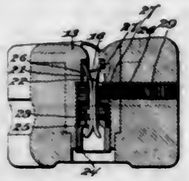


1. A clutch control device for automobiles comprising a cylindrical member adapted to be bodily carried by a clutch lever, means carried by said member for engaging said lever, said member having a cylindrical portion, and a piston mounted within said cylindrical portion and having a projecting piston rod provided with a head located externally of said cylindrical member, said cylindrical member having a bottom portion provided with a restricted aperture.

1,624,514. TIE CLASP. ARTHUR J. SMITH, Tappan, N. Y., assignor to James F. Doolan Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1926. Serial No. 105,216. 1 Claim. (Cl. 24—259.)

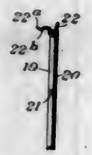
A neck tie clasp formed from a blank for tie clasps formed from a strip of sheet metal and having a narrow shank portion and an enlargement at each end, one of said enlargements being of several times the width of the shank and being of substantially oval form, the last mentioned enlargement being punched out in the center to form a loop, said shank being doubled on itself with

the shorter end inclined toward the longer end of the shank, the loop having its sides bent downwardly and its free end bent upwardly, the downwardly bent portions of the loop sides normally having their upper and lower



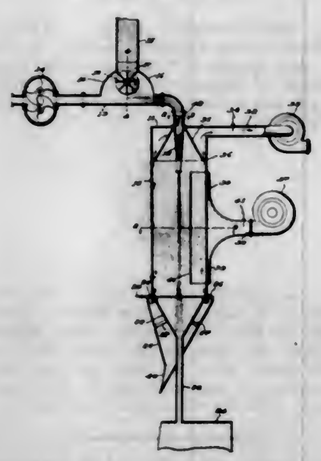
surfaces in the respective planes of the upper and lower surfaces of the shank and the lower surface of the loop end normally contacting with the upper surface of said shank.

1,624,515. HARNESS FOR LOOMS. PHILIP L. SPENCER, Millbury, Mass., assignor to J. H. Williams Company, Utica, N. Y., a Corporation of New York. Filed July 10, 1925. Serial No. 42,750. 1 Claim. (Cl. 139—91.)



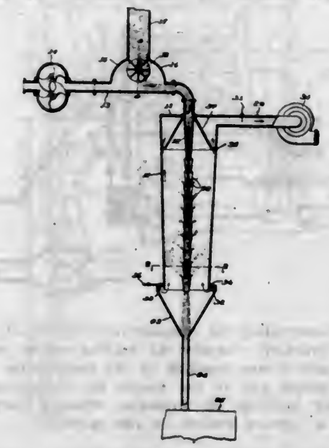
A harness frame for looms comprising shafts and end bars, the end bars being united to the ends of the shafts by being provided with a right angle portion and an angle bar secured to the end bar so that its angle arm projects longitudinally of the shaft, the end of which is received between the right angle portion of the end bar and the arm of the angle bar, the end of the shaft being provided with two bolt holes, the right angle portion of the end bar having two bolt holes registering therewith and the arm having a bolt hole registering with one of such holes and a double-shank bolt having a portion connecting the shanks, one shank passing through the registering holes of the right angle portion, arm and shaft and the second shank passing through the second hole in the right angle portion and entering the second hole in the shaft, the connecting portion of the bolt engaging the surface of the right angle portion of the end bar.

1,624,516. SHUTTLE. PHILIP L. SPENCER, Millbury, Mass., assignor to J. H. Williams Company, Utica, N. Y., a Corporation of New York. Filed July 10, 1925. Serial No. 42,751. 1 Claim. (Cl. 139—217.)



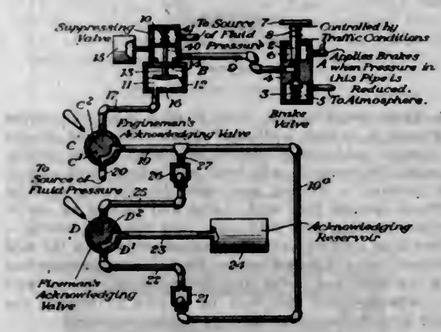
A shuttle for looms having, in combination, a shuttle body having a large and a small opening intersecting each other at substantially right angles, a thread block located in the large opening and provided with a longitudinal thread passage and an internally threaded lateral opening registering with the smaller opening in the body of the shuttle, a tension device comprising a carrier having two tension members supported therein, a screw having a pressure spring for applying spring pressure to the tension, fitting in the lateral hole in the thread block and in the smaller opening in the shuttle body, serving to lock the thread block in the body and being adjustable to vary the tension.

1,624,517. POULTRY CRATE. BURNIS A. STAMP, Brooklyn, N. Y., assignor, by mesne assignments, to Stamp Rightway Conveyor Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Mar. 28, 1925. Serial No. 19,067. 3 Claims. (Cl. 220—17.)



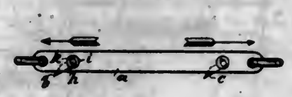
1. A poultry crate comprising an end member and a top member each having a wire frame, a U-shaped spring clip enveloping the frame of said end member and having its legs projecting vertically upward to receive the frame of the top member, the inner leg being bent horizontally to pass inside of the frame of the top member, and a wire slidably mounted in the top member to pass under the horizontal portion of said clip leg to latch the top member to the end member.

1,624,518. AIR-BLAST CLASSIFIER. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Dec. 10, 1925. Serial No. 74,499. 9 Claims. (Cl. 209—144.)



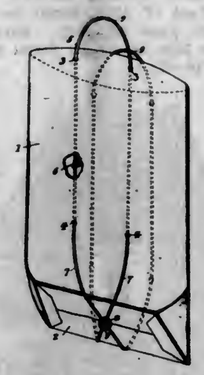
1. An air blast classifier, comprising in combination, a casing constructed to provide a relatively long spacious air chamber therein and having a material receiving receptacle at one end, a nozzle located at the other end of the casing to deliver a strong blast of air carrying the materials to be treated lengthwise of the casing toward said receptacle so that the lighter particles are given an opportunity to work laterally out of the path of the air blast under the gradual retarding effect of the air within said chamber while the heavier particles are shot by the air blast into said receptacle, and means for conducting air from the casing to remove the lighter particles that work laterally out of the air blast.

1,624,519. AIR-BLAST CLASSIFIER. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Dec. 10, 1925. Serial No. 74,500. 8 Claims. (Cl. 209—188.)



1. An air blast classifier, comprising in combination, a casing, a nozzle for blowing a blast of air bearing the materials to be treated thru the casing, a plurality of conical nozzles arranged in nested relation in alignment with the air blast nozzle so that the heavier particles will be shot by the air blast along a straight, uninterrupted path thru the series of nozzles while the lighter particles that tend to separate out of the direct path of the air blast will be crowded out by the force of the air blast between the adjacent nozzles, and means for removing from the casing the air in which the lighter materials are suspended.

1,624,520. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 17, 1925. Serial No. 50,607. 14 Claims. (Cl. 303—18.)

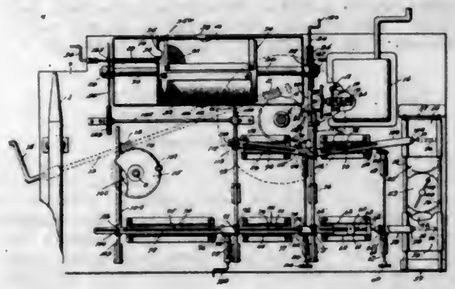


1. In combination on a train, automatic brake applying mechanism responsive to traffic conditions in advance of the train, two separate manually operable acknowledging valves, and means effective only upon operation of both said valves for rendering said automatic mechanism ineffective to apply the brakes.

1,624,521. HARROW. ARTHUR WALTER, Schweinfurt-on-the-Main, and WILHELM KUTTRUF, Seligenstadt, near Wurzburg, Germany, assignors to Maschinenfabrik Walter & Kuffer, Schweinfurt-on-the-Main, Germany. Filed May 21, 1925, Serial No. 31,925, and in Germany July 8, 1924. 2 Claims. (Cl. 55—60.)

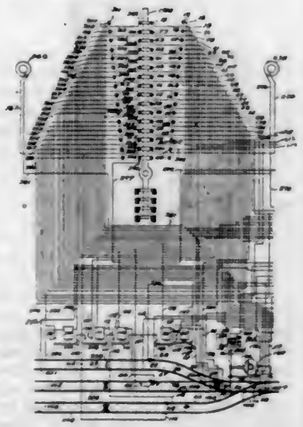
1. A harrow comprising lateral sledge bars having rectangular openings therethrough whose diagonals are inclined to the vertical, and cutter-bars having ends shaped to fit said openings and means to secure said ends in said openings.

1,624,522. PAPER BAG. ALEXANDER E. WEISTOCK and HARRY DAHNE, Baltimore, Md. Filed May 7, 1926. Serial No. 107,425. 1 Claim. (Cl. 229—54.)



A paper bag having an imperforate bottom wall, the side walls of the bag having upper and lower openings located at equal distances beyond the median vertical dimension of the side walls and an endless cord threaded through the openings in the side walls of the bag and projecting above the edge of the bag to form handles, said endless cord being disposed exteriorally of the lower portion of the side walls of the bag and exteriorally of the bottom wall, said cord having portions extending diagonally from the lower openings in the opposite side walls of the bag directly and completely across the under surface of the bottom of the bag and around the edges thereof and the portions of the cord at the same side of the bag converging toward each other from the openings toward the bottom of the bag and a ring surrounding the diagonally disposed portions of the cord.

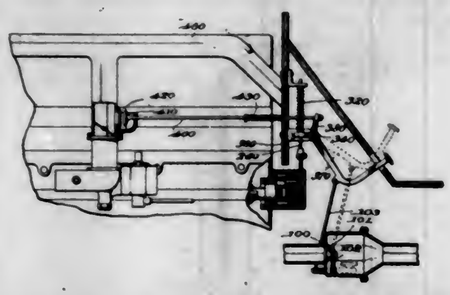
1,624,523. APPARATUS FOR DIRECTING THE SIGHTING OF GUNS. RAYMOND W. ANDERSON, Maplewood, N. J. Filed Jan. 16, 1926. Serial No. 81,864. 3 Claims. (Cl. 235—61.5.)



1. In apparatus for directing gun fire, means for setting the apparatus in accordance with an angle F, a velocity V and time T, a firing-data graph, an index cooperating with said firing-data graph for taking readings thereon, means for effecting a relative shifting of said graph and said index, and means for computing V T cos F and changing the relative positions of the firing-data graph and index accordingly for applying a pre-

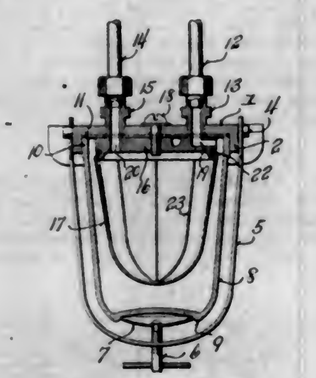
diction correction to the reading from the firing-data graph, where V is the velocity of the target, T is the sum of dead time and time of flight of the projectile, and

F is the horizontal angle of flight of the target with reference to the horizontal projection of the line gun-target.



1,624,524. CONTROL OF TRAINS. ARTHUR REGINALD ANGUS, Westminster, London, England. Original application filed June 17, 1922, Serial No. 569,125, and in Great Britain June 20, 1921. Divided and this application filed May 28, 1925. Serial No. 33,405. 7 Claims. (Cl. 246—23.)

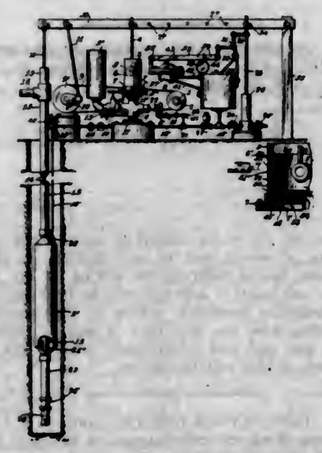
1. Track apparatus for the electrical control of trains on a system of track portions joined together by points, comprising in respect of a road of said system electro-responsive means adapted when energized to cause its movable portion to move from a danger position into a line-clear position and by said movable portion in said line-clear position to cause the movement of said points into a position for making said road, and a signalman's switching means adapted to occupy an inoperative position and a definite road-making position and only in said road-making position to cause electricity to pass through the rails of said road and so to produce the energization of said electro-responsive means but to be prevented by the occupation of said road by a railway vehicle from producing the energization of said electro-responsive means.



1,624,525. METHOD AND MEANS FOR BRAKING MOTOR VEHICLES. MILO D. BEACH, Litchfield, Conn. Filed Jan. 20, 1926. Serial No. 82,498. 6 Claims. (Cl. 123—97.)

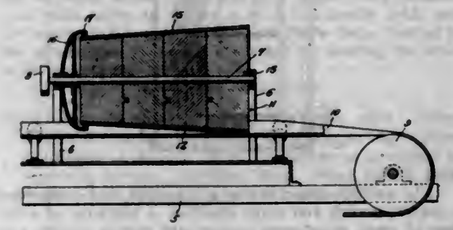
4. An internal combustion engine having intake and exhaust valves, operating means for said valves adapted to be set to cause the valves to operate in the usual manner, or, for reversing the action of said valves so that the engine will be converted into an air compressor whereby the pistons will cumulatively build up a resisting air pressure to check instrokes of pistons,

means for controlling the cumulatively built-up air pressure thus provided, whereby the braking action may be regulated, and means common to the controllable valve operating means and to the means for controlling the cumulatively built-up air pressure, whereby both are subject to a common control by the operator.



1,624,526. OIL FILTER. HARRY C. BOHMSACK, Fort Atkinson, Wis., assignor of one-half to Hugo W. Passer, Fort Atkinson, Wis. Filed May 21, 1926. Serial No. 110,679. 1 Claim. (Cl. 210—165.)

A filter comprising a head having inlet and outlet apertures, a casing positioned below said head, means for forcing said casing against said head, a disc revolubly mounted beneath said head and within said casing, and carrying a filtering sack, said disc having an inlet aperture opening into said casing and having an outlet aperture opening into said sack, said disc also having a bypass duct normally out of communication wtih the said apertures, and adapted to be placed in communication with the inlet and outlet aperture upon rotation of said disc, whereby said disc may be rotated to by-pass the liquid directly from the inlet to outlet apertures.



1,624,527. PUMPING MECHANISM. WILLIAM P. BRETT, Decatur, Ill. Filed Jan. 29, 1926. Serial No. 84,648. 16 Claims. (Cl. 103—205.)

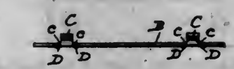
1. The combination, in pumping mechanism, of a load equalizing air cylinder adapted to receive and retain air above atmospheric pressure, a piston adapted to reciprocate in said cylinder and cause fluctuations in pressure and volume of the said compressed air and to be actuated in one direction by the expansive force of said

retained air, a clearance space at one end of said cylinder, and means for increasing and decreasing the volume of said clearance space.

1,624,528. MAGNETIC SEPARATOR. EDWARD H. BRUNE, St. Louis, Mo. Filed Jan. 28, 1926. Serial No. 84,389. 5 Claims. (Cl. 209—223.)

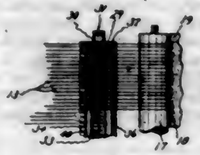
1. In combination with a movable coal carrying belt, a magnetic separator including a drum mounted above the belt and equipped with a baffle to divert lumps of coal away from the drum.

1,624,529. ROTARY MOTOR. GEORGE L. BUFFINGTON and EDWARD H. HOPSON, Detroit, Mich., assignors to Ex-Cell-O Tool & Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 25, 1925. Serial No. 18,180. 7 Claims. (Cl. 253—3.)



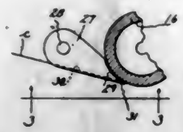
1. A rotary motor having, in combination, an outer casing having a shield at its front end, said shield being open at one side, an inner casing within said outer casing and serving therewith to define a plurality of longitudinal passages between the two, a spindle rotatably mounted in ball bearings at opposite ends of said inner casing, a spacer sleeve positioned in said inner casing and between said ball bearings, a propeller having a plurality of peripheral vanes mounted on said shaft adjacent the rear ends of said passages, a member having a jet passage opening next to said propeller and adapted to direct pressure fluid against said vanes to rotate said spindle, and means for admitting pressure fluid to said jet passage, said pressure fluid being adapted to pass from the vane through said first mentioned passages into said shield and out of said outer casing at the open side of said shield.

1,624,530. SCREW DRIVER. ROMEO O. CARUSO, Reading, Pa., assignor of one-third to Daniel Mastrolia and one-third to Albert F. Ferrainolo, Reading, Pa. Filed Feb. 23, 1926. Serial No. 89,871. 2 Claims. (Cl. 145—52.)



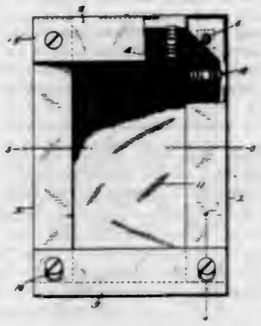
1. In a flexible screw driver, the combination of a handle, a stem rigidly attached thereto by a key, a flexible link member attached to the end of said stem, said flexible member being made up of a number of links, a removable screw-engaging bit attached to the opposite end of said flexible link member, said bit being bifurcated and capable of being expanded, an expanding mandrel within the bit, a flexible stem on which the mandrel is carried, a rotatable sleeve on the handle in engagement with said flexible link member, a coiled spring member forming a casing for the flexible link member and the flexible stem, an adjusting sleeve located on the lower end of the bit, said sleeve being capable of determining the degree of expansion allowed the bifurcated end of the bit.

1,624,531. WIRE TIE FOR BUNDLES OF VARIOUS KINDS. SPENCER C. CARY, Brooklyn, N. Y., assignor to Cary Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Aug. 21, 1924. Serial No. 733,275. 1 Claim. (Cl. 217—69.)



In a device of the class described, a bearing member for a tie composed of a single piece of metal provided on one face with tie receiving keepers and on the other face with tie directing lips, said keepers and lips being co-operable in facilitating the threading of the bearing member upon a tie so as to slide freely thereon.

1,624,532. CORD-GUIDING DEVICE. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 26, 1926. Serial No. 118,761. 3 Claims. (Cl. 154—1.)

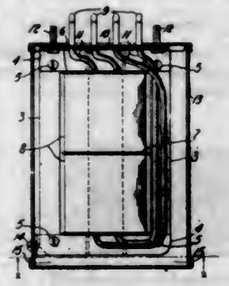


2. A cord guiding device adapted for use in the manufacture of a web of weftless cord fabric comprising a multi-sided bar extending the full width of the cord web, the several sides of the bar having cord guiding grooves of differing spacing, and being separated by smooth surfaces of sufficient elevation to free the cords from adjacent guiding grooves.

1,624,533. CORD-GUIDING DEVICE. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 26, 1926. Serial No. 118,762. 2 Claims. (Cl. 154—1.)

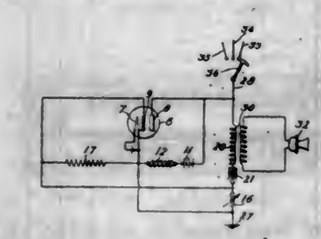
2. Apparatus for the production of weftless cord fabric of the type wherein a sheet of unconnected cords are guided by a smooth surfaced roll against a sheet of rubber upon a calender roll, characterized by a guiding member presenting a grooved guiding surface tangent to the smooth surfaced roll and furnishing the cords with guiding and spacing contact up to substantially the instant of their contact with the smooth surfaced roll.

1,624,534. WINDOW SCREEN. JAMES A. CHEWNING, Sikeston, Mo. Filed Apr. 24, 1925. Serial No. 25,688. 4 Claims. (Cl. 156—14.)



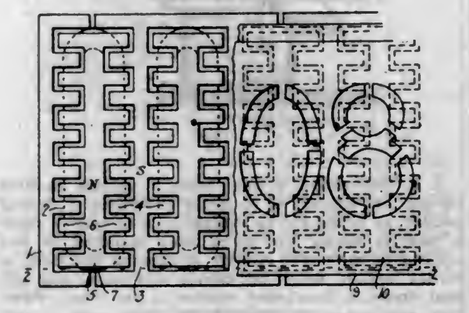
1. A screen including a metallic frame composed of frame members of channel form provided at their inner sides with inwardly extending flanges, a sheet of screen material having its marginal portions extending between the said flanges and clamps arranged at intervals and consisting of loops embracing the marginal portions of the said sheet and crimped thereon interiorly of the frame after the said screen material is placed in position in the frame and having laterally bent terminals abutting against the flanges of the frame members.

1,624,535. STAIR SQUARE. CHRIST A. CHRISTIANSON, Ulen, Minn. Filed May 26, 1925. Serial No. 33,073. 1 Claim. (Cl. 33—98.)



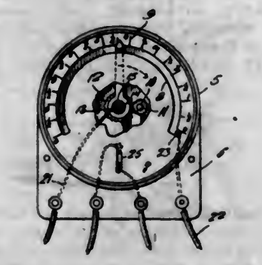
A device of the class described including a pair of hinged bars, a second pair of bars slidable on the first pair of bars, means limiting the sliding of the bars in relation to one another and operable to hold the bars in different adjusted positions, plates on the second bars and extending over the first bars, a pair of blades, and adjustable pin and slot connections between the blades and the second bars and the plates.

1,624,536. INDUCTANCE DEVICE. ARTHUR J. CHRISTOPHER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1924. Serial No. 755,640. 7 Claims. (Cl. 175—361.)



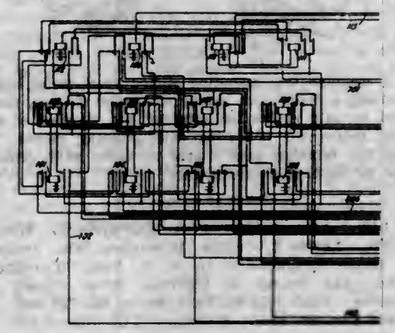
1. In an inductance device, a magnetic core comprising a central branch and outer branches, a plurality of windings of equal impedances around said central branch, and means to maintain the impedance balance between said windings for varying values of superposed direct current comprising air-gaps in said core symmetrically arranged with respect to said windings.

1,624,537. OSCILLATION GENERATOR. EDWIN H. COLPITTS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 1, 1918. Serial No. 214,971. 23 Claims. (Cl. 250—36.)



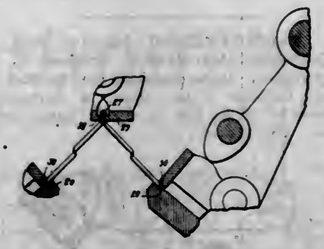
1. Means for generating oscillations and transmitting them to a work circuit, comprising an evacuated vessel having an input circuit and an output circuit, and an oscillating circuit including separate means for associating said oscillating circuit electrostatically separately with said input and output circuits.

1,624,538. MAGNETIC STENCIL AND WORK HOLDER. HARRY G. CRAIN, Canisteo, N. Y., assignor of one-half to John P. Lair, Canisteo, N. Y. Filed July 15, 1926. Serial No. 122,718. 3 Claims. (Cl. 101—125.)



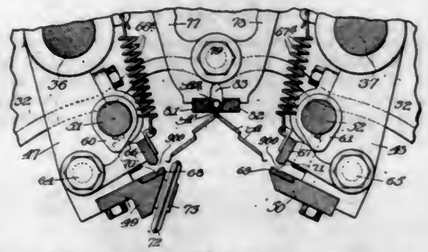
1. In a magnetic stencil and work holder, the combination with electro-magnets provided with off-set pole pieces formed with alternately projecting and recessed portions, the projecting portions of the pole pieces of one magnet arranged in the recessed portions of the pole pieces of the adjacent magnet, the said pole pieces being disposed near each other to create a strong magnetic field, and the outer surfaces of the said pole pieces being located in the same plane to provide a surface for holding the work to be stenciled.

1,624,539. ELECTRIC TIME SWITCH FOR AUTOMOBILE LIGHTS. ARISTIDE L. N. CREMO and ALBERT J. GORDON, Attleboro, Mass., assignors of one-third to Joseph E. Gaynor, Attleboro, Mass. Filed Apr. 6, 1925. Serial No. 21,094. 1 Claim. (Cl. 200—35.)



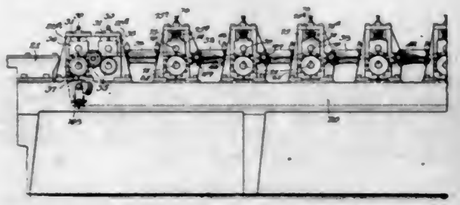
In a device of the class described, a casing, a front panel for the casing, said front panel being provided with an arcuate slot having one end slightly offset, a fixed contact at said offset end of the slot, a shaft mounted for rotation in the casing, a gear rotatable on the shaft, an insulating washer on the shaft next to the gear, an indicator having a hub portion rotatable on the shaft, a spring associated with the hub portion holding it in frictional engagement with the washer and the washer in frictional engagement with the gear, a time controlled mechanism gear meshing with the first mentioned gear, said indicator being bent intermediate its ends so that its free extremity is offset, the intermediate bent portion extending through the slot, so that when the indicator is actuated to said end of the slot, it will engage the fixed contact for closing a circuit.

1,624,540. TESTING DEVICE FOR TESTING REGISTER SENDERS. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 29, 1925. Serial No. 40,262. 12 Claims. (Cl. 179—175.)



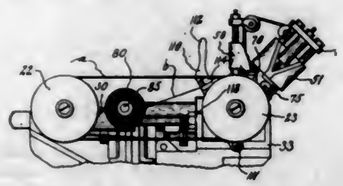
1. In a system for testing senders employing registers of different types, a testing device for testing the senders, means in said testing device for setting the registers of each type and means for varying the operation of said testing device in accordance with the type of registers employed by the sender to be tested.

1,624,541. CORNER BEAD. LEWIS E. CURTIS, Warren, Ohio, assignor, by mesne assignments, to A. C. Paul, Minneapolis, Minn., and George A. Chritton, River Forest, Ill., trustees. Filed Nov. 24, 1923, Serial No. 676,733. Renewed Jan. 24, 1927. 5 Claims. (Cl. 164—65.)



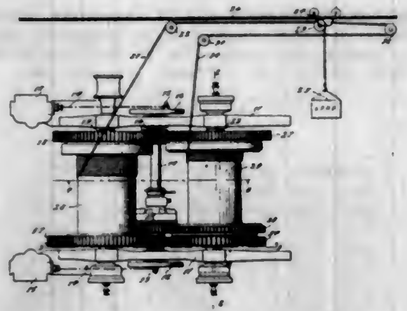
1. The method of forming an expanded metal corner bead which consists in advancing a blank longitudinally, forming a central channel therein, forming a plurality of slits in a longitudinal row on each side of said central channel, continuing the advance of the blank and the formation of slits for the length of the blank, shaping the central channel to form a bead and subsequently expanding the slitted portions on each side thereof.

1,624,542. APPARATUS FOR EXPANDING METAL CORNER BEADS. LEWIS E. CURTIS, Milwaukee, Wis., assignor, by mesne assignments, to A. C. Paul, Minneapolis, Minn., and George A. Chritton, River Forest, Ill., trustees. Filed June 14, 1924. Serial No. 720,099. 15 Claims. (Cl. 164—6.5.)



1. A machine for expanding slitted sheet metal blanks comprising a frame, two shafts journalled therein, means carried by said shafts for gripping the margins of said blanks, means for actuating said gripping means, and means for rotating said shafts to move said gripping means for expanding said blanks.

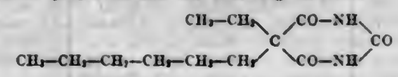
1,624,543. APPARATUS FOR EXPANDING METAL LATH. LEWIS E. CURTIS, Milwaukee, Wis., assignor, by mesne assignments, to A. C. Paul, Minneapolis, Minn., and George A. Chritton, River Forest, Ill., trustees. Filed July 26, 1924, Serial No. 728,420. Renewed Jan. 24, 1927. 9 Claims. (Cl. 164—6.6.)



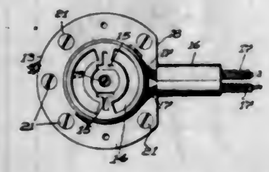
1. In apparatus for expanding slitted metal blanks, means for forming ribs in said blanks and advancing them through the machine, and diverging expander members for receiving the blanks and engaging the ribs formed therein, said expander members comprising means for alternately engaging the interior of the ribs and the exterior margins thereof.

1,624,544. FABRIC-FEEDING DEVICE FOR BEAD WIRE-COVERING MACHINES. CHARLES H. DESAUTELS, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Feb. 10, 1925. Serial No. 8,111. 2 Claims. (Cl. 154—9.)

1. A wire covering machine having a plurality of rolls around which a wire ring is stretched, devices for applying a covering strip to the ring, and a device for tucking the end of a strip into the bight between the ring and one of said rolls.



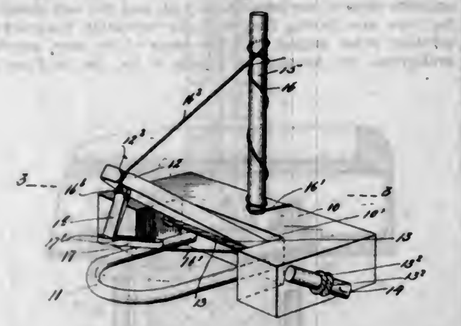
1,624,545. HOISTING AND CONVEYING DEVICE. MERIAN H. DICKINSON, Seattle, Wash., assignor to Lidgerwood Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,530. 8 Claims. (Cl. 254—185.)



1. In combination, a main cable, a carriage mounted thereon and adapted to be moved therealong, a driving member, an inhaul and an outhaul drum on each of which a cable is wound, the cables being connected to and adapted to move said carriage in opposite directions, a driving member, means for driving said inhaul and outhaul drums in interlocked relation in the inhaul direction, and means for changing the speed ratio of said drums while rotating in the inhaul direction by changing the speed of rotation of the outhaul drum.

1,624,546. ETHYL-NORMAL-HEXYL-BARBITURIC ACID. ARTHUR W. DOX, Windsor, Ontario, Canada, assignor to Parke Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 15, 1924. Serial No. 756,155. 1 Claim. (Cl. 260—33.)

As a new product of manufacture, the compound which may be designated as ethyl-normal-hexyl-barbituric acid, said compound being a white crystalline solid having hypnotic properties and the following structure:

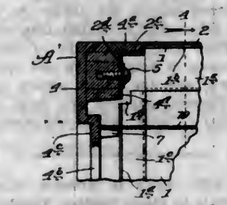


1,624,547. ELECTRIC-BRACKET OUTLET. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The American Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 11, 1924. Serial No. 692,012. 3 Claims. (Cl. 173—338.)

1. An attachment for an electric light fixture having a canopy for concealing the base of the fixture, comprising a plug receiving receptacle having electric conductor wires for connecting it to the electric light conductors within the canopy, a metal base plate to which the receptacle is secured and constructed to be fastened to a wall of the room adjacent the canopy, an enclosing casing for the receptacle, and a tube formed integral with the base plate and constructed to extend thru a shallow notch in the base of the canopy and to completely enclose the portion of the conductor wires extending from the receptacle to the interior of the canopy

1,624,548. ANIMAL TRAP. DANIEL GLASSHOFFER, Roselle, N. J. Filed Sept. 2, 1926. Serial No. 133,210. 3 Claims. (Cl. 43—81.)

1. In an animal trap, a base, a jaw torsionally suspended from said base so as to have the tendency to swing into trapping position, a flexibly suspended bait holder and a flexibly suspended latch member adapted to be interposed between said bait holder and said jaw to hold the latter in open position until its release from said bait holder upon the depression of the latter by the animal.

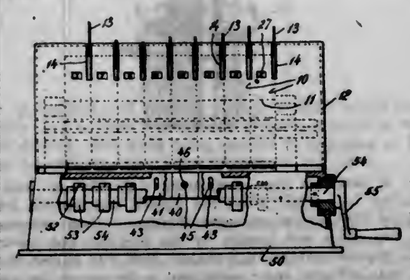


1,624,549. MULTIPLE GRADUATING MACHINE. HANS N. HALVERSEN, Vineland, N. J., assignor to Kimble Glass Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1924. Serial No. 743,694. 27 Claims. (Cl. 33—21.)

1. In a graduating appliance, a combination of means to support the vessel to be graduated, means to mark graduation lines on said vessel, and means to move said vessel and marking means relatively to one another to produce the spaces between the lines including an articulated member capable of adjustable flexure to produce variations in said spaces conforming substantially to the irregularities of the internal caliber of the vessel.

1,624,550. STOVE OR RANGE. AUGUSTUS F. HARTER, Chicago, Ill., assignor to Cribben & Sexton Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1926. Serial No. 140,880. 3 Claims. (Cl. 126—39.)

1. In a range, an oven unit comprising a front frame provided with door-openings and having a rearwardly turned outer flange, a top plate having a depressed front marginal portion fitting within said flange and having a downwardly turned attaching flange, side plates having at their upper portions inwardly offset margins and having

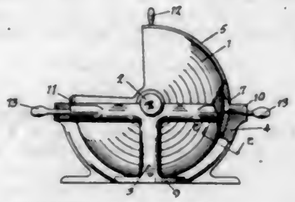


at their front portions inwardly offset margins provided with inturned attaching-flanges, said top plate having depending lateral flanges fitting over the inwardly offset upper margins of the side plates, and cap screws connecting said attaching-flanges to said front frame.

1,624,551. MULTIPLEX TRANSMISSION. JACOB SUTER JAMMER, Cumberland, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 17, 1924. Serial No. 756,399. 2 Claims. (Cl. 178—44.)

1. In a wave transmission system in which the waves of higher frequencies in traversing the system are attenuated to a greater extent than those of lower frequencies, a selective network of a high-pass filter type having its inductances constructed with a relatively small value of $\frac{L}{R}$ to give the structure a gradually changing loss characteristic throughout the transmission range to compensate for the unequal attenuation of the waves by said system.

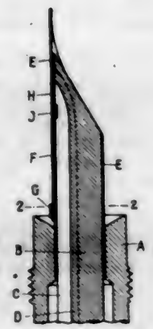
1,624,552. APPARATUS FOR MAKING INDELIBLE IMPRINTS ON SHEET MATERIAL. GEORG KIRKEGAARD, Brooklyn, N. Y., assignor to National Surety Company, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1924. Serial No. 754,885. 9 Claims. (Cl. 101—95.)



1. A check writer adapted to coact with a chemically treated check so as to produce indelible impressions thereon, comprising a pair of selective type carriers, means for heating the type on the carrier and means for moving the check into contact with the heated type.

5. In combination, a machine having a plurality of rotatable selective carriers, each carrier having a plurality of dies on its periphery, means for heating the dies of each

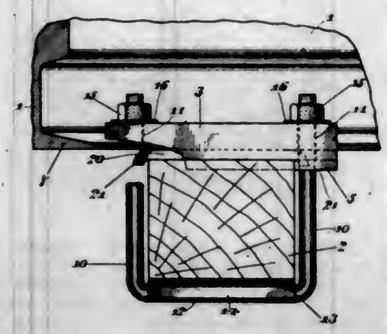
carrier, a movable platen adapted to coact with the selected die of each carrier, and means for simultaneously elevating said platens.



9. In a check writer, a carrier having a plurality of sets of type thereon, each set of type comprising two words superimposed one on the other, the letters of one word gradually decreasing in height from one end of the word to the other and the letters of the other word gradually increasing in height from one end of the word to the other, whereby the small letters of one of the words will be disposed beneath the large letters of the other word so that adjacent words will overlap.

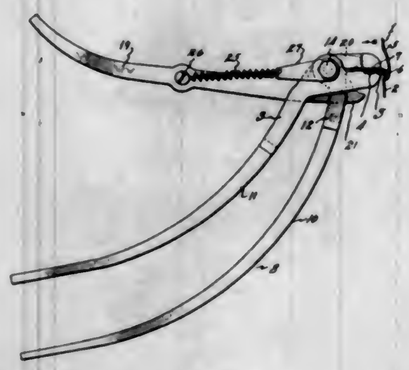
1,624,553. LADLE. JOHN G. KOEGLE, Toledo, Ohio, assignor of one-half to Hugo Boelter, Toledo, Ohio. Filed June 17, 1926. Serial No. 116,604. 11 Claims. (Cl. 22—84.)

1. In a ladle, a receptacle having an outlet opening, a member for pivotally supporting the receptacle and for closing the opening of the receptacle, the member having an opening adapted to register with the opening of the receptacle when the receptacle is turned to pouring position.



1,624,554. RESERVOIR PEN. THEODOR KOVÁCS, Berlin, Germany. Filed July 9, 1926, Serial No. 121,461, and in Germany July 13, 1925. 5 Claims. (Cl. 120—50.)

1. A reservoir pen comprising a holder, a feed-bar adapted to project from the holder and having longitudinal air and ink passages therein, a sleeve surrounding the outer end portion of the feed-bar and covering said channels where they project from the holder except at their extreme outer ends, and a device on the sleeve for detachably securing a pen nib.

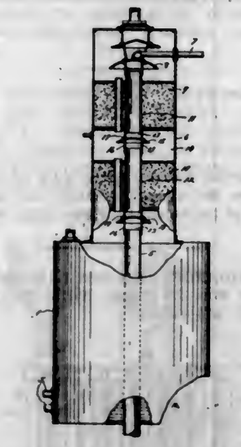


1,624,555. RAIL-FASTENING DEVICE. WILLIAM CURTIS LEISER, Philadelphia, Pa. Filed June 23, 1926. Serial No. 117,913. 5 Claims. (Cl. 238—314.)

1. A fastening device for fastening rails to cross ties, comprising clamping bars having flange-like portions extending from the upper portions of the inner sides thereof, which portions are of a length substantially equal to that of the clamping bars and are adapted to engage the opposite sides of the base of the rail, and the said clamping bars also having longitudinally extending flange-like portions which project from the bases of the bars, which projections are adapted to engage a tie, the said bars

having openings therethrough adjacent their opposite ends and U-shaped members embracing a tie, the upper ends of the opposite sides of said U-shaped members extending through said openings, and means for engaging the said upper ends to clamp the said clamping bars against a tie and against the opposite sides of the base portion of a rail.

1,624,556. PLIERS. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 25, 1924. Serial No. 734,125. 14 Claims. (Cl. 81—15.)



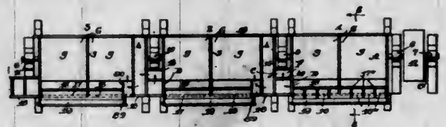
4. A tool for connecting together sheet metal parts, having cooperating jaws for holding said parts, and a lever connected to the jaws having means for cutting a tongue from one of said parts, and means for bending the tongue over the other of said parts.

1,624,557. WATER HEATER AND PURIFIER. HENRY E. MOFFAT, Detroit, Mich. Original application filed Mar. 26, 1926, Serial No. 97,813. Divided and this application filed July 23, 1926. Serial No. 124,429. 5 Claims. (Cl. 261—118.)

1. The combination with two spaced sections of steam pipe, substantially aligned, of a baffle member arranged

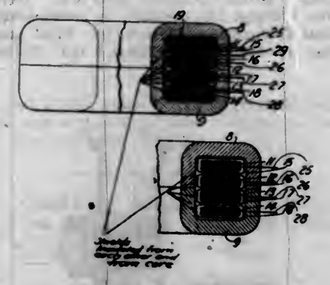
substantially transversely of said pipe in the space between said sections, and connections between each pipe

section and said baffle member, one of said connections including an element yieldable to provide for differential expansion of said sections.



1,624,558. COMBINATION UNDERGARMENT. GERTRUDE L. NICKERSON, Bridgeport, Conn., assignor to The Warner Brothers Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 28, 1926. Serial No. 132,091. 7 Claims. (Cl. 2—73.)

1. A combination undergarment comprising an upper section or bassière portion of a semi-elastic material adapted to conform to the shape of the body and having a substantially V-shaped opening in the back extending downwardly from the upper edge of said portion, an elastic strap connecting the opposite sides of said opening adjacent the top thereof, and a depending nether garment of soft loosely fitting material secured adjacent the lower edge of said upper section.



1,624,559. FLOTATION APPARATUS. TOM M. OWEN, Wallace, and MICHAEL P. DALTON, Mullan, Idaho. Filed July 5, 1924. Serial No. 724,250. 8 Claims. (Cl. 209—169.)

1. A flotation apparatus comprising an aligned series of cells, each consisting of an impeller chamber, and an elevator chamber communicating with the head end of said impeller chamber at its bottom, a shaft extending lengthwise of said cells, impellers and elevators mounted on said shaft and within said impeller and elevator chambers respectively, and discharge ducts connecting the tail end

of each impeller chamber with the following elevator chamber, and means for maintaining the pulp level at the intake to each elevator chamber substantially lower than at the discharge therefrom.

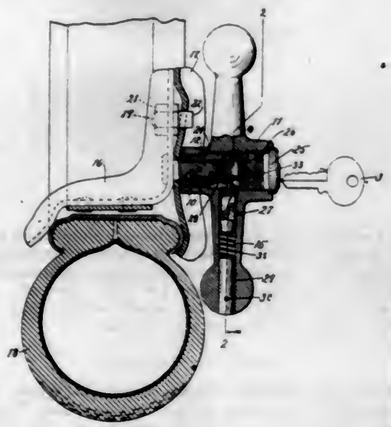
1,624,560. INDUCTANCE COIL AND METHOD OF MANUFACTURING THE SAME. EDWARD B. PAYNE, Great Neck, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1924. Serial No. 749,818. 5 Claims. (Cl. 175—356.)

1. An inductance device comprising a plurality of windings, a core comprising a shell of magnetic material surrounding and enclosing said windings, and individual electrostatic shielding means for said windings, comprising an interrupted metallic shield substantially completely surrounding each of said windings.

1,624,561. BRACELET HOOK. EUGEN PRESTINARI, Pawtucket, R. I., assignor to New Jersey Chain Corporation, Newark, N. J., a Corporation of New Jersey. Filed July 12, 1926. Serial No. 121,842. 6 Claims. (Cl. 24—233.)

1. A bracelet end member having a sheet metal body portion and a sheet metal hook member pivoted to said body portion, said hook being opened by swinging of the hook towards its free edge relative to the body.

1,624,562. ELECTRON-DISCHARGE DEVICE. VICTOR L. RONCI, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1923. Serial No. 681,580. 5 Claims. (Cl. 250—27.5.)



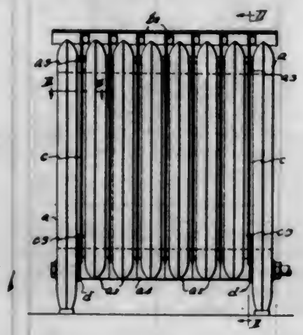
1. In an electron discharge device, containing an apertured insulating plate, a filament support comprising a suspension spring having a conical portion and a cylindrical portion, said spring being seated in said apertured insulating plate, said cylindrical portion being substan-

tially flush with the top of said insulating plate, said conical portion extending through said insulating plate, a suspension member centrally positioned in said spring,

and a sleeve for said member engaging the lower end of said spring and having its other end secured to said member.

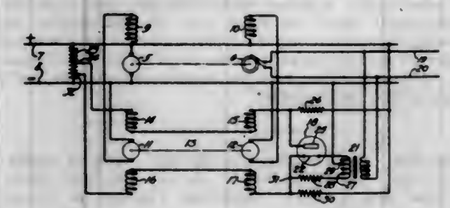
1,624,563. BOLT-LOCKING DEVICE. GEORGES ROUDANEZ, Chicago, Ill., assignor, by mesne assignments, to Lucille J. Roudanez, Chicago, Ill. Filed Aug. 23, 1924. Serial No. 733,722. 2 Claims. (Cl. 70—90.)

1. In a device of the class described, an interiorly threaded sleeve having a longitudinally extending groove exteriorly formed thereon, an element housing the sleeve and co-axially mounted therewith to permit relative rotation and limited longitudinal movement of the sleeve relative to the element, said sleeve projecting from the element at one end, stops limiting the amount of longitudinal movement of said sleeve to less than the maximum amount of its projection from said element and means operable to connect the sleeve with the element to prevent their independent rotation comprising a plunger mounted in the element, resilient means tending to force the plunger into said groove and key actuated means operable to disengage the plunger from said groove.



1,624,564. SHOE-LACE FASTENER. SAMUEL R. SHETZLINE, Jr., Philadelphia, Pa., and EMIL A. DOBBLIN, Moorestown, N. J. Filed Aug. 25, 1926. Serial No. 131,398. 2 Claims. (Cl. 24—121.)

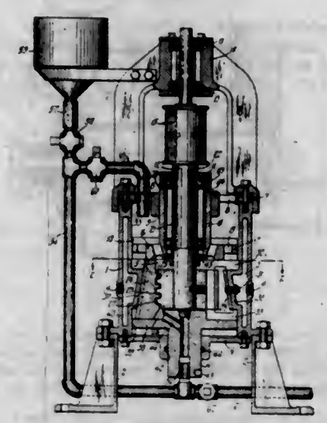
1. A shoe lace fastener comprising a body, an upwardly projecting outer leg extending from the lower end of the body, a bulge at the point of connection between the body and outer leg, said bulge extending beyond the inner face of the body, an inner leg projecting downwardly from the upper end of the body and terminated with an arcuate



portion for coaction with the bulge, a lip at the end of the inner leg below the arcuate portion, and an outwardly curved tongue at the terminal of the outer leg.

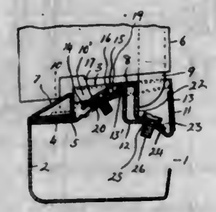
1,624,565. RADIATOR. ELLIOTT J. STODDARD, Detroit, Mich. Filed Nov. 26, 1923. Serial No. 676,905. 10 Claims. (Cl. 257—151.)

9. In an apparatus of the kind described, in combination with a deflecting plate, a series of radiator sections having lugs extending between them, plates extending downward from said deflecting plate and having L-shaped slots adapted to engage said lugs, said sections also having lugs extending between them at a point spaced from the first mentioned lugs, said downwardly extending plates being adapted to engage both of said lugs when adjusted to position, said vertically extending plates being provided with vertical slots therethrough, and a plate extending through and engaging in said slots, and means for securing the last named plate to the radiator sections so as to secure the first named plates in their position on said radiator.



1,624,566. CONTROL REGULATOR. HUGH M. STOLLER, Mountain Lakes, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 3, 1924. Serial No. 723,856. 13 Claims. (Cl. 171—312.)

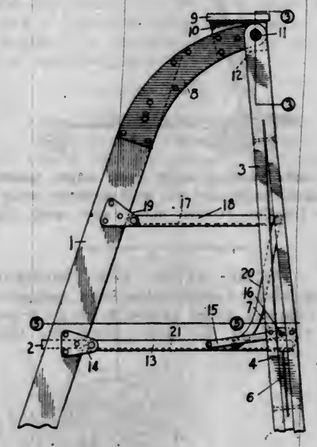
1. In a regulator system a motor generator set, an auxiliary dynamo electric machine variably operated with respect to said set, means responsive to variations in a



characteristic of said set for controlling said machine in accordance therewith, and connections between said machine and said set whereby the speed of the motor and the excitation of the generator are simultaneously regulated to hold substantially constant the characteristic of said set.

1,624,567. MACHINE FOR DISPERSING VARIOUS SOLIDS AND LIQUIDS. MERWYN C. TEAGUE, Elmhurst, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 22, 1924. Serial No. 733,524. 16 Claims. (Cl. 259—7.)

1. A dispersion machine comprising a mixing chamber, series of stationary and movable interengaging projections disposed in said chamber, and means for simultaneously adjusting both said series of projections.



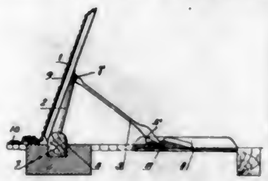
1,624,568. ADJUSTABLE STRIKER PLATE. FRED JAMES WESTROPE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 15, 1924. Serial No. 756,095. 9 Claims. (Cl. 292—340.)

1. A striker plate including an adjustable hollow wedge-shaped body, and a support for said plate having a substantially wedge-shaped portion projecting within the hollow body, and means for holding the body in adjusted position including an element extending transversely of said hollow body and projection.

1,624,569. STEPLADDER. BENEDICT E. WILLETT, Dayton, Ohio. Filed Sept. 12, 1924. Serial No. 737,289. 7 Claims. (Cl. 228—17.)

1. A stepladder comprising a front frame and a rear frame pivotally connected one to the other at their upper ends, a platform pivotally mounted on the front frame at a point below the upper end thereof, a supporting member carried by the rear frame to support the rear end of said

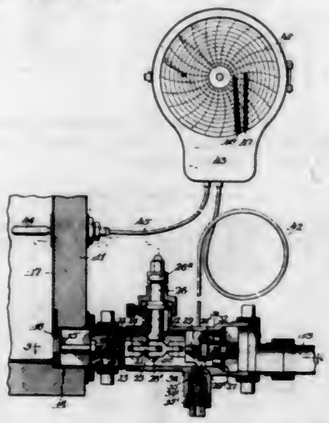
platform, and a link connecting said platform with said rear frame and arranged to form a toggle to lock said frames in their extended positions.



1,624,570. GARMENT. EUNICE M. ANTOONIAN, Boston, Mass. Filed Aug. 4, 1924. Serial No. 729,897. 7 Claims. (Cl. 2—74.)

1. That process of making garments which comprises folding in the lateral marginal portions of a piece of fabric of suitable dimensions until their free lateral edges substantially meet, uniting, as by stitching, one end of each of said lateral marginal portions to the adjacent end margin of the central part of the fabric, and attaching a sleeve at a point adjacent to each fold line.

1,624,571. RIVER DAM. JEAN MARIE LOUIS ANTOINE AUBERT, Paris, France. Filed Jan. 23, 1926, Serial No. 83,321, and in France May 2, 1925. 3 Claims. (Cl. 61—27.)

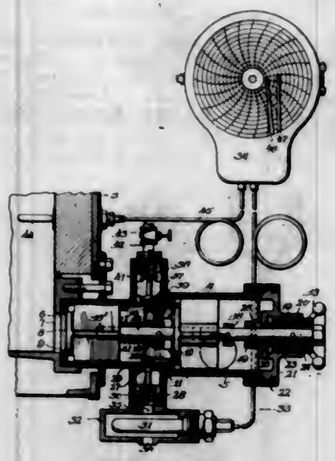


1. In a river dam, the combination of a plurality of gate sections, an individual support for each section pivoting at its lower end about a horizontal axis parallel to the dam, and a ground sill on which the gate sections

bear at their lower edges; the upper surface of the sill being cylindrical and coaxial with the pivotal axes of said supports so that the gate sections can swing with their

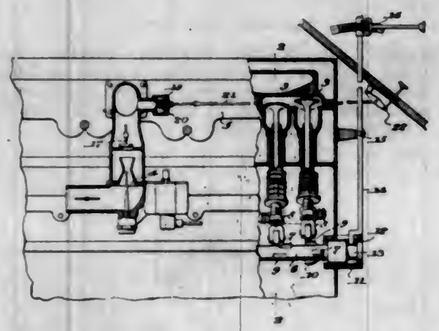
supports while keeping their lower edges constantly in bearing contact with the sill, said sections being raisable simply by traction exerted upon their upper edges.

1,624,572. FLUSH VALVE FOR PASTEURIZERS. RALPH B. BAGBY, Cedar Rapids, Iowa, assignor to J. G. Cherry Company, Cedar Rapids, Iowa, a Corporation of Iowa. Filed Aug. 31, 1926. Serial No. 132,879. 6 Claims. (Cl. 99—2.)



6. The combination of a Pasteurizing tank having an outlet, a pipe line, a connection between said outlet and said pipe line comprising a casing, valves in said casing for said outlet and said pipe line, a valved drip-leak in the casing between said tank outlet and pipe line valves, a sterilizing valve in the casing between said tank outlet and pipe line valves, a crank arranged in the casing for opening and closing said tank outlet and pipe line valves conjointly, and a cam guide flexibly connected to the crank and to the pipe line valve for operating the drip-leak valve and sterilizing valve to permit said valves to close before the tank outlet and pipe line valves are opened.

1,624,573. PASTEURIZING APPARATUS. RALPH B. BAGBY, Cedar Rapids, Iowa, assignor to J. G. Cherry Company, Cedar Rapids, Iowa, a Corporation of Iowa. Filed Aug. 31, 1926. Serial No. 132,880. 16 Claims. (Cl. 99—2.)

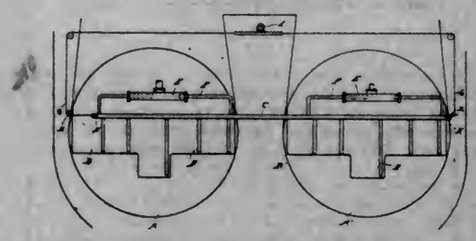


1. The combination of a Pasteurizing tank having an outlet, a pipe line, a connection between said outlet and said pipe line comprising a casing, valves in said casing for said outlet and said pipe line, a drip-leak for the casing between said valves and comprising a valve, and movable means within the casing connecting the outlet valve and the pipe line valve for opening and closing said valves conjointly and for opening and closing the drip-leak valve.

16. The combination of a Pasteurizing tank having an outlet, a pipe line, a connection between said outlet and said pipe line comprising a casing, valves in said casing for said outlet and said pipe line, a drip leak for the casing between said valves and comprising a valve, means for opening and closing said valves, means for supplying

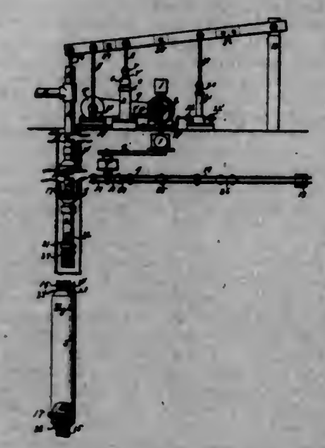
steam to the casing to sterilize the casing, and thermal recording means connected to the tank and to the casing for recording the Pasteurizing process and the sterilizing process in their time relation to each other on a single chart.

1,624,574. MEANS FOR BRAKING MOTOR VEHICLES. MILO D. BEACH, Litchfield, Conn. Filed Oct. 26, 1923. Serial No. 670,819. 9 Claims. (Cl. 123—97.)



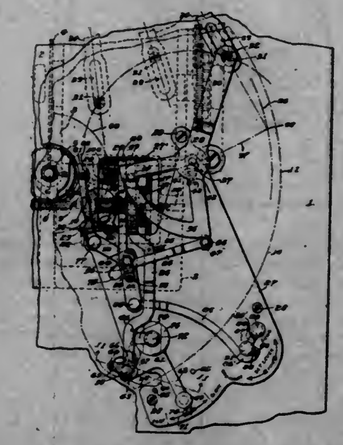
1. Means for braking motor vehicles by the use of the internal combustion engine thereof comprising devices for opening the exhaust valves on every out-stroke of the engine pistons, and closing said valves on every in-stroke of the pistons and for closing the intake valves on every out-stroke of the pistons and opening said intake valves on every in-stroke of the pistons, whereby air is repeatedly drawn into the engine on every out-stroke of the pistons and is compressed into the engine manifold on every in-stroke of the pistons, whereby operation of the pistons cumulatively builds up an air pressure in the manifold and cylinders, and an automatically-acting valve which normally permits the carburetted charge to pass to the manifold, said valve being adapted to close to prevent the escape of the cumulatively built up compressed air from the manifold into the carbureter.

1,624,575. ART OF GALVANOPLASTY. ARTHUR BIDDLE, Trenton, N. J., assignor to United Products Corporation of America, a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,530. 13 Claims. (Cl. 204—8.)



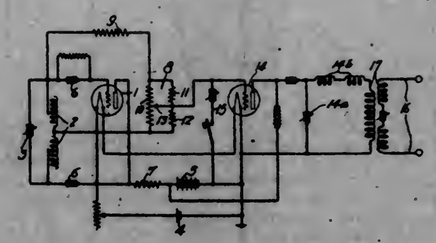
2. The method of electro-depositing material upon a non-metallic body out of an electrolyte which consists in coating said body with rubber in aqueous dispersion, surfacing said coating with an electro-conductive comminuted material, coagulating the solid content of said aqueous dispersion to form a water resistant coating, and forming an electro-deposit thereon in an electroplating bath.

1,624,576. BOILER CLEANER. FRANK BOWERS, Detroit, Mich., assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 21, 1919. Serial No. 305,818. 2 Claims. (Cl. 122—391.)



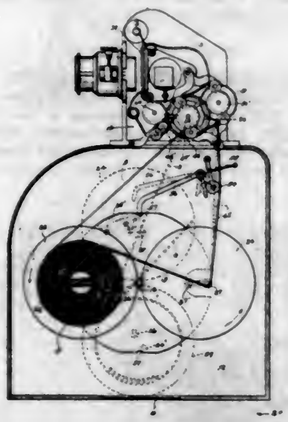
1. In a boiler cleaner, the combination with a longitudinally reciprocatory header, of a stationary header arranged parallel thereto and connected with a source of supply of steam, and a pair of conduits telescopically engaging said stationary header at opposite ends thereof and laterally connected to said reciprocatory header, thereby forming a balanced connection.

1,624,577. DEEP-WELL PUMPING MECHANISM. WILLIAM P. BRETT, Decatur, Ill. Filed Aug. 20, 1923. Serial No. 658,461. 22 Claims. (Cl. 103—206.)



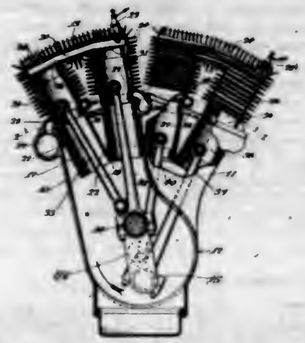
1. The combination, in deep well pumping mechanism, of a water pump cylinder, an air compressor, a load equalizing air cylinder, an air receiver or reservoir, a water discharge pipe leading from said water pump, an air line leading from said air compressor into said air receiver, an opening or port leading from the lower part of the said air receiver into the said water discharge pipe adjacent to said water pump cylinder, and a one way air duct leading from the said air receiver into one end of said load equalizing air cylinder.

1,624,578. SOUND-REPRODUCING MACHINE. HORACE LEOPOLD TUCKER BUCKLE, Ylewsley, England, assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Nov. 5, 1924, Serial No. 747,892, and in Great Britain Feb. 5, 1924. 22 Claims. (Cl. 188—187.)



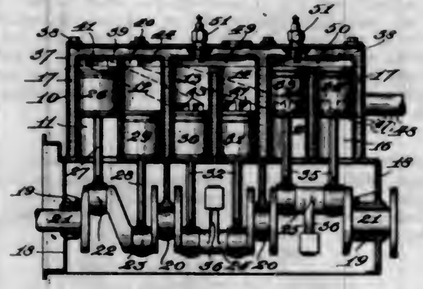
1. In a talking machine, the combination with a motor, a turntable and a reproducer, of a constant speed controlling mechanism, a variable speed controlling mechanism actuated by said reproducer, and a conversion member connected to both said mechanisms and manually operative to alternately throw said mechanisms into operative relation with said motor.

1,624,579. SIGNALING SYSTEM. JOHN C. BURKHOLDER, West End, N. C., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 5, 1922. Serial No. 527,097. 5 Claims. (Cl. 178—44.)



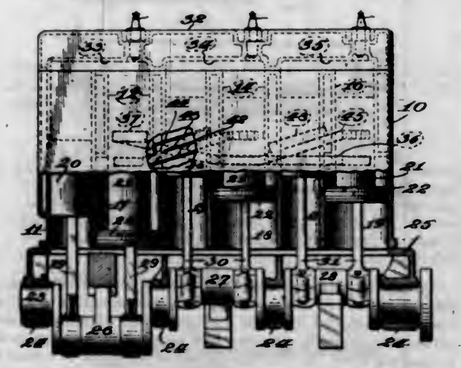
1. In combination, a source of oscillations and a transmission circuit connected to said source through a potentiometer which comprises a resistance, an adjustable contact associated therewith, and equal impedance devices connected between the terminals of said resistance and said adjustable contact.

1,624,580. CONTINUOUS MOVING-PICTURE MACHINE. JOHN P. BURNETT, Chicago, Ill., assignor to Automatic Motion Picture Display Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1921. Serial No. 450,016. 22 Claims. (Cl. 88—18.7.)



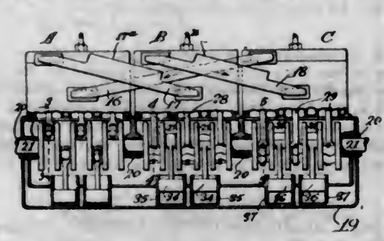
1. The combination with a motion picture apparatus and a film magazine, of a continuous film passing into and out of said magazine; and a pair of co-operating interchangeable oppositely disposed film receiving means, said means being interchangeable by the direct interengagement of the film with, and the application of its tension to one of the film receiving means, substantially as described.

1,624,581. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed May 31, 1923. Serial No. 642,507. 3 Claims. (Cl. 123—53.)



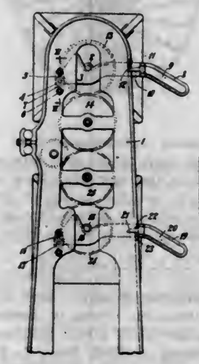
1. In a two stroke cycle internal combustion engine, four combustion cylinders arranged in two pairs, the head ends of the chambers within the members of the respective pairs of cylinders being connected by common compression and combustion clearance chambers thereby forming two dual cylinder combustion chambers, the four cylinders being disposed in different radial planes having a common center, one pair of cylinders occuping one circumferential plane, the other pair of cylinders occupying another circumferential plane and the four cylinders being spaced apart circumferentially so that the entire front and side portions of the four cylinders are wholly exposed to air drafts that are directed rearwardly from the forward end of the engine.

1,624,582. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed June 9, 1924. Serial No. 718,836. 1 Claim. (Cl. 123—53.)



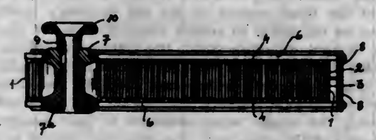
The combination in a two stroke cycle internal combustion engine, of six cylinders, a piston within each of the six cylinders, a crank shaft, a separate connection between each piston and the crank shaft, the six cylinders being arranged in a row parallel with the axis of the crank shaft, a detachable cylinder head having a recess formed in its underside to connect as a common compression and combustion chamber, the first and second cylinders from a given end of the row of six cylinders, a second recess formed in the cylinder head to connect as a common compression and combustion clearance chamber, the third and fourth cylinders from the same end, a third and a fourth recess formed in the underside of the cylinder head, said third and fourth recesses being located so as to register with and provide volume clearance chambers for the fifth and sixth cylinders in the row, there being four crank throws to said crank shaft, two of said crank throws having two bearing peripheries and the other two throws having single bearing peripheries, a counterweight extending from and diametrically opposite the crank throw between the two bearing peripheries of each of the two bearing crank throws, said two bearing crank throws being disposed diametrically opposite to each other, the two single bearing crank throws being arranged diametrically opposite to each other, four main bearings supporting the crank shaft, one main bearing on each end of the crank shaft outside of the cranks, a third main bearing disposed between the pair of single bearing crank throws and one of the two bearing crank throws, the fourth main bearing disposed between the pair of two bearing crank throws, ports formed in the wall of each of the six cylinders, two transfer ducts, one leading from the clearance chamber of the first cylinder at one end of the row of six cylinders to the ports formed in the third cylinder from the same end, the second transfer duct leading from the clearance chamber of the second cylinder from the same end, to the fifth cylinder from the same end, the pistons within one pair of cylinders that are joined by the common clearance recess in the cylinder head being connected by separate connections to the two bearing peripheries of one of the two bearing crank throws of the crank shaft, the two pistons within the second pair of cylinders joined by the second clearance recess in the cylinder head, being connected by separate connections to the other one of the two bearing crank throws, the two cranks to which the pistons of the cylinders that are joined by the transfer ducts being angularly disposed in relation to each other so as to cause the piston within the one cylinder of the pair of cylinders joined by a common clearance recess in the cylinder head, to move sufficiently past crank end dead center to close the ports formed in said cylinder and cut off registration with the respective transfer duct as the piston within the other cylinder of the two by said transfer duct reaches top or head end dead center and ignition means located in each of the two recesses formed in the cylinder head and which connect the members forming the two pairs of combustion cylinders.

1,624,583. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Apr. 9, 1925. Serial No. 21,826. 8 Claims. (Cl. 123—59.)



4. The combination with an internal combustion engine having six cylinders, three of which are provided with combustion chambers and with charge volume pumping chambers, of three charge volume transfer ducts arranged between the pumping chambers of said three cylinders and the combustion chambers within the other cylinders of said three cylinders, two of said transfer ducts being shorter than the third duct, a partition arranged within each shorter duct and dividing the space therein into a main chamber and an auxiliary chamber, there being an opening formed through the lower portion of said partition for establishing communication between the main and auxiliary chambers therein and said three ducts being disposed inside the outer walls of the cylinder block.

1,624,584. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed July 27, 1925. Serial No. 46,257. 5 Claims. (Cl. 123—53.)



3. In a two stroke cycle internal combustion engine, three units of three cylinders each, the nine cylinders of the three units being arranged in a row, with their axes parallel, each unit comprising a pumping cylinder and a pair of combustion cylinders, the members of each pair of combustion cylinders being connected by a common clearance chamber, a gaseous fuel transfer duct leading from the head end of each pumping chamber to one of the pair of combustion chambers in one of the other of the three units, a crank shaft having three sets of cranks to which the pistons in the three sets of cylinders are respectively connected, the pins of said crank being arranged 120° apart, and means connected to the three sets of the crank shaft for establishing perfect reciprocative and rotary mass balance for the three engine units.

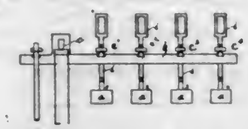
1,624,585. REEL MILL. HERBERT C. CHASE, Stonington, Conn., assignor to Atwood Machine Company, Stonington, Conn., a Corporation of New Jersey. Filed Oct. 6, 1922. Serial No. 592,906. 12 Claims. (Cl. 242—85.)

1. An end frame, a reel shaft, a reel gear mounted thereon, a driving gear meshing with the reel gear, and a support provided with an open bearing for receiving the end of the reel shaft adjacent the reel gear, said support being carried by the end frame and movable to disconnect the reel gear from its driving gear.

1,624,586. MEANS FOR HOLDING FILMS IN SPACED COIL FORMS. LÁSZLÓ CZAKÓ, Budapest, Hungary. Filed Feb. 16, 1922, Serial No. 537,120, and in Hungary Apr. 2, 1921. 6 Claims. (Cl. 95—100.)

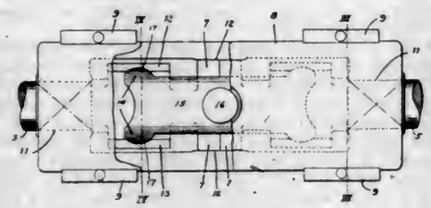
1. A device of the class described, comprising, in combination, a hub adapted to receive a strip of film in spiral formation, means for exerting pressure locally on the edges of the film, and means for retaining the coils of said film in spaced relation.

1,624,587. SIREN. THEODORE DECOT, Sauk City, Wis. Filed Oct. 5, 1921. Serial No. 505,623. 4 Claims. (Cl. 116—147.)



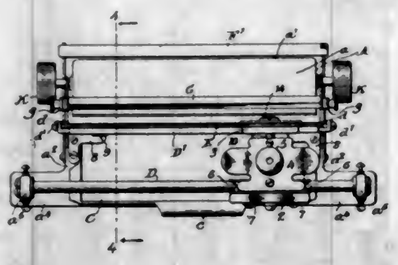
1. In a vertically disposed air siren for projecting upper and lower sound wave bands of different frequencies, the combination of a vertically extending rotor shaft, a cylindrical casing mounted axially of said rotor shaft, said casing having an upper series of apertures and a lower series of apertures, said upper series of apertures exceeding in number said lower series of apertures whereby said upper series of apertures will project an upper band of sound waves of relatively high frequency for projecting sound to a great distance, and said lower series of apertures will project a lower band of sound waves of relatively low frequency for the immediate locality, a rotor in said casing mounted on said vertical shaft, said rotor

comprising a central web portion disposed in a plane between said upper and lower series of apertures, an upper series of substantially flat blades formed integral with said web portion, a lower series of substantially flat blades formed integral with said web portion, said upper series having a greater number of blades than said lower series,



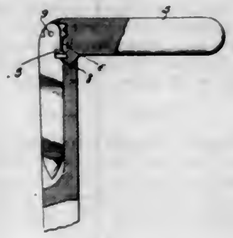
and circumferentially extending flanges projecting from the outer ends of said blades the advancing portion of each flange being to the rear of a plane passing through the axis of rotation and the center of the impelling surface of each blade whereby a free expulsion of air is permitted through the apertures in the casing.

1,624,588. WEIGHING SCALE. HEINRICH AUGUST ESSMANN, Altona-Ottensen, Germany, assignor to the Firm Ottensener Waagenfabrik Albert Essmann & Co., Altona-Ottensen, Germany. Filed Dec. 7, 1925, Serial No. 73,848, and in Germany Dec. 19, 1924. 3 Claims. (Cl. 265—48.)



1. In a weighing scale, a weighing beam supported on a knife edge, a series of weights arranged to be set on the weighing beam at prescribed distances from the knife edge of the beam, means to set the normally ineffective weights on the beam to render them effective at the rate of the desired weighing ratio, the means for setting and unsetting the weights including levers and rotatable circular cam disks, both levers and disks corresponding in number to the said weights, notches on the peripheries of the disks, the levers being arranged to bear against the peripheries of the disks and to engage the weights so as to set the weights, when, on rotation of the disks, the notches register with said levers.

1,624,589. DIFFERENTIAL-DRIVING MECHANISM. SAMUEL R. DODDS, Pittsburgh, Pa. Filed Oct. 7, 1925. Serial No. 61,056. 6 Claims. (Cl. 74—7.)

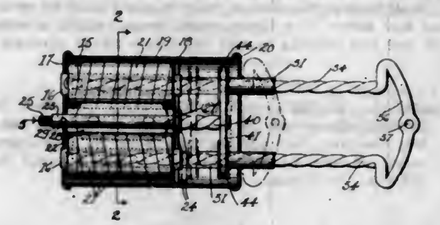


1. The combination with a plurality of end confronting driving shafts each having a lateral abutment, of an outer surrounding armature, a power imparting housing within the armature, and an equalizing bar engaging said abutments within and in rotative connection with the power imparting housing.

1,624,590. ENVELOPE OPENER. EDWARD E. FLEMING, Hagerstown, Md. Filed July 6, 1926. Serial No. 120,781. 18 Claims. (Cl. 164—73.)

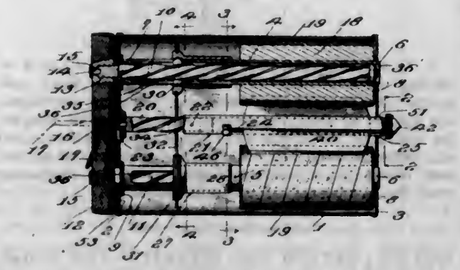
13. An envelope opener comprising a reciprocating carriage mounted on a supporting base and carrying a knife rockably mounted thereon and normally yieldingly sustained in inoperable position and adapted to be depressed to operate when the carriage is moved in either a forward or backward direction, a knife guide, and means for holding an envelope with one end or margin thereof in position to be severed by the knife when moving in either direction.

1,624,591. CANE. RIVES FLEMING, Richmond, Va. Filed Apr. 9, 1926. Serial No. 100,952. 4 Claims. (Cl. 135—47.)



3. A combination of a cane having a handle at right angles to the body thereof, a blade pivoted at the joint of the handle and the body of the cane, a spring positioned in the cane, said spring resting against the face of the blade to force the blade into an open position, in alinement with the handle of the cane, said handle acting as a weight to direct the point of the blade.

1,624,592. BLADE-STROPPING DEVICE. GEORGE D. GALLAGHER, Phoenix, Ariz., assignor, by mesne assignments, of part interests to Nannie F. Hoos, Ruth B. Walten, Baltimore, Md.; Callie F. Moore, Washington, D. C.; and J. March Matthews, Baltimore County, Md. Filed Aug. 5, 1919, Serial No. 315,517. Renewed Aug. 22, 1925. 19 Claims. (Cl. 51—86.)



4. A safety razor blade stropper comprising an enclosing casing, rotatable stropping means journaled therein and held against endwise movement, an angularly shiftable blade holder support journaled therein in spaced

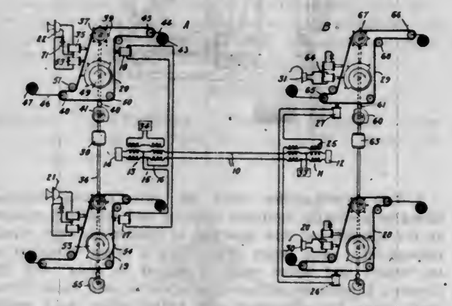
relation to said stropping means, a driver reciprocable into and out of said casing axially of said stropping means and blade holder support, and devices operatively

connecting said driver with said stropping means and blade holder support whereby to position said blade holder support and to rotate said stropping means.

1,624,593. SAFETY-RAZOR-BLADE STROPPER. GEORGE D. GALLAGHER, Washington, D. C., assignor, by mesne assignments, of part interests to Nannie F. Hoos and Ruth B. Walten, Baltimore, Md.; Callie F. Moore, Washington, D. C.; and J. Marsh Matthews, Baltimore County, Md. Filed July 28, 1921. Serial No. 488,102. 18 Claims. (Cl. 51—86.)

7. A device of the class described comprising an enclosing casing, slotted tubes rotatably journaled therein, stropping rolls carried by said tubes, spiral members reciprocable through said tubes, spools slidingly mounted on said tubes, balls carried by said spools and projecting through the slots of said tubes to contact with said spiral members, a blade holder including a spiral portion mounted in said casing, a bridge piece connected with said spools and having an angular bore slidingly engaging said spiral of the work holder, whereby said blade holder is positioned and said stropping rolls are rotated on reciprocation of said spiral members.

1,624,594. METHOD FOR COMPENSATING FOR UNEVENNESS IN PRINTER'S TYPE. LESLIE J. GOULD and ROBERT GOULD, Toronto, Ontario, Canada. Filed May 28, 1926. Serial No. 112,390. 3 Claims. (Cl. 101—401.3.)

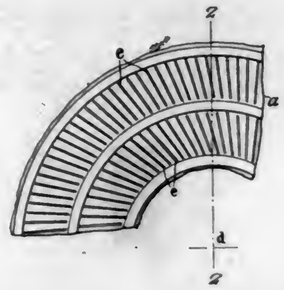


1. The method of compensating for unevenness in printer's type which consists in placing a number of sheets of waxed tissue upon the cylinder or platen of a press, taking an impression of the set-up type thereupon, cutting out of the waxed tissues certain impressions, and placing these tissues as a pad beneath the packing to serve as a make-ready.

1,624,595. ATTACHMENT TO ELECTRIC INSULATION. ARTHUR HADDOCK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 3, 1922. Serial No. 565,666. 4 Claims. (Cl. 85—13.)

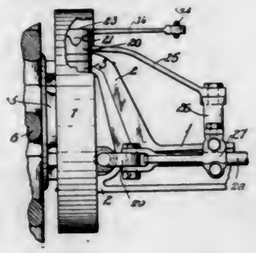
1. In combination, a body having an edge, said body being composed of material too weak to withstand a substantial strain on screw threads therein, an element attached to said edge, and means, including a circular plug having an expanded head completely filling an exposed end of a hole in said body, and a screw threaded into said plug at a substantial angle to the axis of said plug for clamping said element against said edge.

1,624,596. SIGNALING METHOD AND SYSTEM. RALPH V. L. HARTLEY, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1920. Serial No. 432,984. 15 Claims. (Cl. 179—15.)



1. The method of signaling which comprises periodically transmitting to a signaling line segments of speech signals from a source at a greater speed than received from said source, and periodically and alternately transmitting to said line segments of speech signals from another source at a greater speed than received from said other source whereby the segments of speech signals from both sources are transmitted over said line without overlapping.

1,624,597. METHOD OF MANUFACTURING BALL ROLLING DISKS. HENRY LEONARD HEATHCOTE, Coventry, England, assignor to Rudge-Whitworth Limited, Coventry, England. Filed Feb. 6, 1922, Serial No. 534,502, and in Great Britain Mar. 2, 1921. 7 Claims. (Cl. 29—148.)



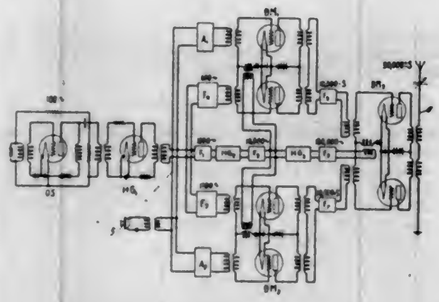
1. A method of preparing hardened disks or like appliances for finishing rough blanks for bearing balls or the like, comprising forming one or more concentric

grooves in said disks, subjecting said disks to a hardening process and then to any necessary truing or rectifying of the said grooves as by running with balls in posi-

tion, grinding or the like, and finally forming sharp-edged channels across the surface of the groove or grooves by etching.

1,624,598. STEERING-WHEEL BRAKE. EDMUND G. HEINZELMAN, Belleville, Ill. Filed Aug. 27, 1923. Serial No. 659,520. 5 Claims. (Cl. 188—194.)

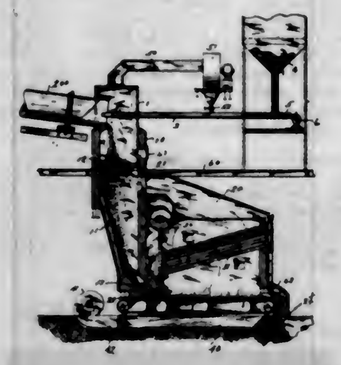
3. The combination with an axle having steering knuckles pivotally mounted thereon and wheels journaled on the spindles of said knuckles of brakes for said wheels respectively, each brake comprising a drum mounted on the wheel and brake shoes mounted to turn with the steering knuckle in operative relation to said brake drum, and means for actuating said brake shoes, said means comprising counterpart cam members mounted concentric with the axis of said knuckle opposite the gap between the brake shoes, said cam members being mounted to turn with the knuckle and also being rotatable independently of the knuckle.



1,624,599. MANUFACTURE OF FIBER BOARD. ROBERT W. HILTON, deceased, late of Cincinnati, Ohio, by Danesi M. Hilton, executrix, Cincinnati, Ohio, assignor to The Kemper-Thomas Company, Norwood, Ohio, a Corporation of Ohio. Filed Nov. 1, 1923. Serial No. 672,208. 1 Claim. (Cl. 92—21.)

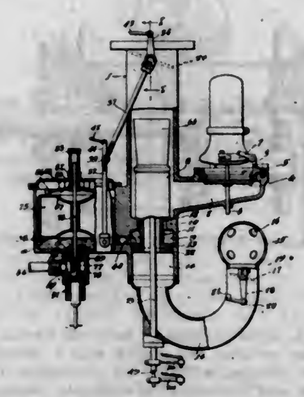
The process of manufacturing weather resistant fiber board, which consists in thoroughly mixing fiber pulp in an aqueous solution of soap and treating the pulp with lead acetate to precipitate insoluble lead soap in intimate admixture with said fiber, the quantity of soap required being sufficient to provide approximately not over three per cent by weight of insoluble soap on the basis of the pulp used.

1,624,600. COLORED-VAPOR SIGNAL. THOMAS G. HITT, Seattle, Wash. Filed Dec. 24, 1926. Serial No. 156,999. 6 Claims. (Cl. 52—24.)



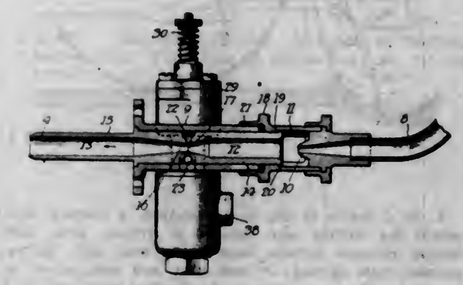
6. A colored transparent vapor signal formed by spraying into moist air a liquid which fumes readily in moist air and has coloring matter intimately mixed therewith.

1,624,601. SECRET COMMUNICATION. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 2, 1923. Serial No. 648,903. 38 Claims. (Cl. 178—44.)



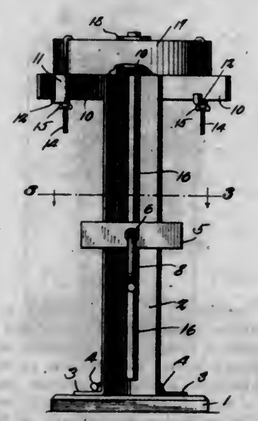
1. In signaling in which the signal is revealed at a receiving point by derivation from a carrier wave component and components containing signaling variations, the method of obtaining secrecy in transmission comprising replacing the carrier wave component by a component of a different frequency, transmitting the wave so altered, and deriving at a receiving point the carrier component from the component of different frequency.

1,624,602. METHOD AND APPARATUS FOR UTILIZING HEAT. DAVID S. JACOBUS, Jersey City, and ARTHUR D. PRATT, Short Hills, N. J., assignors to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 5, 1923. Serial No. 622,872. 8 Claims. (Cl. 122—27.)



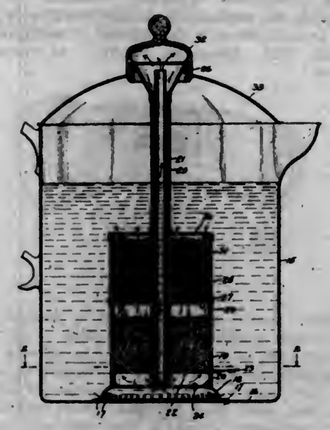
1. The method of utilizing heat contained in preheated, divided, solid, non-combustible material from a furnace, which consists in conveying the heated material from the furnace which produces it to a point beneath a boiler heating surface to heat the same by the radiant heat of the material, forcing air through the material beneath said heating surface and across said heating surface and then into contact with a portion of said material before it is carried beneath said heating surface and then utilizing the reheated air in the furnace producing said heated material to support combustion therein.

1,624,603. CARBURETOR. CHARLES F. L. KAUFMANN and WALTER L. KAUFMANN, Santa Ana, Calif. Filed Oct. 28, 1918. Serial No. 260,042. 2 Claims. (Cl. 261—78.)



1. In a carburetor, three stationary concentric nozzle tubes forming intermediate fuel passages, the inner tube forming an air passage of fixed area, annular heads carried by the middle tube axially adjustable thereon and cooperating with the upper ends of the inner and outer tubes respectively to form an annular fuel discharge orifice for each fuel passage, said adjustable heads having concentric air passages of fixed area, means for adjusting the heads to vary the sizes of the orifices, and means to supply fuel to the spaces between the tubes.

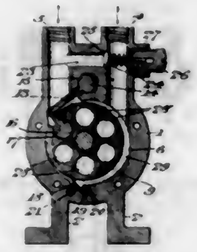
1,624,604. CARBURETOR. THOMAS W. KINGS, Harvey, Ill., assignor to Ira E. Burtis, Beaver Dam, Wis. Filed May 17, 1923. Serial No. 639,521. 2 Claims. (Cl. 123—127.)



1. A charge-forming device of the class described comprising a Venturi tube, an intake manifold with which said Venturi tube is in communication at one of its ends, a fuel passageway in communication with said Venturi tube near its point of smallest diameter, a valve for controlling the level of fuel in said passageway, and means for operating said valve, said means being subject for operation, to the aspiratory action of said Venturi tube and the level of the liquid in said passageway.

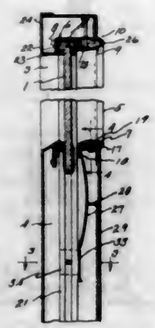
1,624,605. BABBITTING FRAME. CLEMENS JOHN KUSCHEL, Brown Valley, Minn. Filed May 24, 1926. Serial No. 111,339. 2 Claims. (Cl. 22—123.)

1. In a device of the class described, a standard having transverse arms, holders adjustable on the arms in a direction parallel to the axis of the standard and in a direction at right angles to the axis of the standard, and a clamping means cooperating with the standard intermediate the ends of the standard.



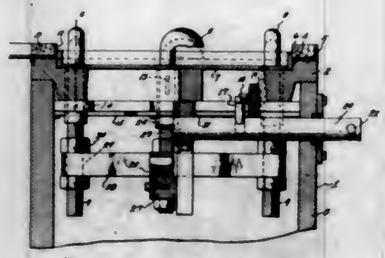
1,624,606. COFFEEPOT. FRANKLIN EDWARD LANE, Nacozari, Mexico. Filed May 19, 1926. Serial No. 110,202. 6 Claims. (Cl. 53—3.)

1. A coffee pot comprising a receptacle adapted to contain water, a coffee container in the receptacle, a filtering device in the receptacle, and means operating when



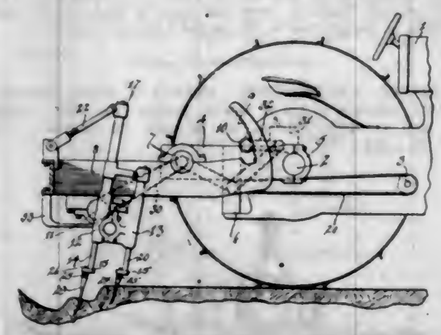
the water in the receptacle boils to cause the boiling water to circulate through the coffee container and then through the filtering device, and finally discharging back into the receptacle.

1,624,607. PUMP. GEORGE W. LEIMAN, Newark, N. J., assignor to Leiman Bros., New York, N. Y., a Copartnership composed of William H. Leiman, George W. Leiman, Gustave A. Leiman, Edward C. Leiman, and John Leiman. Filed Dec. 16, 1921. Serial No. 522,874. 2 Claims. (Cl. 103—132.)



1. A pump comprising a casing having a cup shaped cylindrical chamber formed therein, inlet and outlet ports for said chamber, a rotary shaft provided with a crank, a cylindrical piston having substantially an uninterrupted working periphery of a slightly smaller diameter than the diameter of said chamber and mounted on said crank in position to be oscillated eccentrically in the chamber, a link comprising a short arm and a straight long arm disposed at right angles to each other, the free end of said short arm being connected to the piston and the long arm linked to the casing between the inlet and outlet ports, a cavity in the wall of the chamber adjacent the outlet port for housing said link, whereby the movement of the long arm will open and close the outlet port, a spring actuated curved wing hinged in the casing and having its free end arranged to extend into the chamber in position to engage the bottom of the working periphery of the piston, and a plate secured to the casing for covering the chamber, piston, wing, link and cavity.

1,624,608. WINDOW FRAME. HERMAN C. MAISE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 27, 1923. Serial No. 659,671. 13 Claims. (Cl. 296—48.)

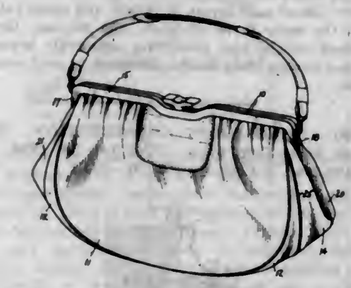


10. In combination, a door having a window opening, and an inturned lateral flange below said opening, a removable window frame in said window opening, and a yieldable element carried by said frame and engaging said inturned lateral flange so as to maintain said window frame in a predetermined position in said opening.

1,624,609. JIG. HERMAN C. MAISE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 1, 1924. Serial No. 692,138. 15 Claims. (Cl. 144—288.)

1. A work holder including a table top having opposite work seating portions and formed with a depression between said portions, a frame for positioning the work arranged in said depression between said marginal seats and projecting above said seats, and clamping members extending above said frame and engageable with the work to secure it upon said seats.

1,624,610. SPADING DEVICE. OSCAR AKE MATSON, Chicago, Ill. Filed Mar. 6, 1926. Serial No. 92,869. 3 Claims. (Cl. 97—36.)

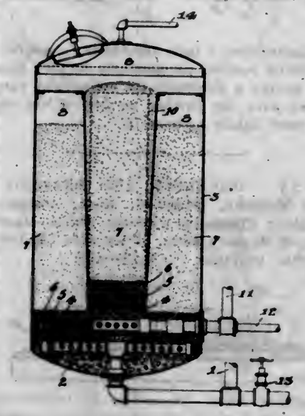


1. In a device of the type described, a spading unit, means for moving said unit in a circular path, rods having recesses therein disposed in said unit, spring-pressed balls carried by said unit and adapted to be received within said recesses for holding said rods in a predetermined position, and a plurality of excavating tools flexibly disposed at the lower ends of said rods, said spring-pressed balls being forced out of the recesses when said tools strike an obstacle, and means for moving said rods back into operative position.

1,624,611. HAND BAG. CHARLES J. MCCABE, Brooklyn, and IRVING SCHOENHOLZ, Far Rockaway, N. Y., assignors to McCabe and Schoenholz, Inc., New York, N. Y., a Corporation of New York. Filed June 9, 1926. Serial No. 114,707. 5 Claims. (Cl. 150—30.)

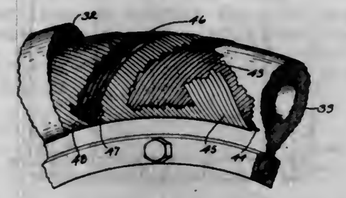
1. In a hand bag, a pair of side elements, and a connecting portion extending around the ends and bottom of the bag between said side elements and attached thereto, said connecting portion including a plurality of strips joined together along their longitudinal edges.

1,624,612. HAND BAG. CHARLES J. MCCABE, Brooklyn, and IRVING SCHOENHOLZ, Far Rockaway, N. Y., assignors to McCabe and Schoenholz, Inc., New York, N. Y., a Corporation of New York. Filed June 10, 1926. Serial No. 114,903. 14 Claims. (Cl. 150—30.)



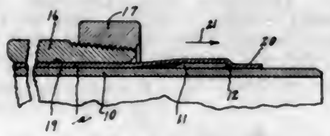
3. In a hand bag comprising pivoted frame members and side walls carried thereby, a gusset adapted to form the bottom and end walls of the bag, said gusset having end wall portions made up of two substantially triangular sections associated with each other in a manner whereby a variable shape may be imparted to the end wall portions by suitably designing said sections.

1,624,613. PISTON PACKING. THURLOW E. MCFALL, Sparta, Mich. Filed June 14, 1926. Serial No. 115,806. 6 Claims. (Cl. 74—109.)



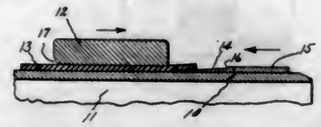
1. A piston packing comprising a flat disc formed with a helical slot, the inner end thereof starting a short distance from the center of the disc and progressively approaching the periphery of said disc and joining with a gap cut inwardly from the outer edge of the disc, substantially as described.

1,624,614. TWO-FLOW BASE-EXCHANGE WATER SOFTENER. CHESTER T. MCGILL, Elgin, Ill., assignor to Reiter Company, Elgin, Ill., a Corporation of Illinois. Filed Nov. 14, 1925. Serial No. 69,078. 2 Claims. (Cl. 210—24.)



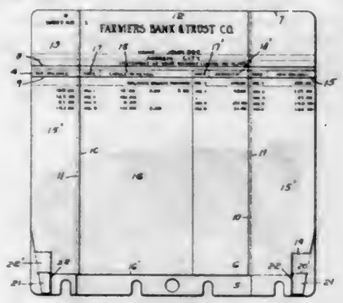
1. A base exchange water softener comprising a tank, an auxiliary container within the tank, multiple layers of filtering material in the tank and in the container, base exchange material supported on the filtering material, means for introducing liquid selectively in the tank and container below the filtering material, the tank and container being in open communication so that the fine loose exchange material may be carried from one bed to the other by the flow of liquid through the apparatus in either direction.

1,624,615. METHOD OF MAKING TIRE CASINGS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 17, 1921. Serial No. 478,303. 1 Claim. (Cl. 154—14.)



The method of building a tire casing consisting in laminating in plies rubberized building elements carrying an amount of rubber in excess of that required for the normal purpose of the elements and sufficient of itself to fill the spaces between the elements, such elements being located closely adjacent each other near the bead edges of the tire and gradually diverging from one another adjacent the tread portion of the tire, molding the tire under pressure and thereby causing the excess rubber carried by the elements to fill the spaces between the elements, and vulcanizing the tire.

1,624,616. BEVELING AND SEALING CLAMP. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 24, 1925. Serial No. 45,900. 4 Claims. (Cl. 18—43.)

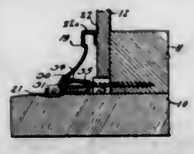


1. In combination, a tube vulcanizing mandrel having a tapered skiving portion permanently located thereon, and a member having a substantially cylindrical bore adapted to be drawn over the skiving portion of the mandrel to press the tube tightly against it.

1,624,617. BEVELING AND SEALING CLAMP. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 24, 1925. Serial No. 45,901. 2 Claims. (Cl. 18—43.)

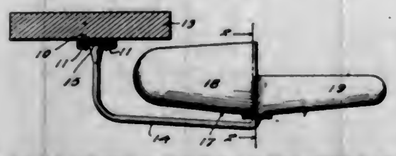
1. A tube beveling and sealing clamp comprising a sleeve having a bore of a size presenting a snug running fit over the mandrel upon which the clamp is to be used and provided on its outer surface with a tapered end portion and a cylindrical portion separated from each other by a slight shoulder, and a ring having a bore of a size presenting a snug running fit over the cylindrical portion of the sleeve.

1,624,618. COMBINED STATEMENT AND LEDGER SHEET. GEORGE O. MOBLEY, Heath Springs, S. C. Filed June 8, 1926. Serial No. 114,548. 2 Claims. (Cl. 282—27.)



1. A combined ledger and statement sheet for posting machines, comprising a single section of paper folded transversely upon itself for providing upper and lower sheets, the upper section of paper having perforations at the transverse fold whereby the leading ends of the upper and lower sheets are relatively rigidly and detachably connected to positively prevent relative longitudinal movement between said leading ends, the upper sheet only having longitudinal perforations, which lead to the transverse perforations, the lower and upper sheets being longitudinally ruled for providing an intermediate statement section and outer side balance strips, the statement section and the strips having proper heading designations, the statement section of the upper sheet being adapted to be torn along the longitudinal and transverse lines of perforations and thereby separated from the lower sheet and balance strips of the upper sheets, and flat means affording a longitudinally sliding connection between the free end of each balance strip and the lower sheet, whereby a sheet of carbon paper may be properly held between the upper and lower sheets and the sheets will not pucker when being rapidly fed through the posting machine, the flat connecting means serving to retain the trailing ends of the balance strips to the lower sheet when the statement sheet is torn therefrom, the balance strips being free from connection with the lower sheet except at the leading and trailing ends.

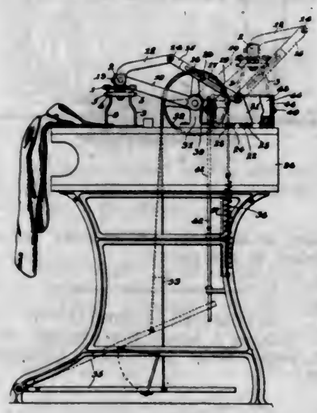
1,624,619. TIRE PATCH. LEE R. MOORE, Kansas City, Mo. Filed May 3, 1926. Serial No. 106,407. 1 Claim. (Cl. 152—26.)



A tire patch comprising an inner layer of fabric, an outer layer of fabric, cementing material between said layers, stitching extending through said layers and said cementing material, a layer of uncured rubber overlying the outer side of said layers of fabric, and tacks extending through the outer layer of fabric and through the layer of uncured rubber and projecting outwardly beyond the latter and having their heads embedded in said cementing material.

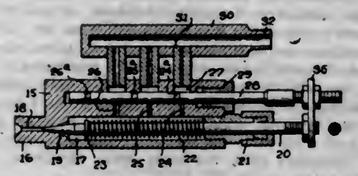
1,624,620. STORE-FRONT CONSTRUCTION. BON E. MYERS, Sioux City, Iowa. Filed July 19, 1926. Serial No. 123,266. 9 Claims. (Cl. 20—564.)

1. In a store front construction, a pair of sash members to engage the respective sides of a pane of glass, one of said members having a threaded opening, and a tie link having a threaded connection with the other sash member and a threaded portion threaded through said opening so that rotation of the link will simultaneously advance it in the same direction relative to both members, said link having a portion adapted by contact with the member having the threaded opening, to limit the rotation of the link in said opening.



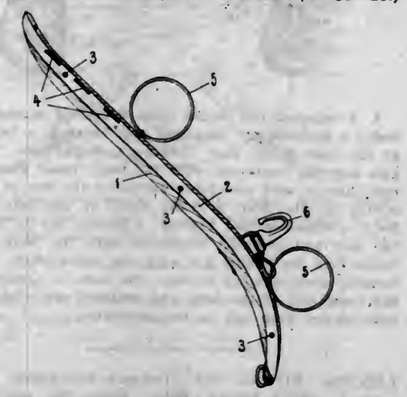
1,624,621. ASH TRAY. INGLE R. NAUGLE, Anna, Ohio. Filed Feb. 25, 1926. Serial No. 90,614. 3 Claims. (Cl. 131—51.)

3. An ash receiver comprising a substantially L-shaped member including relatively long and short arms and having means for slidable and rotatable attachment to a



support, the long arm being terminally formed with an upturned tapering portion provided with a disk at its base, and a tray comprising an elongated member having a receptacle on one end and opening in the direction of the other end, an inclined cigar supporting chute at the other end of the tray leading into the open end of the receptacle, the intermediate portion of the bottom of the tray being formed with a tapered socket receiving said tapering upturned portion whereby the tray is rotatably and readily removably supported on the arm.

1,624,622. MULTIPLE MARKER AND SPACER. OLIVER J. PECTAL and ELTON J. PALMER, Philmont, N. Y. Filed Nov. 13, 1925. Serial No. 68,840. 2 Claims. (Cl. 33—190.)

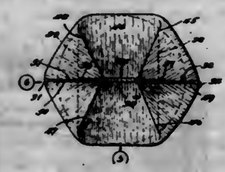


1. A device comprising a multiple marker, a collapsible bracket supported on a suitable portion of the device, marking finger holders connected to the bracket and marking fingers in the holders, the collapsible bracket being adapted for adjusting the distance between the finger holders and maintaining them in adjusted position, means for inking the marking fingers consisting of an ink receptacle, a revolvable ink pad in the receptacle, and means for revolving said ink pad and for bringing the marking fingers in contact with the ink pad and for returning the fingers to the position for marking.

1,624,623. ART OF SUPPLYING FUEL TO EXPLOSIVE ENGINES. HERMAN PEDERSEN, Bathbeach, N. Y. Filed Apr. 14, 1922. Serial No. 552,804. 5 Claims. (Cl. 123—180.)

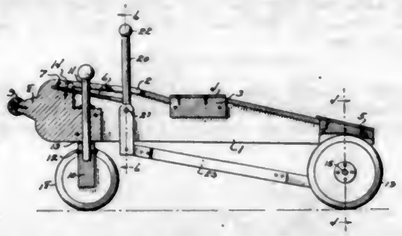
2. An apparatus of the kind described comprising a casing secured to the intake pipe of an internal combustion engine and having a chamber therein communicating with said intake pipe, a spring actuated valve in said chamber, a second chamber in said casing, a valve in said second chamber, ports of varying size connecting said two chambers, a second casing receiving acetylene gas, means connecting said second casing and said second chamber and having ports therethrough corresponding in size with said first mentioned ports, ports in said second named valve corresponding in size with said first mentioned ports but spaced apart a greater distance than the ports connecting said first and second named chambers, means connecting said two valves to move the same simultaneously.

1,624,624. HAME FOR DRAFT HORSES OR MULES. AGLIBERT PILLET, Buenos Aires, Argentina. Filed Aug. 20, 1924. Serial No. 733,212. 1 Claim. (Cl. 54—25.)



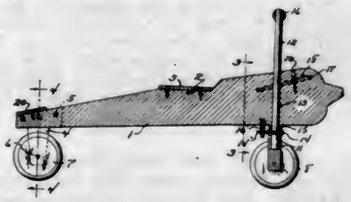
The combination in hames for draft animals, of a wooden member constituting the support for the usual connecting rings and hooks with a metallic reinforcement of substantially right angled cross-section one face of which is disposed on that portion of the hame which is to the rear with regard to the line of draft and the other face disposed on the outer face of the hame adjacent thereto.

1,624,625. PROCESS FOR DESULPHURIZING COAL, WATER, OR MIXED GASES FOR ILLUMINATING OR HEATING. EMIL RAFFLOER, Duisberg-on-the-Rhine, Germany, assignor of one-half to Wm. E. Leuchtenberg, New York, N. Y. Filed Jan. 8, 1925. Serial No. 446. 6 Claims. (Cl. 23—3.)



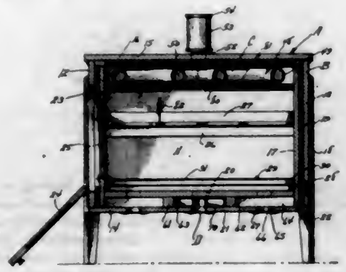
1. A process for desulphurizing gases, consisting of introducing the gas to be purified and blowing purifying material in a finely divided form into a desulphurizing chamber where sulphur absorption takes place.

1,624,626. BAG OR LINING. FRANCIS T. ROBINSON, Brooklyn, N. Y., assignor to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1923. Serial No. 617,938. 9 Claims. (Cl. 229—53.)



1. A one piece crinkled paper bag having a formed flat bottom suitable for lining containers, and made from a one piece flat crinkled paper bag blank with unformed bottom, said bag having a predetermined peripheral crease around the closed end of the blank and having the closed corner portions of the blank spread out and folded against the bottom to provide a formed one-piece flat bottom defined by said crease and which bottom is stretchable throughout its periphery.

1,624,627. RIDING TOY. DORMAN SCHAEFFER, Helena, Mont. Filed July 2, 1926. Serial No. 120,146. 2 Claims. (Cl. 208—42.)

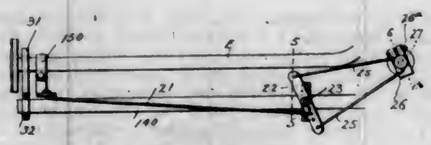


1. A wheeled toy of the class described comprising a body, a horizontally arranged seat thereon, a tail piece at the rear of the body forming a second seat, a front axle movably connected with the body, front wheels carried thereby, said axle being moved by the feet of a child sitting on the seat, a crank shaft at the rear of the body, a wheel carried thereby, a handle bar in front of the seat and pivotally connected with the body, a link connecting the handle bar with the crank shaft, a wing forming strip passing through the body, a projection at the front end of the body and resilient material on the ends of the wing and on the projection.

1,624,628. RIDING TOY. DORMAN SCHAEFFER, Helena, Mont. Filed July 2, 1926. Serial No. 120,147. 3 Claims. (Cl. 208—165.)

1. A device of the class described comprising a body, wheels connected with the rear end of the body, a seat fastened to the upper edge of the body, a front axle, a wheel carried thereby, a steering post rotatably supported by the body and held against other movements, means for connecting the post to the axle and interengaging members connected with the body and post for limiting the turning movement of the post and axle.

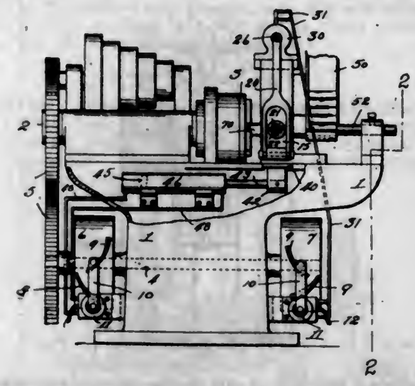
1,624,629. INCUBATOR. AARON A. SCOTT, Tigrett, Tenn. Filed May 10, 1924. Serial No. 712,376. 2 Claims. (Cl. 119—42.)



1. In an incubator, the combination with a body having an egg compartment therein and a lower wall including spaced inner and outer plates, longitudinally extending partitions disposed between the plates forming a centrally disposed chamber and side chambers, the side chambers having air inlet and air outlet openings formed therein, a water tray arranged within the central chamber having a flue therethrough, the lower plate having an opening communicating with the flue, the inner plate having openings communicating with the opposite ends of the central chamber all and for the purpose specified.

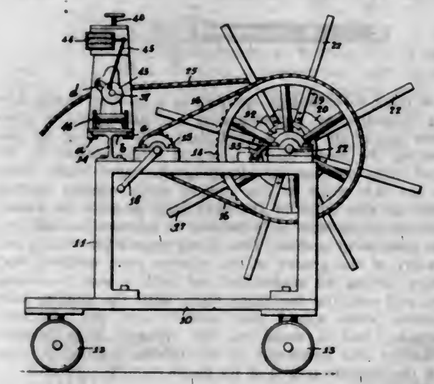
1,624,630. INDUCTANCE DEVICE AND METHOD FOR MANUFACTURING THE SAME. WILLIAM J. SHACKELTON, Scotch Plains, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 21, 1921. Serial No. 471,371. 10 Claims. (Cl. 178—46.)

1. A block of iron dust core material, and a coil of wire imbedded in said block.



1,624,631. AUTOMATIC CARBURETOR ADJUSTMENT. WILLIAM J. SHORT, Heber Springs, Ark. Filed Nov. 7, 1923. Serial No. 673,397. 5 Claims. (Cl. 261—39.)

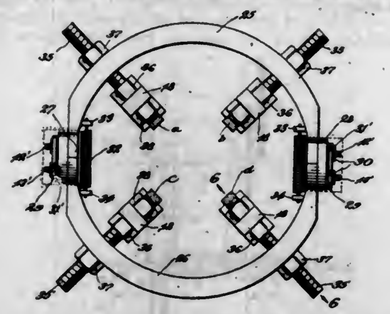
2. The combination of a carburetor valve and the exhaust pipe of an internal combustion engine, such exhaust pipe being free to move longitudinally under temperature changes due to exhaust gases passing through such pipe, a device connected with and partaking of such longitudinal movement of the exhaust pipe, the point of connection between said device and exhaust pipe being a substantial distance from the carburetor valve, and an operative connection between said device and the carburetor valve for transmitting to the valve the longitudinal movement of the exhaust pipe, such connection situated to be substantially unaffected by heat from the exhaust pipe and said operative connection comprising means to multiply the motion transmitted from the exhaust pipe consisting of a lever and its pivot and a movable member engaging the lever at different distances from the lever pivot, the lever moving member being nearer the pivot.



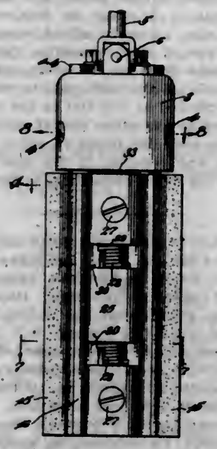
1,624,632. NIPPLE-THREADING MACHINE. NEVIN B. SMITH, Hamburg, Pa. Filed June 10, 1926. Serial No. 114,880. 3 Claims. (Cl. 10—105.)

2. In a nipple threading machine, the combination of a rotatable cutter head, a nipple engaging jaw, pneumatic means comprising a cylinder and connected valves for moving the jaw toward and away from the cutter head, pneumatic means comprising a cylinder and connected valves for opening and closing the jaw, with drums having cams thereon for actuating the

valves, a feed chute carried by the jaw and movable therewith, and a nipple ejector in alinement with the lowermost nipple in the chute.



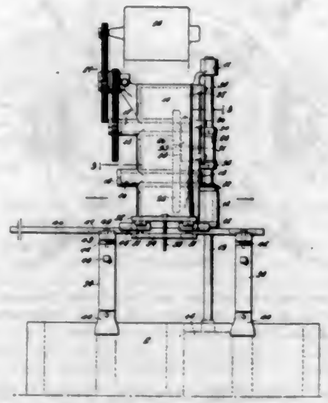
1,624,633. MEASURING AND REELING DEVICE. EUGENE D. SPOERRI, Omaha, Nebr. Filed July 1, 1926. Serial No. 119,858. 7 Claims. (Cl. 33—129.)



2. In a measuring and reeling device for flexible strands, a frame, a rotatable shaft journalled on the frame, a strand-holder rotatable with the shaft for moving a strand, a base-block disposed approximately parallel with the shaft and secured to the frame, a standard mounted slidingly on the base-block, a recording device on the standard, a spindle journalled in the standard, a measuring-wheel mounted on the spindle adapted to engage and to be rotated by the strand, a cam on the spindle, and a link movable with the cam for actuating the recording device.

1,624,634. GRINDING TOOL. PERL LEE STARR, Chicago, Ill. Filed Oct. 10, 1923. Serial No. 667,681. 10 Claims. (Cl. 51—206.)

1. A device for grinding a surface of revolution by rotation of the work or device, one with relation to the other, comprising two or more grinding tools having abrading surfaces adapted to lie in the surface of revolution of the work or device, means to support said tools with their abrading surfaces in said surface of revolution comprising two or more members, each carrying one or more of said tools and means to connect said members so that the members and the tool or tools each carry may move toward or from the axis of said surface of revolution but in so doing must move axially one member and its tool or tools with reference to another and the tool or tools of the latter.



1,624,635. CYLINDER-GRINDING TOOL. PERL LEE STARR, Chicago, Ill. Filed Oct. 24, 1923. Serial No. 670,441. 9 Claims. (Cl. 51—206.)

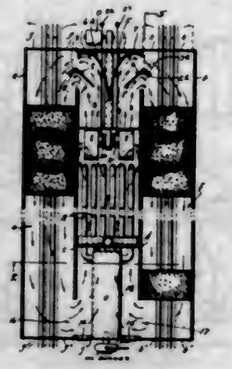
1. A grinding tool comprising independent sections, means connecting the sections to compel a relatively axial movement thereof during any movement of the sections toward and from each other, a cap fitting one end of the sections, means for connecting one of the sections to the cap, abrading elements carried by and projecting outwardly beyond the sections, and means whereby the cap may be connected to a driving element for simultaneously rotating the sections without interfering with their relative movement.

9. A grinding tool comprising independent sections, means connecting the sections to compel a relatively axial movement therefor during any movement of the sections toward and from each other, each of the sections being formed with recess opening through the outer surface, abrading element carrying members adapted to bear on the outer surface of the sections, said members having projecting portions to seat in said recesses, a clamping bar adjustable relative to each section and adapted to engage and hold a plurality of members in fixed relation to the sections, and springs carried by the clamping bars and underlying said members to compel a movement of the members from the section when permitted by the adjustment of the clamping bar.

1,624,636. PORTABLE HONING OR LAPPING MACHINE. HENRY STRAND, Cleveland, Ohio. Filed Dec. 10, 1924. Serial No. 754,977. 2 Claims. (Cl. 51—245.)

1. In a portable lapping machine, a vertical shell-like frame, substantially V-shape in transverse section to form one open side, vertically alined bearings at the open side of said frame, a shaft extending through said bearings, a cross-head fixed to the shaft, guides carried by the opposed walls of the open side to engage the cross-head, a crank pivoted at one end to the cross-head, a rotary shaft fixed to the other end of said crank, gearing arranged in the shell-like frame to effect reciprocation of the cross-head and rotation of the shaft, and external drive gear having drive connection to the other gearing.

1,624,637. DYESTUFFS AND PROCESS OF MAKING SAME. FRITZ STRAUB, Basel, and HERMANN SCHNEIDER, Riehen, near Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Mar. 6, 1925. Serial No. 13,626, and in Switzerland Mar. 20, 1924. 11 Claims. (Cl. 260—12.)



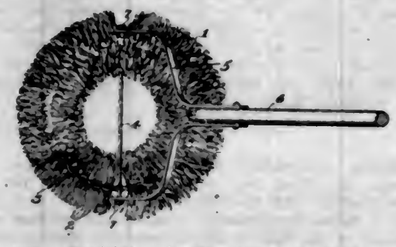
8. As new products the herein described new chromium compounds deriving from the o-hydroxyazodyestuffs prepared from diazotized 1-hydroxynaphthalene-8-sulphamide-2-amino-4-sulphonic acid and naphthols, which products form violet-brown to black powders, dissolving in water to solutions with bluish-violet to greenish-blue colorations and red-violet to violet colorations by addition of caustic soda, dyeing wool in an acid bath dark red-blue to greenish-blue fast tints.

1,624,638. RESIN AND PROCESS OF MAKING THE SAME. CHARLES O. TERWILLIGER, Beacon, N. Y., assignor to Fritz V. Briesen, trustee, New York, N. Y. Filed July 5, 1923. Serial No. 649,720. Renewed Feb. 7, 1927. 7 Claims. (Cl. 260—4.)

1. A resin which contains in combination a phenolic body, a ketone and a formaldehyde body, and which has been produced by permitting such substances to react simultaneously.

1,624,639. FRUIT DRIER. JOHN T. THOMASEN, Carlton, Oreg. Filed Oct. 26, 1926. Serial No. 144,302. 8 Claims. (Cl. 34—46.)

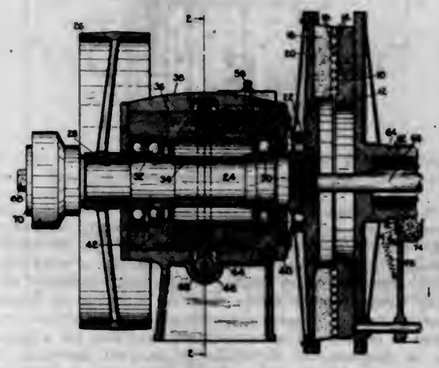
1. In a fruit drier a housing divided by partitions into two parallel drying chambers separated by an intermediate passageway, outwardly curved deflector-walls located in said intermediate passageway in the outlet end of the drier, the interior ends of said deflector-walls converging to the medial line of said intermediate passageway, heat generating means located in said intermediate passageway, independently operable means for circulating the



heated air thru each of said drying chambers individually and doors controlling the communication of the intermediate passageway with the drying chambers respectively.

1,624,640. RAZOR-BLADE HOLDER. WALTER M. TIETZ, Newark, N. J. Filed Aug. 3, 1925. Serial No. 47,803. Renewed Mar. 8, 1927. 1 Claim. (Cl. 30—25.)

A razor blade holder, comprising a tubular handle having extending on approximately a similar relative plane from one of its ends a fixed rigid strip member for supporting the razor blade, a second strip slidable on the fixed strip member for clamping the razor blade, hooks on the side edges of the slidable strip member overlapping the side edges of the fixed strip member for loosely holding the slidable strip member in movable contact with the fixed strip member, two spring fingers protruding outwardly of the groove of the slidable strip member, each finger having an unattached end with a bead for engaging and carrying the razor blade with the slidable strip member when moved from contact with the fixed strip member, and a stem on the slidable strip movable inwardly and outwardly of the tubular handle for moving the slidable strip and its finger.



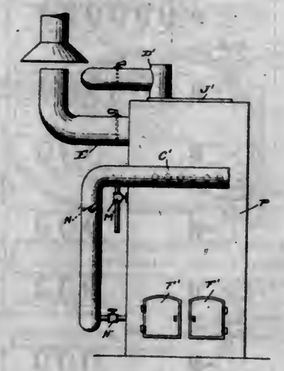
1,624,641. MOP. HENRY M. VAN DEUSEN, Westfield, Mass. Filed May 1, 1926. Serial No. 106,063. 1 Claim. (Cl. 15—229.)

A mop comprising a handle, forked brackets secured on opposite sides of said handle near one end thereof and extending in opposite directions laterally therefrom, a ring formed of a plurality of strands of wire twisted around each other and having mop material secured be-

tween said strands by the twisting thereof, a rod passing diametrically through said ring between the twisted strands thereof and rigidly fixed thereto and having its opposite ends projecting through said ring and pivoted in the free ends of said brackets, said ring and material being freely rotatable with said rod in either direction through the space between said brackets.

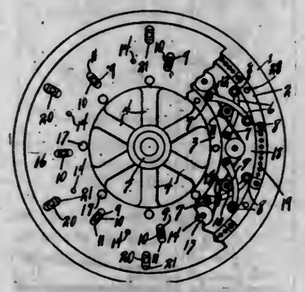
1,624,642. GRINDING MACHINE. ALBERT VUILLEUMIER, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed May 16, 1923. Serial No. 639,227. 9 Claims. (Cl. 51—130.)

1. In a ball grinding machine, in combination, a disc, means for rotating the disc, a second disc held against rotation, one of said discs having ball grooves with intervening ribs, and means for relatively moving the discs to cause one disc to engage the ribs on the other for dressing the latter, substantially as described.



1,624,643. ELASTIC-SUPPORT SYSTEM FOR VEHICLES. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Dec. 16, 1922. Serial No. 607,308. 14 Claims. (Cl. 267—17.)

1. In an elastic support system for relatively movable members the combination of a plurality of springs interposed therebetween, and means conjoining said members and said springs whereby the latter are connected in series when the members are forced toward each other, and are connected and increasingly flexed in parallel when the members are separated beyond the position of static equilibrium.

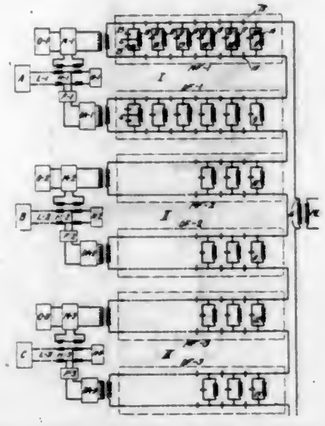


1,624,644. PROCESS OF MAKING COMBUSTIBLE GAS. WILLIAM D. WILCOX, Idaho Falls, Idaho. Filed Apr. 1, 1921. Serial No. 457,811. 1 Claim. (Cl. 48—202.)

The herein described process of generating coal and water gas by admitting air for blasting at an intermediate level to a body of coal contained in each of two generators, and thereby heating the fuel to incandescence, passing the blast gases downwardly and into corresponding regenerators, adding additional air for the combustion of the blast gases therein, alternately thereafter admitting steam to one of the two generators at the same level at which air was previously admitted, passing the steam downwardly through the incandescent fuel to form water gas, passing the water gas into and up the adjoining re-

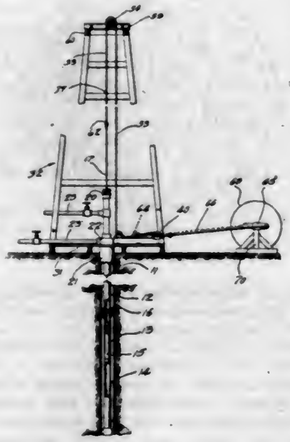
generator, across, and down the second regenerator and thereby superheating the water gas, passing the superheated water gas into the second regenerator, and then upwardly through a body of fuel having a layer of uncarbonized coal to a gas outlet above the coal, whereby mixed coal and water gas is produced.

1,624,645. VEHICLE WHEEL. BERT WILKINSON, Fort Worth, Tex. Filed July 28, 1926. Serial No. 125,537. 2 Claims. (Cl. 152—37.)



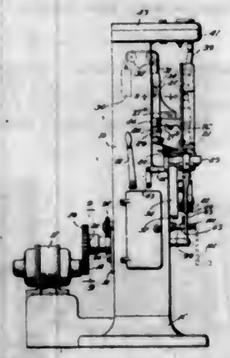
2. A vehicle wheel having a felly, guard members rigid with said felly and projecting radially outward and provided with annular interior shoulders, a tread and a holder therefor mounted between said guard members and provided with antifriction bearings, said shoulders being adapted to limit the inward thrust of said holder, yielding swinging arms provided with rollers bearing against the inner periphery of said holder, and means for controlling the inward and outward movement of said swinging arms.

1,624,646. TRANSMISSION SYSTEM. WALLACE V. WOLFE, Corona, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,808. 12 Claims. (Cl. 178—44.)



1. In a carrier wave signaling system, a transmission medium, a source of carrier waves, and a band filter con-

nected intermediate said source and said medium and traversed by waves from said source, said filter comprising a plurality of inductance coils, a coil near the end of



the filter adjacent said transmitting medium having a core of nonmagnetic material while other coils at the opposite end of the filter have cores of magnetic material.

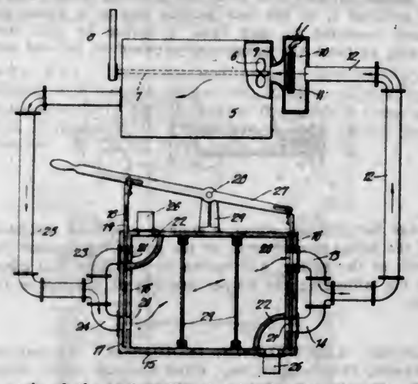
1,624,647. LONG-STROKE PUMPING APPARATUS. VICTOR YORK, Los Angeles, Calif. Filed Nov. 11, 1924. Serial No. 749,133. 3 Claims. (Cl. 74—14.)

1. In combination; a pump barrel; a pump plunger; a cable associated with said plunger; a stationary wheel over which said cable extends; a movable wheel over which said cable extends, said movable wheel being slidably mounted upon a base; and means for moving said movable wheel so as to move said cable in a manner to reciprocate said plunger.

1,624,648. COUNTERSINKING MACHINE. WILHELM G. ALDEEN, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a Corporation of Delaware. Filed Aug. 21, 1922, Serial No. 583,177. Renewed Oct. 22, 1926. 23 Claims. (Cl. 77—23.)

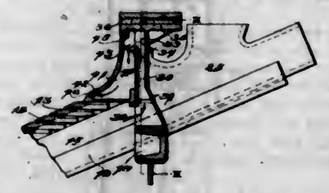
9. In a machine of the character described, the combination of a power driven element, a cutter tool having driving connection therewith to be driven constantly in the operation of the machine, a work support, adjustable work feeding means, and adjustable cutting stroke feeding means, both of said feeding means having driving connections with said power driven element in the normal operation of said machine but adapted to be disconnected therefrom for manual operation to permit the adjusting thereof in setting said machine for operation.

1,624,649. SPORTING CARTRIDGE. CARLOS DES ALLIMES, Jerez de la Frontera, Spain. Filed Oct. 27, 1925, Serial No. 65,224. 4 Claims. (Cl. 102—15.)



1. A metal cartridge case having its mouth edge formed with an undercut channel presenting an abrupt shoulder and a metal disc seating in and conforming to said channel and bearing from the shoulder.

1,624,650. AIR SUPPLY FOR TUMBLERS. ADOLPH ANFOSSI, Brooklyn, N. Y. Filed Nov. 27, 1925. Serial No. 71,724. 6 Claims. (Cl. 34—7.)

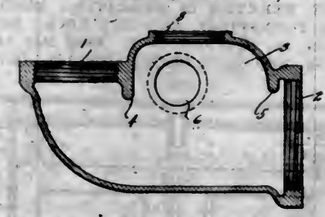


1. The combination with a clothes drying device having an air inlet and an outlet of a chamber through

which said air passes in circulation to and from the drying device, adapted to accumulate air and valve members

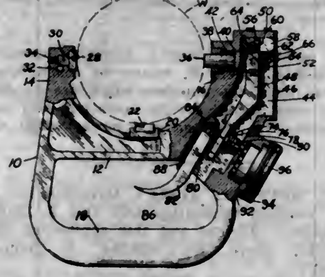
in each of the end walls of said chamber for diverting the air discharged from said drying device into the chamber or into atmosphere.

1,624,651. STOKER. OTTO ARAM, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1923. Serial No. 643,367. 4 Claims. (Cl. 110—44.)



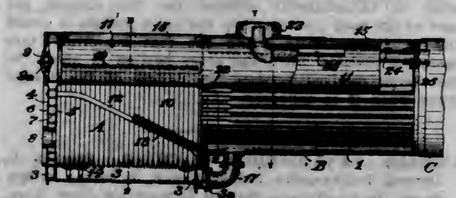
2. In an underfeed stoker furnace having alternately arranged series of tuyères and retorts, a ram box associated with each retort, hollow castings defining fuel openings from the ram boxes into the retorts, and air distributing members disposed rearwardly of the said hollow castings, said hollow castings and air distributing members being formed to conduct air therethrough and to the furnace.

1,624,652. COLORED SHEET MATERIAL AND METHOD OF PRODUCING THE SAME. THOMAS M. ATKINSON, Milltown, N. J., assignor to The Royston Paper Company, Milltown, N. J., a Corporation of New Jersey. Filed Sept. 9, 1925. Serial No. 55,354. 2 Claims. (Cl. 41—26.)



1. As an article of manufacture, a web of colored paper suitable for covering and like purposes, said paper having imposed upon at least one surface thereof a plurality of configurations including metallic or other lustrous coating material preapplied beneath a dye of uniform hue and tone, whereby said paper is given a single or basic color in which said configurations are blended and fixed.

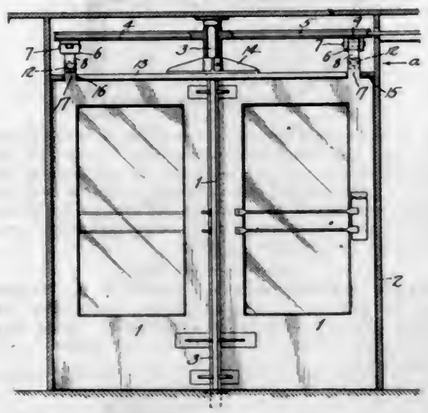
1,624,653. WATER-CLOSET BEND. EDWARD W. N. BOOSEY, Detroit, Mich. Filed June 29, 1925. Serial No. 40,416. 3 Claims. (Cl. 137—75.)



1. A water closet bend having threaded inlet and outlet ends, said bend being constructed with a pocket in the upper surface between the said ends, the wall defining the pocket at the forward end extending below the wall defining the pocket at the rear end, the said pocket having hubs for the connection of waste piping, and a vent connection in the upper side thereof.

1,624,654. GAUGE. RICHARD J. BRITTAIN, Jr., Newark, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 14, 1924. Serial No. 699,227. 13 Claims. (Cl. 33—147.)

1. In an external diameter gauge, a frame to straddle the work to be gauged and having work positioning plates arranged at right angles to one another, a gauge pin slidable in the frame at right angles to one of said plates, a lever pivoted to the frame and having means to operate the gauge pin, an indicator actuated by the lever, and means for moving the lever; substantially as described.



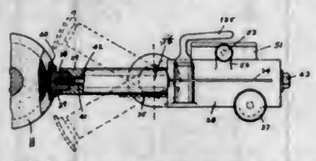
1,624,655. LOCOMOTIVE BOILER. ALFRED W. BRUCE, New York, N. Y. Continuation of application Serial No. 64,347, filed Oct. 23, 1925, and in Canada Oct. 18, 1926. This application filed Jan. 27, 1927. Serial No. 164,031. 17 Claims. (Cl. 122—94.)

1. In a locomotive boiler, the combination of a barrel and a fire box; the fire box having a steam drum at the top thereof, side wall water tubes leading into said

drum, a hollow mud ring connected to the bottom of the tubes to supply feed water therefor; and a wrapper sheet rigidly secured to the barrel and the fire box, forming a stiffening means for the parts of the fire box, and a housing for the sides and top of the fire box.

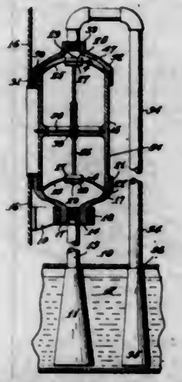
1,624,656. MEANS FOR UTILIZING THE SURPLUS ENERGY EXERTED IN OPERATING REVOLVING DOORS, TURNSTILES, AND THE LIKE. BENJAMIN B. BRYAN, Jr., New York, N. Y. Filed May 14, 1926. Serial No. 109,016. 4 Claims. (Cl. 185—19.)

1. The combination with a revolving barrier, of a power wheel, a generator, means for communicating to said power wheel the impulses which are manually imparted to said barrier for its operation, and means of driving connection between said power wheel and generator.



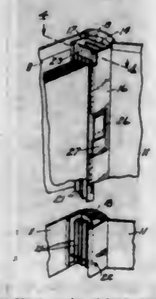
1,624,657. SUPPORT. JAMES L. DAVIDSON, Los Angeles, Calif. Original application filed July 2, 1919, Serial No. 308,087. Divided and this application filed Oct. 11, 1921. Serial No. 506,984. 3 Claims. (Cl. 217—60.)

1. A support for a container, said support being adapted to engage the cover portion thereof, said support comprising a foot hinged to the edge of the cover portion, and a flanged brace member hingedly connecting the foot to the body portion of the container and operating to automatically collapse the foot against the back of the body portion when the cover portion is closed and to automatically swing the foot outwardly into operative position when the cover portion is open, the foot being received between the flanges of the flanged brace when it is collapsed.



1,624,658. LENS-GRINDING MACHINE. EDWARD P. DEVINE, Indianapolis, Ind., assignor, by mesne assignments, to Continental Optical Corporation, New York, N. Y., a Corporation of Delaware. Filed June 7, 1924. Serial No. 718,471. 5 Claims. (Cl. 51—96.)

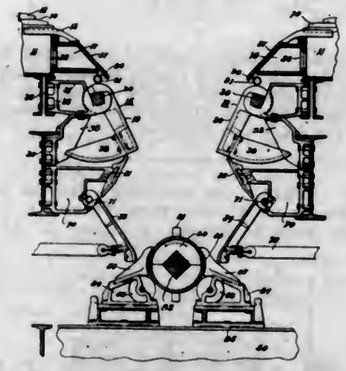
1. In a lens grinding machine, the combination with a grinding wheel, and means for holding a lens adjustable towards and from the grinding wheel, of a removable tube longitudinally adjustable in the lens holding means towards and from the grinding wheel, means for securing it to the lens holding means, a gauge rod loosely mounted in said tube, a spring in said tube tending to force the gauge rod outward so its end will



engage the grinding wheel, a stop on said tube for limiting the outward movement of the gauge rod against the action of the spring, and means on said tube and gauge rod for indicating the proper position of the rod in the tube.

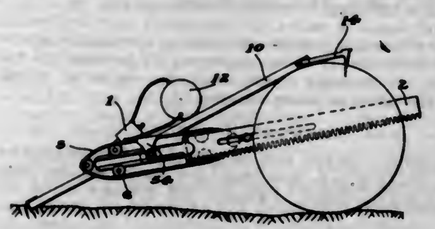
1,624,659. LIQUID-LEVEL INDICATOR. THOMAS M. EYNON, Philadelphia, Pa. Filed Nov. 24, 1922. Serial No. 602,992. 8 Claims. (Cl. 73—54.)

1. In an indicator of gasoline height in tanks, a casing adapted to be connected at both ends with a tank, connections with the two ends terminating in pipes of different diameters adapted to extend within the gasoline, a pair of diaphragms in the casing, one at each end, shutting off the ends from the body of the casing, a connection between the diaphragms, a spindle coupled with the connection within the casing to rotate with the movement of the diaphragms and an indicator carried by the spindle.



1,624,660. BINDER. WILLIAM FELDMANN, Chicago, Ill. Filed Oct. 11, 1926. Serial No. 140,791. 3 Claims. (Cl. 129—38.)

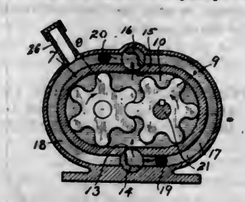
1. A binder, including a backing provided with spaced flanges, a plurality of elements pivotally secured to one end of said backing and between said flanges, a member



hinged to the opposite end of one flange and adapted to hold the free ends of said elements between said flanges, and means slidable on the other flange for removably securing said member.

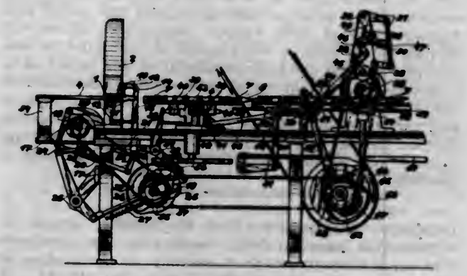
1,624,661. REFUSE-DISCHARGE MECHANISM. ROBERT A. FORESMAN, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1921. Serial No. 513,500. 24 Claims. (Cl. 110—32.)

1. In combination in an ash discharge device for a progressive feed furnace, a pit adapted to receive refuse from the active grate surface comprising means for distributing air to the refuse in an upper zone of the pit, and an oscillating agitator pivoted at one side of the pit and disposed below the zone of combustion for agitating the refuse in the upper zone of the pit, said agitator being high enough to operate without disturbing the refuse in the bottom of the pit.



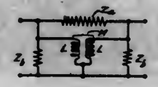
1,624,662. POWER DRAG OR FALLING SAW. FREDRIK HALVORSEN, Seattle, Wash. Filed Oct. 9, 1922. Serial No. 593,253. 5 Claims. (Cl. 143—68.)

1. In combination, a motor, a reciprocable saw, a reciprocable crosshead and a guide therefor, said saw being connected to said crosshead, a chain operatively connected to said crosshead, and connected to be driven by said motor, and a guide for said chain terminating at each end in cams approaching a cycloid, whereby the speed of said crosshead and saw is gradually increased at the beginning of a stroke.



1,624,663. HYDRAULIC TRANSMISSION. EDWARD G. JACKER, Chicago, Ill., assignor of one-half to Vincent Bendix, Chicago, Ill. Filed July 8, 1919. Serial No. 309,458. 1 Claim. (Cl. 60—53.)

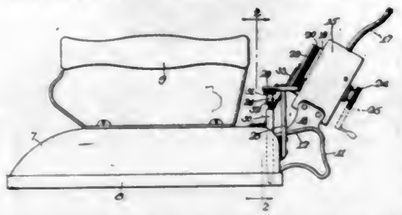
In a device of the class described, a casing of a flattened cylindrical shape having both ends closed and provided on its interior with a pump chamber and a motor chamber and a passageway entirely surrounding the pump chamber and conforming to its contour, short passageways centrally disposed in the flattened sides of the casing forming communication between the first named passageway and the pump chamber, valves



at the junctions of said passageways to control the passage of fluid therethrough connected to operate in unison and other passageways connecting said first named passageway to the inlet and outlet sides of the motor chamber.

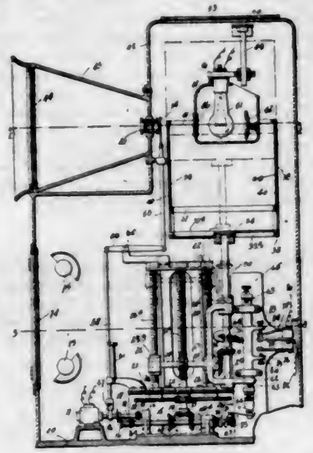
1,624,664. FILLING AND PACKING MACHINE. EMIL JAGENBERG, Dusseldorf, Germany. Filed Sept. 10, 1926, Serial No. 134,632, and in Germany Sept. 1, 1925. 8 Claims. (Cl. 93—6.)

2. In a filling and packing machine in combination an open holder for a plurality of articles, an intermittently movable table carrying a plurality of empty containers for said articles, a carriage adapted to be reciprocated into and out of contact with the articles in the holder, substantially lever-shaped feeling means pivotally disposed on the holder, adapted to be engaged with the articles and to be operated by the movement thereof, stopping means operatively connected to said feeling means and movable in and out of contact with the carriage, marking and labeling means associated with the movable table, and locking means for the marking and labeling means engageable with the carriage.



1,624,665. WAVE FILTER. KENNETH S. JOHNSON, Jersey City, and TIMOTHY E. SHEA, Rutherford, N. J., assignors, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 31, 1925. Serial No. 5,959. 9 Claims. (Cl. 178—44.)

1. A wave filter section comprising a plurality of circuit branches disposed in series and shunt relationships to the direction of wave propagation, reactive impedance elements included in said branches, the impedances of which cooperate to enable the filter section to pass freely a band of wave frequencies the limits of which are both above zero frequency, inductive coils in two similarly

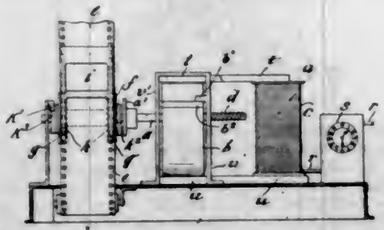


disposed circuit branches which are separated by an oppositely disposed branch, and mutual inductance between said coils, said mutual inductance being positive with respect to the series connection of said coils and determining at least in part the wave transmission characteristics of the filter section.

1,624,666. ATTACHMENT FOR ELECTRIC IRONS. EUGENE S. KARLSEN, Chicago, Ill. Filed Dec. 31, 1925. Serial No. 78,706. 3 Claims. (Cl. 219—25.)

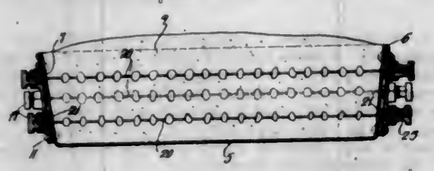
1. In a device of the class described, the combination with an electric iron having therein a heating element provided with conductors extended through its rear portion, of another pair of conductors having electric connection with a supply of electricity, said last named conductors provided with contact members, a thermostat carried by the iron, a bar adapted for actuation in one direction thereby pivotally supported at one of its ends, a contact bar adjacent the pivoted bar in connection with one of the first named conductors, a brush carried by said bar to rest against one of said contact members and another brush electrically connected to said heating element and resting against the other of said contact members.

1,624,667. MOTION-PICTURE MACHINE. GEORGE H. KERN, Los Angeles, Calif., assignor to The Producers Pictures Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Dec. 2, 1921. Serial No. 519,461. 21 Claims. (Cl. 88—16.)



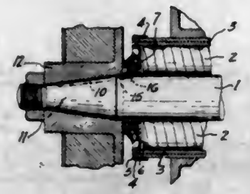
1. In a motion picture machine, a holder for receiving pictures, a screen, means for projecting said pictures onto said screen, means for revolving said holder, feeding means for moving said holder in axial direction, means for actuating said revolving and said feeding means intermittently in one direction and at a constant speed in the opposite direction, and means for disabling said projecting means during the return movement of said holder.

1,624,668. APPARATUS FOR HEAT-TREATING METALS. FREDERIC S. KOCHENDORFER, River Forest, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 15, 1922. Serial No. 601,021. 22 Claims. (Cl. 266—3.)



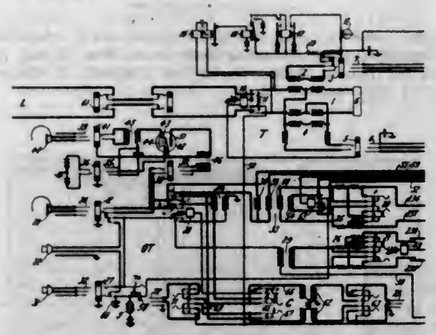
17. A method of passing metal in strand form through a substantially horizontally heating chamber, which comprises simultaneously pushing and pulling said strand between two points and allowing a portion between said chamber and one of said points to sag.

1,624,669. PROJECTING MACHINE. EDOUARD ERNEST LEHWESS, St. Cloud, near Paris, France. Filed Jan. 6, 1823. Serial No. 610,995. 6 Claims. (Cl. 88—28.)



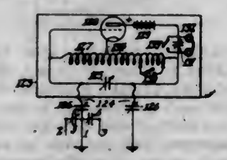
1. A feed mechanism for projecting apparatus wherein the feed of the film or other pictures are suitably arranged for intermittent projection, comprising an automatic electric driving mechanism, means between the driving mechanism and the film strip or like picture mounting to effect alternately a quick feed of the film or like a predetermined and always uniform extent, said means including a spring cooperating with the electric drive, means to switch on a momentary current actuating the mechanism a substantial part of a revolution against the resistance of the spring, means for breaking the current and allowing return-motion by the spring energy to the initial or normal position.

1,624,670. MEANS FOR ORNAMENTING FOODSTUFFS. ALBERT MARTIN, New York, N. Y. Filed Mar. 30, 1926. Serial No. 98,592. 7 Claims. (Cl. 107—1.)



2. A means for ornamenting foodstuffs comprising a container having openings in the walls thereof, rods extending across said container and passing through said openings, said rods being adapted to carry edible members disposed in ornamental arrangement, and means whereby the rods may be drawn out of said container when the foodstuff is in edible condition so that the members carried by the rod will remain in position in the foodstuff to form a design when the same is cut in slices.

1,624,671. PACKING RING. VICTOR E. NELSON, Redford, Mich. Filed Apr. 27, 1921. Serial No. 464,845. 9 Claims. (Cl. 286—7.)



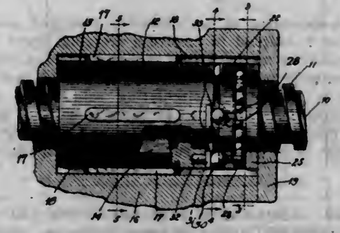
3. In a packing for rods, shafts or the like, a bearing for the shaft, a cap enclosing the bearing, a cork ring having a flat face engaging the said cap and having a beveled face on the opposite side, a spring metal cup shaped member engaging the said beveled face and secured to the shaft, a member on the shaft and means between the said member and cup shaped member yieldably forcing the cork ring into engagement with the cap.

1,624,672. COMMUNICATION SYSTEM. HENRY W. O'NEILL, Elmhurst, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 17, 1924. Serial No. 756,403. 24 Claims. (Cl. 250—6.)

1. In a signaling system, radio transmitting and receiving stations, signal responsive means at the receiving station, a circuit including a pair of relays, one at each of said stations operated upon the actuation of said signal responsive means, a visual signal at each station actuated by the operation of its corresponding relay, means actuated upon answering a call at either station to deenergize both relays, a circuit for the relay at the station where the call is answered prepared upon the answering of the call, and means for closing said circuit upon disconnection to actuate said visual signal as a clearing-out signal.

1,624,673. METHOD OF AND MEANS FOR RADIO-COMMUNICATION. ARTHUR E. PAIGE, Philadelphia, Pa. Filed Apr. 19, 1922. Serial No. 555,556. 8 Claims. (Cl. 250—11.)

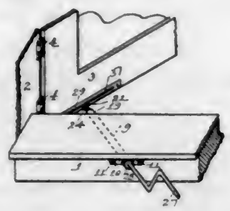
4. The combination with a municipal electric supply system including but three wires, two of which are oppositely polarized and one of which is neutral; of apparatus adapted for radio communication and including respective adjustably variable condensers connected with said polarized wires, and an electric circuit of oscillatory character having directional capacity for such communication; which apparatus is dirigible with respect to said three supply wires; and a ground connection for said apparatus; whereby the maximum directional effect of said apparatus may be determined by adjustably shifting the position thereof with respect to said ground connection.



1,624,674. PROCESS OF PRODUCING LACTIC ACID FROM SUGAR-CONTAINING RAW MATERIALS BY MEANS OF LACTIC-ACID BACTERIA. ALFRED POLLAK, Vienna, Austria. Filed Sept. 11, 1924, Serial No. 737,197, and in Czechoslovakia Sept. 29, 1923. 4 Claims. (Cl. 260—120.)

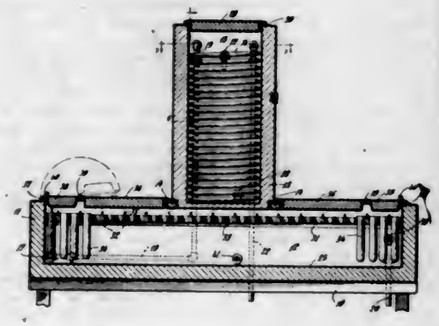
1. A continuous process of producing lactic acid from sugar-containing raw materials by means of lactic acid bacteria, which consists in initiating vigorous acidulation of the sugar-containing solution to be fermented, thus provoking an ample propagation of the ferment in all parts of the said solution, whereby part of the generated lactic acid is neutralized after its formation with nitrogen-containing alkalis, and withdrawing the fermented liquid at intervals by portions and supplying equal amounts of fresh sugar-containing solution to the acidulating vessel while acidulation is permitted to continue.

1,624,675. O-O-DIACYL DERIVATIVES OF DIPHENOLISATINE AND PROCESS FOR THE MANUFACTURE OF SAME. ERNST PREISWERK, Basel, Switzerland, assignor to The Hoffmann-La Roche Chemical Works, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1923, Serial No. 669,237, and in Switzerland Nov. 27, 1922. 9 Claims. (Cl. 260—48.)



4. As a a new product O-O-diacetyl-diphenolisatine which may be produced by treating diphenolisatine with an acylating agent under conditions in which less chemical energy is developed than necessary to form triacetyl diphenolisatine, the new compound being a light, fine crystalline powder, which is difficultly soluble or even insoluble in the usual organic solvents, absolutely insoluble in water, likewise in cold dilute sodium hydroxide solution, its melting point being 242° C., the product being dissolved after prolonged stirring with warm sodium hydroxide solution and diphenolisatine being separated from the solution by acidifying, the new compound being destined for use in therapy, as it possesses laxative properties and is at the same time only very moderately toxic, in the animal test doses of more than 1 g. per kilo body-weight having no toxic effect.

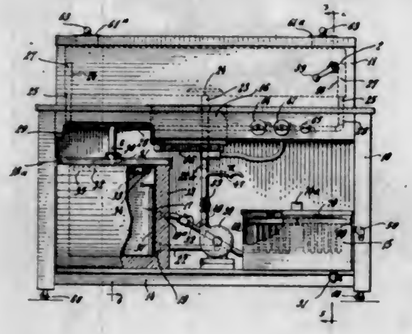
1,624,676. NUT AND SCREW FEED. STAFFORD M. RANSOME, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill.; a Corporation of Illinois. Filed May 21, 1925, Serial No. 31,963. 18 Claims. (Cl. 74—40.)



18. A correcting device for the inaccuracies of feed screws comprising, in combination, a nut formed of a plurality of sections longitudinally movable relative to each other axially of the nut, and mechanism associated therewith to average the separate advances of the nut sections.

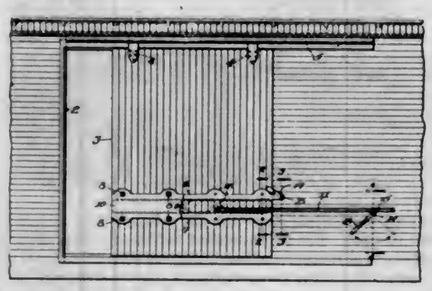
1,624,677. CLOSURE-SWINGING DEVICE. JOHN W. SEALOCK and MARTIN DE GRAAF, Grand Rapids, Mich., assignors to Wolverine Metal Specialties Co., a Corporation of Michigan. Filed Dec. 26, 1924. Serial No. 758,035. 5 Claims. (Cl. 268—120.)

1. In a device of the character described: a frame having a bore extending therethrough; a cap mounted on the frame adjacent the bore's inner end; a sleeve in the bore threaded in the cap; a screw having a head between the cap and an end of the sleeve for holding the screw against axial movement; a closure swingably mounted on the frame and having a guide-bearing extending transversely to the closure's axis of swinging; a nut on the screw carrying a member slidable in the guide-bearing; the cap having an opening for the insertion of means for turning the screw.



1,624,678. APPARATUS FOR FREEZING AND MOLDING CONFECTIONS. MILTON SCHNAIER, New York, N. Y. Filed Jan. 31, 1924. Serial No. 689,746. 5 Claims. (Cl. 62—31.)

1. An apparatus of the character described comprising a receptacle adapted to receive a freezing liquid, guiding and supporting means within said receptacle, a refrigerating receptacle mounted centrally upon said first named receptacle, means for circulating said liquid through said receptacles, and means at opposite sides of said first named receptacle for the reception and discharge of the substance to be treated, substantially as specified.

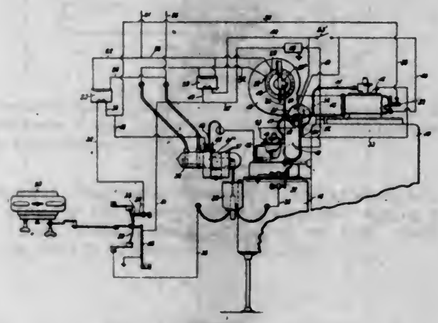


1,624,679. APPARATUS FOR FREEZING AND MOLDING CONFECTIONS. MILTON SCHNAIER, New York, N. Y. Filed Apr. 26, 1924. Serial No. 709,179. 7 Claims. (Cl. 62—114.)

1. An apparatus of the character described comprising a support, a refrigerating receptacle, a freezing receptacle, and an auxiliary receptacle on said support; said auxiliary receptacle being disposed at the side of said refrigerating receptacle, means for circulating a freezing agent through said freezing and refrigerating receptacles, an

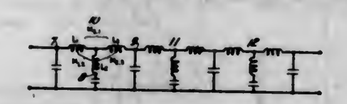
elevated overflow outlet in said refrigerating receptacle, and a conduit connecting said overflow outlet with said auxiliary receptacle, substantially as specified.

1,624,680. CAR-DOOR OPENING AND CLOSING MECHANISM. CHARLES SCHUSSLER, Blue Island, Ill. Filed Oct. 4, 1926. Serial No. 139,543. 7 Claims. (Cl. 268—44.)



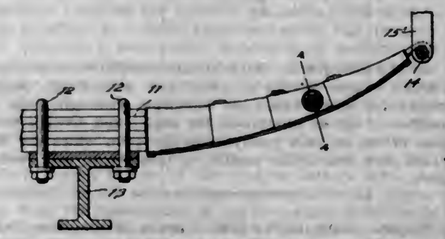
1. The combination with a car wall having an opening and a sliding door therefor, of an opening and closing mechanism for said door, consisting of a pair of upper and lower racks extending crosswise of the door and secured thereto with their teeth opposed, a hand lever pivoted to the car wall at one side of the door, and an endwise movable actuating member pivoted to the hand lever at one end and having at its opposite end a shoe between the racks and engageable with the teeth of either of them for respectively opening and closing said door thereby.

1,624,681. COMBINED BOILER AND INCINERATOR SYSTEM. LEWIS L. SCOTT, St. Louis, Mo. Filed Dec. 5, 1925. Serial No. 73,424. 5 Claims. (Cl. 158—28.)



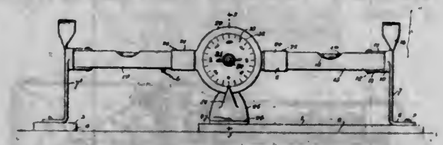
1. In a system such as described, a boiler, an incinerator, a burner for each of said elements, fuel supply connections for delivering fuel to each of said burners, a spark plug in each burner, normally inoperative electrical connections for said spark plugs, air supply connections for each burner, a valve controlling flow of fuel through

said connections to direct it to either of said burners, a switch for closing the circuit of either of said spark plugs, a valve for controlling the flow of air through the air



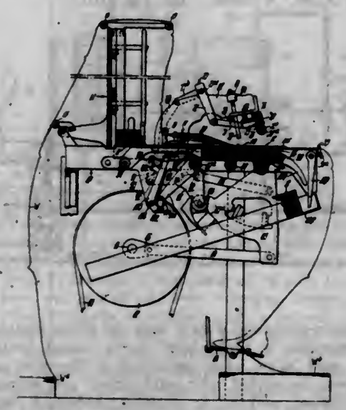
supply connections, and common operating connections for the switch, air valve and fuel valve for rendering the spark plug circuit operative and for establishing a flow of fuel and air to either of said burners.

1,624,682. ELECTRICAL NETWORK. TIMOTHY E. SHEA, Rutherford, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 31, 1925. Serial No. 5,968. 11 Claims. (Cl. 178—44.)



1. In a wave transmission network, a plurality of meshes coupled by impedances, additional coupling impedance between at least one pair of meshes due to the configuration of impedance elements included in said pair of meshes, and means for neutralizing said additional coupling impedance comprising an impedance having opposite sign and equal magnitude thereto at all frequencies.

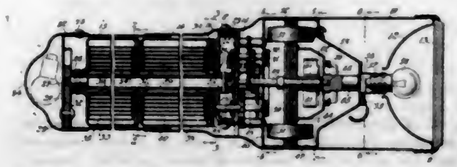
1,624,683. METAL CASING FOR LEAF SPRINGS. LAWRENCE SKOK, Cleveland, Ohio, assignor to The Apex Spring Cover Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1921. Serial No. 514,912. 9 Claims. (Cl. 267—37.)



1. A device of the character described comprising in combination, a spring having separate leaves, a cover therefor having a pressure chamber surrounding the springs, said chamber being formed by a jacket of fluid-proof material, and a reinforcing metallic casing entirely surrounding and closely fitting the jacket, said casing comprising sections of light sheet metal having the ends of adjacent sections overlapping each other, and means for sealing the end sections, whereby lubricant under pressure may be retained within said jacket.

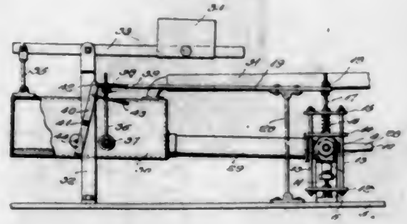
1,624,684. COMBINATION LEVEL. EUGENE W. SMITH, New York, N. Y. Filed Aug. 2, 1926. Serial No. 126,674. 3 Claims. (Cl. 33—214.)

1. A combination level comprising a pair of tubular members each carrying level vials, a pair of supporting legs for one of said tubular members, a single supporting leg for the other of said tubular members, means for pivotally connecting together said tubular members so that the tubular member carrying the single leg may be swung at an angle to the other tubular member, and a base connected with the two legs associated with one of the tubular members.



1,624,685. MANIFOLD-WEB-PRINTING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 9, 1925. Serial No. 61,431. 22 Claims. (Cl. 101—57.)

1. In a multiple-addressing machine, the combination with an addressing machine having a printing-plate magazine, a printing bed disposed forward from said magazine, and a roller-platen, of an anti-friction element including a roller mounted on said machine at the rear and near the bottom of said magazine, two anti-friction rollers mounted at the top of said magazine, one at the front and one at the rear thereof, a roller mounted on said machine at the front of said magazine a short distance above said printing bed, said rollers adjacent said magazine being laterally disposed and arranged for passing a forwardly-fed work-web over the same from a work-pack below the bottom of said magazine at the rear



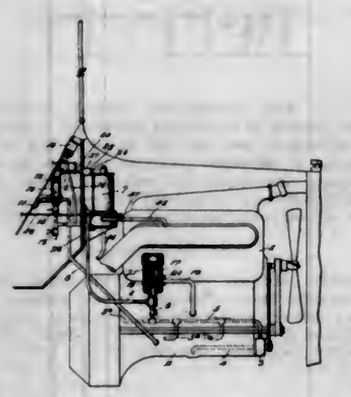
thereof, and along said printing bed to printing position under said roller-platen, and means for lightly pressing said work-web against said printing bed adjacent said printing position, said rollers and said means co-operating to permit the weight of said web behind said magazine to keep slightly taut the stretch of said web disposed on said printing bed to the rear of printing position.

1,624,686. FLASH LIGHT. RENSSELAER J. SMITH, South Bethlehem, N. Y., assignor to The Batles-Lite Co., composed of Mildred A. Smith and Charles Z. Smith, Albany, N. Y. Filed June 5, 1926. Serial No. 113,965. 5 Claims. (Cl. 240—10.5.)

1. A flash-light, including an electric lamp, a fixed reflector, a generator connected with said lamp for producing a source of energy to illuminate the same, a spring motor for driving the generator, a governor for regulating the speed of operation of the generator, and including a common means for controlling the governor and effecting relative movement of the lamp with respect to the fixed reflector to vary the focus of the same.

1,624,687. TANK-FILLING MEANS. WILLIAM H. SMITH, Oakland, Calif. Filed June 24, 1926. Serial No. 118,279. 4 Claims. (Cl. 137—101.)

1. The combination with a tank; of filling means therefor comprising a liquid inlet valve, means for quickly closing said valve when permitted to function, a lever operatively connected with said valve, and moved to a predetermined position by opening thereof, a latch for positively holding said lever in said position to hold the valve open, and means actuated by predetermined rise of liquid in the tank for automatically releasing said holding means.

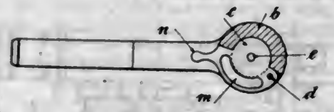


1,624,688. PNEUMATIC WHEEL. FERDINAND K. SVENSON, Detroit, Mich. Filed May 28, 1926. Serial No. 112,309. 6 Claims. (Cl. 152—33.)

1. A pneumatic wheel comprising a felloe, a pneumatic cushioning element surrounding and spaced from said felloe, a tire member surrounding and spaced from said element, a pair of oppositely disposed clamping members having binding engagement with said tire member and element for maintaining them in spaced relation, and a pair of clamping members having binding engagement with said element and secured to said felloe for maintaining the

element and felloe in spaced relation, each of said clamping members formed with an intermediate ribbed part.

1,624,689. LUBRICATING SYSTEM OF INTERNAL-COMBUSTION ENGINES. ERNEST J. SWEETLAND, Montclair, N. J. Filed Nov. 19, 1920. Serial No. 425,042. 31 Claims. (Cl. 184—6.)

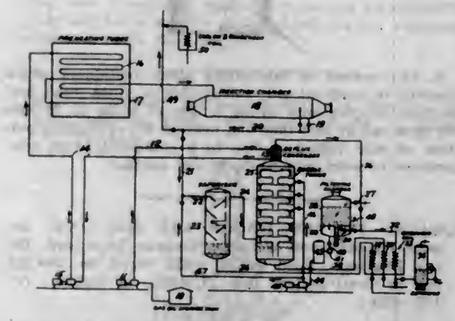


1. The combination with an automobile internal combustion engine having a crank case, of a single pump means for withdrawing oil therefrom and delivering a portion of the oil directly to the engine and another portion of the oil to a purifying device from which the oil freed from deleterious matter, is returned to said crank case.

1,624,690. TOBACCO PIPE. LESLIE WASHBURNE TAYLOR, Bournemouth, England. Filed Sept. 25, 1926. Serial No. 137,735, and in Great Britain Oct. 6, 1925. 1 Claim. (Cl. 131—12.)

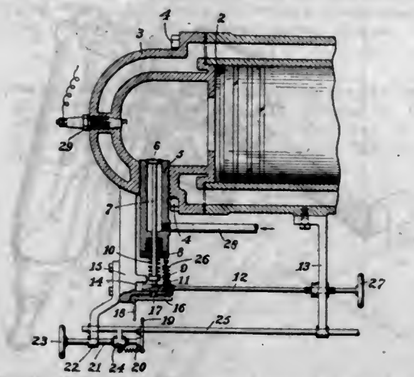
In a tobacco pipe, a movable and perforated disc normally dividing the interior of the bowl longitudinally into an upper and a lower chamber, said disc pivoted on the

bowl for removal from the interior of the latter, a slot in the bowl for receiving said disc, a finger device in



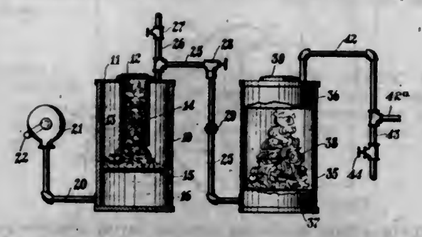
connection with said disc for effecting the movement of the latter in and out of the bowl interior, substantially as herein set forth.

1,624,691. METHOD FOR THE INSTANTANEOUS SETTING OF GLUE BETWEEN SURFACES. GEORGE J. THOMA, Portland, Oreg. Filed July 26, 1926. Serial No. 125,115. 2 Claims. (Cl. 144—309.)



1. A method of repairing blisters on veneered furniture consisting of slitting the blister at the base, the placing of glue between the raised surface and the next surface disposed thereto and the simultaneous application of heat and pressure during the setting of the glue.

1,624,692. PROCESS OF MANUFACTURING GASOLINE. HENRY THOMAS, Ridley Park, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Aug. 12, 1925. Serial No. 49,702. 3 Claims. (Cl. 196—96.)

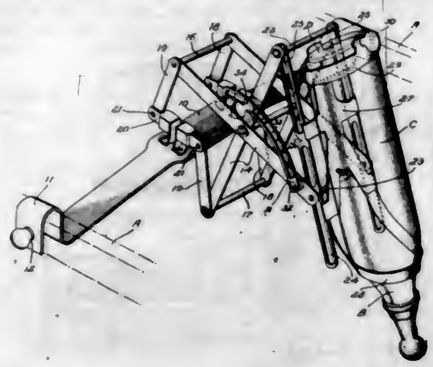


2. The process of producing decolorized gasoline which comprises releasing the pressure on cracked hydrocarbon that is largely in a liquid phase and under high pressure and contains a substantial proportion of gasoline and allowing a predominating proportion of the liquid hydrocarbons to vaporize within an expanded space, the vapor within said space containing said gasoline and heavier hydrocarbons, separating out the minor portion of the hydrocarbons in a liquid condition, subjecting a flowing stream of such vapor to partial condensation and intimately mixing vapors of the flowing stream with the condensate of the same stream, thereby effecting separation from the hydrocarbon of higher boiling constituents with resultant partial purification of the gasoline vapors, filtering the uncondensed vapors of the flowing stream of hydrocarbon through a body of a decolorizing material, maintaining such temperature of filtration as will permit a portion of the vapors to condense, and condensing the decolorized vapors that are uncondensed in the body of decolorizing material.

1,624,693. FUEL-CONTROL MEANS FOR INTERNAL-COMBUSTION ENGINES. BURCHARD D. THOMPSON, Cyclone, Pa., assignor of one-half to J. L. Yerdon, Bradford, Pa. Filed Aug. 27, 1926. Serial No. 131,968. 3 Claims. (Cl. 123—90.)

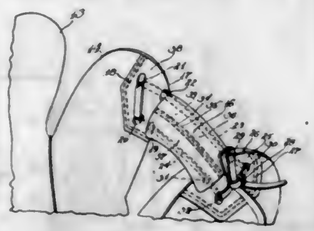
1. In combination an internal combustion engine cylinder, means to supply fuel thereto including an inlet valve held in closed position by means of a spring impact, means to lift said valve from its seat, reciprocating means to intermittently trip said impact means, said impact means including a cam movable across the axis of the valve stem and in contact with said stem.

1,624,694. GAS PRODUCER. ABEL C. TREVIÑO, San Antonio, Tex. Filed Jan. 16, 1925. Serial No. 2,802. 1 Claim. (Cl. 48—76.)



In a gas producer, in combination, a gas generating chamber with a door hingedly mounted on the top thereof, a gas outlet pipe connected to the top of said chamber, and a valve in said pipe, collars fixed to the stem of said valve, a lever fulcrumed intermediate of its ends to a stationary part, one end of said lever engaging between said collars, a link pivotally connected to the other end of said lever, the other end of said link being formed with an elongated aperture, a pin engaging said aperture and supported from a stationary member, said link having a short extension on the end with the elongated aperture, a short link pivotally connected at one end to said short extension, a locking bar formed with projections, said projections being pivotally connected with the other end of said short link, a pair of straps fixed to said door slidably guiding said locking bar, a pair of hooks fixed to the top of said chamber, and engageable with said locking bar.

1,624,695. NURSING-BOTTLE HOLDER. ANDON TUMEKJIAN, West New York, N. J. Filed May 14, 1926. Serial No. 109,156. 3 Claims. (Cl. 248—65.)

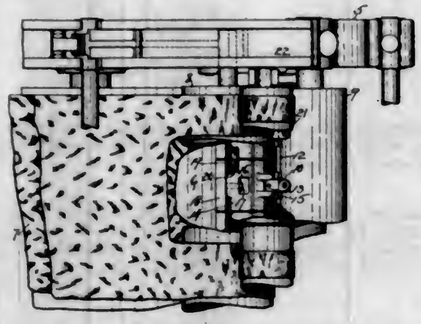


2. A nursing bottle support including an attaching base for attachment to a baby carriage, bassinet, or the like; a swingably and extensibly adjustable supporting frame on said base, a bottle holder carried by, movable with the

frame, and having limited slidable connection therewith, and means for locking the frame in adjusted relation to the base, said means consisting of an arcuate slotted arm pivotally connected to one of the frame members and a

set screw on another frame member engageable through the slot of the arm for clamping engagement with the arm, said bottle holder including bottle-embracing straps for encompassing the neck and bottom portions of the bottle.

1,624,696. BASEBALL GLOVE. ARCHIBALD J. TURNER, Chicago, Ill., assignor to Wilson-Western Sporting Goods Co., Chicago, Ill., a Corporation of Delaware. Filed Sept. 7, 1926. Serial No. 133,824. 10 Claims. (Cl. 2—19.)

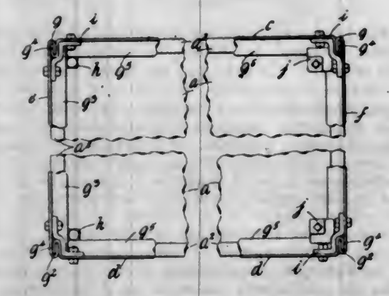


1. In a hand protecting covering having separate casings for certain digits, means for connecting said casings comprising spaced tension members fastened to said casings, and flat means supported by said tension members between the same.

1,624,697. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 25, 1924. Serial No. 728,073. 33 Claims. (Cl. 197—153.)

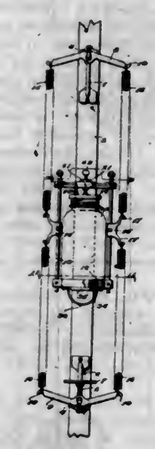
1. In a typewriting machine, the combination with a platen and a ribbon-vibrator adjacent the printing line of said platen, of means for supporting a length of auxiliary typewriter ribbon lengthwise of said platen at said printing line, and a shifter arranged for permanently shifting selectively part or all of said length of auxiliary ribbon edgewise out of and into typing position.

1,624,698. DOFFER FOR IRONING MACHINES. ROBERT J. WATTS, Benton Harbor, Mich. Filed Oct. 27, 1926. Serial No. 144,458. 5 Claims. (Cl. 68—9.)



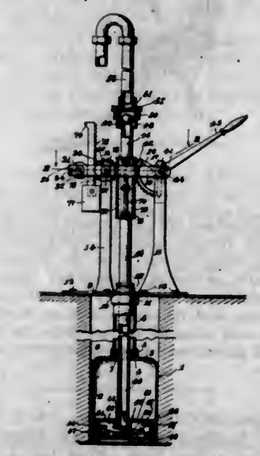
1. A doffer including a pivotally mounted knife support, with a hole extending inward from the edge thereof, and a doffing knife located at the edge of said support and having a shank extending into said hole and freely pivotally movable therein.

1,624,699. SILICA RECEPTACLE AND PROCESS OF MANUFACTURE. HENRY A. WATRINGER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1926. Serial No. 146,059. 3 Claims. (Cl. 49—78.1.)



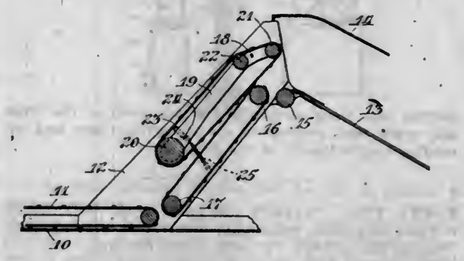
2. The method of fabricating silica containers which consists in mechanically subdividing a silica tube into sections, mechanically fitting a disc of silica to fit into the open end of said tube and heating the contiguous portions of said tube and disc to a sufficiently high temperature to weld said parts to one another.

1,624,700. PIT TUB, WAGON, AND THE LIKE. ALBERT WEDDELL and WILLIAM THOMAS TOLHURST, Tipton, England. Filed Oct. 2, 1926, Serial No. 139,215, and in Great Britain Oct. 27, 1925. 3 Claims. (Cl. 105—364.)



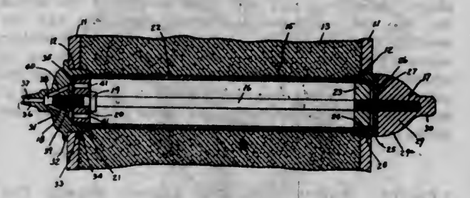
1. A pit-tub, wagon or like body combining a bottom having boundary edge hook formations turned inwardly, opposite sides having vertical edge and lower horizontal edge hook formations, opposite ends having vertical edge and lower horizontal edge hook formations, the vertical edge hook formations of the sides and ends to correspond, and the horizontal edge hook formations to correspond to the boundary edge hook formations of the bottom, the whole of the hook formations being put into engagement by horizontal movement outwardly of the sides and ends, and devices for subsequently securing said engagements, substantially as described.

1,624,701. CHURN, MIXING MACHINE, AND BEATER. GEORGE P. A. WEISENBORN, Kansas City, Mo. Filed Nov. 13, 1925. Serial No. 68,888. 9 Claims. (Cl. 259—91.)



1. In a device of the character specified, upper and lower sets of springs, couplers connecting corresponding upper and lower springs and a carrier having adjustable connection with the couplers.

1,624,702. PUMP. CHARLES I. WHIPPLE, Denver, Colo. Filed June 21, 1926. Serial No. 117,494. 2 Claims. (Cl. 74—14.)

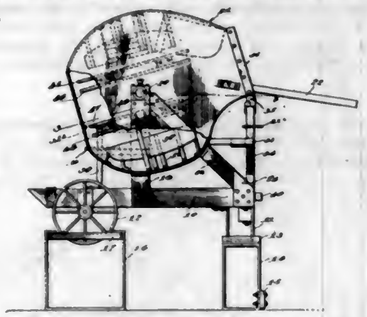


1. A reciprocatory operating mechanism for the plunger element of a pump comprising a pair of oppositely disposed racks adapted to be bodily carried by said element, oscillatory toothed means engaging with one of said racks for reciprocating said element, counterbalancing means for said element, means operated from the other of said racks for reciprocating said counterbalancing means in a contra-direct direction with respect to the reciprocation of said element, guiding means for said counterbalancing element, and means for limiting the movement in either direction of said counterbalancing element.

1,624,703. FLOATING ELEVATOR FOR HARVESTERS. GUSTAV W. WITTE, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 26, 1924. Serial No. 752,281. 13 Claims. (Cl. 198—165.)

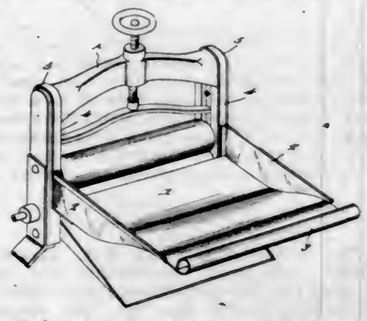
1. In a harvester having a platform and a binder deck, the combination of means for elevating material from the platform to the deck, comprising upper and lower inclined endless aprons, the lower end of the upper apron adapted yieldably to move away from the lower apron to increase the space between them at the lower end only, the upper end of the same apron being simultaneously movable downwardly about a fixed axis to direct the elevated material in a line substantially with the binder deck.

1,624,704. PNEUMATIC CORE FOR BLOCK MACHINES. ASH ADAMS, Crawfordsville, Ind., assignor to Lamore Tile Machine Company, Crawfordsville, Ind., a Corporation. Filed Mar. 15, 1926. Serial No. 94,645. 5 Claims. (Cl. 25—128.)



1. A pneumatic core device comprising a rod threaded at one end, a pressure inflatable bag enveloping said rod, an outwardly tapered member positionable within one end of the bag for supporting the same and mounted on said rod, and a recessed cap having a complementary taper for clampingly receiving the bag end and securing the same between the cap and the supporting member, said cap and said tapered supporting member including communicating passages for supplying pressure to and releasing pressure from said bag.

1,624,705. CONCRETE, MORTAR, AND PLASTER MIXER. GEORGE WASHINGTON ADAMS, San Antonio, Tex. Filed July 16, 1926. Serial No. 122,912. 6 Claims. (Cl. 83—73.)

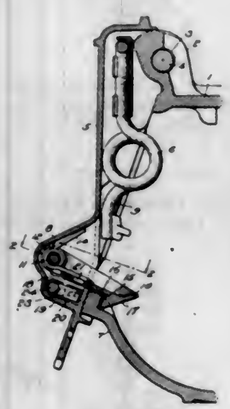


1. In a device of the character described, a drum mounted for oscillation about a fixed axis, and having a normally open end, supporting bars secured to the side

walls of the drum and extending transversely of the same, other supporting bars located at a higher level than the first mentioned supporting bars, the ends of the sup-

porting bars being secured to the side walls of the drum; and grate bars secured to the supporting bars and extending longitudinally of the drum.

1,624,706. SAFETY DEVICE FOR WRINGERS. THOMAS ADAMS, Sheboygan, Wis. Filed Feb. 12, 1927. Serial No. 167,801. 1 Claim. (Cl. 68—32.)

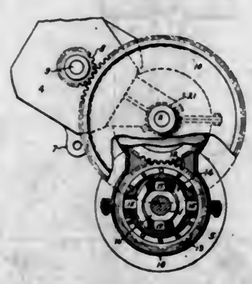


An attachment for a wringer comprising a trough-shaped member having the inner portion of its bottom flat and the outer portion curving upwardly and outwardly, the outer end of the bottom part extending beyond the side pieces of the trough and having its extremity bent upon itself to provide a roll at the outer end of its top face and a hook at the inner end of each side piece for engaging the upper ends of the end pieces of a wringer.

1,624,707. RAZOR. MAURICE ALLAND, Atlantic City, N. J. Filed June 10, 1925. Serial No. 36,103. 2 Claims. (Cl. 30—12.)

1. A razor, comprising a handle having an aperture, a pin secured in said aperture and provided upon its freely extending end with screw threads and intermediately with a radial flange, a member having an aperture through which the fixed end of said pin between the handle and the flange extends rotatably, said member being provided with spaced lugs, adapted to enter correspondingly positioned apertures in a razor blade supported by said member, a clamping member having a concavely curved lower face and a lug extending freely therefrom, pivotal means to secure said lug to one end of said first member, said clamping member being provided with apertures to receive said first lugs, and with a threaded aperture adapted to normally receive the threaded end of said pin in adjustable engagement, rotation of said handle with respect to said clamping member being operative to secure a flexible blade upon said first member with varying degrees of tension and resulting curvature of the blade, and a retrogression of the handle with respect to said clamping member operating to permit the tension of the blade upon the release of said clamping member to forcibly oscillate said clamping member outwardly and thereby release the blade from said first member, and a reversible blade normally positioned between said members and when facing in either direction having a blunt end lying in spaced relation with said lug, and being provided with oppositely directed cutting edges extending substantially the full length of said members and beyond the inner surface of the pivot lug.

1,624,708. JOURNAL BOX. DONALD S. BARROWS, Rochester, N. Y., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Jan. 21, 1924. Serial No. 687,522. 5 Claims. (Cl. 308—51.)



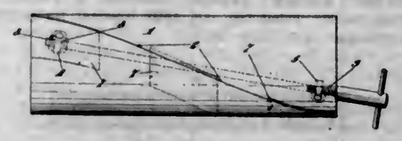
1. The combination with a journal box, of a lid pivotally connected thereto, said lid being provided with a lock receiving boss opening upon the inner face thereof, and a laterally extending passageway intersecting said boss, said passageway opening at its ends upon the opposite face of the said lid, and a locking member mounted in said boss and adapted to maintain the lid in closed position, said passageway being adapted to receive a lock actuating key.

1,624,709. LOCOMOTIVE OR CAR. ASA F. BATCHELDER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 4, 1924. Serial No. 729,861. 5 Claims. (Cl. 105—113.)

1. In a locomotive, a plurality of driving axles having wheels thereon adapted to run on a track, a frame for said locomotive located inside of said wheels and spring borne on said axles, side rods connecting said axles, a

motor mounted on said frame, a countershaft substantially parallel to said driving axles, spur gearing connecting the shaft of said motor with said countershaft, and spur gearing connecting said countershaft with one of

said driving axles and comprising a gear on said countershaft and a gear rim surrounding said axle and having a universal joint connection therewith, said last-mentioned spur gearing being located between said wheels inside of said frame.



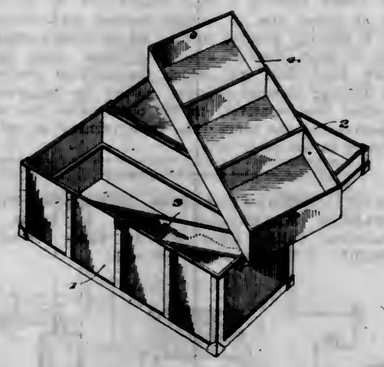
1,624,710. CARBONIZED ARTICLE AND PROCESS OF MAKING SAME. JAMES BECKWITH, Eugene, Oreg. Filed Aug. 18, 1924. Serial No. 732,729. 2 Claims. (Cl. 25—157.)

1. A process for the treatment of articles which comprises subjecting them for a relatively long period to the volatile products arising in the production of charcoal and for a relatively short period to a temperature high enough to drive off volatile constituents from the articles and deposit fine particles of carbon in the interstices of the material of the articles.

1,624,711. WATER-SOFTENING REAGENT AND PROCESS OF PREPARING SAME. ABRAHAM S. BEHRMAN, Chicago, Ill., assignor, by mesne assignments, to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1921. Serial No. 504,677. 23 Claims. (Cl. 23—112.)

23. In a process of silicating glauconitic material, the silication step consisting in treating the glauconitic material with an alkali metal silicate solution only for a sufficient length of time to result in substantial improvement in the base exchange properties.

1,624,712. CONTRACTIBLE AND EXPANSIBLE SUPPORTING MEANS SUITABLE FOR USE IN THE CONSTRUCTION OF PIPES, TUNNELS, BRIDGES, AND OTHER BODIES OR STRUCTURES. HAROLD BERRIDGE, South Kensington, London, England. Filed May 29, 1926, Serial No. 112,726, and in Great Britain Nov. 17, 1925. 6 Claims. (Cl. 25—128.)

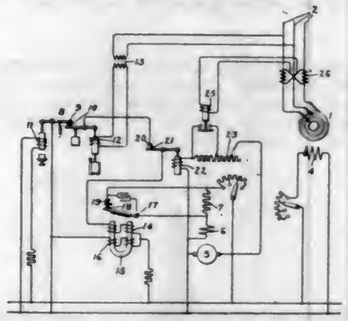


1. A contractible and expansible device comprising a cylinder formed of sheet material divided throughout its length by a slit extending along and partly around it in a helical manner and means whereby the material at opposite sides of the slit can be caused to move longitudinally in opposite directions and thereby increase the length of the cylinder and reduce its diameter.

1,624,713. SPINDLE OF SPINNING, TWISTING, AND LIKE FRAMES. THOMAS ALEXANDER BOYD and HAROLD ARTHUR BOYD, Glasgow, Scotland. Filed July 9, 1926, Serial No. 121,434, and in Great Britain Nov. 4, 1925. 8 Claims. (Cl. 118—55.)

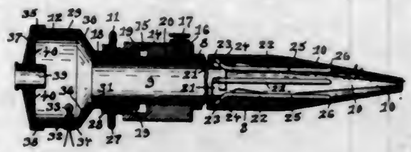
1. In flyer spinning frames and the like, a spindle, a bobbin mounted upon said spindle for free rotation thereon, and a holder attached to said bobbin and rotating therewith, in combination with centrifugal members carried by said holder adapted to give a drag to said bobbin, the whole being adapted to permit the removal of said centrifugal members without removing the holder from working position.

1,624,714. TRUNK. CALVIN BULLOCK, Denver, Colo. Original application filed Jan. 3, 1924, Serial No. 684,220. Divided and this application filed May 21, 1926. Serial No. 110,749. 1 Claim. (Cl. 190—13.)



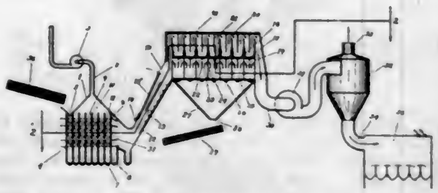
A trunk having bottom and top sections hinged together, said bottom section having a diagonal compartment arranged thereacross and extending part way only of the depth of said bottom section, and a removable till fitted into said bottom section over the diagonal compartment to form a closure therefor.

1,624,715. REGULATING SYSTEM. ROBERT M. CAROTHERS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 21, 1924. Serial No. 694,427. 5 Claims. (Cl. 171—229.)



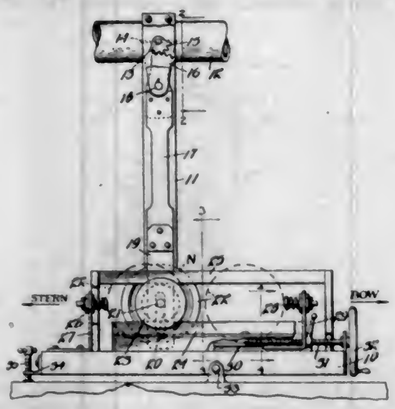
1. In a regulating system, a generator, an exciter therefor, means operative in response to a characteristic of the output of said generator for controlling the

excitation of said exciter, means operative in response to an electrical condition of said exciter for controlling the excitation thereof, and means operative in response



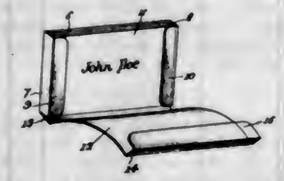
to another characteristic of the output of said generator for controlling the operation of said means which is responsive to an electrical condition of said exciter.

1,624,716. URETHROSCOPE. FERDINANDO CERBO, Providence, R. I. Filed Feb. 17, 1927. Serial No. 169,112. 6 Claims. (Cl. 128—7.)



1. In a urethroscope, an outer tube, a plurality of dilator arms formed integral with the outer tube and when closed forming a cone shaped end on the outer tube, an inner tube in surface contact with the outer tube, a dilating member having an inclined portion secured to each dilator arm, the inner tube having bayonet joint slots into which the inclined portion of each dilating member engages, means for reciprocating the inner tube relatively to the outer tube, and means for preventing the inner tube from turning on its axis relatively to the outer tube.

1,624,717. APPARATUS FOR TREATING FIBER-BEARING MATERIALS. NORRIS K. DAVIS, San Francisco, Calif. Filed Dec. 16, 1924. Serial No. 756,207. 2 Claims. (Cl. 209—30.)

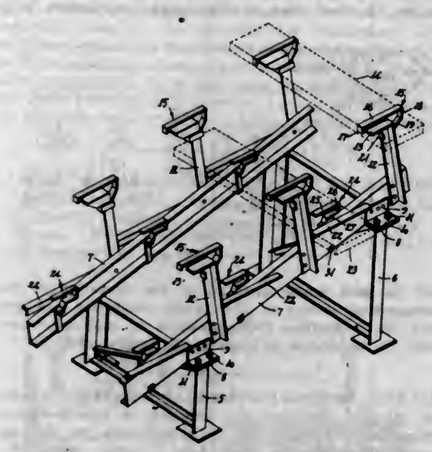


1. An apparatus for treating the finely divided fiber bearing ore for the separation and recovery of the fiber therefrom, comprising an upwardly inclined duct provided with a movable wall, enabling the gradual increase of the cross sectional area of the duct from its lower to its upper end, a primary material separating chamber discharging into the lower end of the duct, a secondary material separating chamber into which the upper end of the duct discharges, means for creating an air suction through said chambers and upwardly in said duct, means for directing fibrous material into the primary separating chamber, and means into which said suction means discharges for receiving the separated fiber.

1,624,718. SHIP GOVERNOR. WELCOME CARPINTER DENNIS, Oakland, Calif. Filed July 19, 1926. Serial No. 123,470. 6 Claims. (Cl. 137—159.)

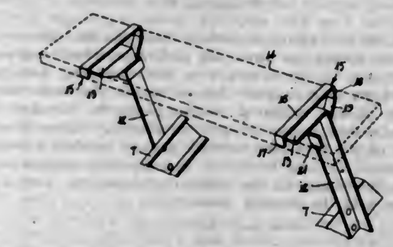
1. A governor comprising a pendulum arm, a steam valve controlled by the fulcrum end thereof, a rotating weight journalled in slots in the lower end thereof, guide rollers rotating with said weight and straight guide rails for said rollers, substantially as set forth.

1,624,719. CARD PROTECTOR. PAUL DIXON, Atlanta, Ga. Filed July 3, 1926. Serial No. 120,462. 1 Claim. (Cl. 206—39.)



A card protector comprising a single sheet of material possessing a substantial inherent flexibility and resiliency cut to provide a body wall with end flaps and a cover wall at one longitudinal edge, said end flaps being bent on spaced apart sharp crease lines into spaced overlapping relation upon the body wall to hold a stack of cards thereagainst, said cover wall being bent on sharp spaced apart crease lines into overlapping relation upon said flaps and over the body wall to enclose the stack of cards and having a closure flap at its free edge bent on spaced crease lines into spaced overlapping relation upon the cover wall and adapted to snap about the opposite longitudinal edge of the body wall for closing in the stack of cards and retaining the cover wall closed.

1,624,720. RACKET STRING. ARTHUR M. DRITZ, New York, N. Y. Filed Dec. 16, 1926. Serial No. 155,209. 5 Claims. (Cl. 273—73.)



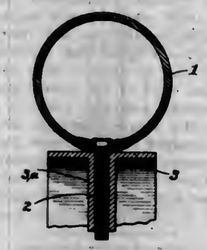
1. As a new article of manufacture, a racket string including a stranded gut body, and a helically wound binding wire thereon, the convolutions of which are embedded in the outer surface of the gut body.

1,624,721. KNOCKDOWN STAND. CHARLES ANDRE DUKE, New York, N. Y. Filed June 11, 1926. Serial No. 115,300. 4 Claims. (Cl. 304—1.)

3. A knock-down stand comprising stringers, a board extending across and seated on said stringers, and clips having portions to be slipped into engagement with one edge portion of the board and to fit astride said edge portion, and the clips having lower hooks to engage under the stringers.

1,624,722. KNOCKDOWN STAND. CHARLES ANDRE DUKE, New York, N. Y. Original application filed June 11, 1926, Serial No. 115,300. Divided and this application filed Feb. 12, 1927. Serial No. 167,698. 2 Claims. (Cl. 304—1.)

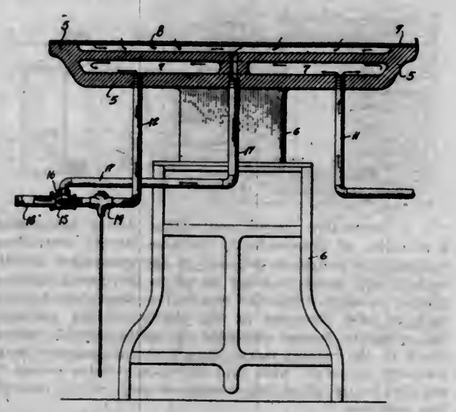
1. A knock-down stand comprising supporting standards, a board seated on and supported by said standards, and removable clips having portions to extend over said board and other portions to extend partly around said standards for holding the board in place on the standards.



1,624,723. VULCANIZATION ACCELERATOR AND PROCESS OF MAKING SAME. HAROLD WALTER ELLEY and DONALD HOWARD POWERS, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 2, 1924. Serial No. 753,524. 29 Claims. (Cl. 18—53.)

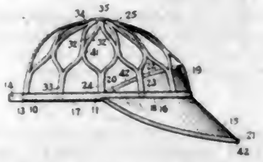
10. The process of treating rubber which comprises mixing with the rubber a vulcanising agent and the product obtainable by condensing a nitroso-dialkyl-amino compound with a primary amine and condensing the resulting amino-hydrazine derivative with a reactive aldehyde, and subjecting the mixture thus formed to vulcanization.

1,624,724. RUBBER COMPOSITION AND METHOD OF PREPARING SAME. HAROLD WALTER ELLEY, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 5, 1926. Serial No. 106,969. 15 Claims. (Cl. 18—53.)



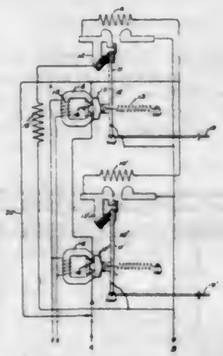
1. The method of protecting a composition comprising rubber from oxidation which method comprises the incorporation into said composition of an aryl compound containing nitro, amino and hydroxy groups.

1,624,725. METHOD OF TREATING CURED INNER TUBES FOR PNEUMATIC TIRES. FRANK FENTON, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 10, 1926. Serial No. 128,461. 3 Claims. (Cl. 18—56.)



1. The herein described method of treating cured inner tubes for pneumatic tires which consists in supporting the inflated tube so that the wall thereof is free to adjust itself and with the valve stem maintained in the median plane of the tube, and then first heating the tube and subsequently allowing it to cool while so held.

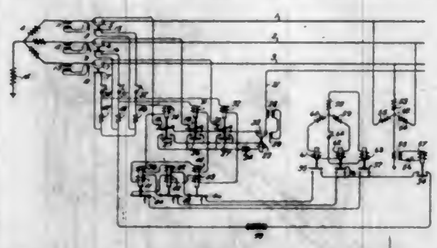
1,624,726. GARMENT PRESS. PETER EDUARD GELDHOF, Syracuse, N. Y., assignor, by mesne assignments, to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 2, 1921. Serial No. 441,931. 4 Claims. (Cl. 68—9.)



1. In a garment press, the combination of a pressing element having a perforated pressing surface and a heating chamber; a suction conduit in communication with the pressing surface of said element; and means for passing a heating medium to and through said chamber and through the action of the heating medium discharged from said chamber effecting a suction in the conduit.

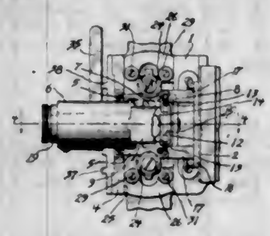
1,624,727. SPORT VISOR CAP. CARL M. GOLDBERG, New York, N. Y., assignor to Schaffer & Goldberg, a Copartnership composed of Samuel Schaffer and Carl M. Goldberg, New York, N. Y. Filed Jan. 13, 1927. Serial No. 160,843. 9 Claims. (Cl. 2—176.)

1. In a visor cap, a flexible, non-elastic headband section, subtending less than a complete circle, an elastic member interposed between the ends of said section, a visor of flexible, resilient, transparent material overlapping the lower front edge of said section, a forehead member of the same material as said visor highest at the front central portion thereof and tapering to points at the ends thereof, and in contact with said section only at the front upper edge of the latter, stitching securing said forehead member and said visor to said head-band section whereby the greater part of the outer face of said section is exposed to view, said flexible head-band section being arranged between and serving to space apart vertically the adjacent edges of said visor and said forehead member, and a head strap of a single piece of material secured at its ends to said head-band section.



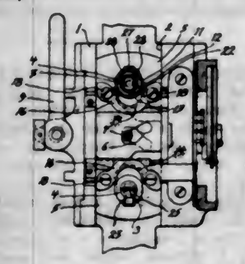
1,624,728. PROTECTIVE DEVICE. GEORGE GRAF, Berlin-Pankow, Germany, assignor to General Electric Company, a Corporation of New York. Filed June 24, 1925, Serial No. 39,370, and in Germany Oct. 27, 1924. 3 Claims. (Cl. 175—294.)

1. A protective circuit controlling device comprising a plurality of independently movable circuit controlling members connected in multiple in the controlled circuit, each of said members being biased to the circuit opening position, electro-responsive means for separately holding each of said members in the circuit closing position, and separate means energized in series circuit responsively to the current in the circuit and arranged to magnetically cooperate with said electro-responsive means to simultaneously effect the release of said circuit controlling members.



1,624,729. POWER SYSTEM. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 24, 1923. Serial No. 670,617. 7 Claims. (Cl. 171—97.)

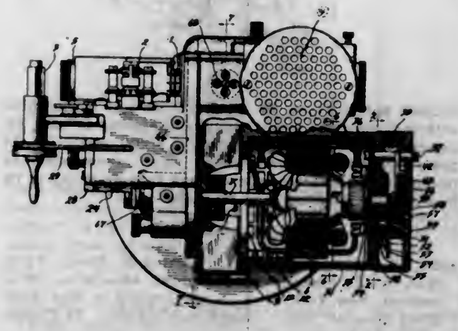
1. A system of the class described wherein a plurality of main conductors connected to different terminals of current supply means are each provided with means for disconnecting it from the system when it becomes faulty and wherein a spare conductor is arranged to be substituted for any one of said main conductors, characterized by the fact that selector means responsive to a



fault on said conductors and to the operation of the disconnecting means of the faulty conductor are provided for controlling the connection of said spare conductor to the system in place of the faulty conductor.

1,624,730. MOTION-PICTURE APPARATUS. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 1, 1922, Serial No. 572,170. Divided and this application filed Apr. 24, 1924. Serial No. 708,707. 4 Claims. (Cl. 88—18.)

1. A motion picture machine including a film sprocket, a support member mounted for sliding movement normal to the axis of the sprocket, a film retaining member mounted on said support for movement therewith into and out of film retaining relation with the sprocket, a cam formation in the support member extending transversely of the movement thereof, and an actuating member engaged in said formation and movable transversely of the movement of the support member for effecting movement of the support member.

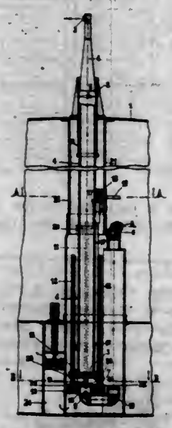


1,624,731. FILM SPROCKET GUIDE. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1924. Serial No. 726,538. 7 Claims. (Cl. 88—17.)

1. In a device of the character described the combination with a film sprocket provided with teeth adjacent respective ends thereof, of a segmental guide associated

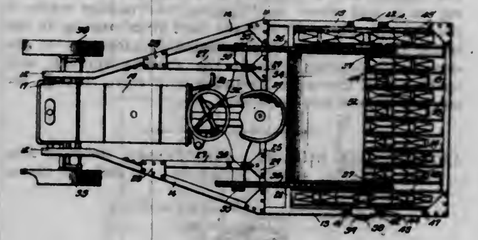
therewith for retaining a perforated film engaged with the sprocket and provided with concave guide surfaces facing the sprocket and extending angularly with respect thereto and disposed in spaced relation adjacent respective ends of the sprocket for engagement with marginal portions of the film on the sprocket, said guide surfaces consisting of outer portions disposed on the outsides of respective teeth and inner portions stepped from the outer portions in a direction away from the axis of the sprocket and overlying respective teeth of the sprocket.

1,624,732. MOTION-PICTURE PROJECTING MACHINE. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1924. Serial No. 732,469. 14 Claims. (Cl. 88—17.)



1. In a motion picture projecting machine the combination with a driven film feeding mechanism, of means for reversing the direction of operation of the feeding mechanism, a pivoted member for operating said reversing means, a revoluble stop gear disposed coaxial with the pivoted member, a second revoluble stop gear carried by the pivoted member and meshing with the first mentioned stop gear and cooperating therewith, and means for driving said first mentioned stop gear with the film feeding mechanism whereby to operate said pivoted member to operate said reversing means to effect reversal of the direction of operation of the feeding mechanism at opposite ends of a predetermined travel of a film fed by said feeding mechanism.

5. In a motion picture projecting machine the combination with a driven film feeding mechanism, of a shutter movable into and out of position to interrupt the projecting light on a film fed by said feeding mechanism, an air impelling device driven with the feeding mechanism, means for automatically reversing the direction of operation of said feeding mechanism and said impelling device at opposite ends of a predetermined travel of a film fed by said feeding mechanism, and pneumatic means responsive to air affected by the operation of said impelling means for causing the shutter to be closed during reversal of the feeding means and to be open during operation of the feeding means between reversals thereof.

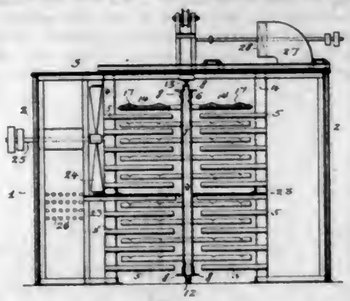


1,624,733. PERISCOPE MORE PARTICULARLY FOR SUBMARINES. JULES HUMBRECHT, Fridenau, near Berlin, Germany, assignor to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Fridenau, near Berlin, Germany. Filed Aug. 23, 1921, Serial No. 494,497, and in Germany Jan. 19, 1916. 2 Claims. (Cl. 88—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a periscope, more particularly for submarines, a casing for the optical elements of the instrument consisting of at least two parts axially shiftable with relation to each other the one provided with a light admission opening and with an optical system firmly mounted therein having a finite focal length and a further casing part being provided with the eye-piece, the instrument further provided with a reflecting device arranged in the path of rays between the light admission opening and the eye-piece, driving spindles in co-operative connection as well

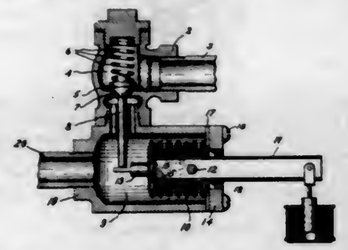
with the casing part provided with the light admission opening as with the reflecting device, a reflector driving spindle rotatable within a nut in firm connection with the casing part provided with the eye-piece and interconnected and geared with the spindle actuating device for the casing part provided with the light admission opening.

1,624,734. METHOD OF TAMPING AND TAMPING MACHINE. CALVERT R. HUNT, Kansas City, Mo. Filed Aug. 2, 1926. Serial No. 126,442. 9 Claims. (Cl. 94—50.)



1. In a device of the character described, a framework, a rotatable shaft mounted on the framework, and taping and kneading means mounted on said shaft to rotate therewith, and comprising sets of members, the members of one set having contact surfaces differing from those of the other set for the purpose set forth.

1,624,735. RACK DRIER FOR BRAKE LININGS AND OTHER STRIP MATERIAL. ALPHEUS O. HURXTHAL, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1927. Serial No. 165,922. 8 Claims. (Cl. 34—48.)



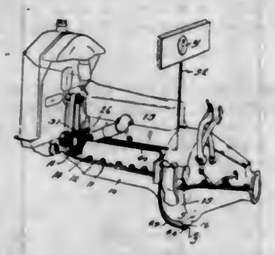
1. The combination in a drier for drying strip material, of a casing having a series of horizontal supporting arms for the material to be dried; a truck arranged to

travel longitudinally into the drier; and means for attaching one or more strips of material to the truck, so

that when motion is imparted to the truck it will draw the strips into the drier and over the fixed supporting arms.

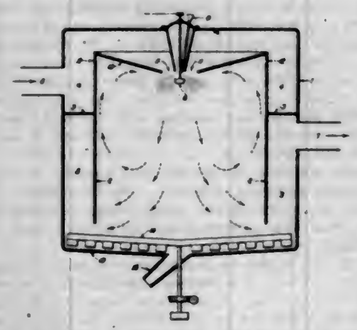
1,624,736. VALVE. LEONARD P. HUTT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 3, 1925. Serial No. 6,649. 3 Claims. (Cl. 251—31.)

1. In combination with a conduit system for conveying a fluid, a valve within the conduit for controlling the flow of the fluid in the system, an opening in the side of the conduit and a flexible cup within the conduit serving as a seal about said opening, the outside walls of the cup serving to prevent the fluid from passing to the inside of the cup, a lever mounted in proximity to the cup and extending outside the conduit through said opening, and means for operating said valve through the medium of said lever and said cup.



1,624,737. TIE HOLDER. JOHN JENSEN, Houston, Tex. Filed Sept. 23, 1926. Serial No. 137,298. 1 Claim. (Cl. 2—150.)

A tie holder comprising a tapered tube adapted for the passage of the ends of the tie, said tube being substantially oval in cross section and a partition within the tube and extending longitudinally thereof to divide the tube into two openings for the reception of the ends of the tie, said partition at the upper end thereof extending transversely of the tube upon the minor axis thereof and at its lower end extending transversely of the tube upon the major axis thereof.

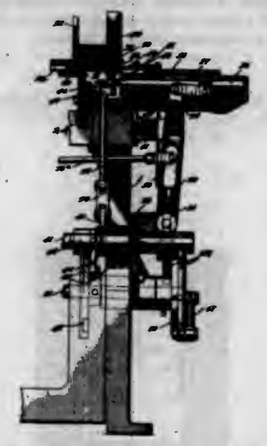


1,624,738. OIL PUMP. HANS P. JESPERSON, Sioux City, Iowa. Filed Dec. 26, 1925. Serial No. 77,719. 4 Claims. (Cl. 123—195.)

1. In combination with an automobile engine having a cylinder block, a crank case having an opening to receive a forward crank case bolt for securing said block and crank case together, a cylinder front cover having an opening adapted to receive an intermediate right cap screw for securing said cylinder cover to the cylinder block, the cylinder block having a time gear shell including substantially vertical and downwardly and outwardly

inclined portions; an oil pump disposed in engagement with said portions, means securing the pump in such engagement, said means including a screw engaging the pump through said cover opening, and a screw extending through said crank case opening and into the pump at its free side for securing it to the block.

1,624,739. SPRAY DRYING. ARTHUR B. JONES, Plainfield, N. J., assignor to Industrial Associates, Incorporated, New York, N. Y., a Corporation of New York. Filed June 18, 1926. Serial No. 116,930. 10 Claims. (Cl. 159—4.)

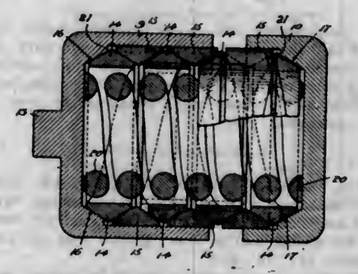


1. The method of spray drying which comprises dispersing a fluid as a nebula, causing a convection current to traverse the zone of said nebula, leading the chilled and moisture saturated portion of the convection current from the lower end of the drying chamber, and causing the unsaturated portion of the convection current to rise and to re-enter the nebula zone to there absorb further moisture.

1,624,740. CARTON-FEEDING MECHANISM FOR CARTON FOLDING AND FILLING MACHINES. RUEL ANDERSON JONES, Covington, Ky., assignor to R. A. Jones & Company, Inc., Covington, Ky., a Corporation of Kentucky. Filed Jan. 22, 1925. Serial No. 4,105. 4 Claims. (Cl. 271—32.)

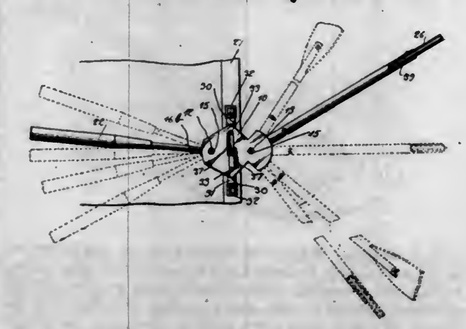
4. In a machine of the class described, a magazine for supporting a stack of collapsed flat cartons, and a reciprocating ejector for successively ejecting the cartons operating upon the lowermost carton of the stack, said ejector having forwardly extending spaced and different

length lips, the lower lip being the longer to support the carton, the upper lip shaped to form in conjunction with the lower lip a socket for receiving the bowed carton and engaging about the edge of the carton to obtain a



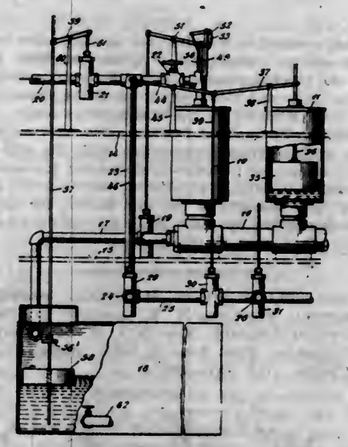
very substantial hold upon the carton and sustain the same against vertical displacement or release from the ejector as the ejector moves forwardly to convey the carton from the magazine.

1,624,741. DISPLAY DEVICE. LOUIS A. LEPPKE and JOHN HARRY SCHARF, Omaha, Nebr. Filed Dec. 10, 1926. Serial No. 153,821. 5 Claims. (Cl. 40—142.)



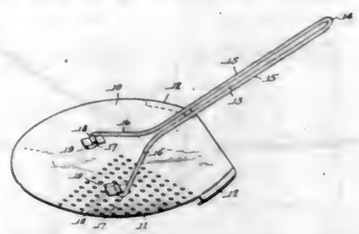
1. In a display device, a background having keeper characteristics, an object holder, comprising a base, a magnetizable body, and a plate, said plate securing said base to said magnetizable body.

1,624,742. SPLIT-RING DRAFT GEAR. BYERS W. KADEL, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Mar. 28, 1924. Serial No. 702,638. 19 Claims. (Cl. 213—29.)



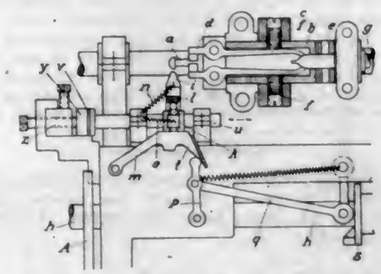
17. A shock absorbing mechanism involving symmetrical radially yieldable rings of spring metal, each of said rings comprising split complementary bands, the thickness of each band being greater at its center than adjacent its ends.

1,624,743. BOW-FACING OAR. WILLIAM HENRY KIMBERLIN, Bismarck, N. Dak. Filed Nov. 4, 1926. Serial No. 146,234. 10 Claims. (Cl. 9—25.)



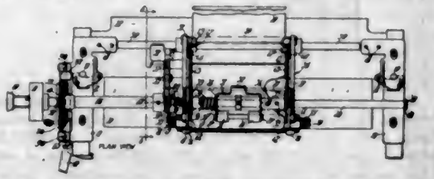
1. In a feathering oar and in combination, a plate, a lever pivoted to the plate, means for shifting the lever about the pivot thereof, a sleeve rotatably mounted upon the lever and bearing a blade, means limiting rotation of the sleeve at positions where the blade is arranged in the plane of swing and when the blade is perpendicular to the plane of swing of the lever, a lug upon the sleeve having faces coacting with the plate when the sleeve is at said limits of its movement to prevent return movement of the sleeve, means coacting with the tube when the lever is at the opposite limits of its movement for partially rotating the sleeve from one toward the other of said positions, said plate having coaction with said lug during the initial portion of the stroke of the lever completing the rotation of the sleeve from one to the other of said positions.

1,624,744. AUTOMATIC HYDRAULIC IRRIGATION SYSTEM. ERNEST A. KIENAST, Los Angeles, Calif. Filed Oct. 24, 1924. Serial No. 745,700. 6 Claims. (Cl. 299—27.)



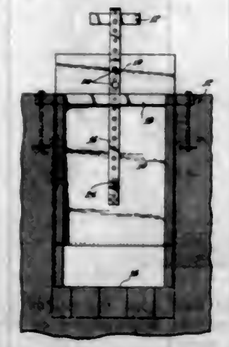
1. In an irrigation system, a plurality of feed pipes leading to individual sections to be irrigated, a primary tank, and a plurality of secondary tanks each individual to and connected with one of the said feed pipes, a drain pipe connected with said primary and secondary tanks, a drain tank, and means connected with said primary tank for controlling the discharge of the contents of said drain pipe into said drain tank.

1,624,745. COMBINED COVER AND STRAINER. FREDRICK W. KUHNAST, New York, N. Y. Filed July 28, 1926. Serial No. 125,487. 7 Claims. (Cl. 53—8.)



3. A draining device for utensils of the character set forth, said device including a flat perforated body having a marginal depending bead-engaging hook at one side and a handle pivoted to the upper surface and adjacent the center of said body for limited swinging movement whereby to insure the projection of the handle from the side provided with the bead-engaging hook.

1,624,746. AUTOMATIC MACHINE FOR MAKING THE HEADS OF SLOTTED WOODEN OR IRON SCREWS. KARL KUMPMANN, Ludenscheid, Germany. Filed June 22, 1926, Serial No. 117,821, and in Germany May 7, 1924. 2 Claims. (Cl. 10—8.)



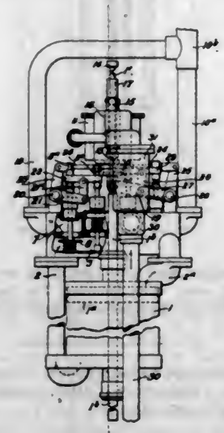
1. An automatic machine for making the heads of slotted screws, comprising a rotary machine head in which the blank is clamped, a tool holder mounted on the machine frame and oscillatory towards the blank, an oscillatory lever mounted on the said machine frame, the said lever having an inclined bearing surface, a second lever on the machine frame cooperating with the said bearing surface, means for periodically displacing the said second lever and thus lifting the said oscillatory lever, and two cutting tools mounted in the said holder, the one of the said tools working upon the upper face of the screw head, and the other upon the lower face.

1,624,747. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 2, 1925. Serial No. 34,303. 36 Claims. (Cl. 197—135.)

1. In a typewriting machine, the combination with a platen-carriage and regular line spacing mechanism, of a stencil-card typing device detachably mountable as a unit upon the carriage, said device including means to present the card at the printing line for typing a line adjacent the top edge of said card, and means operable by said line-spacing mechanism to line-space and group all of the remaining lines of typing, with the top and the bottom lines of said group spaced equal distances from the respective top and bottom edges of the card.

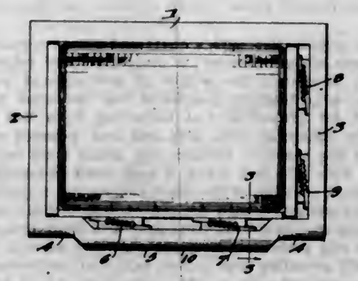
1,624,748. WATER GATE. KARL F. LILJEGREN, Donna, Tex. Filed Aug. 18, 1924. Serial No. 732,771. 4 Claims. (Cl. 61—28.)

1. The combination with an upwardly and downwardly movable water gate, of a frame having side walls by which the gate is guided in such movement and a sill to coact with the lower edge of said gate, one of such coacting parts having a sharp knife-like coacting part and the other of such parts being of softer material than the knife-like part and serving as a chopping block against which trash may be cut and into which the sharp knife-like part may be forced to effect a tight embedding closure at the bottom of the gate.



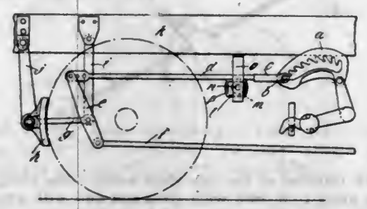
1,624,749. PULP-HEATING COIL. HARRY W. LOWE, Indianapolis, Ind.; Mark W. Lowe, administrator of said Harry W. Lowe, assignor to John P. Dalzell, Minneapolis, Minn. Filed Mar. 26, 1919. Serial No. 285,142. 4 Claims. (Cl. 257—205.)

1. A pulp-cooking coil, comprising a plurality of pipe sections, for immersion in the pulp, a plurality of separate discharge connections for such pipe sections, a separate downwardly extending pipe from each discharge connection, and a check valve connected to each downwardly extending pipe.



1,624,750. MEANS FOR MEASURING BY VOLUME PETROL AND OTHER FLUIDS. ARTHUR WILLIAM MACLEOD, London, England. Filed Aug. 10, 1925, Serial No. 49,332, and in Great Britain Aug. 28, 1924. 3 Claims. (Cl. 73—30.)

1. Apparatus for measuring liquids by volume, comprising in combination a measuring cylinder having ports at the ends thereof for the inlet and discharge of liquid, valves to control said ports, a piston and piston rod free to reciprocate in said measuring cylinder, an auxiliary cylinder having ports at the ends thereof for the inlet and discharge of liquid, a piston and piston rod free to reciprocate in said auxiliary cylinder, a slide valve for controlling the inlet and discharge ports of said auxiliary cylinder, means on the piston rod of the piston of said measuring cylinder to coact with said slide valve of said auxiliary cylinder to mechanically reverse the position of said slide valve immediately prior to the piston rod of the measuring cylinder reaching the end of its stroke, a main supply pipe to convey the supply of liquid under pressure to said valves of said measuring cylinder, a branch pipe from said main supply pipe extending to

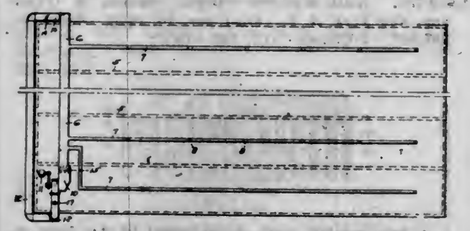


said auxiliary cylinder, a spring-loaded back-pressure valve in said branch pipe to permit of the passage of pressure liquid to said slide valve of said auxiliary cylinder only when said piston of said measuring cylinder arrives at the end of its stroke and the liquid pressure in said branch pipe increases, and means connecting the inlet and discharge valves of said measuring cylinder with the piston rod of said auxiliary cylinder to cause the movement of the said piston rod of said auxiliary cylinder to reverse the flow to and from said measuring cylinder at the end of each stroke of said piston in said measuring cylinder.

1,624,751. PRINTING-PRESS CHASE. ALBERT M. MCMILLAN, Riverdale, Md. Filed Aug. 6, 1926. Serial No. 127,672. 2 Claims. (Cl. 101—391.)

1. A printing press chase of substantially rectangular frame having one of the sides thereof offset in its middle portion to receive locking quoins, the middle portion being offset a distance corresponding substantially to a width of standard type furniture.

1,624,752. BRAKE SLACK ADJUSTER FOR VEHICLES. JOHN MITCHELL and JOHN CECIL GEORGE COSSEY, London, England. Filed May 24, 1926, Serial No. 111,348, and in Great Britain July 2, 1925. 6 Claims. (Cl. 188—198.)

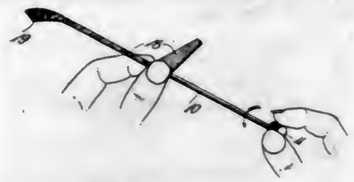


1. A brake slack adjuster for railway vehicles comprising a slotted and internally toothed segment interposed between two parts of a brake gear, a pin on one of said parts adapted to engage in the teeth of the segment, and means for imparting a two-part movement to a portion of the brake gear during the return of said gear to the "off" position.

1,624,753. REVERSIBLE COMB. JUAN DE DIOS MORENO, San Francisco, Calif. Filed Nov. 29, 1926. Serial No. 151,478. 1 Claim. (Cl. 132—11.)

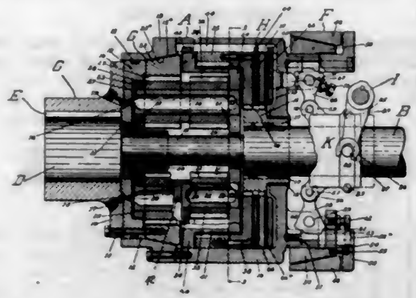
In a comb, a coarse section, a fine section, a hand hold section connecting said coarse section and said fine section, said hand hold section having outstanding ribs formed on the opposite sides thereof and diagonally disposed with relation to the teeth thereof, and the teeth of said coarse section and said fine section being disposed in opposite directions.

1,624,754. DRYING SYSTEM. MORITZ L. MUELLER, Seattle, Wash., assignor to Northwest Blower Kiln Company, Portland, Oreg., a Corporation of Washington. Filed Nov. 4, 1926. Serial No. 146,135. 15 Claims. (Cl. 34—46.)



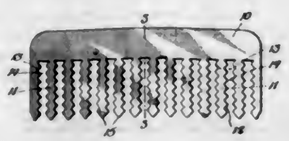
1. The combination with a battery of driers having their usual main circulatory systems, of connecting ducts between all of said driers which are in addition to and auxiliary to said main circulatory systems and are arranged to controllably deliver at will waste vapors from the drying chambers of some of said driers to others of said driers.

1,624,755. PIPE-CLEANING MEANS. HOWARD M. MURPHY, Philadelphia, Pa. Filed June 25, 1926. Serial No. 118,530. 2 Claims. (Cl. 131—13.)



1. Pipe cleaning means comprising a rod having a split which is parallel with the length of the rod and opens through the front end of said rod, and a longitudinally

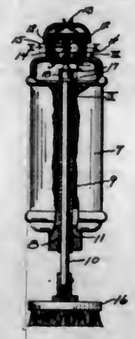
tapered flexible cleaning strip co-operable with said rod in forming a cleaner; the relatively wide end of said strip being adapted for partial reception in said split,



whereby rotation of the rod while holding the strip, will form a swab from said wide strip end and will wind the remainder of the strip around the rod.

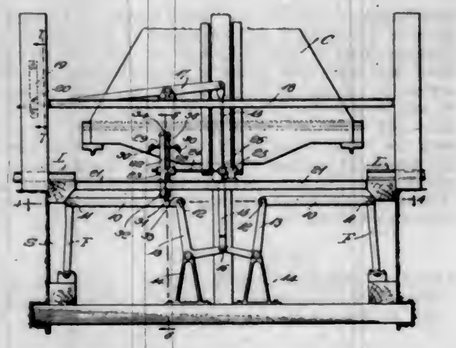
1,624,756. REVERSING GEAR. ARTHUR T. NABSTEDT, New Haven, Conn. Filed June 21, 1919. Serial No. 305,884. 37 Claims. (Cl. 74—34.)

1. In a mechanism of the character described, an internal driving gear, an internal driven gear and pinions meshing with each other and meshing respectively with said gears, means supporting said pinions for rotative and bodily movement, a casing embracing said gears and connected to said supporting means, and means for connecting all of said members to rotate together.



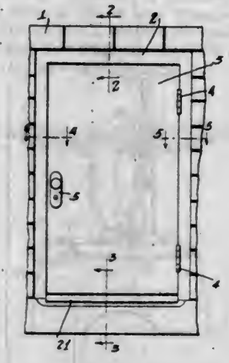
1,624,757. HAIR-WAVING COMB. GEORGE B. O'CONNOR, New York, N. Y. Filed Nov. 10, 1926. Serial No. 147,487. 2 Claims. (Cl. 132—18.)

1. A hair waving comb characterized by flat hair engaging members whose opposite side edges have lateral pointed portions of uniform size and shape.



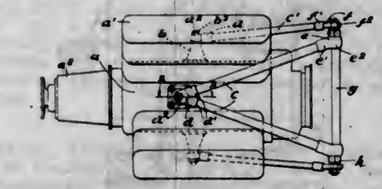
1,624,758. ELECTRIC SHOE CLEANING AND POLISHING MACHINE. HEZEKIAH POWELL, Kansas City, Mo., and WALTER P. GROVES, Edwardsville, Kans. Filed Oct. 6, 1925. Serial No. 60,722. 4 Claims. (Cl 172—36.)

1. In a machine of the kind described, having in combination with an electric motor, a shaft rotatable by said motor and mounted therein for longitudinal movement, a switch associated with the motor and adapted to control the current thereto, said switch being opened and closed as said shaft is moved longitudinally and means including a pivotally mounted shaft engaging member having a cam member integral therewith and a manually operable



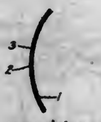
means for actuating said shaft engaging means around its pivot, engaging said cam member for imparting longitudinal reciprocating movement to said shaft.

1,624,759. CAGE-LOCKING MEANS. STEPHEN J. REAP, Olyphant, Pa. Filed June 1, 1926. Serial No. 112,998. 4 Claims. (Cl. 187—75.)



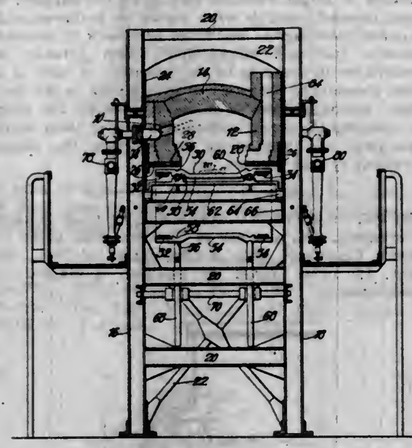
4. In combination with a shaft and a cage mounted for movement along the same; a projectable and retractable support to sustain the weight of said cage at a given landing, a horizontally positioned link connected to said support for projecting and retracting it, a bell crank pivotally connected with said link and mounted at one side of the shaft, a vertical link rising from and connected with said bell crank, a rock shaft mounted horizontally at one side of the shaft and having a crank arm pivotally connected with the end of said vertical link, an actuating arm projecting from said rock shaft toward the cage, a trip projecting from the cage and adapted to engage said actuating arm to rock said shaft only when the cage ascends, whereby to effect retraction of said support, a latch engageable with said horizontal link to hold said support in retracted position, a third arm mounted above said actuating arm and adapted to be upwardly swung by said trip, and a releasing connection between said third arm and said latch for releasing the latter when the former is upwardly swung.

1,624,760. DOOR STRUCTURE. JAMES H. ROWLEY, Chicago, Ill., assignor to The Sykes Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1925. Serial No. 37,227. 5 Claims. (Cl. 189—46.)



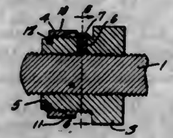
1. The combination in a sheet metal door frame and hinged sheet metal door assembly, of a marginal flange on the door and formed from the metal thereof and extending along the sides and top at the inner face thereof and projecting in the direction of closing movement of the door at the top and lock side thereof and in the plane of the door at the hinge side thereof, an intermediately disposed inwardly projecting molding on the door frame and formed from the metal thereof and extending along the sides and top thereof, a metal strip secured on said molding and extending therealong and projecting therefrom normal to the plane of the door frame opening in spaced relation with the frame in the direction of the door and forming a stop therefor and an open sided channel facing the closed door at the top and lock sides of the frame, and an open sided channel formed from the metal of the frame at the hinge side thereof and extending therealong immediately adjacent the side of the molding adjacent the door and facing the lock side of the frame, said flange being adapted to project into said channels when the door is closed for engagement with packing secured therein.

1,624,761. MEANS FOR SUPPORT OF AERO ENGINES. FREDERICK HENRY ROYCE and ALBERT GEORGE ELLIOTT, West Wittering, near Chichester, England, assignors to Rolls-Royce Limited, Derby, England. Filed July 31, 1926, Serial No. 126,284, and in Great Britain Aug. 8, 1925. 6 Claims. (Cl. 244—31.)



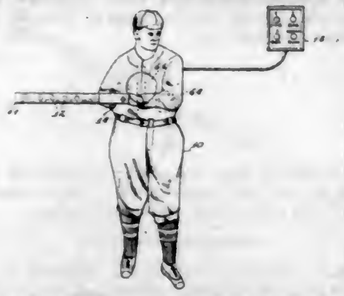
1. In an aeroplane means for supporting the engine on the face of the nacelle comprising cantilever triangular brackets projected from the nacelle and trunnions projected from the sides of the engines and secured to the apices of such brackets.

1,624,762. REFLECTOR LAMP. ALFRED RÜTTENAUER, Charlottenburg, Berlin, and GEORG GAIDIES, Pankow Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed May 14, 1926, Serial No. 109,160, and in Germany June 26, 1925. 3 Claims. (Cl. 176—34.)



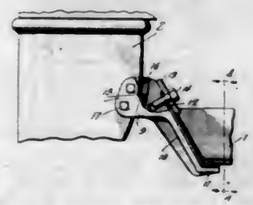
1. An electric lamp comprising a bulb, and a silver coating on the bulb protected by a fused enamel layer covering and hermetically sealing the coating.

1,624,763. HEATING FURNACE. HERBERT C. RYDING and ARTHUR B. HASWELL, Birmingham, Ala. Filed Apr. 9, 1926. Serial No. 100,851. 4 Claims. (Cl. 214—18.)



1. A heating furnace having an endless travelling hearth comprising spaced chains having cross flights secured thereto, and cooled means for supporting said flights independently of said chains.

1,624,764. NUT LOCK. BURT SALE, Riverside, Calif. Filed Aug. 7, 1926. Serial No. 127,884. 2 Claims. (Cl. 151—24.)

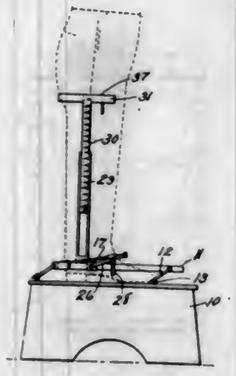


1. The combination, a bolt, a nut screwed thereon, said nut having an outer threaded portion provided with a series of radially disposed openings that communicate with its bore and having an annular depression at its outer end, pins, each of which having an inner pointed end and an outer headed end, one of which being received in each of the mentioned openings, a cap nut screwed on the exteriorly threaded portion of the first mentioned nut having its bore flared at one end, for frictional contact with the heads of the pins for forcing said pins through the openings to cause the pointed ends thereof to bite and distort the threads of the bolt and a ring member seated in the groove of the first mentioned nut for holding the cap nut thereon.

1,624,765. TARGET GAME. WILLIAM C. SCHMEH, Park Ridge, N. J. Filed Aug. 10, 1926. Serial No. 128,392. 4 Claims. (Cl. 273—102.)

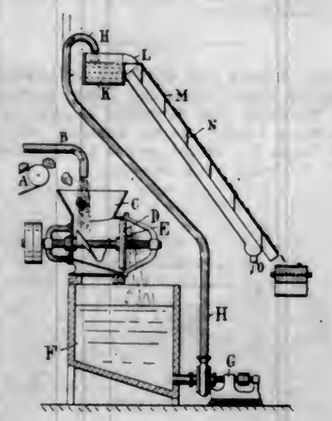
1. A target game comprising a swinging support, a plurality of target elements carried by the support, each target element operable when struck by a thrown object, an annunciator, means associated with each of said target elements and said annunciator which actuates said annunciator in response to the operation of each of said target elements as the result of being struck by the thrown object, manually operable means carried by the support for resetting the target elements to render them operable repeatedly, and mechanism for effecting the swinging movement of said support.

1,624,766. FASTENING DEVICE. WILLIAM SCHRODER, Covington, Ky., assignor to The Sebastian Lathe Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 22, 1924. Serial No. 745,246. 2 Claims. (Cl. 248—20.)



1. A device of the class described comprising a body portion slotted at one side to provide spaced jaws adapted for engagement with or about a portion of a support and having a leglike extension providing a flat face lying in a plane at right angles to the long axis of the slot, said leg terminating in an angular foot for supporting the receptacle at the bottom and a clamping jaw adapted for cooperation with the upper edge of the receptacle supported by the leg and foot, to force the receptacle against the leg, and clamping elements for the jaws.

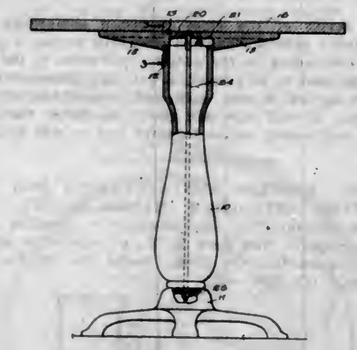
1,624,767. BOLT. WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Dec. 29, 1924. Serial No. 758,763. 1 Claim. (Cl. 85—9.)



A bolt comprising a threaded portion, a head formed on one end of said threaded portion, and a projection extending from one side only of said threaded portion adjacent the under side of said head, said projection being of a width equal to the diameter of the threaded portion of said bolt, and the sides of said projection being parallel to each other.

1,624,768. TAILOR'S MEASURE. BRYANT SIMPSON, Washington, D. C. Filed Aug. 5, 1924. Serial No. 730,290. 3 Claims. (Cl. 33—8.)

1. A tailor's measure comprising a support, a frame mounted thereon, a heel engaging member pivotally supported on said frame, a yoke pivotally and slidably mounted on said frame, a graduated tape of elliptical formation supported on the said heel engaging member and yoke and capable of being adjusted toward and away from said support, and also varying in length, and adapted to be used for measuring the width of the bottom of a trouser leg, and a gage pivotally mounted on said yoke and adjustable in a vertical plane to measure the angle or hollow of the bottom of said trouser leg.



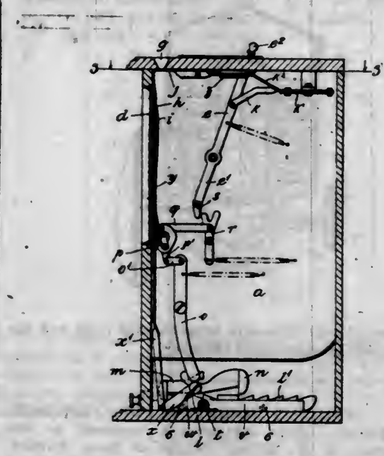
1,624,769. REMOVAL OF WATER FROM PEAT AND THE LIKE. OLOF SÖDERLUND and TROTTON BOBERG, Clapham Park, and NILS TESTRUP, Westminster, London, England, assignors to Techno-Chemical Laboratories, Limited, London, England. Filed Sept. 30, 1924, Serial No. 740,870, and in Great Britain Nov. 7, 1923. 5 Claims. (Cl. 44—27.)

1. The method of reducing peat to matter from which the liquid can subsequently be largely extruded by pressure comprising adding a quantity of water which will reduce the solid matter to not more than 2 per cent of the mass, thoroughly mixing the mass and shortening

any extended fibres, carrying the mass over perforated surfaces through which the water and contained slimy constituents can pass and collecting the matter from said perforated surfaces.

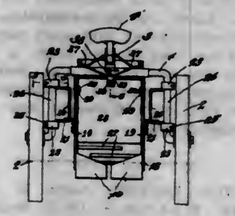
1,624,770. TABLE. ROBERT J. STUART, Poughkeepsie, N. Y.; Etta Barlow Stuart and Thomas H. Stuart executors of said Robert J. Stuart, deceased. Filed Sept. 11, 1923, Serial No. 662,107. Renewed May 14, 1926. 4 Claims. (Cl. 45—117.)

1. A table comprising a pedestal, a spider having depending ribs forming a socket for receiving the upper end of the pedestal, a top carried by the spider, means for adjusting the spider on the pedestal to level the top, and means preventing the turning of the top with respect to the pedestal.



1,624,771. CONSTRUCTION OF WHEELS FOR ROAD VEHICLES. GEORGE TURNER, Parramatta, near Sydney, and JOSEPH ELDRED BISHOP, Mosman, near Sydney, New South Wales, Australia. Filed July 27, 1923, Serial No. 654,137, and in Australia Mar. 26, 1923. 1 Claim. (Cl. 301—95.)

In a wheel having a rim comprising a series of felloes of a definite circumferential width adapted to receive the spokes of the wheel and a plurality of felloes of a relatively smaller circumferential width disposed intermediate each pair of the said spoke receiving felloes; a longitudinally extending groove formed in the opposite radially extending sides of each of said felloes; and a strip fitted within the adjacently positioned grooves of the adjacent felloes.

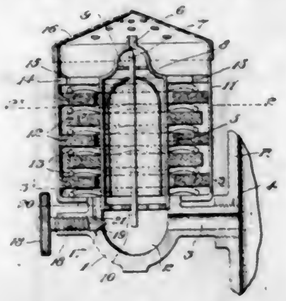


1,624,772. TREASURY-NOTE CABINET. ARTHUR WARREN, Kennington Cross, and SAMUEL NORMAN SOLOMON, Westminster, London, England. Filed Nov. 24, 1924, Serial No. 751,945, and in Great Britain Dec. 29, 1923. 4 Claims. (Cl. 132—1.)

3. A note receiving and displaying apparatus of the type referred to for containing a supply of notes combined with a change giving mechanism consisting of at least one change delivery drawer corresponding to the value of the notes, a locking device for each drawer consisting of a single rack bar the teeth of which are cut in reversed directions and two correspondingly reversed pawls coacting with said rack teeth, a lever engaging

the tails of both said pawls, and means for operating said lever from the mechanism of the note receiving and displaying apparatus.

1,624,773. BOLL-WEEVIL CATCHER. ROSS WEAVER, Forrest City, Ark. Filed Nov. 14, 1923. Serial No. 674,719. 4 Claims. (Cl. 43—133.)

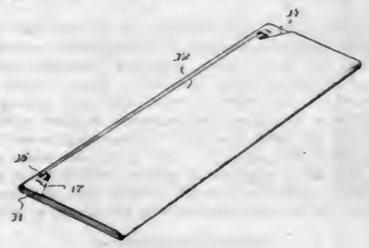


1. In an insect exterminator, an arched axle, spaced clamping members secured for adjustment on the side portions of said axle, U-shaped securing brackets received by the clamping members, a hood, bracket plates connected to the sides of said hood and having loose connection with the securing brackets to allow a swinging movement of said hood, plant engaging arms having one of their ends secured to the inner side walls of said hood and being adapted to remove insects from plants, and liquid containing troughs formed with said hood for receiving the insects removed from the plants by the arms.

1,624,774. COMBINED AIR PURIFIER OR HUMIDIFIER AND RADIATOR VENT VALVE. ADOLPH BAUER, Newark, N. J., assignor to Richard C. Jenkinson, doing business as R. C. Jenkinson & Co., Newark, N. J. Filed Mar. 20, 1924. Serial No. 700,497. 11 Claims. (Cl. 237—78.)

8. A device of the character described, comprising a casing having two chambers one of which surrounds the other, said chambers communicating at one end with a common fluid inlet and having independent outlets at

their other ends, an automatic valve for controlling the outlet of one of said chambers, and an absorbent material

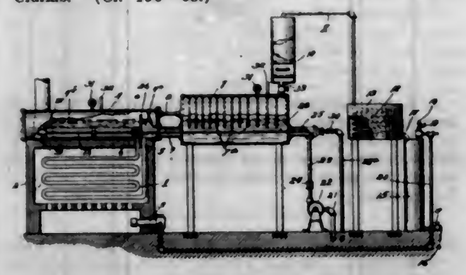


in the other of said chambers between said inlet and the outlet of said last-mentioned chamber.

1,624,775. LIGHTING MAGNETO FOR VEHICLES. FRITZ BOVARD, Bern, Switzerland, assignor to the Firm: Sport S. A., Bienne, Canton of Bern, Switzerland. Filed Dec. 11, 1923. Serial No. 680,014. 1 Claim. (Cl. 200—80.)

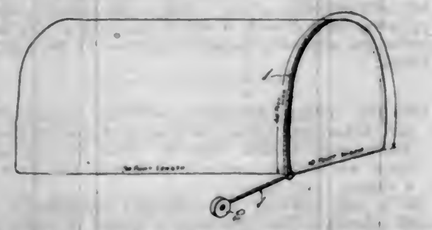
In a lighting magneto for vehicles of the kind where with the increasing speed resistances are switched-in in parallel to the lamps and in combination, a rotor shaft, a plate spring surrounding said shaft concentrically and attached with one end to said shaft, a contact weight secured to the free end of said plate and a plurality of stationary contacts arranged resiliently behind each other in the path of said weight and adapted to be switched-in successively.

1,624,776. FILE JACKET. JOHN K. CASSEL, Ainsworth, Nebr. Filed Feb. 8, 1924. Serial No. 691,456. 1 Claim. (Cl. 229—87.)



In a device of the class described, a main sheet adapted to have its end portions folded toward each other, resilient securing means connected with one edge portion and projecting therefrom, an oppositely located portion of the sheet having parallel series of pockets for engagement by the resilient means, said pockets including an inner wall constituting a folded reinforcing strip, and an apertured wall providing entrance openings, the folds of the inner and outer walls being on opposite sides of the pockets.

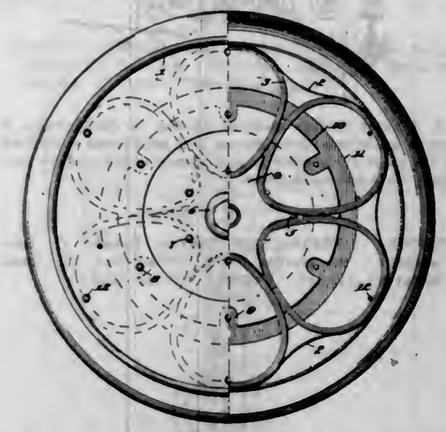
1,624,777. SLEEVE-PRESSING FORM. LAWRENCE T. CHELLIS, Corvallis, Oreg. Filed Feb. 23, 1924. Serial No. 694,646. 6 Claims. (Cl. 223—19.)



1. A device of the class described comprising two substantially narrow elongated ribs, each having a curvature corresponding to the natural curvature of the part of the garment to be pressed, a flat strip arranged therebetween, spring means connected respectively to the outer ends of said ribs, and means to fasten the inner ends of said spring means together and to said strip.

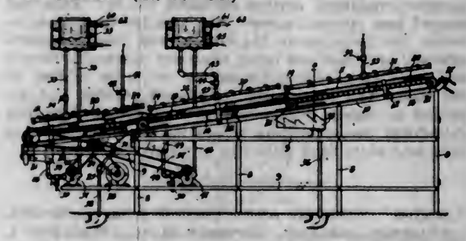
1,624,778. PROCESS AND APPARATUS FOR CONVERTING PETROLEUM HYDROCARBONS. ROY CROSS, Kansas City, Mo., assignor to Gasoline Products Company, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1923. Serial No. 671,355. 10 Claims. (Cl. 196—68.)

3. A process for converting petroleum hydrocarbons consisting in charging the oil to an initial stage in which the oil accumulates in a pool, thence through a heating stage and then to a conversion stage, maintaining the liquid products in the initial stage and the conversion stage separate with open vapor communication therebetween, passing the evolved vapors from the conversion stage through the initial stage containing the pool of relatively cooler oil, thence to dephlegmating and condensing stages, withdrawing the unvaporized products from the conversion stage and utilizing their energy to produce a turbulent condition of the oil in the conversion stage, and maintaining carbon, separated during the conversion reaction, in a suspended condition.



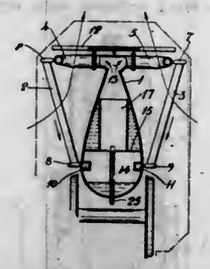
1,624,779. MEASURING TAPE. LOUIS C. DE CAMP and ALFRED J. DE CAMP, Molina, Colo. Filed Oct. 6, 1924. Serial No. 742,031. 1 Claim. (Cl. 33—137.)

A hay-stack measuring device comprising a tape line adapted to be passed transversely over an elongated hay-stack and transversely along the ground at one end of



the stack, said tape having spaced pairs of numbers at or near one pair of which, the free end of the tape will be located when said tape is positioned as above stated, the numbers reached by said free end of the tape showing two approximate weights of an imaginary slice one foot thick cut transversely from the stack being measured, one weight being that of one kind of hay while the other is that of another kind, said tape also being divided into feet, whereby after determining the weight of the aforesaid imaginary slice one foot thick, the length of the stack in feet may be measured with the tape, multiplication of said weight by the number of feet of stack length, giving the approximate weight of the entire stack.

1,624,780. WHEEL. FRANCISCO DE LUCA, Santiago de Chile, Chile. Filed Sept. 25, 1924. Serial No. 739,905. 4 Claims. (Cl. 152—8.)

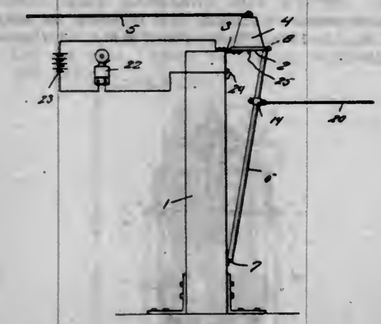


4. A resilient wheel comprising a rim and a hub, leaf spring-rings of ovoid shape having the broad ends seated adjacent the rim and their apices seated adjacent said hub, a casing comprising an annular part carried by said rim and a central part carried by said hub, the walls of said parts freely telescopic in an intermediate zone, bolts passing through said annular part bearing against the inner surfaces of said rings at their broad ends, and bolts passing through said central part bearing against the inner surfaces of said rings adjacent their apices, said rings being otherwise freely floatably mounted with respect to each other and to said casing.

1,624,781. METHOD AND APPARATUS FOR HANDLING PHOTOPRINTS. GLEN M. DYE, Minneapolis, Minn. Filed Aug. 25, 1924. Serial No. 733,967. 31 Claims. (Cl. 95—94.)

1. The method of finishing separate cut photo prints which comprises progressing said prints face upward on a conveyor, and successively spraying on said prints developing and rinsing fluids.

1,624,782. CONDENSER FOR LOCOMOTIVES. ERIK OTTO ERIKSSON, Lidingo-Brevik, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Lidingo-Brevik, Sweden, a Corporation. Filed Mar. 25, 1924, Serial No. 701,859, and in Sweden Mar. 28, 1923. 3 Claims. (Cl. 257—25.)

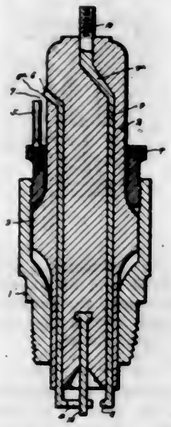


1. A condenser for locomotives or similar vehicles comprising a receptacle and an air-cooled part cooperating with said receptacle, the receptacle being divided into two compartments located the one above the other and serving both as liquid spaces.

1,624,783. POLISHING COMPOSITION. ALFRED BRYANT FISHER, New York, N. Y. Filed Apr. 14, 1924. Serial No. 706,560. 5 Claims. (Cl. 51—280.)

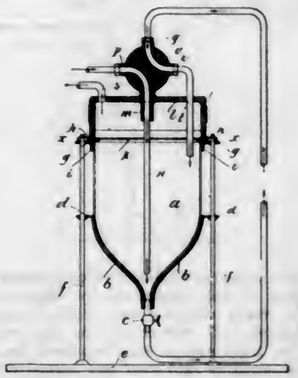
1. A polishing composition, which comprises an intimate mixture of finely divided metal dust, pumice and oil.

1,624,784. SAFE CONTROL AND SIGNAL FOR PUMP-OPERATING MECHANISM. JOHN JAMES FRASER, Camden, Ark., assignor of forty-five per cent to Henry E. Farabee, Camden, Ark. Filed Dec. 6, 1924. Serial No. 754,451. 2 Claims. (Cl. 192—116.5.)



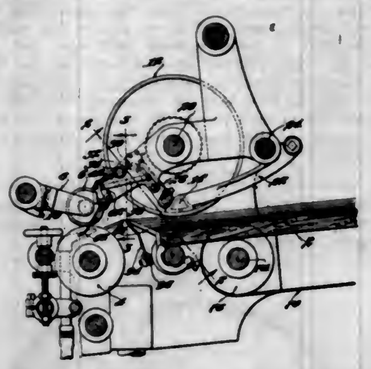
1. A device of the class described comprising a supporting standard, a shelf hinged on the upper end of said standard, a weight carried by said shelf, an engine control cable associated with said weight, an arm hingedly supported at its lower end on said standard, the upper end of said arm engaging said shelf and normally holding the same in an inoperative position, whereby the engine control cable is idle, and means for disengaging the upper end of said arm from said shelf whereby the shelf is automatically swung downwardly by said weight and actuates the cable to cut off the engine.

1,624,785. SPARK PLUG. DAVID G. FUCHS, Pittsburgh, Pa. Filed Oct. 16, 1923. Serial No. 668,925. 1 Claim. (Cl. 123—169.)



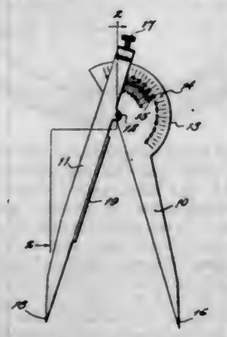
In a spark plug, a body of electrical conducting material, a core of electrical insulating material mounted in the body, a packing member of electrical conducting

material threaded into the body and cooperating therewith to secure the core, a pin of electrical conducting material secured in the core and projecting from the lower end thereof, two electrical conductors carried by the core and insulated thereby from each other and from the pin as well as from the body and the packing member, said conductors being provided with terminal elements



disposed adjacent and at opposite sides of the pin, means for connecting one of the conductors to one side of a source of supply of electrical energy, and a terminal pin of electrical conducting material carried by the packing member, the upper end of the other conductor projecting beyond the core and being spaced from said terminal pin to form therewith a visible spark gap.

1,624,786. DEVICE FOR CLEANING PIPE LINES. BERNHARD GERBER, Stellingen, near Hamburg, Germany. Filed May 1, 1924. Serial No. 710,414. 3 Claims. (Cl. 225—12.)

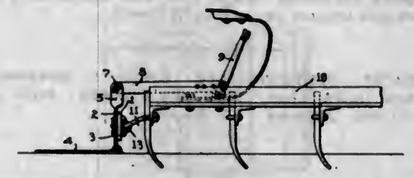


1. An apparatus for cleaning pipe lines, more particularly pipes for conveying beer, by means of a finely granulated cleaning material acted upon by the suction of a waterjet comprising in combination, a vessel, a cover on said vessel, a two-way valve on said cover, a nozzle pipe in the vessel that is connected with the valve, branches on the valve for communicating with a water supply, the interior of the vessel and one of the pipes lines, an outlet pipe in the cover for conveying away the dirty water, a metal cap at the lower end of the vessel and a one way valve thereon for connecting up to the pipe to be cleaned, substantially as described.

1,624,787. PAPER-FEEDING MACHINE. HENNING HALLSTREAM, Brockton, Mass., assignor to Cross Paper Feeder Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1924. Serial No. 686,528. 15 Claims. (Cl. 271—28.)

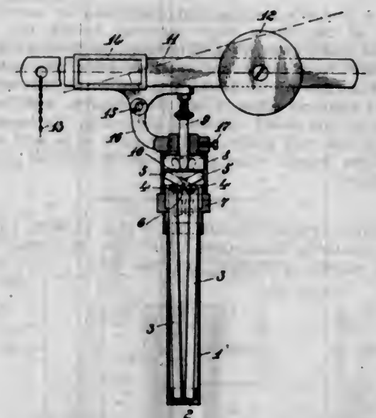
1. A sheet feeding machine having, in combination, a suction sheet separating device, and mechanism controlled by the sheet for rendering said device active and for rendering said device inactive.

1,624,788. COMBINATION TOOL. ROBERT C. HOFMAISTER, Bartlesville, Okla. Filed Oct. 27, 1924. Serial No. 746,187. 1 Claim. (Cl. 33—148.)



In combination, a substantially U-shaped member terminating to provide pointed extremities, apertured lugs projecting from the corresponding edges of the limbs of said member near one end thereof, a longitudinally disposed plate connecting the said edges of the respective limbs at a point beneath said lugs, a second member having one end pointed, and an enlarged substantially semi-circular graduated portion arranged at the other end thereof and pivoted between said lugs for movement between the limbs above the lugs of the first mentioned member, said members being relatively adjustable toward and away from each other, and a set screw carried by the closed end of the first mentioned member and arranged to engage the curved edge of the semi-circular cylindrical portion of the second mentioned member, to hold said parts fixed relatively in adjusted position.

1,624,789. WEEDER ATTACHMENT FOR HARROWS. CLARENCE JOHNSTON, Townsend, Mont. Filed Oct. 7, 1924. Serial No. 742,250. 1 Claim. (Cl. 97—238.)

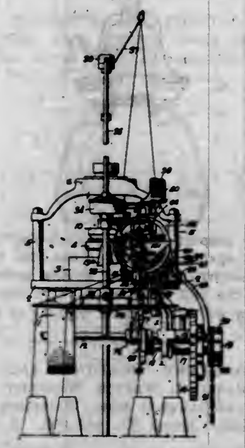


In combination with a harrow, the latter being provided with rearwardly extending hanger hooks terminating in eyes, a weeder comprising a tooth carrying bar having

eyes engaged with the eyes of the hanger hooks, a plurality of teeth mounted on said bar and having extending ground engaging portions, a latch controlled hand lever mounted on the harrow, a pair of brace members

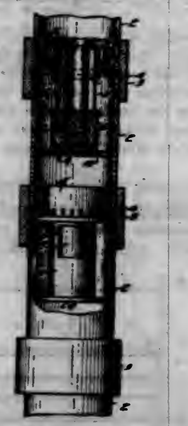
connected with said bar and extending upwardly therefrom, and a link having a pivotal connection at one end with the lever and at the other end being disposed between said brace members and pivotally connected therewith.

1,624,790. THERMOSTAT. BERTHOLD KLAFTEN, Berlin-Grunewald, Germany. Filed Feb. 16, 1924. Serial No. 693,244. 7 Claims. (Cl. 297—12.)



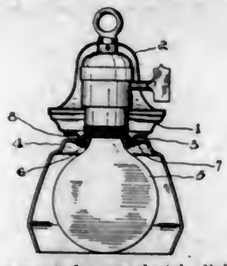
1. A thermostat comprising a protecting tube; a sleeve secured to the top of said tube; a pair of thermostatic elements arranged in said tube; a pair of arms pivoted to each other intermediate their ends and one end of each arm being connected to the end of its respective thermostatic element; a disk slidably mounted in said sleeve and adapted to be operated by the other ends of said arms; and a lifting pin secured to said disk and slidably mounted in said sleeve for transmitting the action of the thermostatic elements by means of said arms.

1,624,791. INSULATED PISTON. MICHAEL E. KRAXBERGER, Buckingham, Colo. Filed Nov. 18, 1924. Serial No. 750,680. 3 Claims. (Cl. 74—108.)



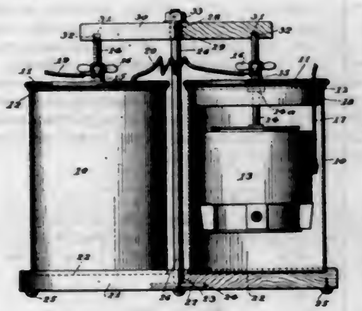
1. An auxiliary partition for pistons comprising two complementary parts, pivotally secured together adapted to be arranged to constitute in one position a complete partition and in another position to overlap to permit insertion into the piston.

1,624,792. STRIPING ATTACHMENT FOR KNITTING MACHINES. WALTER LARKIN, Norristown, Pa., assignor to Fidelity Machine Company, Philadelphia, Pa., a Corporation of Delaware. Filed July 19, 1923. Serial No. 652,541. 25 Claims. (Cl. 66—144.)



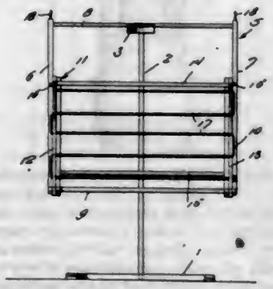
1. The combination of a circular knitting machine; a series of yarn sources; mechanism remotely situated relative to the knitting unit of said machine for successively and unrestrictively selecting different yarns from said sources; and means adjacent said selecting mechanism for knotting the end of each succeeding selected yarn to the yarn being fed to the knitting unit, and severing the running yarn from the newly selected yarn adjacent the said formed knot.

1,624,793. CONTACT APPARATUS. MATTHEW D. MANN, Jr., Roselle, and HORACE M. WEIR, Newark, N. J. Filed July 16, 1924. Serial No. 726,251. 4 Claims. (Cl. 261—114.)



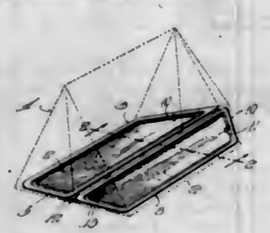
1. In an apparatus of the character described the combination of a tube, plates in the tube and bubble bell assemblies attached to said plates, each such assembly comprising a bubble bell having a series of openings around its periphery and a passage for the downward flow of liquid through its center, a cup into which such passage leads to provide a liquid seal and a passage for the upward flow of a vapor or the like between said liquid passage and the outer wall of the bubble bell.

1,624,794. SHADE HOLDER FOR ELECTRIC-LAMP SOCKETS. WILLIAM A. MARTIN, Toronto, Ontario, Canada. Filed Mar. 22, 1924. Serial No. 701,152. 2 Claims. (Cl. 240—138.)



1. A shade support for an electric light socket comprising a coil spring adapted at one end to engage the neck of an electric lamp and a ring connected to the other end of the coil and formed with clips adapted to secure the ring within the upper opening of a lamp shade.

1,624,795. BATTERY HOLDING AND CARRYING MEANS. MARTIN L. MARTUS, Woodbury, and EDMUND H. BECKER and JAMES G. ROSS, Waterbury, Conn. Filed Dec. 19, 1923. Serial No. 681,480. 2 Claims. (Cl. 136—173.)

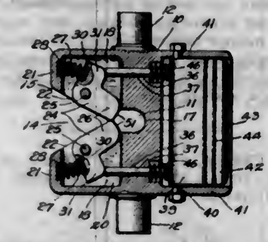


1. In combination with a plurality of battery units, a supporting device therefor comprising a base member adapted to seat the batteries, an upper member extending between the batteries and engaging their upper ends at its ends whereby its center portion forms a handle, and connecting means between said base member and upper member adapted to clampingly engage the same with the batteries.

1,624,796. PORTABLE CLOTHESRACK. CHARLES H. MERCIER, Pittsfield, Mass. Filed Dec. 17, 1924. Serial No. 756,502. 1 Claim. (Cl. 68—34.)

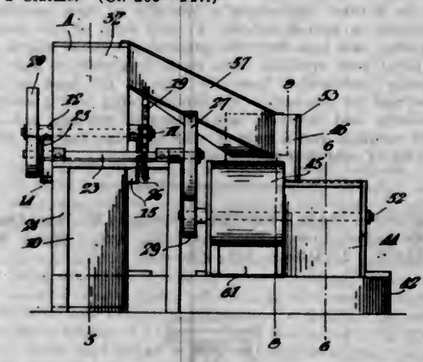
In a support for a readily removable clothes rack, a base, a standard extending upwardly therefrom, a rectangular shaped block supported on the upper end of the standard and adapted for rotation thereon, said block being provided with a longitudinally extending channel in the upper face thereof, the intermediate portion of the top of the clothes rack being adapted to rest in the channel whereby the clothes rack is removably suspended by the block and adapted for rotation therewith.

1,624,797. SLEEPING MAT. SAMUEL C. MOREHOUSE, New Haven, Conn. Filed July 13, 1923. Serial No. 651,260. 2 Claims. (Cl. 5—344.)



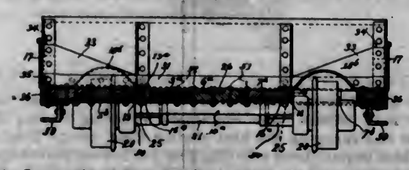
1. A camper's sleeping mat comprising an imperforate body of impervious sheet material having the edges thereof rolled upwardly and inwardly to provide a hollow inflatable form sustaining water shedding rim, with the major portion of the latter disposed within the confines of the marginal edges of said body portion, and the free edges of said rolled rim being secured to the upper surface of the body portion and arranged to be held spaced from the ground when either side of the mat contacts the latter.

1,624,798. PACKING FOR OIL-WELL PUMPS. ALBERT H. NEILSON, Tulsa, Okla. Filed Oct. 30, 1925. Serial No. 65,832. 2 Claims. (Cl. 286—23.)



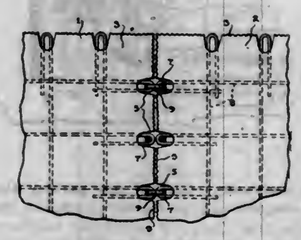
1. In combination with a packing cylinder and a plunger rod, glands at the ends of the cylinder having concave and convex inner ends, respectively, an intermediate gland having its ends concaved and convexed in paired relation to corresponding faces of the end glands, a packing member between the intermediate gland and the end gland having the concaved face, having its ends convexed to receive compression from said glands, and a packing member between the intermediate gland and the end gland having the convexed face, having its ends concaved to receive expansion from said glands, whereby the packing members are adjustable respectively against the rod and the cylinder.

1,624,790. SUCKER-ROD ELEVATOR. ALBERT H. NEILSON, Tulsa, Okla. Filed May 12, 1926. Serial No. 108,551. 10 Claims. (Cl. 294—91.)



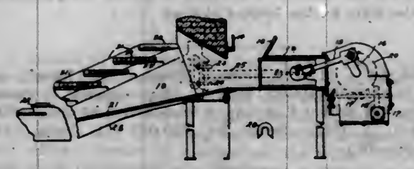
1. In an elevator of the character described, a body having a vertical opening forming a rod seat and a passage leading from said opening forming a receiving throat, a jaw member pivoted on the body at each side of the passage on a vertical axis, means yieldingly urging the jaw members to close the passage, and an actuating member pivoted on the body on a horizontal axis and connected with the jaws for shifting the jaws to open the passage.

1,624,800. DUST AND CHAFF COLLECTOR FOR GRAIN-ELEVATOR HEADS. WILLARD A. PETTEYS, Wilcox, Nebr. Filed July 22, 1924. Serial No. 727,593. 2 Claims. (Cl. 209—147.)



1. A dust and chaff collector for grain elevator heads comprising in combination with an elevator head, a casing adapted to detachably engage with the elevator head, a fan in the casing, a main compartment in the casing and compartments communicating with said main compartment, a detachable head for the casing and compartments formed in said head registering with the compartments in the casing, air chutes connecting the casing head with the elevator head whereby, on the fan being operated a suction air blast is created from the elevator head through said casing.

1,624,801. MINE CAR. WALTER S. PURDY, Huntington, W. Va., assignor to Frederick H. Gibbs, trustee, New York, N. Y. Filed Aug. 27, 1924. Serial No. 734,432. 28 Claims. (Cl. 105—364.)

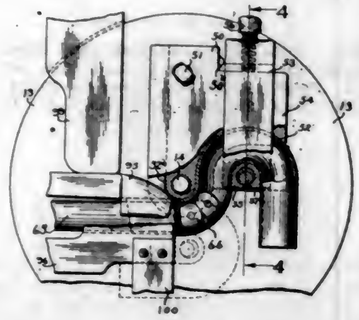


1. In a mine car, a lading receptacle, a floor comprising a plurality of longitudinally extending planks and a plurality of angle members extending between said planks and beyond said receptacle at each end thereof and a metal sheathing enveloping the greater portions of the ends of said planks at each end, all of said parts being rigidly connected together.

1,624,802. CONCRETE REINFORCING BOND AND CONNECTER. FRED REBELL, North Fremantle, Australia. Filed June 30, 1925, Serial No. 40,584, and in Australia Sept. 22, 1924. 3 Claims. (Cl. 72—106.)

1. In a building construction, a plurality of building slabs, certain of which are edgewise united, others of which having their edge portions overlying the united edge portions of the first slabs, the edgewise united slabs having notches or openings, bondings embedded in the slab and having loops located in the notches, means connecting the loops, the slab with its edge overlying said united edges having bondings, means connecting the last bondings with certain of the loops of the first bondings, wood fillers in the corners adjacent the slab which overlies the edgewise united slabs, and means passing through the joint of the several slabs and through the fillers for bonding the structure together.

1,624,803. SIDE-WALL CONSTRUCTION FOR FURNACES. ROBERT SANFORD RILEY, Worcester, Mass., assignor to S. Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 22, 1923. Serial No. 658,799. 4 Claims. (Cl. 110—44.)

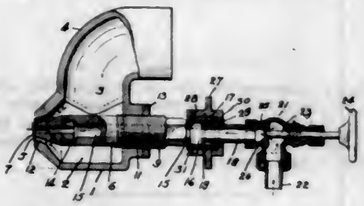


2. In an underfeed furnace, an air admitting side wall structure comprising a top block, a bottom block, a plurality of intermediate blocks, said blocks having portions spaced apart to provide air openings, and ribbed bars mounted in said openings.

1,624,804. TUBE-BENDING MACHINE. THOMAS T. ROBINSON, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn. Filed July 3, 1924. Serial No. 723,972. 7 Claims. (Cl. 153—40.)

1. In a tube bending machine, a bending arbor having a tube receiving groove and means to hold a tube in said

groove comprising a block adapted to bear against the tube wall, a clamp to embrace the arbor, tube and block,

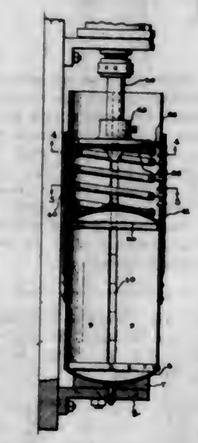


and an eccentrically mounted pin passing through the block and adapted to urge the latter against the tube.

1,624,805. METHOD OF PRODUCING APPAREL ORNAMENTS. ABRAHAM ROSENBERG, Far Rockaway, N. Y. Filed Aug. 28, 1925. Serial No. 53,188. 4 Claims. (Cl. 2—278.)

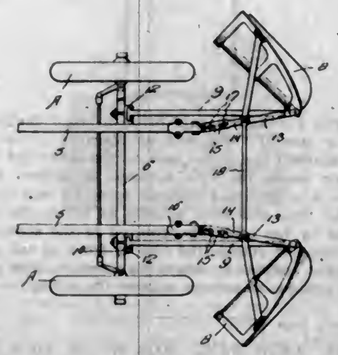
1. In a method of producing a looped ornament for wearing apparel, disposing a strip of corded braid in looped form directly upon the apparel fabric with the corded edge of said strip lying at the interior of the loop, securing the looped strip to said apparel fabric while leaving the corded edge free, and then pulling the cord to contract the interior of the loop to flatten out puckerings in the strip by the looping thereof.

1,624,806. OIL BURNER. PARMLY H. RYDER and CHARLES W. MOORE, Bucyrus, Ohio, assignor to Smokeless Oil Burner Company, a Corporation of Ohio. Filed Jan. 2, 1923. Serial No. 610,087. 1 Claim. (Cl. 158—76.)



An oil burner comprising a cylindrical casing having an air inlet intermediate its ends, a tapered air outlet at one end and a threaded aperture at the other end, a stem having a tapered end complementary to said outlet and an externally threaded portion disposed in said threaded aperture, a comparatively large diameter oil passage within said stem, a valve associated with said stem to control the flow of oil therethrough, and an adjustable sealed connection between said valve and stem including a tubular member having an external flange at one end slidably fitted in an enlarged bore formed in the adjacent end of said stem, said parts being held in engagement by a stuffing nut.

1,624,807. PNEUMATIC PAD. JOSEPH A. SCHINNER, Greenfield, Ohio. Filed Mar. 13, 1926. Serial No. 94,477. 3 Claims. (Cl. 54—68.)

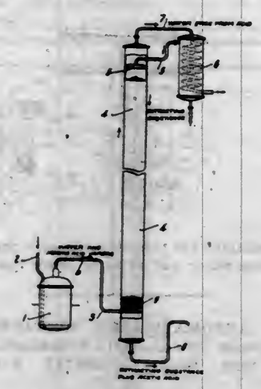


1. In a harness pad for draft animals, including an inflatable pad body and an outer covering therefor provided with openings in an edge thereof, means for attaching the pad and retaining the same in juxtaposition to the harness, comprising a plurality of hook members arranged in spaced relation at said edge of the outer covering, said hook members comprising a single length of material bent medially upon itself to provide a pair of strands intertwisted from the nose of the hook to its base, and the free ends of the strands being bent laterally, reversely and inwardly and extending through one of said openings and a pair of said openings disposed outwardly of said first-mentioned opening.

1,624,808. HAM PRESSER. GEORGE W. SCHOLTEN, Muscatine, Iowa. Filed Aug. 27, 1925. Serial No. 52,877. 2 Claims. (Cl. 100—57.)

1. A ham press comprising a container, a ham contact head within said container, a spring having its lower end engaging the ham contact head, straps fixed to the ham contact head and engaging the lowest convolution of the spring to secure the lower end of the spring to the ham contact head, a plunger contact head engaged with the upper end of the spring, and straps fixed to the plunger contact head and engaging the uppermost convolutions of the spring to secure the upper end of the spring to the plunger contact head.

1,624,809. SNOW-CLEARING APPARATUS FOR AUTOMOBILES. JOHN B. SEWELL, Zanesfield, Ohio. Filed Apr. 14, 1926. Serial No. 101,963. 2 Claims. (Cl. 37—42.)



1. In a snow plow construction for motor vehicles, a pair of plate members adapted to be rigidly attached to the front axle of the vehicle, between the sides of the chassis and the front wheels of the vehicle, a pair of arms cooperatively constructed at their rear ends for slidable association with the respective plate members, said arms extending forwardly in a horizontal plane, a pair of snow plows rigidly attached to the forward ends of the arms and extending diagonally in front of the vehicle front wheels, a bracket rigidly associated with the upper inner portion of each plow and extending rearwardly therefrom, a bar secured at its rear end to the forward end of each of the chassis side bars, the forward ends of said bars being secured to the respective brackets, and a brace rod extending between the brackets.

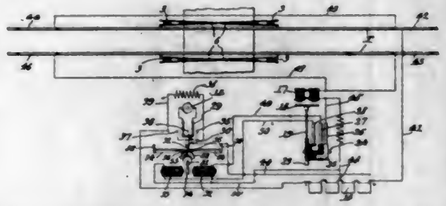
1,624,810. PROCESS FOR THE CONCENTRATION OF DILUTE ACETIC ACID. HERMANN SUIDA, Modling, Austria. Filed June 18, 1924. Serial No. 720,811, and in Austria June 26, 1923. 1 Claim. (Cl. 260—122.)

A process for the concentration of dilute acetic acid which comprises extracting the dilute acid with a solvent which is substantially insoluble in water, the said solvent dissolving the acetic acid and having a considerably higher boiling point than that of pure acetic acid, separating the acetic acid from the solvent charged with it and returning the solvent separated from the acetic acid for re-use in the extraction process.

1,624,811. CONCENTRATION OF DILUTE ACETIC ACID. HERMANN SUIDA, Modling, Austria. Filed June 18, 1924, Serial No. 720,812, and in Austria June 26, 1923. 2 Claims. (Cl. 260—122.)

1. A process for the concentration of dilute acetic acid which comprises extracting the vapors of the dilute acid with a liquid solvent which has a boiling point above 150° C., said solvent having a high capacity for dissolving acetic acid but a low capacity for dissolving water, then

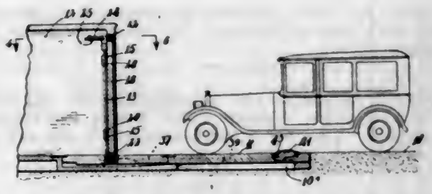
treating the solvent containing the acetic acid to separate the acetic acid and returning the solvent for re-use in the process.



1,624,812. METHOD OF CONCENTRATING DILUTE ACETIC ACID. HERMANN SUIDA, Modling, near Vienna, Austria. Filed Feb. 9, 1926, Serial No. 87,122, and in Austria Feb. 21, 1925. 3 Claims. (Cl. 260—122.)

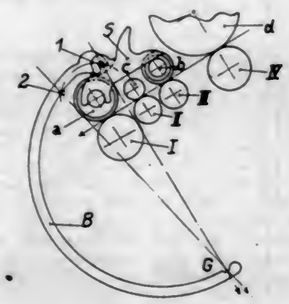
1. A method of manufacturing concentrated acetic acid from diluted acetic acid by extracting the acid from a superheated mixture of acetic acid and water vapor by acetic acid solvents having higher boiling points than that of acetic acid and being substantially insoluble in water, which consists in condensing the water vapors issuing from the extraction process and containing some volatilized acetic acid extraction agent, allowing the condensate to stand to permit the main portion of the extraction agent to separate out as a separate layer, and then removing the water layer still containing some extraction agent and subjecting it to an extraction with a solvent for the said acetic acid extraction agent.

1,624,813. AUTOMATIC GATE. FRED SWEARINGEN, Pueblo, Colo. Filed Nov. 14, 1925. Serial No. 69,111. 6 Claims. (Cl. 246—129.)



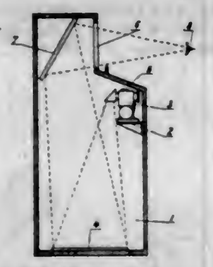
1. The combination with an electric motor, a crossing gate, and means operated by the motor for actuating the gate, of a pole changing switch for controlling the direction of rotation of the motor, a commutator, means con-

trolled by a train at points remote from the crossing for actuating the commutator, and separate circuits controlled



by the commutator for throwing the pole changing switch to operate the motor and raise or lower the gates.

1,624,814. AUTOMATICALLY-OPERATED GARAGE DOOR. DEZSÖ SZALLA, North Tonawanda, N. Y. Filed May 13, 1926. Serial No. 108,787. 5 Claims. (Cl. 268—35.)

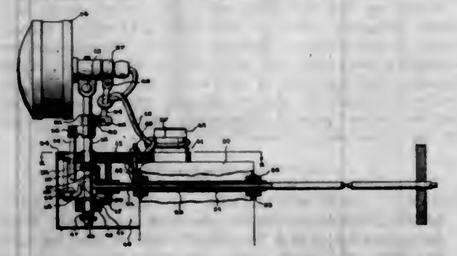


1. In a device of the class described, a door, means for normally urging said door to an opened position comprising a spring attached at one end to said door and at the other end to a stationary member, means for latching said door to a closed position, comprising a segmental crank disc having a catch notch and co-axially fixed to said door, a pivoted finger for engaging said catch notch, means for releasing said latching means upon the approach of a vehicle, and means for closing and relatching said door upon the departure of a vehicle.

1,624,815. FOUR-CYLINDER DRAWHEAD. ERNST TOENNIESSEN, Unterhausen, Germany. Filed Nov. 17, 1925, Serial No. 69,718, and in Germany Dec. 12, 1924. 4 Claims. (Cl. 19—136.)

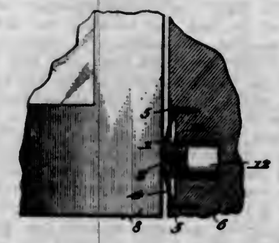
1. In combination with a four-cylinder draw-head, a weighting device comprising a weighted yoke extending over the front top pressure roller of the draw-head, and a saddle journaled on the front top roller and loosely connected with the yoke whereby the saddle can be swung into open position and with the said front top pressure roller remaining weighted.

1,624,816. DEVICE FOR PROJECTING STATIONARY OR MOVING PICTURES IN BROAD DAYLIGHT. ANDRÉ ELIE LAURENT TRIANA, RODRIGUE JOSEPH ANTOINE TRIANA, and JUAN ORTIZ-ESCOFET, Paris, France. Filed June 30, 1925, Serial No. 40,641, and in France July 30, 1924. 1 Claim. (Cl. 88—24.)



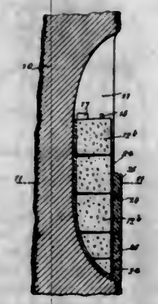
A device for projecting pictures in broad daylight comprising a case provided with an aperture at one end, a screen disposed inside the case at the other end thereof, a bracket inside the case between the screen and the aperture, a projecting apparatus borne by said bracket, a prism for total reflection adapted to reflect the pictures projected by the said apparatus on to the screen and a mirror disposed outside the case in front of the aperture thereof and adapted to reflect the screen in view of showing the pictures to persons outside the casing.

1,624,817. LATH NAIL. HANS WILLIG, Santa Barbara, Calif. Filed July 25, 1925. Serial No. 46,077. 2 Claims. (Cl. 72—118.)



1. The combination with a nail having a head, an elongated body and a flat penetrating tip, a sleeve slidably mounted on the body of the nail, and a series of radially extending spaced ribs formed upon the end of said sleeve adjacent the head and adapted to abut the underside of the same, said ribs having their top edges curved downwardly and inwardly to the center of said body, substantially as and for the purpose set forth, said sleeve being prevented from accidental removal from the nail body by means of the head and flat penetrating tip.

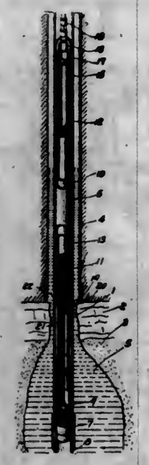
1,624,818. DIRIGIBLE SPOTLIGHT. WILLARD C. WILLIAMS, Indianapolis, Ind., assignor of one-half to John M. Phipps, Indianapolis, Ind. Filed Nov. 27, 1925. Serial No. 71,656. 6 Claims. (Cl. 240—61.)



1. A device for the purpose indicated comprising a lamp, a post at the upper end of which the lamp has a horizontally disposed pivotal connection to permit of its angular movement in a vertical plane, a bracket in which the post is mounted for angular movement in a horizontal plane, an actuating shaft having a geared connection with the post for effecting its angular movement in the bracket, a member carried by the post and axially movable of the latter, said member having a link connection with the lamp, and a second actuating shaft having a terminal crank and a link connection with said member.

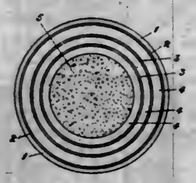
1,624,819. ADJUSTABLE SASH HOLDER. WILLIAM A. WOLFORD, Ansley, Nebr. Filed Apr. 27, 1926. Serial No. 104,962. 1 Claim. (Cl. 292—76.)

An adjustable spring balance comprising a supporting plate designed to be secured to a window frame, an exteriorly threaded cylindrical casing carried by the supporting plate, the latter having upper and lower slots and provided with an intermediate opening disposed centrally of the casing, a spring strip bridging said opening and adapted to bear against the edge of the sash and having its ends arranged in the slots of the supporting plate, a plunger free to slide through the intermediate opening in the supporting plate and bearing against the spring strip intermediate the ends of the strip to force the same into engagement with the sash, a coiled spring bearing against the inner end of the plunger for urging the plunger outwardly, and a cap having screw threaded fit with the casing whereby to adjust the spring to vary the pressure against the sash.



1,624,820. METHOD OF FILLING TREE CAVITIES AND THE FILLING ITSELF. GEORGE VAN YAHRES, Westbury, N. Y. Filed Nov. 5, 1925. Serial No. 67,075. 17 Claims. (Cl. 47—8.)

12. That improvement in the method of filling a cavity in a part of a tree which consists in utilizing blocks of cork, and in expanding inner portions of each block by the use of a wedge driven between the inner portions of each block.

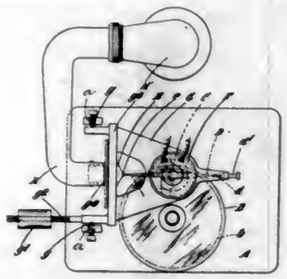


16. In conjunction with a part of a tree having a cavity therein, a filling of cork blocks in the cavity completely filling the same.

1,624,821. OIL-WELL PUMP. SIDNEY C. ASHTON, Kansas City, Mo. Filed Mar. 26, 1926. Serial No. 97,667. 6 Claims. (Cl. 103—181.)

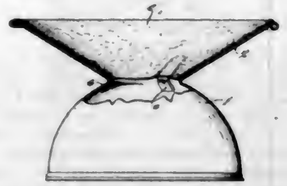
1. A pump of the character described, comprising a standing barrel, a standing valve fixed to the lower end of the standing barrel, a travelling barrel comprising spaced, concentric tubes movable along the inner and outer faces of the standing barrel, a down-check valve on the travelling barrel, and means connected with the travelling barrel and standing valve co-operative to lift the standing barrel and standing valve upon extended elevation of the travelling barrel.

1,624,822. CRICKET, HOCKEY, AND LIKE BALL. GEORGE WILLIAM BELDAM, Ealing, England. Filed Oct. 1, 1925, Serial No. 59,947, and in Great Britain Oct. 30, 1924. 2 Claims. (Cl. 273—58.)



1. A ball comprising an inner spherical mass of cork and rubber and concentric enveloping layers alternately of cork and rubber and worsted, the cork and rubber layers being in semi-spherical hollow form and united at their edges subsequent to their application, the final layer being of a comparatively thin resilient character compressed under heat.

1,624,823. MEANS FOR THE PRODUCTION OR REPRODUCTION OF SOUND OR LIKE VIBRATIONS. SIDNEY GEORGE BROWN, North Acton, England. Filed Sept. 4, 1923, Serial No. 660,748, and in Great Britain Oct. 12, 1922. 6 Claims. (Cl. 274—33.)

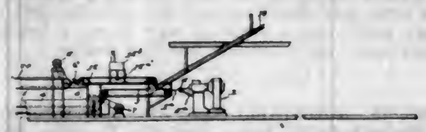


1. In phonic apparatus the combination comprising a movable body having a smooth surface, a rubbing member contactable with said surface, primary vibrating

means, a single instrumentality connecting said primary vibrating means to said rubbing member, and secondary

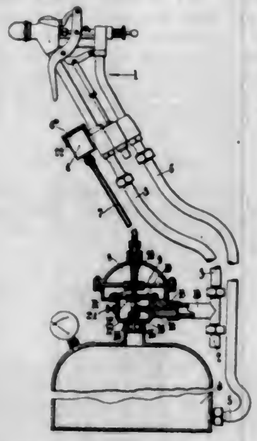
vibrating means connected to said rubbing member for magnifying said primary vibrations, as set forth.

1,624,824. CUSPIDOR COVER. WILLIAM E. BROWN, Sacramento, Calif. Filed Sept. 11, 1925. Serial No. 55,781. 1 Claim. (Cl. 4—285.)



A sanitary cover for cuspidors comprising an arcuate strip of flexible material having its ends spaced from each other, a continuous line of depressions extending entirely about said strip in spaced relation to the marginal edges thereof and defining a border adapted to be torn from the body of the strip along the line of depressions, a coating of sticky substance upon the upper face of said body within the confines of the said line of depressions, a rosinous coating upon the upper face of said border, the ends of said body being overlapped after said border has been removed and secured by the sticky coating to form a concavo-convexed cover adapted to fit snugly in a flared mouth piece of a cuspidor, and fasteners carried by said body and projecting from the same and adapted to be bent into engagement with a portion of the cuspidor to retain the cover in place.

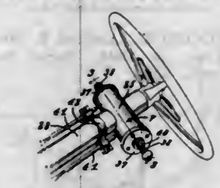
1,624,825. FASTENER FOR CONTAINERS. WILLIAM T. S. BROWN, East Point, Ga. Filed Dec. 2, 1925. Serial No. 72,800. 2 Claims. (Cl. 217—12.)



1. A package of container parts having fastener-openings in its outer members, and fasteners comprising threaded shanks disposed inwardly through said openings and nuts arranged in lapping pairs and each nut having a threaded opening and another opening through which one of said shanks is movable freely, each of said shanks extending first through the latter opening of one nut and into engagement with the threaded opening of the other.

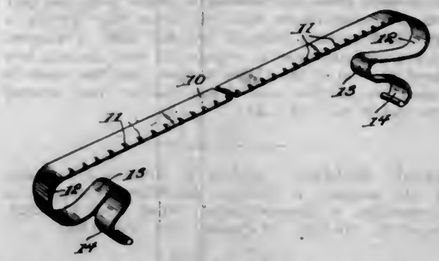
1,624,826. SYSTEM OF MAKING TREADS. GEORGE W. BULLEY, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 22, 1926. Serial No. 103,799. 5 Claims. (Cl. 18—4.)

5. In a system of or apparatus for producing rubber in continuous slab form, an extruding machine, a tank for a cooling liquid, an endless conveyor submerged in the liquid of the tank and receiving the slab from said extruding machine, an endless air cooling conveyor arranged to receive the stock from said first named conveyor, said air drying conveyor having anti-friction stock supporting means to permit free shrinkage of the stock thereon, means for driving said conveyors in unison with the extruding machine, means for conveying the slab from said air drying conveyor to a remote point including a weighing conveyor, a motor for said conveying means, and means controlled by the amount of slack at the delivery end of the air drying conveyor whereby the stock on the air drying conveyor is kept free from tension, said means comprising a pair of spaced and independently bodily movable rolls between which the slab passes and from both of which it is normally free from contact.



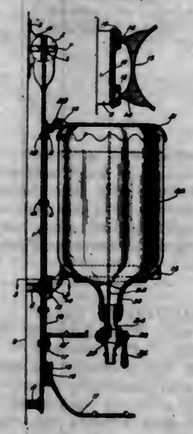
1,624,827. LIQUID-FORCING APPARATUS. CHARLES LAURENCE BURDICK, London, and JOHN DOMINICK WHITEMAN, Wallington, England. Filed Mar. 5, 1926. Serial No. 92,624, and in Great Britain Aug. 19, 1925. 11 Claims. (Cl. 91—45.)

1. Apparatus of the kind set forth comprising the combination of a closed container for liquid, a delivery pipe connected to the container and adapted to be raised to different heights relatively to the container, means to vary the pressure within the container, a column of liquid, means to vary the effective head of said column with the height of said delivery pipe, and means controlled by the pressure of said column to operate the said means for varying the pressure within the container.



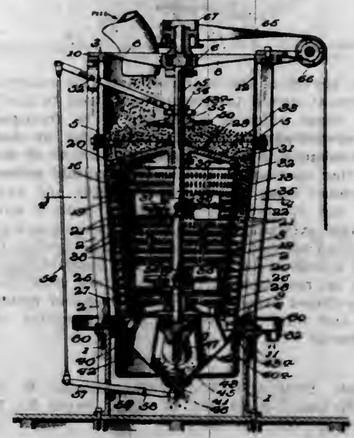
1,624,828. AUTOMOBILE DIRECTION SIGNAL SWITCH. SANTI CAMINITA, St. Louis, Mo. Filed Dec. 15, 1925. Serial No. 75,569. 1 Claim. (Cl. 200—59.)

An electric switch of the character described, comprising an elongated substantially circular body made from insulating material, provided with end and intermediate bores, the intermediate bore opening only through one side of said body and adapted to accommodate a steering column of a motor vehicle, a retaining plate secured to the body across the intermediate bore to hold the body engaged upon the steering column, a pair of switch terminals mounted in each end bore and having



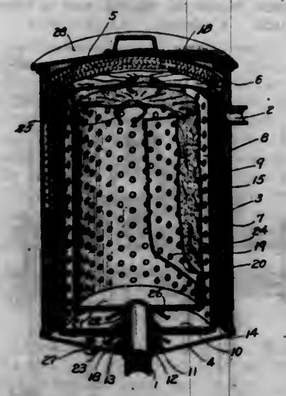
diverging ends, and connected with a normally open electric circuit, caps removably fitted on the ends of the body to close the end bores, a push-pull switch arm slidably mounted centrally in each cap and engageable with the diverging ends of the switch terminals, and means for latching the switch arm when moved inwardly or outwardly relative to the cap.

1,624,829. ATTACHMENT FOR STEAM BOARDS. RICHARD W. DAWN, Deer Lodge, Mont., assignor to W. E. Castleton, Deer Lodge, Mont. Filed Mar. 19, 1926. Serial No. 96,018. 4 Claims. (Cl. 68—11.)



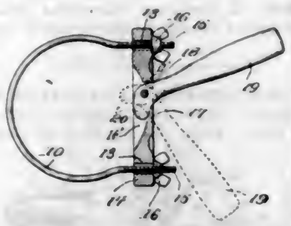
1. A device of the class described, comprising a strip, downwardly extending clamping members carried by the ends of the strip and turned toward each other, and fabric engaging devices carried by the upper surface of the strip.

1,624,830. CONTAINER. REUBEN FRANCIS EMSLEY, Rocky River, Ohio. Filed Sept. 11, 1925. Serial No. 55,802. 1 Claim. (Cl. 248—20.)



A device of the character described, comprising a pair of supports, a hanger, a circular head on the hanger, a bolt projected through the supports and the head, said head and supports having radially disposed grooves and flanges whereby the head is held against accidental turning movement, a container supporting ring on the hanger, a container engaging cap detachably mounted on the hanger.

1,624,831. GRAIN WASHING AND DRYING MACHINE. DAVID GEDDES, Guadalajara, Jalisco, Mexico. Filed Nov. 24, 1925. Serial No. 71,229. 10 Claims. (Cl. 83—27.)

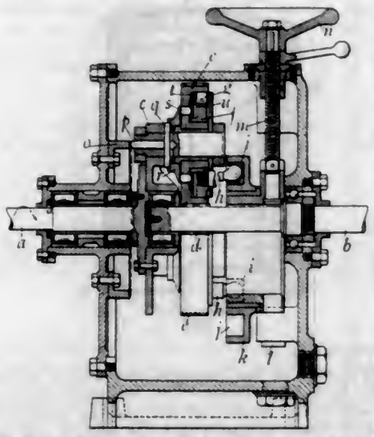


1. In a machine of the character described, an outer stationary foraminous drum, an inner rotating drum having perforations and having rigid annular vanes fixed thereto and overlying the perforations and projecting into a grain treating space defined by said drums, means for rotating the inner drum, and means for causing a current of air to pass into the inner drum and laterally of the drums and across the grain treating space.

1,624,832. GASOLINE FILTER. WILLIAM C. GLOVER, Kansas City, Mo. Filed Apr. 12, 1926. Serial No. 101,240. 4 Claims. (Cl. 210—183.)

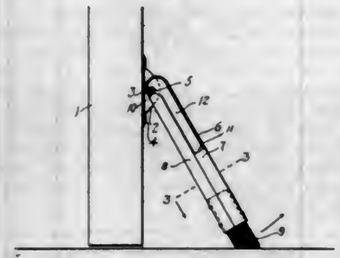
1. In a filter of the character described, a cylindrical housing having an intake pipe extending through its lower end to the interior of the housing, concentrically thereof, a screen located within the housing and spaced from the wall thereof, and a drum open at its upper end and having a neck at its lower end slidable on the intake pipe, the drum having a perforated side wall and a fabric cover for the drum.

1,624,833. JAR OPENER. GEORGE E. GRANT, Derry, N. H. Filed Oct. 7, 1925. Serial No. 61,070. 1 Claim. (Cl. 81—3.1.)



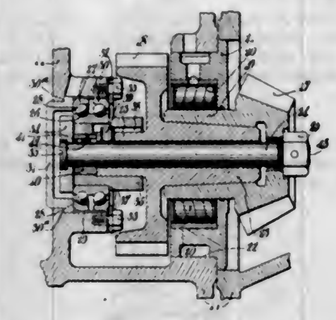
A jar opener of the character described comprising a wire element curved to accommodate itself to the top of the jar about which it is adapted to be arranged, and having spaced parallel threaded extremities, an elongated member adapted to be arranged at one side of said top and having openings to slidably receive said extremities, said member being recessed on one side and having a central slot opening into said recess, a lever having a cam-shaped extremity pivoted within the slot and tapered to be forced between the jar and the top therefor for the purpose specified, one end of the slot constituting a stop to limit the movement of the lever in one direction when the cam-shaped extremity is wholly disposed within said recess, and nuts threaded on the extremities of said wire element.

1,624,834. PEN AND BLOTTER. EDWARD W. GUZIK, Lorain, Ohio. Filed Dec. 19, 1925. Serial No. 76,515. 3 Claims. (Cl. 120—24.)



1. A pen having a chamber in one end thereof, longitudinally extending ribs on the interior walls of the chamber and a blotter having a portion in the chamber and a portion projecting from the chamber, the ribs acting to frictionally hold the blotter in the chamber.

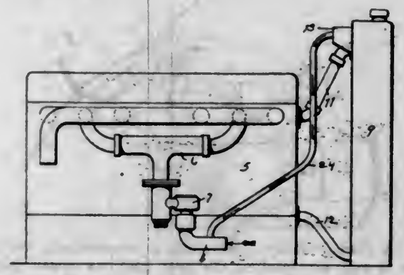
1,624,835. VARIABLE-SPEED MECHANISM. ERNEST CHARLES HATCHER, Finchley, London, England. Filed Mar. 19, 1926, Serial No. 96,023, and in Great Britain Mar. 16, 1925. 4 Claims. (Cl. 74—53.)



1. In a variable speed mechanism, drive and driven members, a carrier on one of said members, a unidirectional clutch including driving and driven parts carried by the carrier and intermediate elements connecting the driving and driven parts, a driving connection between the driven part and the other member, means for oscillating the driving part, and means for retaining said elements in inactive position during certain periods.

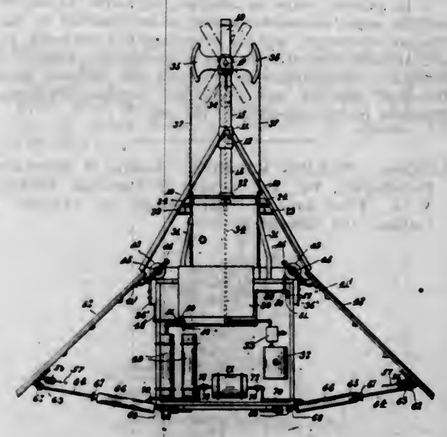
1,624,836. DOORCHECK. ARTHUR F. HICKIE, Lansing, Mich. Filed Apr. 20, 1926. Serial No. 103,290. 3 Claims. (Cl. 292—338.)

3. An invertible door check, comprising a single piece of sheet metal formed with pairs of flanges extending towards each other and forming a hollow body, one pair of flanges being longer than the other pair leaving a longitudinal opening through the said body, a support having a pin arranged to engage the said opening and to meet the top of the longer flanges when the check is in operative position, and a floor contact foot secured in the end of the said body.



1,624,837. BEARING. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 17, 1921. Serial No. 478,423. 22 Claims. (Cl. 308—135.)

8. The combination with a rotary power transmission member and an element on which said member is rotatably mounted, of a longitudinally fixed abutment, and a bushing in engagement with said abutment and engaging said rotary member, said bushing being connected with said element for rotation therewith and being longitudinally movable thereon.

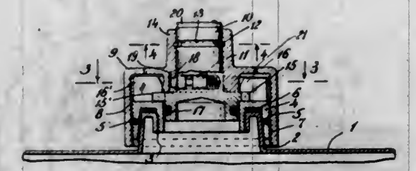


1,624,838. HUMIDIFIER. ZENON A. LIPINSKI, San Francisco, Calif. Filed Jan. 18, 1926. Serial No. 82,130. 1 Claim. (Cl. 123—25.)

In a device of the character described, the combination with an internal combustion engine, having a radiator attached thereto, a casing secured to said radiator, a pair of ports formed between said radiator and said casing, one of said ports being above the other, a baffle positioned within said casing and extending from a point adjacent the upper extremity of the upper of said ports to a point adjacent the bottom of said casing, and a V-shaped baffle positioned within said casing so as to form

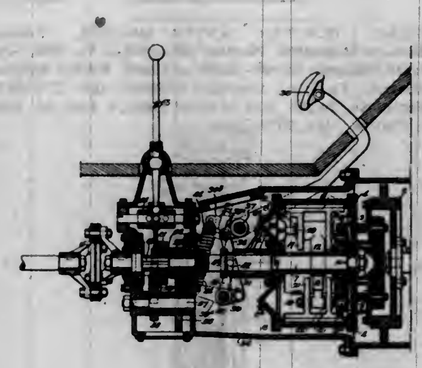
passageways between said first mentioned baffle and the bottom of said casing, and a pipe extending from said casing and communicating with the carburetor of said engine.

1,624,839. SNOWPLOW. SAMUEL W. LOMBARD, Waterville, Me., assignor to Lombard Traction Engine Co., Waterville, Me., a Corporation of Maine. Filed Mar. 18, 1926. Serial No. 95,798. 22 Claims. (Cl. 37—44.)



6. A snow plow having a transom substantially midway of its length; a tractor the forward end of which is connected to said transom by a vertical pivot; and means on said tractor for supporting and raising the rear ends of the shares of said plow.

19. A snow plow provided with steering mechanism in advance of the prow thereof and having a transom between the plow shares; a tractor in the rear of the transom and pivotally connected thereto; and means on the tractor for controlling the steering mechanism.

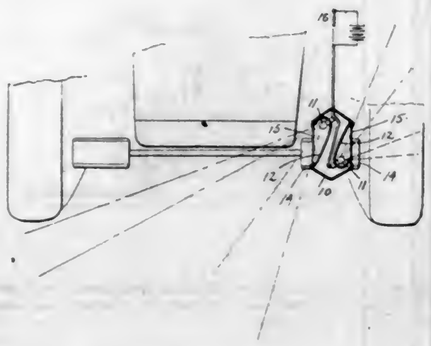


1,624,840. LOCKABLE COVER FOR AUTOMOBILE FUEL TANKS. ASSAD M. MALLUK, New York, N. Y., assignor to Yankee Lock Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 759,000. 8 Claims. (Cl. 220—39.)

2. In a closure for the fuel tanks of automobiles, the combination with a tank having a filling neck, of a cap for the filling neck, locking mechanism including a bolt rotatably mounted in said cap, means including said bolt for locking said mechanism against rotation with

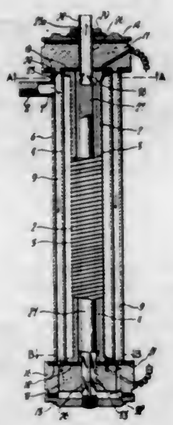
respect to said cap, and an adapting ring fixed to the neck and having an abutment thereon for engagement with said locking mechanism.

1,624,841. HYDRAULIC CLUTCH. ALBERT H. MANWARING, Noble, Pa. Filed Aug. 3, 1925. Serial No. 47,881. 11 Claims. (Cl. 192—60.)



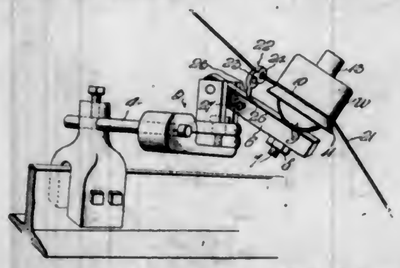
1. In a hydraulic clutch, the combination of driving and driven members rotatable about a common axis, a plunger mechanism comprising a cylinder having a bore of definite diameter and a piston therein, said plunger mechanism having an eccentric longitudinal pivotal connection at one end with one of the members, an eccentric connected with the other members, an eccentric ring surrounding the eccentric, a longitudinal pivot pin directly carried by the eccentric ring and engaging the other end of the plunger mechanism, a port in said cylinder having an area substantially equal to that of the cylinder bore and a valve capable of fully opening or closing said port controlling the flow of liquid into and out of the cylinder of the plunger mechanism.

1,624,842. LAMP FOR AUTOMOBILES. WILLIAM CARL MATTHEWS, Palatka, Fla. Filed Sept. 19, 1925. Serial No. 57,309. 2 Claims. (Cl. 240—8.2.)



2. An automobile lamp comprising two light-emitting members mounted at the front of the automobile one in advance of the other and reflecting surfaces situated between the two lamps, one extending obliquely forward from the rear lamp and terminating in advance and to one side thereof, and having a portion extending in rear of the lamp, and the other reflecting surface extending

obliquely rearward from the front lamp and terminating in rear thereof, and at the front extending around the

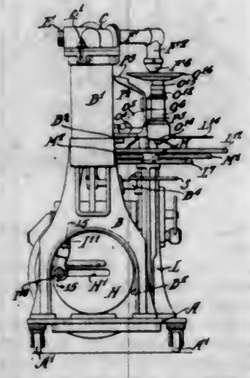


front lamp, and all of such reflecting surfaces being masked to a person directly in front of the automobile.

1,624,843. ELECTRIC WATER HEATER. THOMAS HORACE MCQUINN, Preston, Melbourne, Victoria, Australia, assignor of two-thirds to Harry Morton Sargood, Toorak, Victoria, Australia. Filed Apr. 27, 1925, Serial No. 26,235, and in Great Britain June 10, 1924. 6 Claims. (Cl. 219—39.)

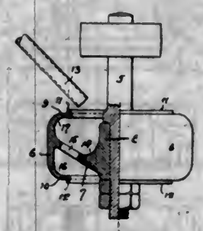
2. An electric water heater comprising a tubular heating element adapted for the passage of liquid therethrough, an electric resistance on the exterior of said element, cylindrical casings arranged around and spaced from said heating element to form an annular water circulating passage which surrounds and is isolated from said electric resistance, end fittings adapted to close the ends of said cylindrical casings and establish communication between adjacent ends of said annular passage and the internal passage through the tubular heating element, a rod extending longitudinally of the heating element, and means associated with said rod to retain the heating element and said casings in proper spaced relationship and in leak proof engagement with said end fittings for the purpose set forth.

1,624,844. SILK AND YARN THREAD TENSIONING AND WAXING DEVICE. WLADYSLAW NOGA, Detroit, Mich. Filed Apr. 8, 1926. Serial No. 100,762. 5 Claims. (Cl. 91—36.)



1. A thread waxer comprising, a substantially vertical post, a cup surrounding the post near its lower end, a sleeve rotatable about the upper portion of the post and adapted for passage through an opening in a wax cake, a thread supporting cap closing the upper end of the cup, a bearing bushing arranged centrally of the cap and surrounding the medial portion of the post, and an antifriction bearing between the adjacent outer ends of the post and sleeve.

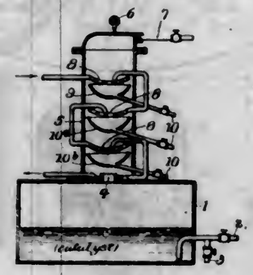
1,624,845. GALVANIC CELL. HERMAN DOUGLAS NYBERG, Norrkoping, Sweden. Filed May 24, 1922, Serial No. 563,375, and in Sweden Mar. 28, 1922. 6 Claims. (Cl. 136—102.)



1. In galvanic cells, an alkaline electrolyte, an electropositive metal electrode adapted to be dissolved by said alkaline electrolyte, and an electronegative electrode, the said alkaline electrolyte having a composition adapted to precipitate substantially as hydroxid the electrode metal dissolved, whereby the electrolyte remains practically unaltered in the operation of the cell.

1,624,846. FILLING MACHINE. DUGALD S. PATERSON, Philadelphia, Pa., and GUSTAV B. PETSCHE, Yonkers, N. Y. Filed June 6, 1924. Serial No. 718,197. 6 Claims. (Cl. 226—96.)

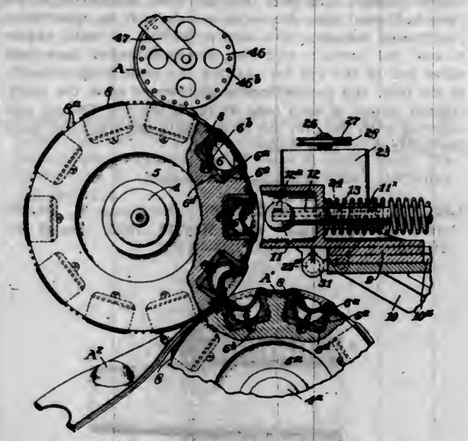
1. A filling machine having a measuring cylinder and a piston moving in said cylinder, in combination with inlet and outlet ports connecting with the cylinder at the top thereof, a downwardly extending delivery nozzle connected to the outlet port having a hydraulic seal at its lower end to prevent the entrance of air and maintain the nozzle full of liquid, adjustable means for actuating the piston whereby its stroke can be varied at will and positively actuated means for opening and closing the ports operating in timed relation to the movements of the piston.



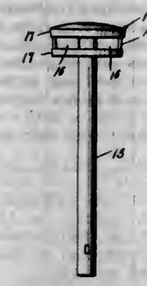
1,624,847. METHOD AND APPARATUS FOR ATOMIZATION OF FLUIDS. CHAMPLAIN L. RILEY, North Plainfield, N. J., assignor to Industrial Associates, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1925. Serial No. 6,642. 8 Claims. (Cl. 299—63.)

3. The method of atomizing liquid which comprises discharging a stream of liquid, converting said discharged stream of liquid by centrifugal force into a whirling annulus of substantial radial depth and high velocity, from a margin of which annulus liquids is centrifugally dispersed to form a nebula.

6. In a centrifugal atomizer, a rotor comprising an annulus with inturned upper and lower flanges forming an interior channel therebetween, a hub, and means connecting the hub and annulus while affording passage for fluid to both flanges for centrifugal dispersion therefrom.



1,624,848. TREATMENT OF OILS. WALTER O. SNELLING, Allentown, Pa., assignor to Gasoline Products Company, Inc., New York, N. Y., a Corporation of New York. Filed May 5, 1915, Serial No. 26,110. Renewed Oct. 17, 1922. Serial No. 595,167. 16 Claims. (Cl. 196—47.)



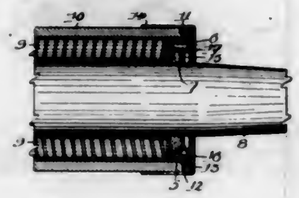
1. The process of converting petroleum oils which comprises establishing and maintaining a body of petroleum oil and vapors therefrom under such heat and pressure as will produce equilibrium in such body and during the maintenance of such equilibrium slowly withdrawing the liquid products of equilibrium and slowly adding fresh oil.

1,624,849. METHOD OF AND APPARATUS FOR MAKING HOLLOW ARTICLES. CHARLES W. STEELE and RICHARD T. GRIFFITHS, Akron, Ohio, assignors to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 19, 1922. Serial No. 569,494. 79 Claims. (Cl. 18—56.)

1. The method of making hollow articles, which consists in mechanically shaping the stock in mold cavities of rotatable molds to form article sections, retaining the formed sections in the cavities by suction and seaming the edges of article sections by co-operation between the molds.

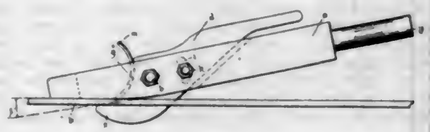
1,624,850. VALVE. EDWARD J. STEELE, Des Moines, Iowa. Filed Dec. 8, 1921. Serial No. 520,919. 1 Claim. (Cl. 123—188.)

A valve having a rigid head disposed at one end thereof, a skirt depending rigidly from said end, scraper rings in longitudinally spaced relation projecting laterally from said skirt having their marginal walls beveled and adapted to directly engage the valve seat so that their facing edges will scrape the valve seat, and the portion of the skirt between said rings being imperforate and having its outer surface disposed inwardly of and disalined with respect to the outer surfaces of the rings.



1,624,851. RAZOR-STROP STRETCHER. THEODORE THOMPSON, Ely, Minn., assignor of one-half to Allan V. Brown, Ely, Minn. Filed May 11, 1925. Serial No. 29,500. 1 Claim. (Cl. 51—203.)

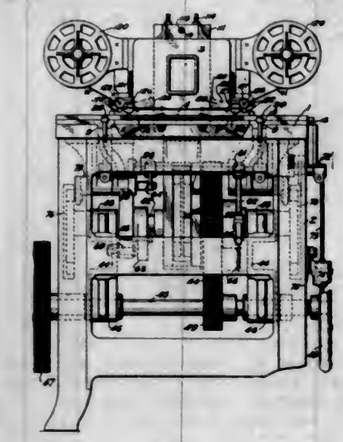
In a structure of the character set forth an elongated base having a bore formed in one end upon the longitudinal center thereof and further having a slot of less length than said bore opening from the bore upwardly



through the top of the base, a plate member overlying the bored end of the base, an adjusting rod slidably extended through said plate into said bore and having screw threads formed upon the outer end thereof, an upstanding pin formed integral with and projecting at right angles to said rod through said slot, means threaded upon said outer end of the rod for shifting the same longitudinally of the face, and an upstanding pin formed upon the longitudinal center of said base at the other end thereof and coacting with the first pin to maintain the strop flat upon the surface of said base.

1,624,852. GREASE RETAINER. NICHOLAS W. TRAUTNER, St. Paul, Minn. Filed May 11, 1925. Serial No. 29,575. 2 Claims. (Cl. 286—5.)

1. A retainer for lubricant comprising an annular receptacle adapted to encircle a shaft and formed from inner and outer cup-shaped members telescoping one within the other, a packing ring formed to fit about said shaft in said receptacle, resilient means arranged within said receptacle to press said ring upon the periphery of said shaft and against the inner surface of one of said cup-shaped members, and means adapted to engage one of said cup-shaped members to hold said resilient means in compressed engagement with said packing ring.



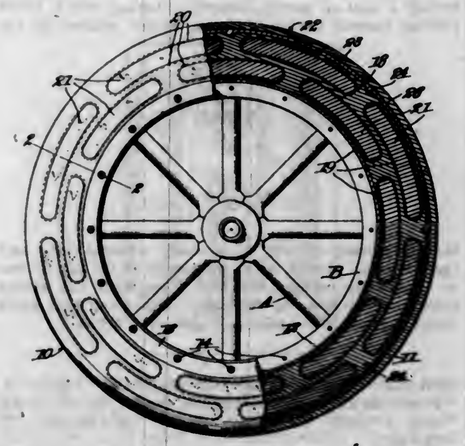
1,624,853. SHEET-METAL CUTTER. PAUL WINTER, Zurich, Switzerland, assignor to Aluminium Welding Works, Ltd., Schlieren, Switzerland. Filed Mar. 6, 1925. Serial No. 13,538, and in Switzerland Oct. 23, 1924. 7 Claims. (Cl. 30—13.)

1. The combination with a holder having a slit for the passage of a chip; of a stationary blade in said slit and projecting from the holder at an angle thereto, whereby the sheet is cut by being placed in said angle between the blade and holder and both co-operating to cut the sheet upon impact on the end of the holder.

1,624,854. MACHINE FOR STAPLING HANDLES ON BAGS. TRUE M. AVERY, Glens Falls, N. Y., assignor to Union Bag & Paper Corporation, Hudson Falls, N. Y., a Corporation of New Jersey. Filed Jan. 16, 1923. Serial No. 613,035. 22 Claims. (Cl. 1—2.)

1. In a machine of the class described, the combination of fastening applying means, and a reciprocatory holder projecting forwardly from the fastening applying means and shaped to receive the mouth of a bag and operative

to carry the bag mouth thereon in a direction longitudinally of the bag and to and from cooperative relation with the fastening applying means.

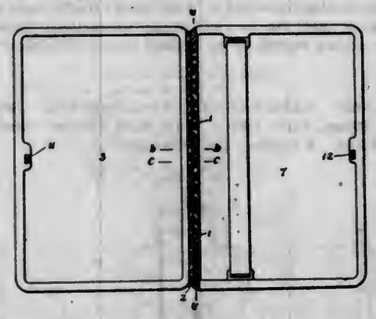


1,624,855. TOY. HUBERT C. BARKER, Houston, Tex. Filed Apr. 25, 1925. Serial No. 25,875. 4 Claims. (Cl. 46—40.)

1. A cylindrical casing having a conical top provided with light inlet openings, and having its side provided with a sight opening, a flanged platform revolubly mounted in the casing, manikins secured to said platform in a plurality of series, the outer series of which represents animals whose names are inscribed on the flange of the platform, a stand secured centrally on the platform, manikins mounted thereon and hand operated means for revolving the platform.

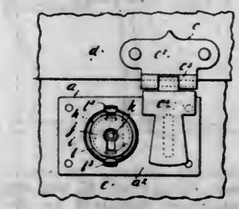
1,624,856. RESILIENT TIRE. ARTHUR E. BAUMAN, Akron, Ohio. Filed Sept. 5, 1922, Serial No. 586,201. Renewed Dec. 12, 1925. 10 Claims. (Cl. 152—8.)

3. A resilient tire having recesses therein, spring means in said recesses, and resilient means on the body overlapping said spring means to prevent lateral displacement thereof and thereby secure the same in place, the resili-



ency of the second mentioned means enabling the same to be displaced for insertion or removal of the spring means.

1,624,857. ALLOY. CLEMENT S. BRAININ, Glen Ridge, N. J., assignor to Baker & Company, Inc., a Corporation of New Jersey. Filed Oct. 17, 1922. Serial No. 595,176. 3 Claims. (Cl. 75—1.)



2. An alloy of high electrical resistance composed of not less than 75% platinum and the rest copper.

1,624,858. BOX, CIGARETTE, AND LIKE CASE. FREDERICK THOMAS BUCKTHORPE and ANDREW BARTER, London, England. Filed Apr. 11, 1925, Serial No. 22,472, and in Great Britain Sept. 18, 1924. 2 Claims. (Cl. 206—41.)

1. A box or the like comprising a pair of members constituting, respectively, a receptacle and a lid for said receptacle, a strip hingedly connected to an edge of one of said members, one of the faces of said strip being provided with a plurality of depressions and projections alternately arranged in longitudinal alinement, the other of said members having adjacent one of its edges a plurality of depressions of greater length than the projections of said strip into which said projections extend, said latter member also having a plurality of projections longitudinally alined with said last-named depressions and of less length than the depressions of said strip and projecting into the latter, and a pin extending longitudinally through the projections of said strip and of said last-named member, one of said members having a keeper and the other member having a catch adapted to engage with and disengage from said keeper when said members are moved relatively to one another in opposite directions lengthwise of said strip.

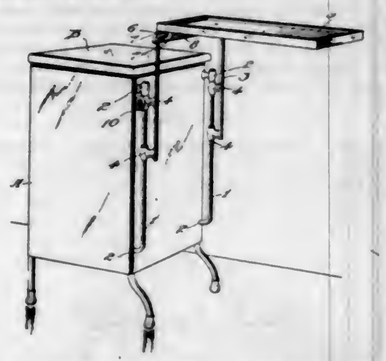
1,624,859. FASTENING FOR ATTACHÉ CASES, BOXES, BAGS, AND SUCH LIKE. CHARLES WILLIAM CHENEY, Birmingham, England. Filed June 8, 1925, Serial No. 35,666, and in Great Britain July 18, 1924. 5 Claims. (Cl. 70—115.)

1. A fastening device comprising a casing having a front plate provided with a catch receiving slot, a bolt slidable in said casing and having a catch engaging nose, said front plate also having an opening adjacent said catch receiving slot, a knob slidable on the outer face of said front plate and having a part extending through said opening and fixedly secured to said bolt, and means mounted on said front plate in advance of said opening and rotatable relatively to said knob, said means adapted, when partly rotated in one direction, to engage a wall of said opening and prevent movement of said knob.

1,624,860. FENDER BRACE. HARRY J. COCKS, Des Moines, Iowa. Filed Feb. 11, 1925. Serial No. 8,412. 1 Claim. (Cl. 280—152.)

In combination with the fender aprons of an automobile having headlights provided with bases supported thereon by bolt connections extending from said bases and through said aprons, a fender brace for said fenders comprising pan shaped elements adapted to fit between the headlights and the fender aprons and have the bolts of said bolt connections extending therethrough, the upturned edges of said pan shaped members fitting around the bases of said headlights and a bar connecting said elements together.

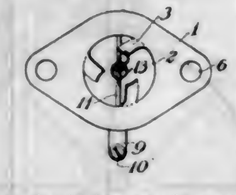
1,624,861. ANTIKICKING DEVICE. JOHN DEWEY, Perry, N. Y. Filed June 8, 1925, Serial No. 35,753. Renewed Mar. 4, 1927. 1 Claim. (Cl. 119—127.)



An anti-kicking boot comprising a member of tough but pliable material which is substantially U-shaped in cross section, and shaped to be arranged around and to conform to the shape of the rear portion of an animal's rear leg from points to the opposite sides of the point

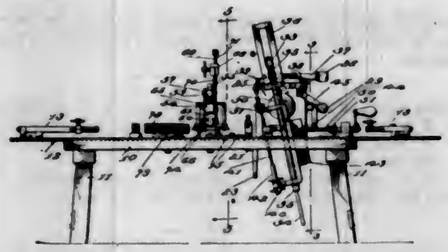
of the hock of the animal's leg, said boot having its sides inwardly swelled to provide protrusions designed to be received in the depressions in the animal's leg above the hock whereby, such depressions in connection with the

shape of the boot will permit of the said boot being clasped and temporarily sustained on the leg of the animal, and means comprising straps for fastening the boot on the leg of the animal.



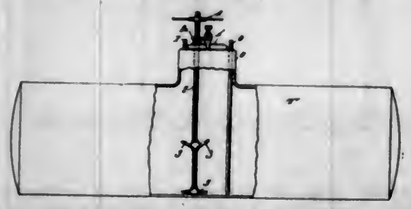
1,624,862. TABLE. JOHN T. ELLIOT, Irvington, N. J., assignor to M. Weiss Corporation, a Corporation of New Jersey. Filed Apr. 18, 1925. Serial No. 24,082. 4 Claims. (Cl. 45—47.)

1. The combination of a support, a horizontal supporting bar, means for vertically adjustably mounting said supporting bar on said support, and a tray pivotally mounted on said bar so that said tray may be swung into a horizontal position with said support serving as a pedestal and into an out-of-the-way position substantially parallel to the side of said support, said bar permitting adjustment of the height of said tray and being formed with an extension position parallel thereto, said tray being provided with hooked arms to underlie said extension portion to hold the tray in horizontal position.



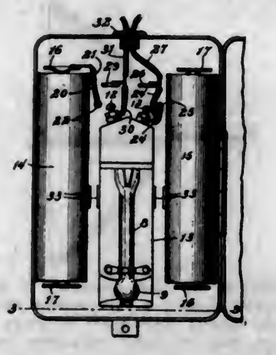
1,624,863. CARBURETOR-MANIFOLD HEATER. CARL O. ERICKSON, St. Paul, Minn. Filed May 18, 1925. Serial No. 30,988. 1 Claim. (Cl. 219—38.)

In combination with the intake manifold of an internal combustion motor, a plate of electrically conductive material having a central opening of a size to conform with the opening of the intake manifold, helical fins carried by said plate and extending into the opening in said plate, a second plate of conductive material mounted adjacent the first plate and insulated from said plate and from the intake manifold, a strip of electrically conductive material connected to the second of said plates and mounted transversely of the central opening and having a bent-up portion centrally thereof, and a coiled heating element having one end thereof gripped by the



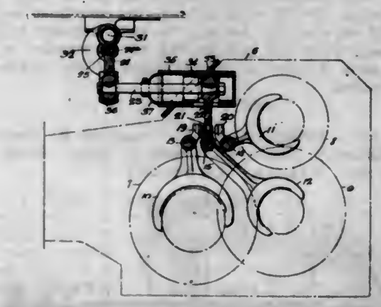
bent-up portion of said transversely mounted strip and the other end thereof connected to one of the helical fins to electrically connect the first plate with the second plate to simultaneously swirlingly agitate and heat gases drawn through the intake pipe past said device.

1,624,864. SAW-SHARPENING MACHINE. OTHO H. FLETCHER and JAMES A. TENNEY, Queens, W. Va. Filed Aug. 3, 1922. Serial No. 579,418. 36 Claims. (Cl. 76—35.)



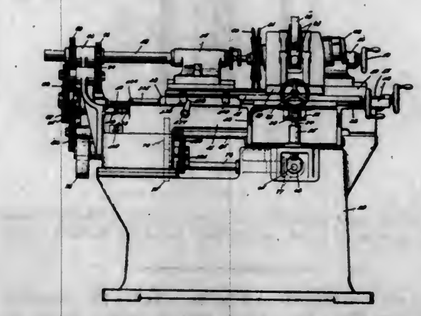
1. A saw sharpening machine comprising a guide frame, a longitudinally reciprocable rock shaft mounted in said frame, means movably mounted in and guided by said frame for reciprocating said rock shaft, a file carrier frame rigidly secured to said rock shaft, and means engaging said file carrier frame to oscillate said rock shaft during reciprocation thereof in one direction.

1,624,865. TANK-CAR-CLEANING DEVICE. FRANCIS E. FREEL, Niles, Ohio. Filed May 2, 1922. Serial No. 558,015. 1 Claim. (Cl. 210—209.)



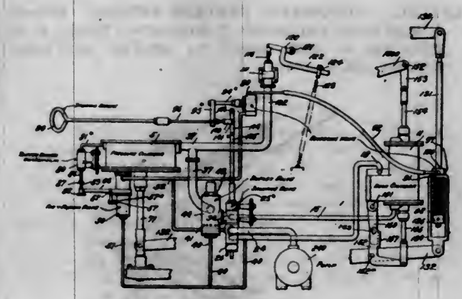
In a device of the character described, a removable closure adapted to be fitted into the opening of a tank, a water supply pipe extending through the removable closure, means for providing a fluid-tight connection between the pipe and closure, horizontal discharge nozzles at the lower end of the pipe, said pipe adapted to extend to a point adjacent to the bottom of the tank, and upwardly inclined nozzles communicating with the pipe and arranged at a point in spaced relation with the lower end of the pipe, and means for rotating the pipe to direct jets of water to every point of the interior of the tank.

1,624,866. PORTABLE FIRE ALARM. ABILIO M. DE SILVA GREAVES, Cambridge, Mass. Filed Jan. 17, 1922. Serial No. 529,866. 3 Claims. (Cl. 177—311.)



3. A portable fire alarm comprising a casing, a backing sheet within said casing, dry cells disposed on opposite sides of the center of the casing at the front of said backing sheet, an upper and a lower spring clip for each dry cell engaging the poles thereof, side clips for holding said cells pressed against the sides of the casing, a thermostatic circuit closer supported upon the backing sheet between the dry cells, said thermostatic circuit closing device having contact points, an electrical connection between two of the pole engaging clips of the cells, a pair of junction plates supported by the backing sheet, electrical connections between the same and the circuit closing contacts, a conducting connection between one of said junction plates and one of the other pair of spring clips, a bell supported by the casing, a conducting connection between one pole of the bell and the remaining spring clip, a conducting connection between the other pole of the bell and the other junction plate, certain of said conductors being disposed upon the rear of the backing sheet, and an insulating covering between said connections and a wall of the casing.

1,624,867. GEAR-SHIFTING MECHANISM. CHARLES O. GUERNSEY, Philadelphia, Pa. Filed Mar. 21, 1925. Serial No. 17,213. 6 Claims. (Cl. 74—39.)

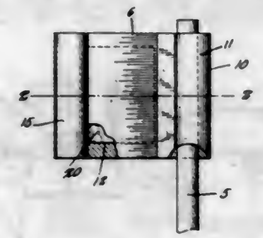


2. The combination with a frame and a gear mechanism connected together for relative pivotal movement; of a device movably mounted on the gear mechanism for shifting an element thereof; an operating lever on the frame; a shaft extending approximately radially with respect to the axis of the said pivotal movement; arms on the shaft; a universally adjustable connection between the lever and one arm on the shaft; and a universally adjustable connection between the other arm on the shaft and the shifting device.

1,624,868. METAL-WORKING MACHINE. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney executors of said Bengt M. W. Hanson, deceased. Filed Mar. 9, 1922, Serial No. 542,442. Renewed Oct. 24, 1924. 25 Claims. (Cl. 51—42.)

1. In a machine for grinding threaded members and the like, a plurality of independently mounted grinding wheels, each having a formed edge adapted to grind a groove or grooves in the work, a holder for rotatably supporting a piece of work in operative relation to said tools, means for relatively moving said holder generally longitudinally of said wheels in accordance with the lead of the thread on the work, and means for automatically moving said grinding wheels transversely of the work.

1,624,869. VACUUM SEALING MACHINE FOR JARS AND OTHER CONTAINERS. HARRY INGRAM, Brooklyn, N. Y. Filed June 24, 1922. Serial No. 570,687. 14 Claims. (Cl. 226—82.)

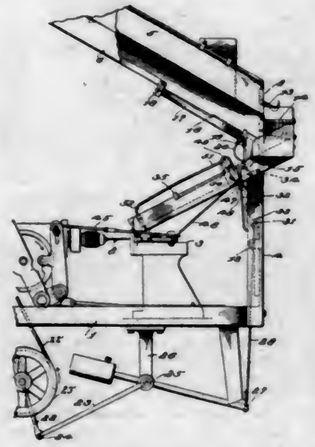


8. In a machine for applying caps to containers, a vacuum pump, a closable sealing chamber, a sealing head movable in said chamber, means for moving the sealing head, a connection between the vacuum pump and the means for moving the sealing head, means whereby vacuum is maintained in said sealing chamber by said pump said means including a connection between the pump and the sealing chamber, and a valve in said last mentioned connection adapted to close the same while leaving open the connection between the pump and the means for moving the sealing head; substantially as described.

1,624,870. LOOM PICKER. DANIEL JOSEPH HIGGINS, Adams, Mass. Filed June 8, 1925. Serial No. 35,708. 1 Claim. (Cl. 139—160.)

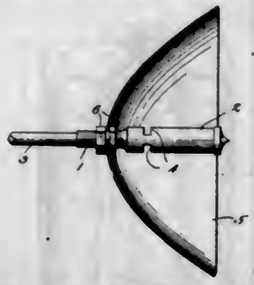
A picker for looms comprising an elongated body, a tubular casting formed on one end of said body and adapted to receive a loom picker rod, said body being provided with a recess opening upon the opposite end

thereof, a substantially elliptical in cross section striking head extending parallel to the last mentioned edge of



said body and engaging the latter and a blade formed with said head to be operatively arranged in said recess.

1,624,871. GROUND ANCHOR. JAMES R. KEARNEY, Kansas City, Mo. Filed July 5, 1922. Serial No. 572,787. 5 Claims. (Cl. 189—90.)

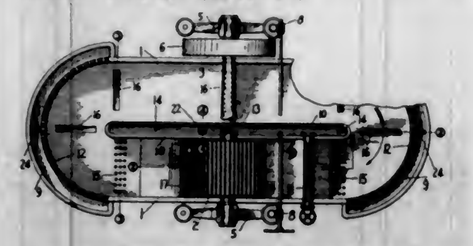


1. In a ground anchor, a body portion, a nut secured thereto, and flexible means mounted on the body for receiving and holding a guy rod in a predetermined position to engage said nut.

1,624,872. AUTOMATIC FEEDING DEVICE. EDWARD J. KINGSBURY and HARRY T. KINGSBURY, Keene, N. H. Filed Apr. 3, 1923. Serial No. 629,718. 21 Claims. (Cl. 10—167.)

10. A feeder of the character described comprising a hopper, an ejector in the hopper, a chute receiving the articles from the ejector, a reciprocating rod for operating the ejector, and a pivoted feeler extending over the chute and held in a raised position by the articles in the chute for disconnecting the rod from the ejector and automatically connecting the rod to the ejector when the articles pass from under the feeler.

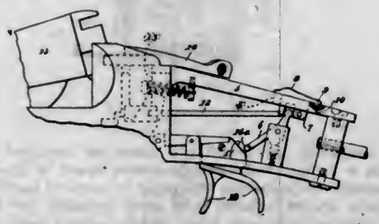
1,624,873. SOUND REFLECTOR. JESSE A. LANDIS, Eaton, Ohio. Filed Jan. 15, 1925. Serial No. 2,615. 1 Claim. (Cl. 116—137.)



In a device of the class described, a parabolic reflector, a tubular support, a fluid-pressure-actuated signal carried by the support, the support extending through the reflector, the reflector being adjustable longitudinally of the support, toward and away from the signal, and holding devices adjustable longitudinally of the support and cooperating with the reflector to retain the reflector in adjusted positions, the holding devices engaging the reflector in a limited area about its axis, so that practically all of the reflector will be free to vibrate, the holding devices constituting means for so positioning the signal within the contour of the reflector that two sorts of sound waves will be produced, to wit, those proceeding directly from the signal and those reflected by the reflector, the signal being sufficiently thin so that it can vibrate and produce a third kind of sound waves when the signal is operated.

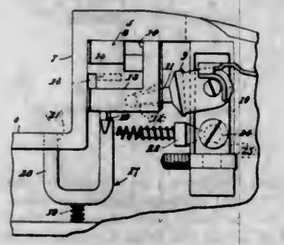
1,624,874. LOOSE-POWDER CONTAINER. SAMUEL S. RADLEY, Gardner, Mass., assignor to Evans Case Co., Attleboro, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1925. Serial No. 66,673. 5 Claims. (Cl. 132—82.)

1. A loose powder container comprising a body and a cover having an opening exposing the bottom of the body, said bottom of the body being in the form of a diaphragm closing said opening, the container outside of said opening and beneath the cover element forming a compartment for powder and the depression of the diaphragm serving to permit escape of the powder to the opening.



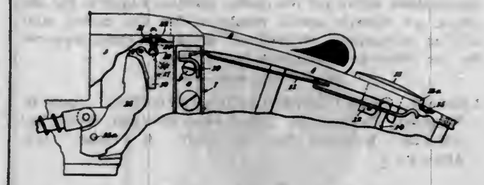
1,624,875. STOCK BEATER. CHARLES W. SHARTLE, Middletown, Ohio. Filed Sept. 4, 1923. Serial No. 660,845. 6 Claims. (Cl. 92—24.)

1. A continuous beater including in combination with a tub for mixing the raw stock in water, a beater roll operable in the tub for reducing the stock, a mid-feather comprising opposite walls forming a receptacle, and an



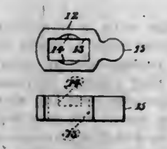
outward extension of the tub forming a receptacle, apertures opening from the tub into said receptacles, whereby portions of the material reduced to a given state and floating at various levels will separate from the mass of the material in the tub and pass through said apertures into said receptacles.

1,624,876. DANGER SIGNAL FOR FIREARMS. LOUIS P. SMITH, Ithaca, N. Y., assignor to Ithaca Gun Company, Ithaca, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,891. 1 Claim. (Cl. 42—1.)



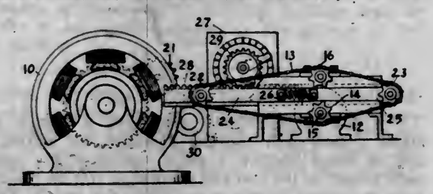
In a device of the type described, a gun frame including an upper tang having a longitudinal slot, a button slidable on the upper tang and having a bifurcated portion depending into said slot, a rod positively connected to the rear furcation of the depending portion of said button, a breech lock operating post journaled in the frame and engageable with the rod to move the latter for shifting the button rearwardly when the post is operated to unlock the breech, a pair of triggers pivoted to the frame, and a safety lever pivoted in the frame with its upper end loosely received between the furcations of the button and with its lower end shiftable into a position to lock the triggers against firing when the button is shifted rearwardly.

1,624,877. BARREL-LOCKING MECHANISM FOR BREAKDOWN GUNS. LOUIS P. SMITH, Ithaca, N. Y., assignor to Ithaca Gun Company, Ithaca, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,893. 1 Claim. (Cl. 42—44.)



In a breech loading break-down gun, wherein the breech frame is provided with a rotary locking bolt rotating on an axis substantially parallel to the axis of the barrel, wherein a rocking spindle is journaled in the breech frame to the rear of the locking bolt, and wherein a pendulum-lever is hinged to the rocking spindle and has a ball and socket connection with the rotary locking bolt, an external recess in said rotary locking bolt, and a vertically slidable substantially U-shaped trip spring-pressed upwardly to normally have the upper end of one leg thereof engaged in said recess of the locking bolt for holding the latter in unlocked position and for simultaneously projecting the other leg of the trip in the path of the barrel whereby the trip will be depressed and released from the locking bolt by engagement of the underside of the barrel with said other leg of the trip when the barrel is moved to operative position.

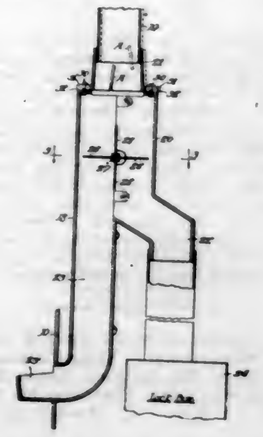
1,624,878. HAMMER-POSITION INDICATOR. LOUIS P. SMITH, Ithaca, N. Y., assignor to Ithaca Gun Company, Ithaca, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,894. 1 Claim. (Cl. 42—1.)



In a gun structure, the combination with a gun frame, and a hammer carried by the frame, of a lever pivoted upon a transverse horizontal axis in the frame in a position to be moved by the hammer when cocked and to be freed when the hammer is fired, a vertically slidable indicator element carried by the frame and adapted to be moved upwardly through the top of the frame into an exposed position by the lever when the latter is moved by the shifting of the hammer to its cocked position, and yieldable means to move said indicator element downwardly into the frame in a concealed position when the lever is freed by the firing of the hammer and to simultaneously return the lever to a position in the path of cocking movement of the hammer.

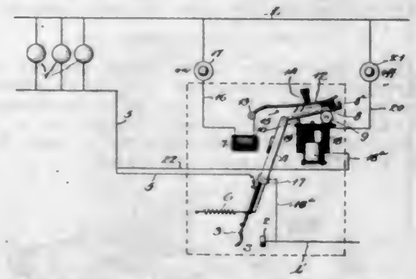
1,624,879. BARREL-LOCKING DEVICE FOR BREAK-DOWN GUNS. LOUIS P. SMITH, Ithaca, N. Y., assignor to Ithaca Gun Company, Ithaca, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,897. 1 Claim. (Cl. 42—44.)

In a barrel lock for break-down guns, a frame having a barrel breech receiving cutout portion, a barrel breech movable into and out of said cutout portion, a horizontal U-shaped slidable bolt movable forwardly for locking the barrel breech in said cutout portion, a manually rotatable vertical shaft articulated to the inner side of one leg of the bolt for moving the bolt rearwardly into its unlocked position, and yieldable means constantly urging the bolt toward its locked position.



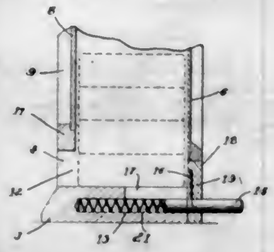
1,624,880. MEANS FOR MAINTAINING MOTORS IN DEFINITE SPEED RELATION. MILLARD COLE SPENCER, East Orange, N. J., assignor to Crocker-Wheeler Electric Manufacturing Company, Ampere, N. J., a Corporation of New Jersey. Filed Nov. 2, 1926. Serial No. 145,748. 1 Claim. (Cl. 172—293.)

A system of motor control for maintaining a number of motors in definite speed relation which comprises a reference speed source for the motors, and in combination



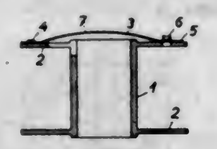
with each motor an endless chain, two sprockets for engaging and driving the chain, driving connections between the motor and one of the sprockets, driving connections between the reference speed source and the other sprocket, a variable transmission in one of the driving connections, idlers for the chain, movable supports for the idlers, an electric speed regulator for the motor, and driving connections between one of the movable supports for the idlers and the speed regulator.

1,624,881. COIN-CONTROLLED APPARATUS. JOHN B. WATLING, Chicago, Ill. Filed June 29, 1923, Serial No. 648,425. Renewed Feb. 10, 1927. 9 Claims. (Cl. 194—1.)



1. The combination with a coin-controlled mechanism including a main chute with a single coin receiving slot having two branch chutes directly connected thereto for receiving the coins that control said mechanism, a main chute having a single coin-receiving slot and guide tube, and a freely rotating member in said main chute operable by the coins so as to deflect in an uncertain manner the coins from said main chute into the branch chutes for delivery to a lock box or externally for return.

1,624,882. SELF-LOCKING SWITCH. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 11, 1924. Serial No. 685,612. 9 Claims. (Cl. 200—106.)

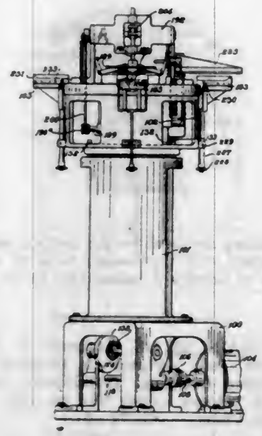


1. A self-locking switch comprising a switch arm, biased toward open position, a magnet for moving the arm to closed position, a roller, constituting a stop, a latch hinged to the arm and adapted to ride on the roller when the arm is moving to and from open position and to drop off the roller and abut against the same when the switch is closed, and an electric circuit adapted to be opened by the latch when it drops from the roller.

1,624,883. CIGARETTE DISPLAY AND DISPENSING CABINET. JACOB GUY ALLEN, Belvidere, Ill. Filed July 11, 1924. Serial No. 725,335. 1 Claim. (Cl. 211—8.)

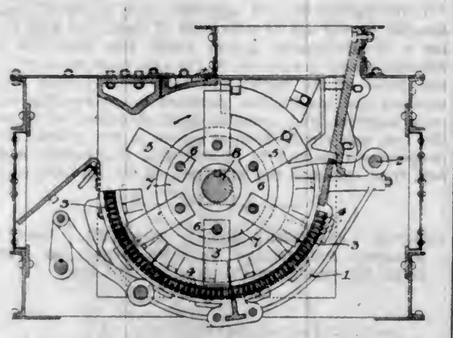
A dispensing cabinet of the character described comprising a cabinet body having a base board, a plurality of package compartments separated by vertical partitions, the back of the cabinet body being openable for filling said compartments, the front of the cabinet body being open at the bottom of each package compartment just above the base board, the base board being provided with an ejector bore extending forwardly from the back beneath each package compartment, an ejector plunger slidable in each bore, means normally tending to move said plungers to retracted position, the base board being slotted through the top so as to intersect each ejector bore, and an upstanding finger on each plunger extending through and above its slot into the adjacent package compartment and adapted for engaging the rear end of a package for ejecting it, the said fingers being arranged to engage stops to limit the retracting movement of said plungers.

1,624,884. SPOOL FOR SEWING MACHINES. FRIEDRICH FELIX BARTH, Radeberg, Germany. Filed Nov. 18, 1925, Serial No. 69,784, and in Germany May 12, 1925. 4 Claims. (Cl. 112—251.)



1. In a spool for sewing machines the combination of a central cylindrical portion, flanges on same, and a flat spring fixed to the outer face of one of the said flanges and adapted to act in the axial direction of the spool.

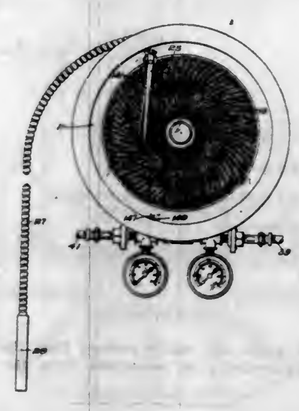
1,624,885. MACHINE AND METHOD FOR MAKING PAPER BOXES. SAMUEL BERGSTEIN and ARTHUR C. E. LINDNER, Middletown, Ohio, assignors to The Interstate Folding Box Company, Middletown, Ohio. Filed Oct. 17, 1925. Serial No. 63,140. 33 Claims. (Cl. 93—49.)



1. A box making machine including in combination, a rotatable work carrier comprising a plurality of box supporting units each adapted to have a box positioned thereon and to move the same upon rotation of the carrier to successive stop positions, each unit being adapted in one of said positions to have a box positioned thereon, means in the next position of stop of said unit for applying double-faced adhesive tape to folded portions of the box, means interposed between said last named position and

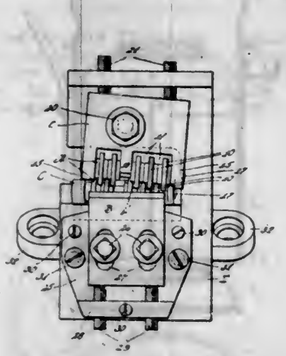
the second stop of said unit acting to moisten the exposed face of the tape, other means acting to fold other portions of the box over the tape and said folded portions,

and means operable under pressure in the third position of stop of said unit to effect adhesion between the folded portions of the box and the sealing element.



1,624,886. SCREEN BAR FOR CRUSHING MACHINERY. GEORGE W. BOSTON, Philadelphia, Pa., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1926. Serial No. 154,916. 3 Claims. (Cl. 83—11.)

1. A screen bar substantially rectangular in cross section, having a plurality of spacing lugs disposed inwardly with respect to the edge of the bar and projecting at right angles with respect to the longitudinal axis of the bar; each lug being provided with flat contacting faces disposed each at an angle to the other.

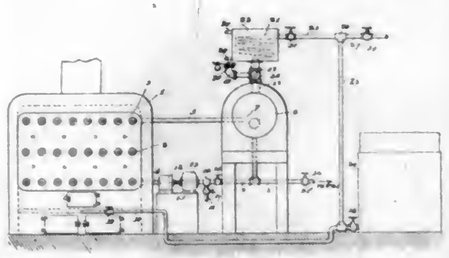


1,624,887. MEASURING AND CONTROLLING INSTRUMENT. EDGAR H. BRISTOL, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1920. Serial No. 402,665. 38 Claims. (Cl. 234—11.)

20. A combined recording and controlling instrument comprising a clock movement having a shaft, a dial plate rotatable thereby, a pen, a pressure responsive member moving the same, governing mechanism including a

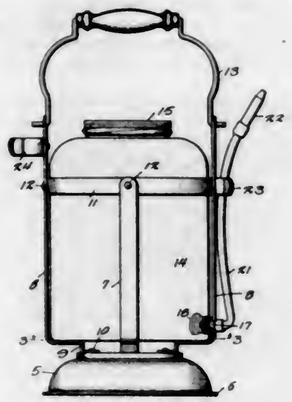
valve element operated by said member, a cooperating valve element and a cam on the time shaft for positioning said latter element.

1,624,888. WORK REST. HARRIS J. COOK, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 11, 1925. Serial No. 49,611. 7 Claims. (Cl. 82—35.)



1. A work rest having a plurality of rollers with their axes inclined relative to one another and each provided with a plurality of circumferential work engaging ribs and intervening grooves, each of said rollers comprising a plurality of independently rotatable sections, some of the ribs of one roller engaging in the grooves of the other roller.

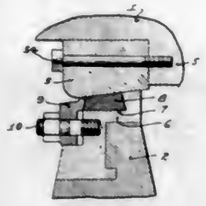
1,624,889. METHOD OF TREATING HYDROCARBONS. WALTER M. CROSS, Kansas City, Mo., assignor, by mesne assignments, to Gasoline Products Company, a Corporation of New York. Filed June 1, 1915, Serial No. 31,486. Renewed Jan. 4, 1912. Serial No. 527,049. 5 Claims. (Cl. 196—51.)



2. A process of converting hydrocarbon oils, which comprises heating and digesting the oil in a coil and enlarged chamber to the extent that the oil attains a substantial equilibrium prior to the withdrawal of the prod-

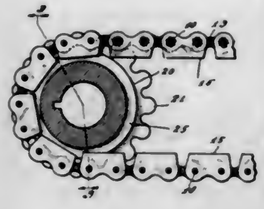
ucts of conversion, the coil only being heated, maintaining a body of liquid oil in the enlarged chamber under the

pressure of gases and vapors evolved from the oil, and withdrawing products of conversion from the enlarged chamber.



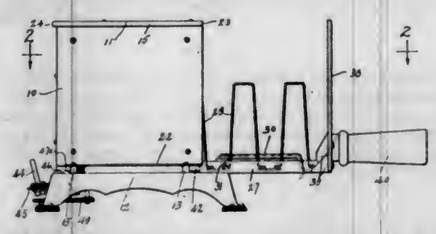
1,624,890. BATTERY FILLER. JOHN S. HOOPER, Wilkinsburg, Pa. Filed Dec. 8, 1925. Serial No. 74,126. 2 Claims. (Cl. 224—45.)

1. In a battery filler of the character described, an open jar carrier embodying a base, a body connected with the base, the body having a lateral offset portion adjacent its lower end and disposed above said base for supporting reception of a jar whereby the jar will be held above said base.



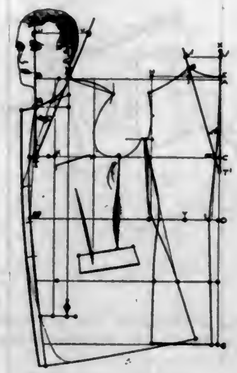
1,624,891. WATER-TIGHT SEATING FOR BUTTERFLY VALVES AND SUCH. ELY C. HUTCHINSON and CHARLES V. FOULDS, Oakland, Calif., assignors to Pelton Water Wheel Company, San Francisco, Calif., a Corporation of California. Filed July 14, 1924. Serial No. 725,772. 5 Claims. (Cl. 251—11.)

1. A butterfly valve, comprising a casing having an annular seat portion provided with seating faces inclined relative to the axis of the seat portion, a disc member pivotally mounted on one diameter with the pivot in substantially the plane of said annular seat portion, seat-engaging members mounted on said disc member and having recesses in one side, and inclined seat-engaging faces, and a compressible packing mounted in said recesses, said packing and the inclined faces of



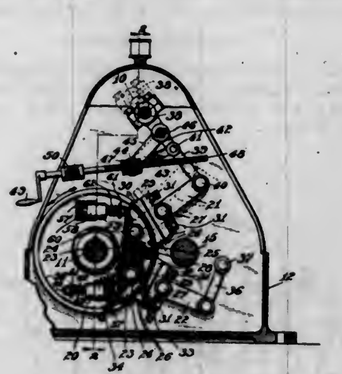
the seat-engaging members having seating cooperation in wedging relation with the seating faces of said annular seat portion to provide a water-tight fit in closed position.

1,624,892. CHAIN DRIVE. CLARENCE P. KOTTLOWSKI, Indianapolis, Ind., assignor to Diamond Chain and Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 30, 1925. Serial No. 72,158. 10 Claims. (Cl. 74—21.)



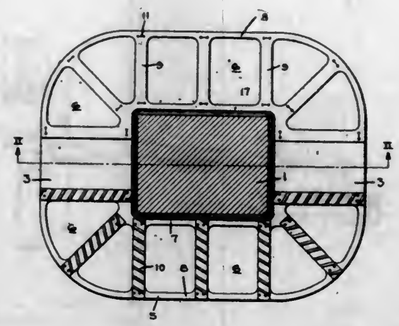
1. In combination, a sprocket, and a chain; said sprocket having one or more rows of teeth, and also having a circumferential groove whose side walls are in different planes transverse to the axis from those of the side faces of the teeth; and said chain having cross members and longitudinal members interconnecting said cross members, and including guide members which project into said circumferential groove in the sprocket and co-operates therewith to prevent said longitudinal members from engaging the side faces of the sprocket teeth.

1,624,893. ELECTRIC BREAD TOASTER. JOHN E. MARSDEN, Philadelphia, Pa. Filed Nov. 30, 1925. Serial No. 72,093. 9 Claims. (Cl. 219—19.)



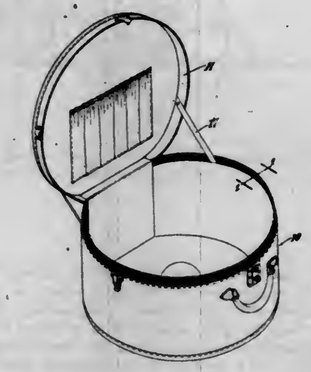
1. In an electric toaster, the combination of a casing, an electrical heating coil therein, a support for a slice of bread movable into or out of said casing, and switch means for said coil operative by said support when the same is moved into said casing to close the circuit.

1,624,894. SYSTEM OF TAILORING. GIUSEPPE A. MONORELLI, Philadelphia, Pa. Filed Sept. 26, 1925. Serial No. 58,870. 8 Claims. (Cl. 33—17.)



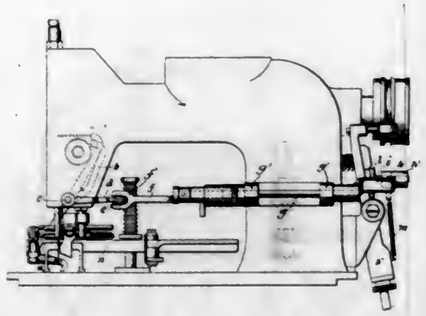
1. The herein described improvement in the art of drafting a coat, which consists in establishing horizontal and vertical reference lines, locating a reference point on the vertical reference line below the horizontal reference line at a distance therefrom bearing a predetermined relation to the breast measure, drawing a diagonal line through the reference point at a predetermined angle from the vertical line, and establishing a second reference point at the intersection of said diagonal and horizontal lines.

1,624,895. VARIABLE-SPEED REDUCTION GEARING. MILTON O. REEVES, Columbus, Ind., assignor to Reeves-Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed Nov. 6, 1924. Serial No. 748,117. 5 Claims. (Cl. 74—53.)



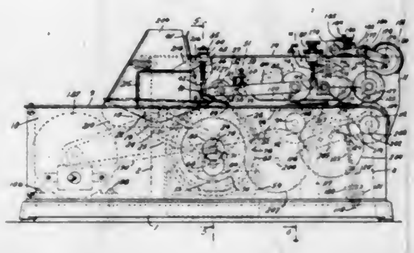
2. A speed-producing power transmission, comprising a driving shaft having an eccentric, a driven member, a gripping device cooperating with said driven member and angularly movable thereon, two links pivoted together and respectively pivotally connected to said gripping device and to said eccentric, an adjustable pivot pin, a link connecting said adjustable pivot pin to a point on one of said first two links.

1,624,896. TRANSFORMER-COIL-SPACING DEVICE. ALEXANDER VEITCH, McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1922. Serial No. 568,876. 6 Claims. (Cl. 175—356.)



1. A coil-spacing device comprising a supporting portion having openings therethrough for the circulation of a cooling medium, the parts of the supporting portion that defines said openings having passages therein for connecting said openings.

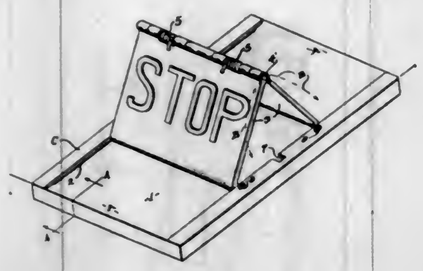
1,624,897. LUGGAGE CARRIER. OSSIP JOSEPH WALINSKY, Sea Gate, N. Y., assignor to White Luggage Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 22, 1925. Serial No. 76,944. 8 Claims. (Cl. 206—8.)



8. In a device of the character described, a collar having a thin strip fastened thereto near one edge, a binding arranged over the edge of said collar and projecting beyond said strip, a lining and a stay, said binding, lining and stay being jointly stitched to said collar just below the edge of said strip.

1,624,898. THREAD TIGHTENER. ALBERT HENNING, Bielefeld, Germany, assignor to Anker-Werke Aktiengesellschaft, Bielefeld, Germany. Filed May 1, 1926, Serial No. 106,077, and in Germany Nov. 4, 1924. 3 Claims. (Cl. 112—242.)

1. The combination with a sewing machine including a tilting cloth clamp, of a pivoted thread pulling lever having at one end a member through which the thread passes and having its other end normally resting directly on the cloth clamp and actuated by movement thereof to produce slack in the thread.

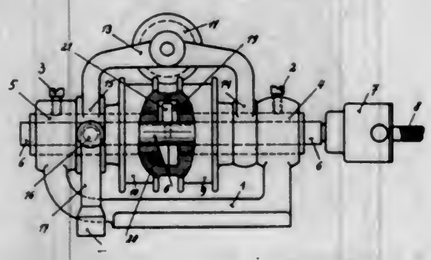


1,624,899. MAILING MACHINE. GEORGE E. NORTHROP, Stamford, Conn., assignor to Red Star Appliances, Inc., Stamford, Conn., a Corporation of Delaware. Original application filed Dec. 31, 1925, Serial No. 78,524. Divided and this application filed Apr. 24, 1926. Serial No. 104,301. 10 Claims. (Cl. 271—2.)

1. In a machine of the character described, the combination of a platform on which a stack of envelopes may be placed with their bodies substantially horizontal and their flaps hanging downward in shingled relation, a power driven drum for advancing the lowermost envelope of the stack, and a feeding drum to which said advanced envelope is delivered.

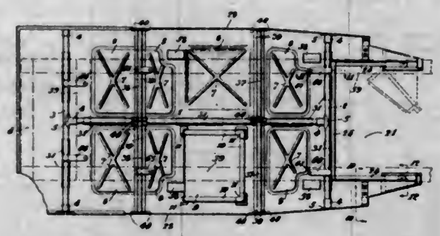
1,624,900. TRAFFIC SIGNAL. KARL C. PARKHURST, Wichita, Kans. Filed Aug. 10, 1926. Serial No. 128,424. 2 Claims. (Cl. 40—125.)

1. In a traffic signal, a bed imbedded in the surface of the road, a depression in the bed having channels on each side thereof, a pair of pivotally connected indicia plates having dowels on the outer corners thereof to engage in said channels, springs engaging at the pivot point of the plates to cause said plates to move towards each other,



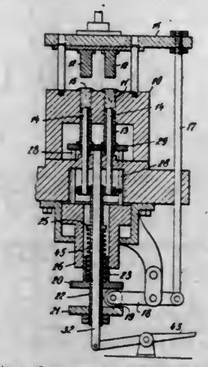
stops engaging across said channels against which said dowels will engage for an angled position of each of the plates.

1,624,901. TIN WITH TIGHTLY-CLOSING COVER. ADOLF SCHWIEGER, Hannover, Germany. Filed Feb. 19, 1926, Serial No. 89,396, and in Germany Dec. 18, 1925. 1 Claim. (Cl. 220—42.)



The combination of a tin having a laterally resilient side wall, a tightly closing cover having a laterally resilient rim engaging over the top part of said side wall, a weak circumferential abutment for the cover in the middle of said side wall, and a downward extension on the cover rim extending beyond and fitting over said weak abutment, substantially as and for the purpose set forth.

1,624,902. NUT-TAPPING MACHINE. HERBERT SPRICK, Leipzig, Germany. Filed Aug. 5, 1925, Serial No. 48,343, and in Germany Aug. 26, 1924. 3 Claims. (Cl. 64—5.)



1. The combination in a nut-tapping machine, of a revolubly mounted working-spindle, two belt-pulleys revolubly mounted on the latter and adapted to move the same in opposite rotary directions, a rotary belt tensioning idler, a driving belt guided over said pulleys and idler, a turnable yoke fulcrumed on said spindle and carrying said belt tensioning idler and adapted when turned to change the arc of contact of the belt with said belt-pulleys, and means in connection with said yoke to yieldingly counteract the pulling force of said belt, substantially as and for the purpose set forth.

1,624,903. VEHICLE UNDERBODY CONSTRUCTION. EDWARD A. WETZEL, Royal Oak, Mich., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 5, 1923. Serial No. 678,566. 11 Claims. (Cl. 296—28.)

1. In a vehicle body construction, a separate integral underbody stiffening unit, comprising a central longitudinal tubular member and transverse tubular members integrally united to the longitudinal member, and means on said unit for securing the unit rigidly to the vehicle body across the bottom thereof, with said longitudinal member disposed along the center line of the body and the transverse members extending from one side of the body to the other side thereof.

1,624,904. METHOD OF AND APPARATUS FOR FORMING BODIES BY PRESSURE. CARL CLAUS, Plainfield, N. J., assignor to Bound Brook Oil-Less Bearing Company, Boundbrook, N. J., a Corporation of New Jersey. Filed Jan. 20, 1925. Serial No. 3,565. 5 Claims. (Cl. 18—16.)

2. In apparatus for producing recessed bodies from compressible material, a mold-chamber having a core-member arranged axially therein with a space between the two and an annular die-member disposed in the bottom of said space against which the material is pressed, a die-member movable into and out of the outer end of said mold-chamber and acting to compress the material in said space and against said annular die-member and said core-member, said core-member being constructed and arranged to give or yield under the action of said material under compression.

Patents Nos. 1,624,905 to 1,625,778.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 357—No. 3. TUESDAY, APRIL 19, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Apr. 6, 1927.*

Austin O. Stanley, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Clifford M. Paxton, 1134 Pacific Street, Brooklyn, N. Y., and patent granted August 10, 1926, No. 1,595,888, to Austin O. Stanley, 205 High Street, Detroit, Mich., and a notice of such declaration sent by registered mail to said Stanley at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Stanley, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

ADJUDICATED PATENTS.

(D. C. Wis.) The McKee patent, No. 1,054,130, for machine for shaving printing plates, *Held* invalid. *C. B. Cottrell & Sons Co.* v. *Claybourn Process Corporation*, 17 F. (2d) 279.

(D. C. Wis.) The McKee patent, No. 1,077,621, for method of treating printing plates to give uniformity of thickness, *Held* invalid. *C. B. Cottrell & Sons Co.* v. *Claybourn Process Corporation*, 17 F. (2d) 279.

(D. C. Calif.) The Barkis patent, No. 1,353,209, for machine for bleaching almonds, *Held* invalid. *Barkis* v. *California Almond Growers' Exchange*, 17 F. (2d) 327.

(D. C. Md.) The Freydberg patent, No. 1,457,625, for fabric binding strips, *Held* invalid. *Freydberg Bros.* v. *Hamburger*, 17 F. (2d) 300.

Change in Price of Official Gazette Publications.

The price of the OFFICIAL GAZETTE has been advanced, beginning March 1, 1927, to $10.00 a year, which will not include the Annual Index.

The Index hereafter will be published in two parts—one on patents, price $1.00, and the other on trade-marks, price 50 cents.

TIME LIMITS FOR ACTIONS.

Completing applications ..... 6 mos.

Responding to official actions:

If dated prior to May 2, 1927 ..... 1 yr.

If dated on or after May 2, 1927 ..... 6 mos.

Renewal of applications:

If allowed prior to May 2, 1927 ..... 2 yrs.

If allowed on or after May 2, 1927 ..... 1 yr.

(See act of March 2, 1927, 357 O. G. 5.)

This act affects all applications pending before this Office, irrespective of their filing dates.

Condition of Applications Under Examination at Close of Business April 8, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 57,658; Trade-Mark Division, 1,917. Oldest new case, Aug. 5, 1926; oldest amended, Sept. 2, 1926. The dates given are 1926 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE STRINGHAM.

Decided March 4, 1927.

1. APPLICATION—ABANDONMENT—SUBSTITUTION OF APPARATUS FOR METHOD CLAIMS FOLLOWING RECOMMENDATION OF BOARD.

Where on appeal to the Board, the ground of rejection of method claims 11 and 12 relied upon by the Examiner was held insufficient, but the appellate tribunal recommended rejection on the patent to D., a new reference, after which two apparatus claims were substituted for claims 11 and 12 and the Examiner ruled the amendment not in accordance with the Board's decision and held the application abandoned, *Held* that since the application already contained both apparatus and method claims, and the new claims did not raise a question of division, nor involved previously unclaimed features, the Examiner's action was in error.

2. SAME—SAME—AMENDMENT TO AVOID NEW REFERENCE FOLLOWING RECOMMENDATION OF BOARD.

Where on appeal from the Examiner's rejection of claims 16 and 17, the Board did not specifically reverse or affirm the Examiner's holding, but recommended rejection on the patent to D., a new reference, and the Examiner refused to permit amendment because the claims were under final rejection, *Held* that the applicant had the right to amend to avoid the D. patent even though the amendment also avoided the ground on which the claims were finally rejected.

ON PETITION.

Application for patent for motor.

Mr. Philip Farnsworth for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has presented a petition "to overrule the holding of abandonment by the Principal Examiner." The petition is accompanied by a request for an oral hearing, but it is not customary to grant hearings on petitions of this character, and the request as to this matter is denied.

On December 14, 1926, the Examiner held the case became abandoned by reason of the failure of the applicant to properly prosecute the application within one year from December 3, 1925, on which date the Examiners in Chief rendered a decision on appeal from the Examiner's rejection of all the claims in the case.

The record shows the applicant appealed from the Examiner's denial of all the claims, 43 in number, and that the Examiners in Chief reversed the Examiner as to 10 claims, recommended new grounds of rejection as to 9 other claims, and affirmed the Examiner as to the remainder of the claims. It will be necessary to consider here only claims 11, 12, 16, and 17.

As to claims 11 and 12, the ground of rejection urged by the Examiner was not deemed sufficient, but the Examiners in Chief recommended these claims be rejected on a patent of record to Devoissaud. Regarding claims 16 and 17, the Examiners in Chief did not specifically reverse or affirm the Examiner's holding, but held such claims failed to distinguish patentably from this same reference, Devoissaud.

On December 15, 1925, an amendment was filed canceling claims 11 and 12 and substituting therefor two new claims which were numbered 3 and 4 and claims 16 and 17 were amended and renumbered 7 and 8.

On March 24, 1926, the Examiner objected to the amendment to these claims as not in accordance with the decision of the Examiners in Chief, required the cancellation of the new claims and the amendments to claims 16 and 17, and held the case awaited complete response to the decision of the Examiners in Chief of December 3, 1925.

On June 29, 1926, the applicant requested a statement of the reasons relied upon by the Examiner in support of his objection to the amendment filed December 15, 1925, and the Examiner on July 8, 1926, furnished such explanation citing authorities in support of his ruling. The applicant was further warned that a proper response to the recommendations of the Examiners in Chief must be presented before December 3, 1926, in order to save the case from abandonment.

On December 2, 1926, the applicant filed an extended argument to the effect that the amendment of December 15, 1925, was proper and should be admitted. On December 14, 1926, the Examiner held the case abandoned. The Examiner stated, however, for the first time that the substitute claims were regarded as improper because they were apparatus claims rather than method claims for which latter they were substituted and further noted that they were "of the same type as those which the Examiner refused," and that they should have been originally presented. He further held, as to claims 16 and 17, that they were not subject to amendment at all as the original final rejection was affirmed by the Examiners in Chief.

[1] It is thought the Examiner was in error in refusing to admit the amendment of December 15, 1925. The case had already claims for the apparatus and claims for the method, and there was no reason why, in seeking to overcome the new ground of rejection presented by the Examiners in Chief, the applicant should be barred from shifting his claims to apparatus rather than method claims. Such shifting did not raise a question of division nor involve claims to previously unclaimed features. There is nothing in the rule of procedure which would preclude the proposed substitution so long as the applicant was trying to avoid the new ground of rejection presented by the Examiners in Chief.

[2] The holding of the Examiner that claims 16 and 17, which the applicant proposed to renumber 7 and 8, were not subject to amendment at all was in error. Even if the decision of the Examiners in Chief be construed as affirming the rejection of the Examiner yet that tribunal did add an additional ground of rejection, the patent to Devoissaud. On appeal from the decision of the Examiners in Chief

the applicant might hope to overcome the ground of rejection urged by the Examiner, but might feel that he could not overcome the additional ground presented by the Examiners in Chief. In view of this condition he was entitled to return to the Examiner and amend so as to avoid the new ground of rejection. If this incidentally avoided the ground of rejection presented by the Examiner, it is believed the amendment was still proper and should have been admitted.

In the amendment of December 15, 1925, the remarks appended urge that claims 11 and 12, which applicant designates as renumbered claims 3 and 4, were almost equivalent in scope to former claims 11 and 12, denied by the Examiners in Chief, and noted in what manner they distinguished from the reference Devoissaud.

It can not be disputed the applicant had a right to amend claims 11, 12, 16, and 17 to overcome the now ground of rejection presented by the Examiners in Chief. It is accordingly held the amendment of December 15, 1925, was responsive to the action of the Examiners in Chief and the holding of abandonment is overruled. The case is remanded to the Examiner for further action in accordance with this decision.

To the above extent the petition is granted.

PATENT SUITS.

D. N. Y., Doc. 2828, *Franklin Knitting Mills, Inc.*, v. *F. Loeser & Co., Inc.* Same, suit filed Dec. 1, 1926, D. C., E. D. N. Y., Doc. 2839, *Franklin Knitting Mills, Inc.*, v. *Gropper Knitwear Corp.*

Des. 68,828, P. L. Pendleton, Panel for radiodials, suit filed Dec. 27, 1926, D. C., E. D. N. Y., Doc. 2873, *Martin-Copeland Co.* v. *Pilot Electric Co.*

T. M. 200,878, American Insulation Co., Asbestos shingle, suit filed Mar. 2, 1927, D. C., E. D. La., Doc. 18,684, *Eternit, Inc.*, v. *J. J. Clarke Co., Inc.*

Re. 16,012. (See 1,305,360.)

Re. 16,284. (See 1,432,658.)

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,459,724, H. P. Fesenmaier, Intake manifold for internal-combustion engines, decided February 26, 1927, claim 1.

Pat. 1,565,478, D. G. Little, Radiotransmitter, decided March 7, 1927, claim 4.

Final decision in interference has been rendered against the following trade-mark:

T. M. 88,737, A specially-prepared size for certain uses, The Cott-A-Lap Company, New Haven, Conn. Registered October 22, 1912. Decided March 26, 1927.

TRADE-MARKS CANCELED.

74,290. Liquid soap. Marc K. Mermod, New York, N. Y., assignor to The Liquid Soap Distributor Company, New York, N. Y. Registered June 29, 1909. Canceled April 6, 1927.

81,248. Certain named musical instruments. The Cable Company, Chicago, Ill. Registered March 21, 1911. Canceled April 6, 1927.

108,931. Leather. J. M. Delaney & Co., New York, N. Y. Registered March 7, 1916. Canceled April 6, 1927.

149,357. Pneumatic tools and machinery. Chicago Pneumatic Tool Company, Chicago, Ill. Registered December 13, 1921. Canceled April 6, 1927.

149,358. Certain named machinery and tools. Chicago Pneumatic Tool Company, Chicago, Ill. Registered December 13, 1921. Canceled April 6, 1927.

164,919. Certain named portable electric tools. Chicago Pneumatic Tool Company, Chicago, Ill. Registered February 27, 1923. Canceled April 6, 1927.

178,301. Canned fish, preserved fruit, and preserved vegetables. John Crampton & Co., Ltd., Manchester, England. Registered January 8, 1924. Canceled April 6, 1927.

181,835. Butter. Blue Valley Creamery Co., Chicago, Ill. Registered March 25, 1924. Canceled April 6, 1927.

Disclaimers.

1,560,474.—*Louis Jensen*, Chicago, Ill. AUTOGRAPHIC REGISTERS. Patent dated November 3, 1925. Disclaimer filed March 30, 1927, by patentee, the assignee, *United Autographic Register Co.*, consenting.

Hereby enters this disclaimer to that part of the claims in said specification which is in the following words, to wit:

"1. The combination in an autographic register with feed rollers one of which is tubular, a shaft reciprocable within the tubular roller and having one end extending beyond the end of said roller, an annular starter collar loose on said tubular roller, and a cone for centering said collar that is secured to and reciprocated by said shaft of a lever designed to reciprocate said shaft.

"2. The combination in an autographic register with feed rollers one of which is tubular, a shaft reciprocable within the tubular roller and having one end extending beyond the end of said roller an annular starter collar loose on said tubular roller and a cone for centering said collar that is secured to and reciprocated by said shaft, of a rocking lever designed to reciprocate said shaft and a cam for rocking said lever."

1,560,475.—*Louis Jensen*, Chicago, Ill. AUTOGRAPHIC REGISTERS. Patent dated November 3, 1925. Disclaimer filed March 30, 1927, by patentee, the assignee, *United Autographic Register Co.*, consenting.

Hereby enters this disclaimer to that part of the claims in said specification which is in the following words, to wit:

"11. In an autographic register, the combination with a shaft having thereon feed rollers, a reciprocal shaft carried by the first mentioned shaft and provided with a screw-threaded extended end, a movable member which engages the screw threaded end of the reciprocatory shaft to effect longitudinal movement thereof and means for effecting a return of said shaft.

"14. In an autographic register, the combination of feed rollers, a shaft mounted for reciprocation within one of the feed rollers, said shaft having an end portion which extends beyond the end of the feed roller in which it is partially housed, a strip engaging and feeding means loosely mounted to be engaged by and positioned to be concentric with the axis of its supporting roller by a cone shaped head associated with the reciprocatory supporting shaft."

1,614,936.—*Leonard D. Soubier*, Toledo, Ohio. GLASS FEEDER. Patent dated January 18, 1927. Disclaimer filed April 2, 1927, by the assignee, *The Owens Bottle Company*.

Hereby enters this disclaimer of claim 4 of said patent, which is in the following words, to wit:

"4. The combination of a container for molten glass having an outlet opening in the bottom thereof, a regulator in the glass above said outlet, a stationary wall surrounding and spaced from said regulator, and means for adjusting said wall up and down."

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 19, 1927.

[VOL. 357. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

63,364. SILK PIECE GOODS. Registered June 18, 1907. EMPIRE SILK CO., Paterson, N. J., and New York, N. Y. Renewed June 18, 1927, to Empire Silk Co., New York, N. Y., a Corporation of Delaware, assignee.

63,424. EXTERNAL REMEDY FOR CROUP. Registered June 18, 1907. THE SMOOT DRUG CO. Renewed June 18, 1927, to Hedquist Drug Co., Provo, Utah, a Corporation of Utah, successor.

63,550. PERIODICALS. Registered June 25, 1907. THE JEWELERS CIRCULAR PUBLISHING CO., New York, N. Y., a Corporation of New York. Renewed June 25, 1927.

63,613. CARTRIDGES, LOADED SHELLS, CAPS, PRIMERS, AND POWDER. Registered July 2, 1907. THE PETERS CARTRIDGE COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed July 2, 1927.

63,614. CARTRIDGES, LOADED SHELLS, CAPS, PRIMERS, AND POWDER. Registered July 2, 1907. THE PETERS CARTRIDGE COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed July 2, 1927.

63,615. CARTRIDGES, LOADED SHELLS, CAPS, PRIMERS, AND POWDER. Registered July 2, 1907. THE PETERS CARTRIDGE COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed July 2, 1927.

63,616. CARTRIDGES, LOADED SHELLS, CAPS, PRIMERS, AND POWDER. Registered July 2, 1907. THE PETERS CARTRIDGE COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed July 2, 1927.

63,617. CARTRIDGES, LOADED SHELLS, CAPS, PRIMERS, AND POWDER. Registered July 2, 1907. THE PETERS CARTRIDGE COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed July 2, 1927.

63,623. LUBRICATING OILS FOR AXLES AND JOURNAL BEARINGS. Registered July 2, 1907. GEORGE W. GALLAWAY. Renewed July 2, 1927, to G. W. Gallaway, New York, N. Y., successor.

63,677. WRITING PAPER. Registered July 2, 1907. J. W. BUTLER PAPER CO. Renewed July 2, 1927, to Butler Paper Corporation, Chicago, Ill., a Corporation of Illinois, assignee.

63,897. WEEKLY PERIODICALS. Registered July 16, 1907. THE JEWELERS CIRCULAR PUBLISHING CO., New York, N. Y., a Corporation of New York. Renewed July 16, 1927.

63,999. CERTAIN METAL MANUFACTURES. Registered July 16, 1907. H. MUELLER MANUFACTURING COMPANY. Renewed July 16, 1927, to Mueller Co., Decatur, Ill., a Corporation of Illinois, assignee.

64,016. A WASHING POWDER. Registered July 16, 1907. LOVERIN & BROWNE COMPANY, Chicago, Ill., a Corporation of Illinois. Renewed July 16, 1927.

64,039. TYPEWRITING MACHINES. Registered July 23, 1907. THE MONARCH TYPEWRITER COMPANY, Syracuse, N. Y. Renewed July 23, 1927, to Remington Typewriter Company, Ilion and New York, N. Y., a Corporation of New York, assignee.

64,310. WHEAT FLOUR. Registered July 30, 1907. THE HUNTER MILLING COMPANY, Wellington, Kans., a Corporation of Kansas. Renewed July 30, 1927.

64,312. WHEAT FLOUR. Registered July 30, 1907. THE NEW ERA MILLING COMPANY, Arkansas City, Kans., a Corporation of Kansas. Renewed July 30, 1927.

64,526. GUN SIGHTS. Registered August 13, 1907. THE LYMAN GUN SIGHT CORPORATION, Middlefield, Conn., a Corporation of Connecticut. Renewed August 13, 1927.

64,609. VALVES AND COCKS FOR STEAM, WATER, AND GAS DISTRIBUTION. Registered August 13, 1907. H. MUELLER MANUFACTURING COMPANY. Renewed August 13, 1927, to Mueller Co., Decatur, Ill., a Corporation of Illinois, assignee.

64,610. VALVES AND COCKS FOR STEAM, WATER, AND GAS DISTRIBUTION. Registered August 13, 1907. H. MUELLER MANUFACTURING COMPANY. Renewed August 13, 1927, to Mueller Co., Decatur, Ill., a Corporation of Illinois, assignee.

64,611. VALVES AND COCKS FOR STEAM, WATER, AND GAS DISTRIBUTION. Registered August 13, 1907. H. MUELLER MANUFACTURING COMPANY. Renewed August 13, 1927, to Mueller Co., Decatur, Ill., a Corporation of Illinois, assignee.

64,783. CERTAIN JEWELRY. Registered August 20, 1907. FRANK JOSEPH GOLDSOLL. Renewed August 20, 1927, to Tecla Pearls, Inc., New York, N. Y., a Corporation of New York, successor.

64,914. SOUND RECORDS FOR TALKING MACHINES. Registered August 27, 1907. COLUMBIA PHONOGRAPH COMPANY, GENERAL, New York, N. Y. Renewed August 27, 1927, to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York, assignee.

64,930. CANNED VEGETABLES AND FRUITS. Registered August 27, 1907. BURT OLNEY CANNING COMPANY, Oneida, N. Y. Renewed August 27, 1927, to New York Canners Inc., Rochester, N. Y., a Corporation of New York, assignee.

65,025. LEATHER BELTING. Registered September 3, 1907. NEW YORK LEATHER BELTING CO., New York, N. Y., a Corporation of New York. Renewed September 3, 1927.

65,052. REGULATING AND BALANCE VALVES. Registered September 3, 1907. H. MUELLER MANUFACTURING COMPANY. Renewed September 23, 1927, to Mueller Co., Decatur, Ill., a Corporation of Illinois, assignee.

LABELS

REGISTERED APRIL 19, 1927.

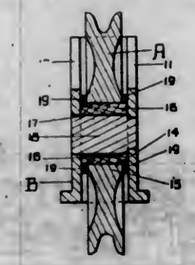
REISSUES

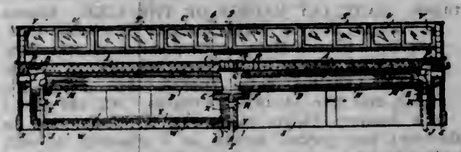
APRIL 19, 1927.



16,593. METHOD FOR PRODUCING A DISINFECTING OR CLEANSING SPRAY FOR HYGIENIC AND MEDICAL PURPOSES. JOHANNES FRENO and EINAR BERGVE, Oslo, Norway. Filed Jan. 6, 1927. Serial No. 159,496. Original No. 1,522,610, dated Jan. 13, 1925, Serial No. 379,597, filed May 7, 1920. 7 Claims. (Cl. 167—9.)

1. Method for the production of a cleaning and disinfecting spray which consists in atomising a liquid dentifrice containing a perborate by means of a high pressure carbonic acid gas.

4. Method of cleansing teeth, which comprises spraying a liquid dentifrice saturated with carbon dioxide onto the teeth, whereby the carbon dioxide released at the teeth will produce an emulsion of the saliva and simultaneously dissolve tartar.

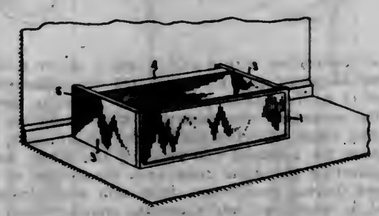


7. Method of cleansing teeth, which comprises applying nascent hydrogen peroxide and nascent oxygen at the place being treated by spraying a liquid dentifrice containing carbon dioxide under pressure onto the teeth.

16,594. SASH-WEIGHT PULLEY. ERNEST S. REILAND and PETER M. REILAND, St. Paul, Minn., assignors to Bayport Foundry Company, Bayport, Minn., a Corporation of Minnesota. Filed May 20, 1926. Serial No. 110,530. Original No. 1,580,763, dated Apr. 13, 1926, Serial No. 8,675, filed Feb. 12, 1925. 8 Claims. (Cl. 16—210.)

1. A sash weight pulley including, a housing having parallel side walls, a pulley adapted to be positioned between said side walls, a cored polyangular opening formed through said pulley having an inner roughened serrated surface and a nonmetallic core bushing member treated with a lubricant adapted to be held fixed by said roughened cored surface in said pulley.

16,595. REFRIGERATED DISPLAY COUNTER. JOHN F. BARGHAUSEN, Takoma Park, D. C. Filed Feb. 21, 1927. Serial No. 170,038. Original No. 1,540,158, dated June 2, 1925, Serial No. 3,658, filed Jan. 20, 1925. 26 Claims. (Cl. 62—37.)



15. In a refrigerated counter, a structure having means for dividing it into an upper relatively high display compartment for the housing of perishable articles, and a relatively low and restricted underlying spraying space, said dividing means having an air descending opening and an air ascending opening for effecting communication between said compartment and said spraying space, means located in the spraying space adjacent the air descending opening and directed toward the air ascending opening for spraying a cooling liquid along said spraying space toward said air ascending opening, thereby to induce a downflow of warmer air from the upper compartment via the air descending opening and an up-flow of cooler air into the upper compartment via the up-flow opening.

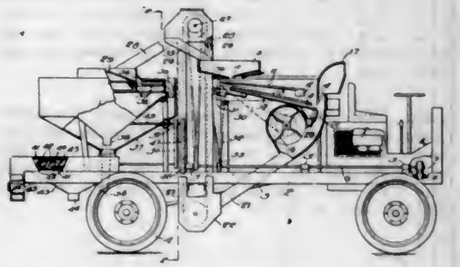
16,596. MANUFACTURING PROCESS OF MAKING BLANKS FOR WATCH MOVEMENTS PROVIDED WITH JEWEL-INSETTING OR PLUG HOLES. HENRI COLOMB, Tavennes, Switzerland. Filed Jan. 6, 1927. Serial No. 159,467. Original No. 1,571,756, dated Feb. 2, 1926, Serial No. 592,642, filed Oct. 5, 1922. 6 Claims. (Cl. 29—177.)

1. In a manufacturing process for blanks of watch movements provided with holes for settings and bushes the procedure of establishing the interchangeability of each piece by first putting in all the holes according to suitable guide marks and then of rectifying all the holes of each piece simultaneously by means of one and the same punch which is likewise guided by suitable but particular marks.

16,597. TUB. BENJAMIN HARRISON DARROW, Woodstock, Ohio, assignor to The Sani-Tabl-Tub Company, Alliance, Ohio, a Corporation of Ohio. Filed Jan. 3, 1927. Serial No. 158,776. Original No. 1,590,738, dated June 29, 1926, Serial No. 56,223, filed Sept. 14, 1925. 6 Claims. (Cl. 4—173.)

1. A bathtub comprising two end walls, a longitudinal side wall secured thereto, the adjacent longitudinal side wall being closed by a tub of less width and depth than the width of the longitudinal wall, but of its full length, the remaining two sides of the device remaining open, that side of the device closed by the tub having a longitudinal seat adjacent the tub, the longitudinal side wall occupying a horizontal position so as to be used as a table top when the device is resting on its opposite side.

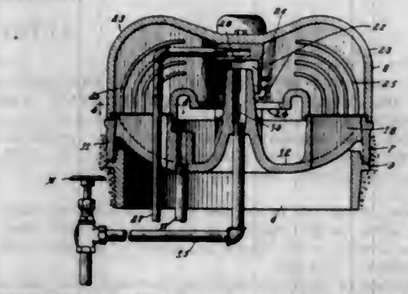
16,598. ELECTRODEPOSITION OF CHROMIUM. CARL HAMBUECHEN, St. Louis, Mo., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Apr. 9, 1926. Serial No. 101,000. Original No. 1,544,451, dated June 30, 1925, Serial No. 724,515, filed July 5, 1924. 8 Claims. (Cl. 204—1.)



4. Process of electrodepositing chromium from a bath containing chromic acid which comprises passing the depositing current into the bath through a soluble anode containing chromium, and an insoluble anode, and adjusting the distribution of the current between the two anodes to maintain an efficient concentration of chromium in the bath.

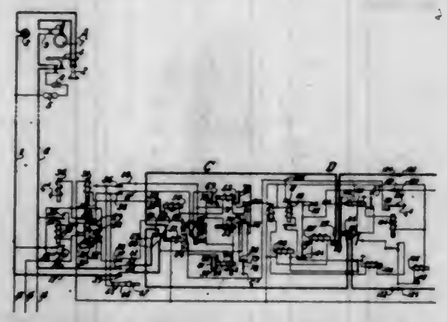
16,599. METHOD OF REPAIRING BROKEN METALLIC STRUCTURES. ROYAL MATTICE, Bethlehem, Pa. Filed Jan. 26, 1927. Serial No. 163,811. Original No. 1,592,609, dated July 13, 1926, Serial No. 737,318, filed Sept. 12, 1924. 10 Claims. (Cl. 219—10.)

10. The method of joining metal plates or the like which comprises forming perforations in one of said plates, securing projecting studs in the other plate, said plate providing the holding means for said studs whereby said studs are positively aligned with each other and with the perforations in the first mentioned plate, then superposing the perforated plate on said second named plate with the studs extending into the perforations therein, and finally welding the studs to the perforated plate to fill the countersinks and form a head on each of said studs.



16,600. PORTABLE APPARATUS FOR CLEANING AND GRADING GRAIN, SEED, AND THE LIKE. RUSSELL V. JUDSON, Detroit, Mich. Filed Jan. 11, 1927. Serial No. 160,513. Original No. 1,522,724, dated Jan. 13, 1925, Serial No. 451,666, filed Mar. 12, 1921. 7 Claims. (Cl. 209—12.)

1. In combination with a vehicle and a power member mounted thereon, apparatus mounted on said vehicle adapted to receive threshed grain and including mechanism for separating out chaff and dirt, mechanism for separating rough imperfect grain from smooth grain and mechanism for polishing and cleaning the grain, means for conducting the grain from each mechanism to the next and driving connections from said power member adapted to operate all said apparatus simultaneously.



16,601. OIL AND GAS BURNER. LEE G. DANIELS, Rockford, Ill. Filed May 23, 1925. Serial No. 32,517. Original No. 1,484,814, dated Feb. 26, 1924, Serial No. 529,824, filed Jan. 17, 1922. 18 Claims. (Cl. 158—91.)

16. In combination, a liquid fuel burner, an air supply conduit for delivering air thereto having an air inlet extending upwardly at the side of the burner and over the same so as to be heated by the flame, and a gas

supply pipe extending through said inlet and providing a pilot lighter for delivering a flame onto the liquid fuel burner through the delivery end of said air inlet.

16,602. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 21, 1926. Serial No. 103,654. Original application filed Feb. 14, 1916, Serial No. 78,161. Renewed June 26, 1920, Serial No. 392,042, now Patent No. 1,439,124, dated Dec. 19, 1922. Divided and application filed Nov. 6, 1922, Serial No. 599,176, Patent No. 1,492,396, dated Apr. 29, 1924. 28 Claims. (Cl. 179—18.)

24. In a telephone system, a trunk line terminating in an automatic switch, means for operating said switch controlled by a calling subscriber over the two sides of said trunk line in series, a second switch for connecting a calling line to said trunk line to enable the said first switch to be operated as set forth, subscriber controlled means for releasing the second switch to disconnect the calling line and trunk line, and automatic means for preventing the release of the second switch in case the trunk line is defective.

16,603. SANITARY NAPKIN OR THE LIKE. EZROLD B. THOMAS, Newton, Mass., assignor to Thomas Products, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1927. Serial No. 169,113. Original No. 1,564,498, dated Dec. 8, 1925, Serial No. 15,241, filed Mar. 13, 1925. 8 Claims. (Cl. 128—290.)

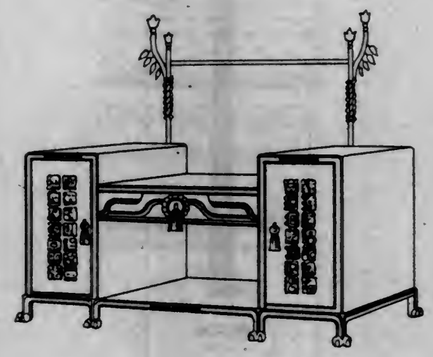
6. A sanitary napkin comprising in combination an absorbent pad portion formed of a plurality of soft, highly flexible, superposed ligno-cellulose webs, whereby said pad portion is disposable after use by depositing it in and flushing a usual water-containing toilet vault and is readily disintegrable in the water thereof or flowing therefrom, an envelope of gauze surrounding said flexible pad portion and retaining said plurality of webs in said superposed relation and extending longitudinally beyond the latter at their opposite ends to provide securing

means for the napkin, and a soft, highly flexible, thin, moisture-proof sheet constituting moisture-retaining means at the outer face of said pad portion intermediate the latter and said gauze envelope, said moisture-retaining means having substantially the same degree of flexibility and softness as that of said pad portion, whereby the softness and flexibility of the latter are preserved, said moisture-proof sheet extending over at least the major central region of the adjacent face of the pad portion but leaving the longitudinal side edges of the latter substantially wholly exposed to the action of the water when deposited therein with said sheet, presenting no obstruction to the ready disintegration of said pad portion when freed from its gauze envelope for discarding after use, and being itself capable of disposal through the same toilet facilities above mentioned.

7. A sanitary napkin comprising a soft, flexible, absorbent pad portion formed of a plurality of ligno-cellulose layers whereby it is disposable after use by depositing it in and flushing a usual water-containing toilet vault and is readily disintegrable in the water thereof or flowing therefrom, an envelope of gauze surrounding said pad portion and extending longitudinally beyond the same at its opposite ends to provide securing means for the napkin, and a soft, highly flexible, thin, moisture-proof sheet at one outer face of said pad portion and within said gauze envelope, said moisture-proof sheet having substantially the same degree of flexibility and softness as that of said pad portion, whereby the flexibility and softness of the latter are preserved, and presenting no obstruction to the ready disintegration of the pad portion, said moisture-proof sheet being itself capable of disposal through the same toilet facilities above mentioned, the edges of said layers forming the pad portion being frayed and uncompacted to reduce possibility of irritation thereby to the user.

8. In a sanitary napkin, a plurality of superposed sheets of wood cellulose constituing a pad portion, and a soft, highly flexible, moisture-proof sheet providing moisture-retaining means at one face of said pad portion, the edges of said cellulose sheets being frayed and uncompacted in the formation of said pad portion to reduce possibility of irritation thereby to the user.

DESIGNS



APRIL 19, 1927.

72,464. CHAIR. MARY ANTROBUS, London England. Filed Dec. 23, 1926, Serial No. 20,115, and in Great Britain Dec. 4, 1926. Term of patent 3½ years.

The ornamental design for a chair, as shown.

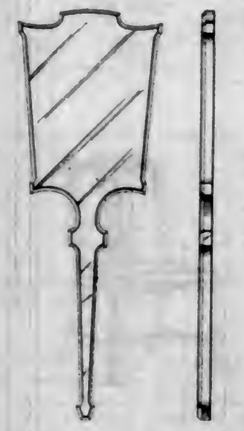
72,465. SIDEBOARD. MARY ANTROBUS, London, England. Filed Dec. 23, 1926, Serial No. 20,116, and in Great Britain Dec. 4, 1926. Term of patent 3½ years.

The ornamental design for a sideboard as shown.

72,466. LAMP-POST OR SIMILAR ARTICLE. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Jan. 25, 1926. Serial No. 16,253. Term of patent 14 years.

The ornamental design for a lamp post or similar article, as shown.

72,467. LAMP-POST OR SIMILAR ARTICLE. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 16,430. Term of patent 14 years.

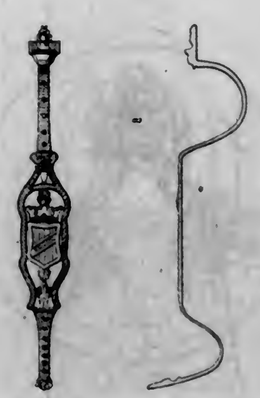


The ornamental design for a lamp post or similar article, as shown.

72,468. COMBINATION ASH TRAY AND LAMP CAP. LOUIS BASKIN and MAX STERNBERG, Chicago, Ill. Filed Dec. 13, 1926. Serial No. 20,041. Term of patent 7 years.

The ornamental design for a combination ash tray and lamp cap as shown.

72,469. MIRROR OR SIMILAR ARTICLE. WILLIAM S. BECHTOLD, Newark, N. J. Filed Dec. 9, 1926. Serial No. 20,002. Term of patent 7 years.

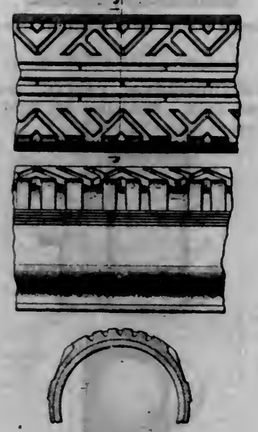


The ornamental design for a mirror or similar article, as shown.

72,470. GOAT AND DARKIE TOY. WILLIAM D. BLUDWORTH, Sacramento, Calif. Filed Jan. 2, 1926. Serial No. 15,937. Term of patent 3½ years.

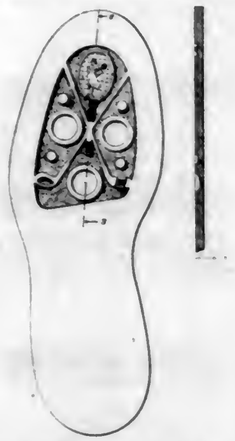
The ornamental design for a goat and darkie toy, as shown.

72,471. LIGHTING-FIXTURE STRAP. MAX BROWN, Brooklyn, N. Y., assignor to Royal Metal Lighting Fixture Co., Inc., a Corporation of New York. Filed Feb. 17, 1927. Serial No. 20,792. Term of patent 3½ years.



The ornamental design for a lighting fixture strap, substantially as shown.

72,472. TIRE. TRUMAN S. CALDWELL, Racine, Wis., assignor to Racine Horseshoe Tire Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 12, 1927. Serial No. 20,854. Term of patent 3½ years.

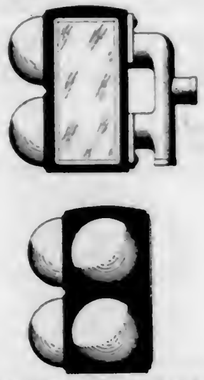


The ornamental design for a tire, substantially as shown.

72,473. TIRE. TRUMAN S. CALDWELL, Racine, Wis., assignor to Racine Horseshoe Tire Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 12, 1927. Serial No. 20,855. Term of patent 14 years.

The ornamental design for a tire, substantially as shown.

72,474. SHOE SOLE. EDWIN CALVIN, Squantum, Mass., assignor to Bearfoot Sole Co. Inc., Boston, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1926. Serial No. 19,981. Term of patent 7 years.



The ornamental design for a shoe sole, as shown.

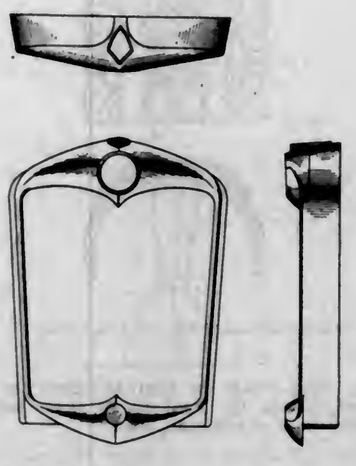
72,475. TEXTILE FABRIC. MICHEL DUBOST, Paris, France, assignor to F. Ducharne Silk Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 19,886. Term of patent 3½ years.

The ornamental design for a textile fabric substantially as shown.

72,476. DIRECTION-SIGNAL CASING. JOHN W. DUNLAP, Modesto, Calif. Filed Oct. 30, 1926. Serial No. 19,545. Term of patent 14 years.

The ornamental design for a "direction signal casing," as shown.

72,477. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y., assignor to Benjamin & Edward J. Gross Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 20,849. Term of patent 3½ years.

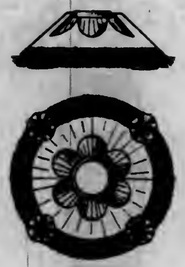


The ornamental design for a finger ring or article of similar nature, as shown.

72,478. HAND BAG OR SIMILAR ARTICLE. SAMUEL HASKELL, Brooklyn, N. Y. Filed Jan. 12, 1927. Serial No. 20,852. Term of patent 3½ years.

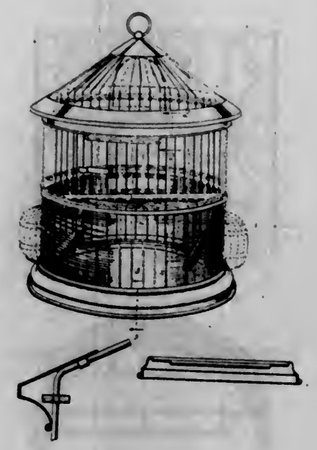
The ornamental design for a hand bag or similar article as shown.

72,479. AUTOMOBILE RADIATOR CASING. ALBERT OWEN HOLTOM, Rochester, N. Y., assignor to Herman Edward Zimmerman, New York, N. Y. Filed Jan. 10, 1927. Serial No. 20,324. Term of patent 7 years.



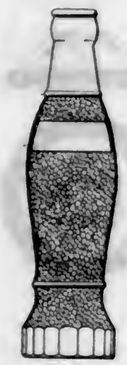
The ornamental design for an automobile radiator casing as shown.

72,480. PLATE OR SIMILAR ARTICLE. FRANK KATZ, Brooklyn, N. Y., assignor to Anchor Manufacturing Company, New York, N. Y. Filed Jan. 15, 1926. Serial No. 16,104. Term of patent 3½ years.



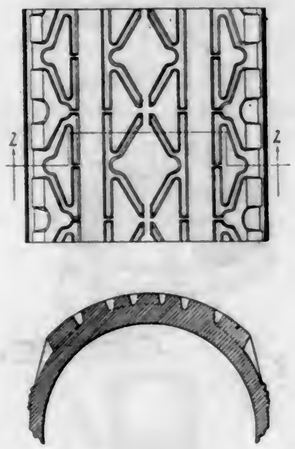
The ornamental design for a plate or similar article, as shown.

72,481. REFLECTOR FOR CHRISTMAS-TREE DECORATION. CONRAD KEMPF, Nuremberg, Germany, assignor to Sueddeutsche Christbaumschmuck- u. Reflektoren Gesellschaft mit beschränkter Haftung, Nuremberg, Germany. Filed Dec. 2, 1926. Serial No. 19,906. Term of patent 3½ years.



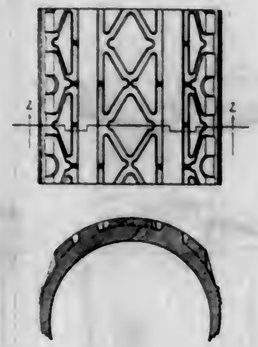
The ornamental design for a reflector for Christmas tree decoration as shown.

72,482. BIRDCAGE. LEWICKI J. LEON, West Chicago, Ill. Filed Jan. 8, 1927. Serial No. 20,307. Term of patent 14 years.



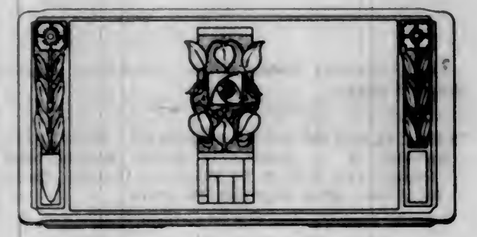
The ornamental design for a birdcage, as shown and described.

72,483. BOTTLE. CORNELIA TAYLOR LONG, Winston-Salem, N. C., and ARCHIE C. SOHN, Pittsburgh, Pa., assignors to Taylor-Long Company, Charlotte, N. C., a Corporation of North Carolina. Filed Oct. 29, 1926. Serial No. 19,534. Term of patent 14 years.



The ornamental design for a bottle as shown.

72,484. TIRE. THOMAS C. MARSHALL, Mount Savage, Md. Filed Feb. 23, 1927. Serial No. 20,852. Term of patent 14 years.



The ornamental design for a tire as shown.

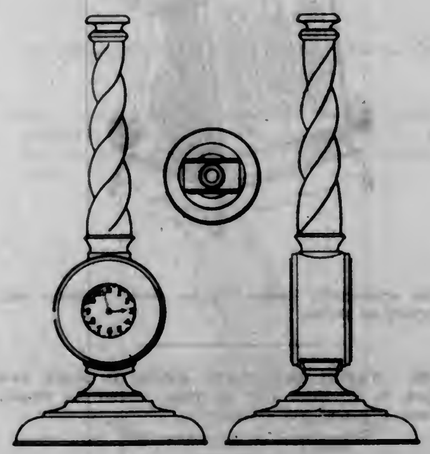
72,485. TIRE. THOMAS C. MARSHALL, Mount Savage, Md. Filed Feb. 23, 1927. Serial No. 20,853. Term of patent 14 years.

The ornamental design for a tire as shown.

72,486. BILL FOLD OR SIMILAR ARTICLE. LEON MAYER, Chicago, Ill. Filed Oct. 20, 1926. Serial No. 19,437. Term of patent 3½ years.

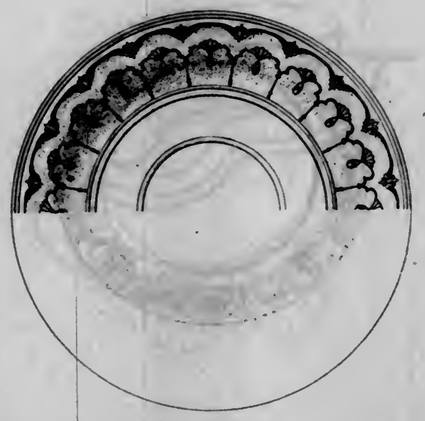
The ornamental design for a bill fold or similar article, as shown.

72,487. WOVEN FABRIC. EMILE MEYER, New York, N. Y. Filed Aug. 10, 1926. Serial No. 18,664. Term of patent 14 years.



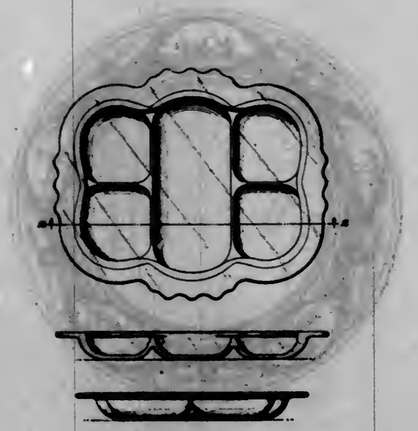
The ornamental design for woven fabric as shown.

72,488. COMBINATION LAMP AND SMOKER'S SET. ERNEST F. MCCARTHY, Darien, Conn. Filed Oct. 27, 1926. Serial No. 19,491. Term of patent 14 years.



The ornamental design for a combination lamp and smoker's set as shown.

72,489. COMBINATION LAMP AND CLOCK CASE. JOHN D. NEWLAND, Los Angeles, Calif. Filed Feb. 14, 1927. Serial No. 20,764. Term of patent 14 years.



The ornamental design for a combination lamp and clock case as shown.

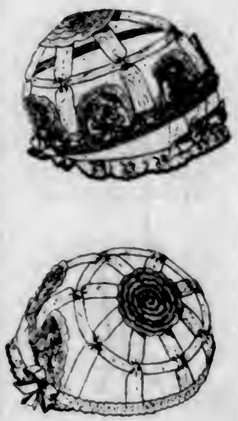
72,490. PLATE OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1927. Serial No. 20,529. Term of patent 7 years.

The ornamental design for a plate or analogous article, substantially as shown and described.

72,491. SERVICE TRAY FOR RELISH OR THE LIKE. WILBER L. ORME, Cambridge, Ohio. Filed Jan. 31, 1927. Serial No. 20,557. Term of patent 7 years.

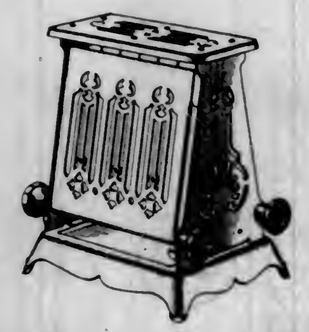
The ornamental design for a service tray for relish or the like, as shown.

72,492. PLATE OR SIMILAR ARTICLE. MAX J. PALM, Jr., Cincinnati, Ohio. Filed Nov. 17, 1926. Serial No. 19,750. Term of patent 3½ years.



The ornamental design for a plate or similar article, as shown.

72,493. PLATE OR SIMILAR ARTICLE. JOHN E. PHILLIPS, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 26, 1926. Serial No. 16,683. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

72,494. BOUDOIR CAP. MINA L. PETERS, Seattle, Wash. Filed Dec. 9, 1926. Serial No. 20,003. Term of patent 3½ years.

The ornamental design for a boudoir cap as shown.

72,495. ELECTRIC TOASTER. CHARLES P. RANDOLPH, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Mar. 22, 1926. Serial No. 17,009. Term of patent 14 years.

The ornamental design for an electric toaster substantially as shown.

72,496. WATCH BRACELET. MILTON H. SABIN, New York, N. Y. Filed July 19, 1926. Serial No. 18,401. Term of patent 3½ years.

The ornamental design for a watch bracelet as shown.

72,497. WHEELED TOY. JOSEPH ANDREW SAUBER, Evanston, Ill., assignor to The Toy Tinkers, Inc., Evanston, Ill., a Corporation of Illinois. Filed Oct. 6, 1926. Serial No. 19,253. Term of patent 14 years.

The ornamental design for a wheeled toy, as shown.

72,498. CREAM PITCHER. ANGELO C. SCAVULLO, New York, N. Y., assignor to Jos. Heinrichs Corporation, a Corporation of New York. Filed Feb. 11, 1927. Serial No. 20,703. Term of patent 14 years.

The ornamental design for a cream pitcher as shown.

72,499. STAND FOR A DRINKING SET OR SIMILAR ARTICLE. PHILIP SCHEINER, Brooklyn, N. Y. Filed Jan. 17, 1927. Serial No. 20,414. Term of patent 3½ years.

The ornamental design for a stand for a drinking set or similar article, as shown.

72,500. COMBINED FRAME AND BODY WITH HOOD FOR A BABY CARRIAGE. HAROLD F. SHAW, Leominster, Mass. Filed Oct. 14, 1926. Serial No. 19,354. Term of patent 7 years.

The ornamental design for a combined frame and body with hood for a baby carriage, as shown.

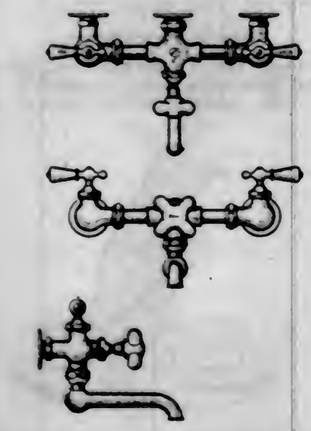
72,501. DRESS. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 13, 1927. Serial No. 20,364. Term of patent 3½ years.

The ornamental design for a dress, substantially as shown.

72,502. DOLL OR SIMILAR ARTICLE. JANE GRAY STOKES, Larchmont, N. Y., assignor to Jane Gray Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 6, 1927. Serial No. 20,297. Term of patent 3½ years.

The ornamental design for a doll or similar article as shown.

72,503. BOTTLE. ARCH B. TAYLOR, Charlotte, CORNELIA TAYLOR LONG, Winston-Salem, N. C., and ARCHIE C. SOHN, Pittsburgh, Pa., assignors to Taylor-Long Company, Charlotte, N. C., a Corporation of North Carolina. Filed Feb. 18, 1927. Serial No. 20,810. Term of patent 14 years.



The ornamental design for a bottle as shown.

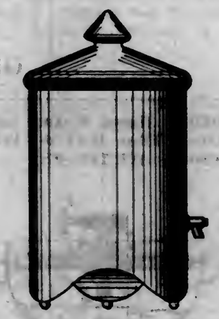
72,504. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Jan. 8, 1926. Serial No. 16,000. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

72,505. FAUCET. WILLIAM F. VAN EWEYK, Milwaukee, Wis., assignor to Milwaukee Brass Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 19, 1926. Serial No. 18,399. Term of patent 7 years.

The ornamental design for a faucet, as shown.

72,506. GOBLET OR SIMILAR ARTICLE. JULES H. VERNON, New York, N. Y. Filed Oct. 26, 1926. Serial No. 19,489. Term of patent 14 years.



The ornamental design for a goblet or similar article, as shown and described.

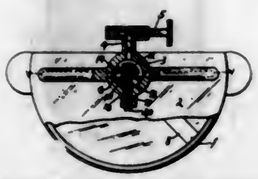
72,507. GOBLET OR SIMILAR ARTICLE. JULES H. VERNON, New York, N. Y. Filed Feb. 5, 1927. Serial No. 20,633. Term of patent 14 years.

The ornamental design for a goblet or similar article, as shown and described.

72,508. WATER COOLER. HENRY WEISS, Millbrae, Calif. Filed Mar. 8, 1926. Serial No. 16,820. Term of patent 3½ years.

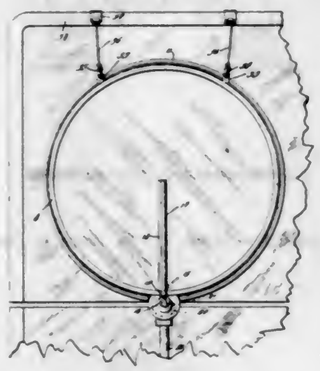
The ornamental design for a water cooler, substantially as shown.

72,509. BADGE OR LIKE ARTICLE. SIMON ZUBROW, Philadelphia, Pa. Filed Feb. 9, 1926. Serial No. 16,456. Term of patent 3½ years.



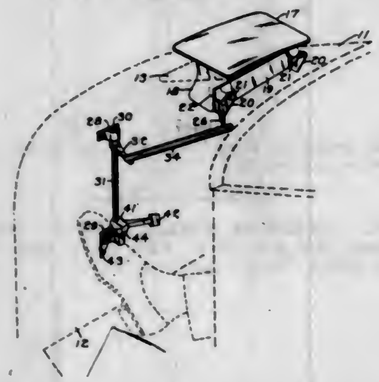
The ornamental design for a badge or like article, as shown.

PATENTS



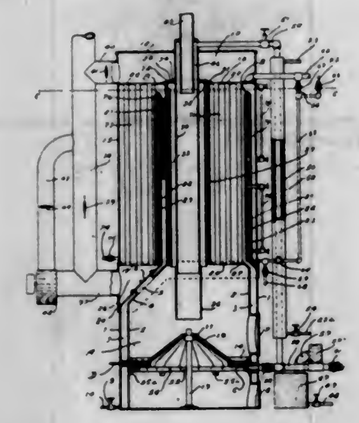
GRANTED APRIL 19, 1927.

1,624,905. MOTOR. HARRY P. ADIE and PAUL GILPIN, Cleveland, Ohio. Filed Mar. 20, 1922. Serial No. 545,307. 2 Claims. (Cl. 121—97.)



2. A motor of the type set forth comprising a casing, a spindle and a piston mounted thereon adapted to oscillate within said casing, a port controlling valve mounted exterior of said casing and in line with the piston spindle, means for holding said valve immovable during a portion of the piston movement, a spring connection between the spindle and the valve operated directly by the spindle and brought under tension by the action of said spindle; the tension thus created in said spring being adapted to overcome the resistance offered by the means for holding said valve immovable and to rapidly oscillate the valve at approximately the end of the piston stroke.

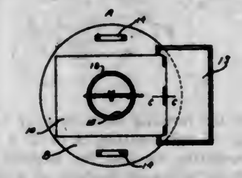
1,624,906. WINDSHIELD. JOHN BAUER, Detroit, Mich. Filed Apr. 9, 1923. Serial No. 630,829. 1 Claim. (Cl. 15—250.)



A windshield protector embodying a substantially circular guarding member, a rubber ring carried by the guarding member and adapted to engage the windshield to which the device is secured, a circular shield supported for rotation within the guarding member, a flange to which the shield is secured, said flange resting in spaced relation with the windshield to which the device is secured, a stationary wiping member contacting with the shield, a gear supported under the shield and contacting with the flange, means for rotating the gear to rotate the shield, and means for securing the windshield protector to a windshield.

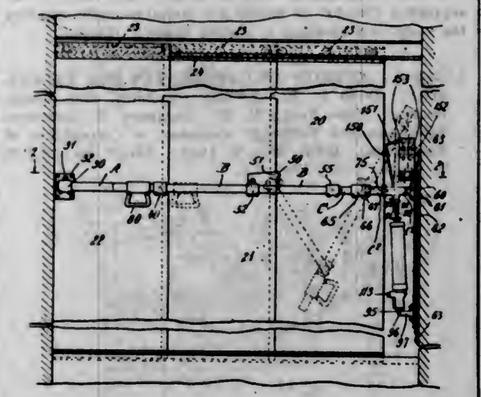
1,624,907. VENTILATOR. JOSEPH H. BOURGON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 3, 1924. Serial No. 723,890. 7 Claims. (Cl. 98—2.)

1. In a motor vehicle, a cowl ventilator, an arm secured to said ventilator, a vertical rotatable shaft secured to the vehicle dash, an arm secured to the upper end of said shaft, and rotatable therewith, a link connecting said arm on said vertical shaft and said arm on said ventilator, and pedals secured to the lower end of said shaft and rotatable therewith to operate said ventilator.



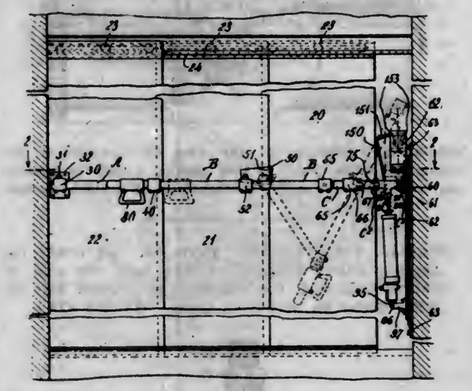
1,624,908. VERTICAL FIRE-TUBE BOILER. OLIVER S. BOWMAN, Colorado Springs, Colo. Filed Oct. 4, 1926. Serial No. 139,419. 7 Claims. (Cl. 122—37.)

1. In a vertical return-draft fire tube boiler, in combination, a main shell; a fire box, comprising concentric shells, positioned below said main shell; a lower tube



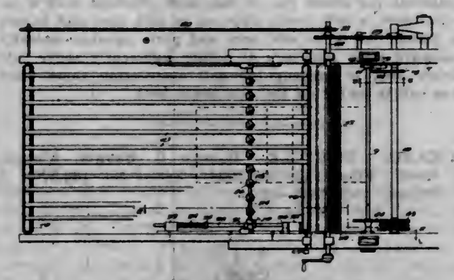
sheet, divided into minor segment, the arc of which is fixed to the rear of said main shell, and a major segment mounted on the inner shell of said fire box; a continuous insulating wall, conforming to an arc at the front and to a chord of a circle at the back, vertically disposed within said main shell and spaced therefrom, said wall comprising concentric shells connected at the top and insulating material there-between, the outer shell being secured to the chord of the minor segment of said lower tube sheet and to the bottom of said main shell, and the inner shell mounted on the outer shell of said fire box.

1,624,909. ASH-HANDLING EQUIPMENT. OLIVER S. BOWMAN, Colorado Springs, Colo. Filed Jan. 10, 1927. Serial No. 160,241. 6 Claims. (Cl. 126—242.)



6. In an equipment of the class described, the combination of a hood, comprising a sheet having an opening therein, and a shell open below and at one end, fixed to said sheet above said opening; a plate, having a slot therein, hinged to the top edge of open end of said shell; a pan fixed to said sheet in proximity to said open end; a thimble, mounted on said shell and in open communication therewith; a damper, mounted on an operating shaft, disposed within said thimble; and a pipe, having a pair of angular slots through which the ends of said operating shaft project, mounted loosely on said thimble and adapted to be connected with a smoke pipe or a chimney.

1,624,910. DOOR CLOSER. THOMAS BRADY, East Orange, N. J., assignor, by mesne assignments, to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 15, 1923. Serial No. 619,231. 8 Claims. (Cl. 16—52.)

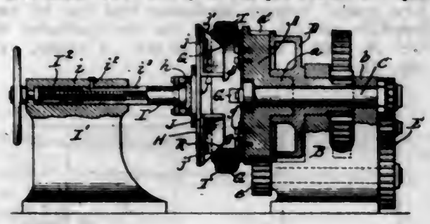


1. Door check or cushioning mechanism comprising a rod, a piston connected thereto, a cylinder receiving said piston and adapted to be connected to a fixed abutment, a by-pass through the cylinder wall and communicating with the lower end of the cylinder through a lateral opening therein, the bottom of said piston being beveled.

1,624,911. DOOR CLOSURE. THOMAS BRADY, East Orange, N. J., assignor, by mesne assignments, to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Original application filed Feb. 15, 1923, Serial No. 619,231. Divided and this application filed Oct. 10, 1925. Serial No. 61,643. 9 Claims. (Cl. 268—52.)

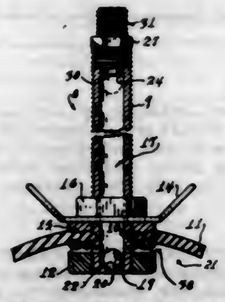
3. Door closure mechanism for sectional doors comprising a series of links pivoted respectively to the door sections and to each other and connected at one end to a fixed pivot, the pivotal connections between the links and doors and between the respective links being adjustable.

1,624,912. PAPER-FEEDING APPARATUS. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Mfg. Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Dec. 1, 1923. Serial No. 678,012. 15 Claims. (Cl. 271—46.)



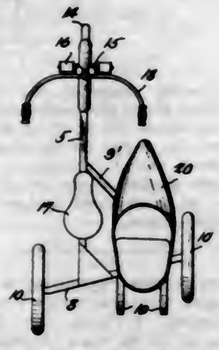
1. In sheet feeding apparatus, the combination with a carrier on which sheets are successively placed in substantial line one behind the other, of means movable to a position above the carrier for elevating the front portions of the sheets out of such line to permit each to override the rear portion of the one in advance of it, and mechanism for automatically and periodically moving the sheet-elevating means.

1,624,913. MEANS FOR UTILIZING WASTE RUBBER. JAMES W. AMES, Montclair, N. J. Filed Apr. 25, 1922. Serial No. 556,545. 9 Claims. (Cl. 164—39.)



1. An apparatus of the class described embodying a plurality of rotatable heads positioned in facing relation one to the other, said heads having means for wedging engagement with a tire rim interiorly thereof, whereby a

tire rim is rotatably mounted for exposing the surface of a tire, means for imparting rotative movement to one of said heads and cutting means positioned in a plane

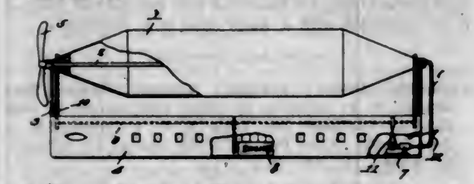


substantially parallel to the axes of rotation of the rotatable heads, said cutting means acting to remove material from a tire for substantially the width thereof.

1,624,914. TIRE VALVE. DAVID W. BEECHTEL, Los Angeles, Calif., assignor of forty-nine per cent to Marvin L. Arnold, Los Angeles, Calif. Filed July 23, 1925. Serial No. 45,445. 1 Claim. (Cl. 152—12.)

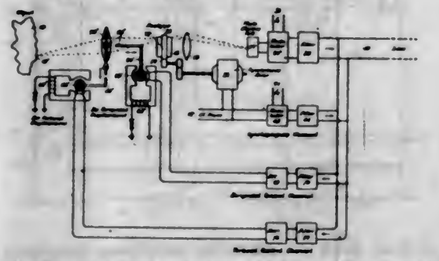
In a pneumatic tire valve, a stem provided with a vertical bore, an inverted seat adjacent the upper end of said bore provided with a coaxial port, a lower seat adjacent the lower end of said bore provided with a coaxial port, a ball freely disposed in said bore and having a piston like fit in said bore and ports opening laterally outward from said bore at points sufficiently above said lower seat to prevent the ball obstructing same when the ball is seated on the said lower seat.

1,624,915. TRICYCLE. HAROLD C. BENNIE, Almena, Kans. Filed Aug. 30, 1926. Serial No. 132,570. 2 Claims. (Cl. 208—45.)



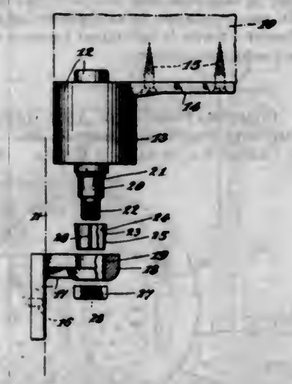
In a device of the character described, a body portion, a propelling wheel at the front end of the body portion, a rear axle disposed at an oblique angle with respect to the body portion, wheels mounted at the ends of the axle, a carrier mounted laterally of the body portion and supported by the axle, and one of the wheels operating at a point to the rear of the carrier.

1,624,916. MACHINE FOR OPERATING ON LASTS. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 8, 1923. Serial No. 611,440. 10 Claims. (Cl. 144—93.)



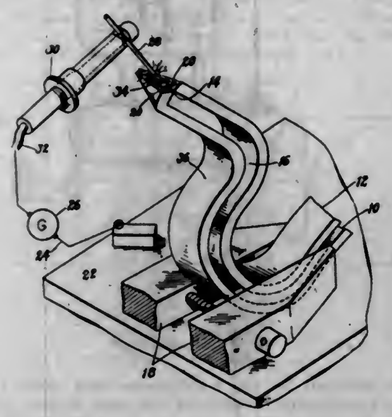
1. A machine for forming holes through the rear ends of lasts having, in combination, a drill, a work holder comprising cooperating devices for engaging respectively the top and the heel-seat surface of a last and constructed and arranged to clamp the last between them and to position the last in front of the drill, one of said devices being constructed and arranged for tilting adjustment relatively to the other of said devices, and means for relatively moving the drill and the work holder axially of the drill to form a hole in the last.

1,624,917. AIRSHIP AND METHOD OF MAKING THE SAME BUOYANT. FORD G. BIRCHARD, Lewisburg, Pa. Filed May 5, 1926. Serial No. 106,910. 5 Claims. (Cl. 244—3.)



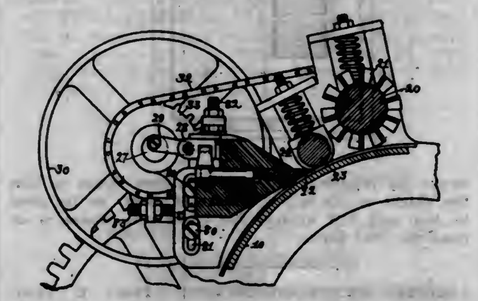
4. The combination with a hollow body and a car supported thereby, of means for simultaneously rotating the body and creating a partial vacuum therein.

1,624,918. METHOD AND APPARATUS FOR TELEVISION. OTTO B. BLACKWELL, Plandome, and Joseph Herman, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 7, 1925. Serial No. 28,702. 21 Claims. (Cl. 178—6.)



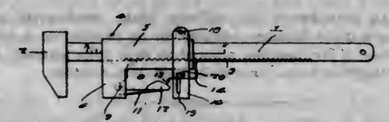
18. The method of television which comprises scanning an object and electrically reproducing an image thereof with maximum definition in the central portion and varying said scanning to reproduce the image with maximum definition in any desired portion.

1,624,919. PIVOT SPRING HINGE. EMIL BOMMER, Brooklyn, N. Y. Filed Feb. 28, 1925. Serial No. 12,231. 1 Claim. (Cl. 16—182.)



A spring hinge for a door, comprising a bracket extending substantially horizontally from the door jamb, the bracket having a vertically extending, downwardly tapering opening therethrough, a pivot pin having an annular shoulder near the lower end thereof, and having a cylindrical portion just below said shoulder, a split collar, the inside bore of which is cylindrical and the outside surface of which is tapered downwardly, said bushing being engageable around said cylindrical portion of the pivot pin, against said annular shoulder, and a nut threaded onto the lower end of the pivot pin, below the bracket, for drawing the pivot pin downwardly and causing said shoulder to jam the collar into the opening in the bracket, for locking the pin in place in the bracket.

1,624,920. ART OF MAKING DIES. ALBERT R. BRADEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 9, 1922. Serial No. 528,012. 2 Claims. (Cl. 76—107.)

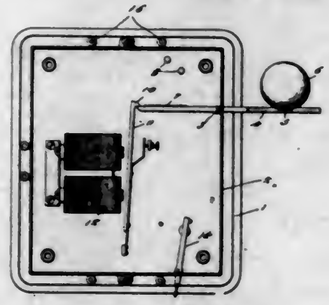


1. The method of making a die, which consists in forming a plurality of separate die-sections out of die-stock, each with its edge of the same contour and length that it is to have in the finished die, assembling said formed sections with their edges coinciding with the contour of the finished die, temporarily securing against relative movement the sections so assembled, and joining the ends of said sections by welding while said sections remain so secured.

1,624,921. LEATHER-WORKING MACHINE. WINN E. BROUGHTON, Peabody, Mass., assignor to The Turner Tanning Machinery Company, Peabody, Mass., a Corporation of Maine. Filed Nov. 14, 1923. Serial No. 674,692. 10 Claims. (Cl. 149—16.)

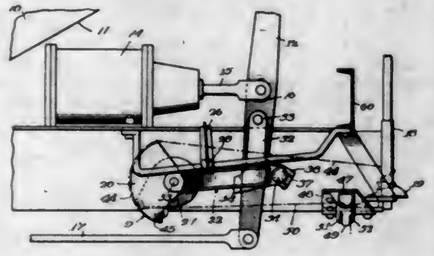
1. In a machine for cheeking hides and other similar pieces of work, in combination, a rotatable drum to support the work, clamping mechanism carried by the said drum to secure the work thereto, a knife for operating on the work, a cylinder having helically arranged vanes to engage the work on said drum and spread it out on the latter before being presented to the knife by said drum, and a finted roll arranged between said spreading cylinder and said knife for co-operation with the drum in presenting the work to the knife.

1,624,922. WRENCH. LEO TALLY BROYLES, Entiat, Wash. Filed May 24, 1926. Serial No. 111,322. 2 Claims. (Cl. 81—134.)



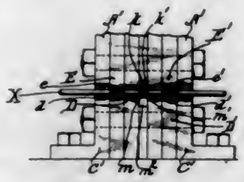
1. In a wrench of the class described, comprising a shank, a jaw carried on one end thereof, there being ratchet teeth formed on the inner edge of said shank, a movable jaw adapted for slidable movement on said shank, a pivoted pawl associated with the movable jaw and cooperating with the ratchet teeth for holding the slidable jaw in any adjusted position on the shank, cooperating means between the free end portion of the pivoted locking pawl and said movable jaw for holding the pawl in engagement with the ratchet teeth, said means comprising a pivoted bail carried by the movable jaw and extending around the free end portion of the locking pawl, the sides of said bail being provided with bayonet slots, and pins projecting laterally from the free end portion of the locking pawl and operable in said bayonet slots.

1,624,923. SIGNAL APPARATUS. RAYMOND W. BURDALL, Gloucester Heights, N. J. Filed Nov. 17, 1923. Serial No. 675,852. 1 Claim. (Cl. 177—329.)



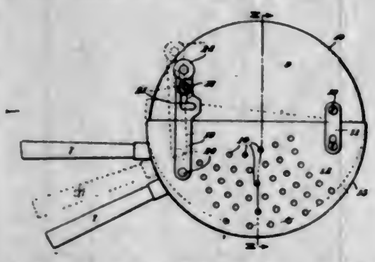
A signal apparatus adapted to attract a deaf person and comprising a casing, a platform lever pivoted within the casing to swing in a vertical plane and having a depressed portion extending exteriorly of the casing, a

ball adapted to normally lie on the depressed portion of said platform lever, means for normally retaining said platform lever in a horizontal position, and magnetic



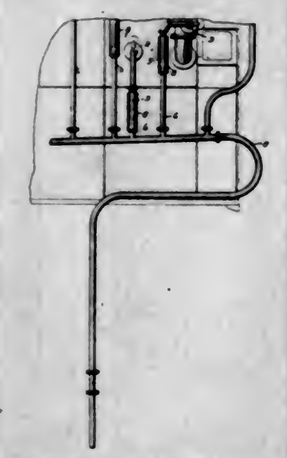
means for releasing said first mentioned means so that the weight of the ball will move the lever on its pivot to drop said ball whereby the latter will bounce to attract the deaf person.

1,624,924. BRAKE MECHANISM. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Aug. 6, 1926. Serial No. 127,572. 9 Claims. (Cl. 188—107.)



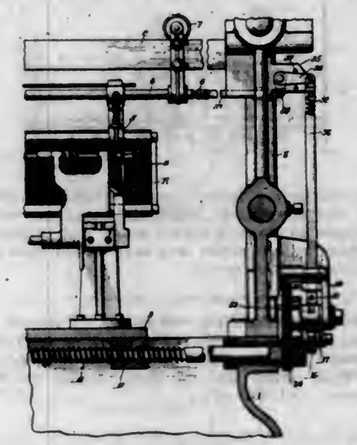
9. An attachment for railway brake mechanism comprising a yoke member adapted to be pivoted to a cylinder lever, a jaw member pivoted to said yoke member, and a multiplying lever pivoted in said jaw member.

1,624,925. WIRE-WORKING MACHINE. SPENCER C. CARY, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1922. Serial No. 552,768. 5 Claims. (Cl. 140—73.)



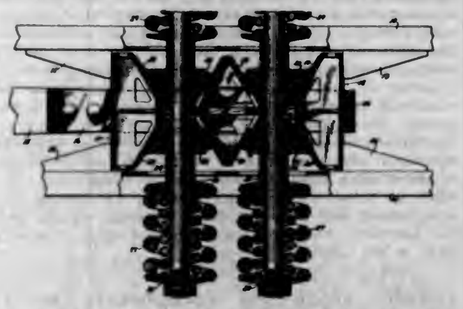
1. In a machine for making wire package binders, the combination with wire feeding means, wire-straightening means, and a cooperating stationary anvil and reciprocating member in spaced relation to said feeding means, of a plurality of deforming dies carried respectively by said stationary anvil and said reciprocating member, said dies being mutually co-operable on a length of wire for producing thereon a deformation bounded by a holding shoulder, and a plurality of cutting members one on the stationary anvil and the other on the reciprocating member, said cutting members being mutually co-operable and acting concurrently with the deforming dies for severing the wire adjacent the deformation produced on said wire by the action of said dies, said co-operating cutting members being in spaced relation to said deforming dies whereby a short length of wire is left intact between the severed wire end and said deformation.

1,624,926. COMBINATION LID AND LIFTING DEVICE. MICHAEL CHOVANEC, Hasleton, Pa. Filed Mar. 26, 1925. Serial No. 18,541. 2 Claims. (Cl. 53—8.)



1. In a device of the type described, a frame formed of a single strand of wire bent into a ring, handles mounted on the ends of said strand of wire by means of which the diameter of the ring may be reduced to permit grasping a cooking vessel for lifting the latter, a pair of plate members fastened to opposite sides of said frame and overlapping each other to form a lid, one of said plate members having a plurality of perforations, and a perforated valve plate fastened to the imperforate plate member in a manner to underlie the perforated plate member for causing the perforations in the plate member and valve plate to register when the ring-like frame is in its vessel grasping condition for permitting the device to be used as a strainer.

1,624,927. SOOT-BLOWER CONNECTION. CHARLES W. E. CLARKE, New York, N. Y. Filed Mar. 8, 1923. Serial No. 623,626. 3 Claims. (Cl. 122—379.)

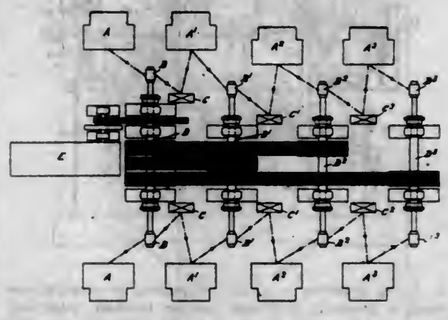


1. In a soot blowing apparatus, the combination of devices for conducting steam including a flexible hose, and a rigid guard located adjacent and laterally of the normal position of an operator and through which said hose extends loosely, said guard being loosely mounted, whereby said guard and hose are movable relatively to each other.

1,624,928. WARP-DRAWING MACHINE. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Original application filed Jan. 8, 1923, Serial No. 611,214. Divided and this application filed June 4, 1926. Serial No. 113,605. 1 Claim. (Cl. 28—44.)

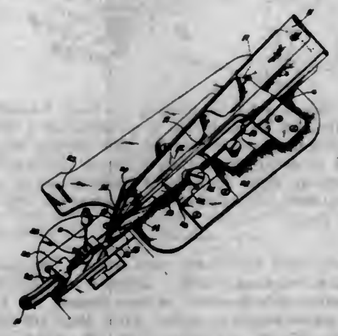
A warp-drawing machine having, in combination, a pivoted arm, yieldable means for swinging said arm, a ratchet wheel pivoted on the axis of said arm, a dog on said arm arranged to engage the ratchet wheel, a mechanism carriage, means driven by said ratchet wheel for feeding the carriage, operating mechanism on said carriage, means for movably supporting a loom reed for engagement by said operating mechanism, said reed being free to travel with said carriage, an arm rigid with the first mentioned arm, a bar mounted for vertical movement, the lower end of said bar when lowered being arranged to limit the oscillation of said arms, counterbalancing means acting upon said bar, a bell crank lever to which the upper end of the bar is connected, and means rendering said bell crank lever sensitive to movement of said reed.

1,624,929. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 19, 1923. Serial No. 681,507. 5 Claims. (Cl. 213—36.)



1. A draft gear comprising a pair of followers each having wedging faces and an inwardly projecting web, a pair of outwardly moving wedge-blocks associated with each follower, a rod extending centrally through each of said pairs of wedge-blocks, springs mounted upon such rods for urging the wedge-blocks inwardly, and a pair of triangular wedge-blocks interposed between the two first-named pairs of wedge-blocks, the inner faces thereof frictionally engaging the named webs of the followers.

1,624,930. WOOD PRESERVATIVE. LEO P. CURTIN, Freehold, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1925. Serial No. 78,001. 4 Claims. (Cl. 99—12.)

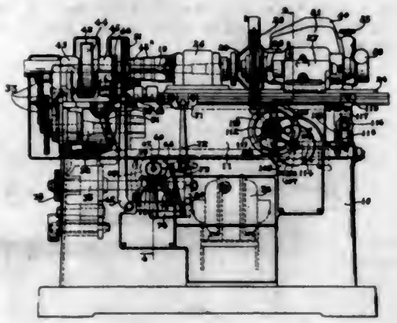


4. Method of preserving wood, comprising impregnating it with an emulsion, comprising a hydrocarbon oil and a solution containing barium hydroxid, and transforming said hydroxid to carbonate within the body of the wood.

1,624,931. ROLLING MILL FOR THE PRODUCTION OF METAL SHEETS OR PLATES. HECTOR LEIGHTON DAVIES, Gowerton, near Swansea, England, and SAMUEL REES COUND, Aberavon, Wales. Filed Oct. 27, 1924, Serial No. 746,110, and in Great Britain Nov. 2, 1923. 3 Claims. (Cl. 29—17.)

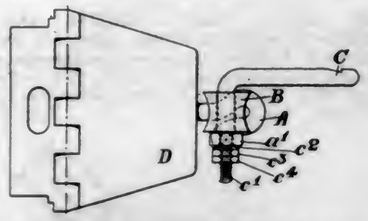
1. A rolling mill installation, comprising a prime mover; a pair of furnaces at opposite sides thereof; a plurality of pairs of rolling mills disposed one after another beyond the prime mover, the mills of each pair having a shaft common thereto and whereon they are mounted in symmetrical relation to each other at opposite sides of a median line which intersects all the shafts centrally; gearing for driving the several shafts from the prime mover; a pair of doublers associated with each pair of mills and disposed symmetrically with relation thereto and at opposite sides of the median line; and a pair of furnaces between each pair of doublers and the succeeding pair of mills and likewise disposed at opposite sides of said line.

1,624,932. ROUND FABRIC BELTING AND ITS METHOD OF MANUFACTURE. ALBERT H. DE VOE, Westfield, N. J., assignor, by mesne assignments, to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 3, 1919. Serial No. 294,394. 15 Claims. (Cl. 74—66.)



1. An article of manufacture comprising a strip of flexible and needle penetrable material rolled upon itself

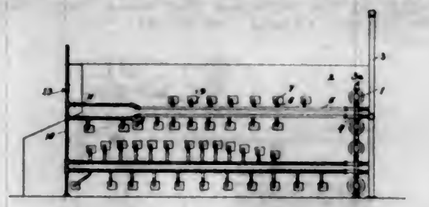
to form a substantially round rope and stitched approximately diametrically thereof to prevent unwinding.



7. The method of making a rope-like article from flexible sheet material, consisting in folding the material longitudinally to form a hem, subsequently coiling it about the folded hem into substantially round form, and stitching it approximately diametrically.

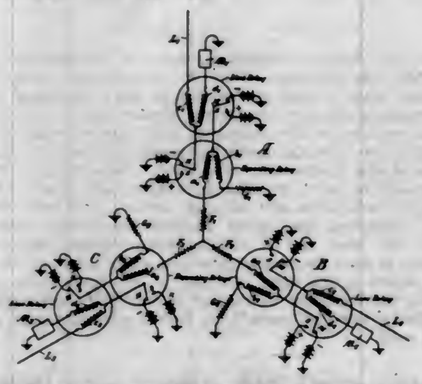
1,624,933. TAP GRINDER. HENRY E. DURKEE, Glastonbury, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 15, 1926. Serial No. 88,471. 10 Claims. (Cl. 51—95.)

1. A tap grinding machine comprising in combination, a base, a pivotally mounted member thereon, work supporting and rotating means on said pivotally mounted member, a support, a wheel rotatably mounted thereon, cam means to effect relative axial movement between said wheel and the work supporting means, means to actuate said cam means from said work rotating means, and means to oscillate said pivotally mounted member in timed relation to said movements to engage and disengage the work relative to the wheel.



1,624,934. THREAD GUIDE FOR SPINNING, TWISTING, AND WINDING MACHINERY. EDWIN ELLIOTT and HAROLD ROEBUCK, Shanghai, China. Filed Sept. 23, 1925, Serial No. 58,110, and in Great Britain Jan. 13, 1925. 2 Claims. (Cl. 118—10.)

1. A thread guide comprising a shank formed with a loop having a cranked end terminating in a perforated block, a roller mounted on an axle having one portion adapted to fit at the perforated block and another portion bent at right angles and constructed to act as a snarl catcher, and means for securing the axle portion to the block.

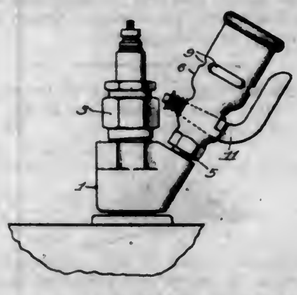


1,624,935. GAS CONTROL FOR OVENS. EUGENE OSCAR ENGELS, Saginaw, Mich., assignor to Baker-Perkins Company, Incorporated, White Plains, N. Y., doing business at Saginaw, Mich. Filed Mar. 16, 1926. Serial No. 95,162. 2 Claims. (Cl. 158—104.)

1. In combination, a heating chamber having a plurality of burners, a header adapted to supply combustible mixtures of air and gas to said burners, a valve-controlled gas conduit connecting each burner with said header, a pressure-regulated automatic mixture control device adapted to supply gas and air in predetermined

ratio to said header during normal variations of pressure therein, and independent automatic means for relieving the pressure within said header before said pressure can rise sufficiently to interfere with said normal operation of said mixture control device.

1,624,936. TELEGRAPH SYSTEM. CHARLES LEE FARIES, Tippecanoe City, Ohio, assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 25, 1926. Serial No. 97,421. 5 Claims. (Cl. 178—73.)

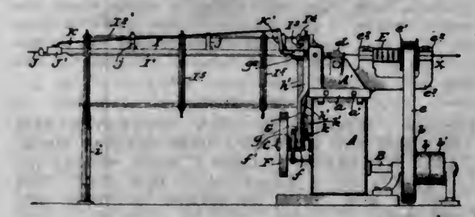


1. A system for signaling including a plurality of telegraph lines over which signals may be transmitted and received, said telegraph lines being connected together at the same station by telegraph sets, each of said telegraph sets including a line relay and a repeating relay, the line relay having a pair of windings, one of said windings being connected to a telegraph line and the other winding being connected to a variable artificial balancing line, the armature of said line relay repeating signals from the associated telegraph line to other telegraph lines in the system, the repeating relay having a pair of windings including resistances proportioned in accordance with the number of telegraph lines in the system, the resistance of one winding being as many times the magnitude of the other as there are telegraph lines in the system, the armature of said repeating relay repeating signals over the associated telegraph line from said other telegraph lines in the system.

1,624,937. SPARK-PLUG ATTACHMENT. ROY C. FLOYD, Chicago, Ill., assignor to Unique Spark Plug Cleaner Co., Chicago, Ill., a Corporation of Illinois. Filed May 18, 1925. Serial No. 30,967. 4 Claims. (Cl. 123—169.)

1. Instrumentalities for cleaning spark plugs, comprising an internal combustion engine, means for permitting the fire and explosive pressure to escape from the engine, and means for presenting the plug to be cleaned to the impinging blast of fire which has escaped from the

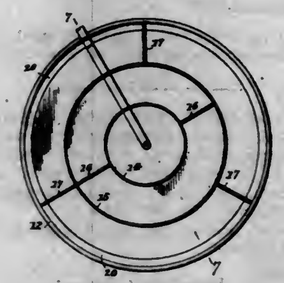
engine, said engine being operative to produce said cleaning blast of fire independently of the plug to be cleaned, so that the plug is cleaned while not operative to function as a spark plug, a socket piece screwed into the opening ordinarily occupied by the spark plug of the engine, forming a support for said plug presenting means, and a spark plug screwed into said socket piece to ignite the charge in the engine, said socket piece having a passage leading to the operative spark plug, and an entirely separate and smaller discharge passage leading to the plug to be cleaned.



1,624,938. METHOD FOR THE PREVENTION OF CORROSION. STANLEY FOWLER, Yorkshire, and EDWIN EDSER, London, England. Original application filed Apr. 26, 1926, Serial No. 104,833, and in Great Britain Mar. 24, 1925. Divided and this application filed Aug. 18, 1926. Serial No. 130,100. 3 Claims. (Cl. 134—1.)

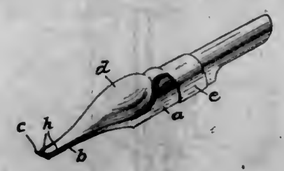
1. A method of preventing corrosion of metallic surfaces which consists in covering the surface with a substantially non-acid layer consisting essentially of anhydrous neutral soap-free wool-fat in homogeneous unclouded admixture with a non-acid non-volatile thinning agent.

1,624,939. LUBRICANT. STANLEY FOWLER, Yorkshire, and EDWIN EDSER, London, England. Filed Jan. 25, 1927, Serial No. 163,551, and in Great Britain Mar. 24, 1925. 1 Claim. (Cl. 87—9.)



A lubricant consisting essentially of anhydrous wool-fat containing less than 0.5% of fatty acids calculated as oleic acid yielding less than 0.1% of ash, capable of dissolving to a clear solution without producing cloudiness or sediment in a mineral lubricating oil, and containing such small quantities of impurities insoluble in benzene at normal atmospheric temperatures as not to render a solution of the wool-fat in twice its weight of benzine turbid, such wool-fat being homogeneously admixed with a mineral lubricating-oil having a viscosity above 400 seconds Saybolt at 100° F.

1,624,940. MACHINE FOR DEFORMING WIRE IN DEFINITE LENGTHS. WILLIAM F. FRECH, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 17, 1923. Serial No. 675,255. 9 Claims. (Cl. 140—78.)

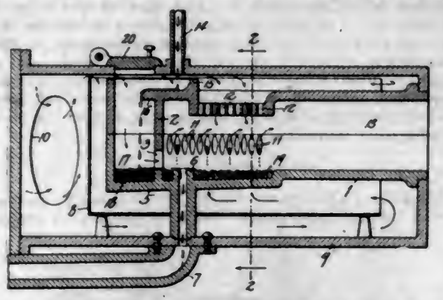


1. In a machine of the class described, a frame member provided with an offstanding lug, a bracket member fixedly attached to said lug, a tubular member for the passage of a wire, a deforming die and a shear member in fixed relation to each other and carried by said bracket member in a plane below the path of feed of a wire, a moving part, a deforming die and a cutter carried by the moving part in co-operable relation respectively to the first named deforming die and the shear member, and a spring actuated plunger supported by the moving part and positioned intermediate the die and the cutter of said moving part for displacing the severed end of the wire relatively to said cutter.

1,624,941. CAKE PAN. NETTIE R. FULKERSON, Fallon, Nev. Filed Aug. 7, 1925. Serial No. 48,819. 1 Claim. (Cl. 53—6.)

In combination with a bake pan having an upstanding circular wall, a removable division member comprising a plurality of partition walls some of which are circular and concentrically arranged and others of which are radially disposed, said division member adapted to nest in the pan and the radial walls thereof having their outer end edges spaced from the inner surface of the side walls of the pan when the circular partition walls are concentrically arranged with relation to the pan.

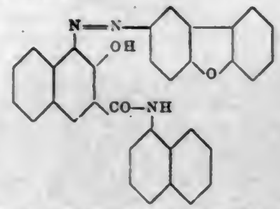
1,624,942. PEN. ROSS F. GEORGE, Seattle, Wash. Filed May 25, 1922. Serial No. 563,648. 10 Claims. (Cl. 120—114.)



1. A pen comprising a pen point slit to form nibs and provided with a feeder overlying the point and adapted in conjunction with the point to form a reservoir for ink between the pen point and feeder, the feeder adjacent its delivery end being in contact with the pin point between its side edges and having a side edge portion out of contact therewith.

1,624,943. OIL BURNER. WILLIAM E. GIBBS, East Orange, N. J., assignor to Gibbs Utilities Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1925. Serial No. 77,018. 13 Claims. (Cl. 158—91.)

1. An oil burner comprising a horizontal casing having concave side walls, a discharge opening at one end, an

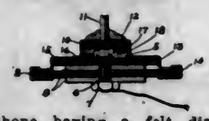


oil containing pocket in the bottom wall, and air supply ports entering said casing tangentially to said concave walls in planes transverse to said casing, whereby the

air is caused to sweep with a gyratory motion over the interior of the casing walls before striking the oil in said pocket.

1,624,944. AZO DYESTUFFS FROM AMINODIPHENYLENOXIDE. EUGEN GLIETENBERG, Leverkusen, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1925. Serial No. 72,814. and in Germany Dec. 11, 1924. 4 Claims. (Cl. 260—95.)

2. As a new product the azo dyestuff having most probably the formula

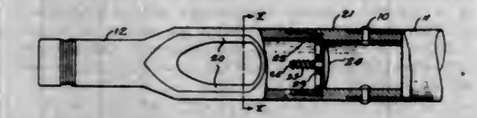


which is a deep red powder, practically insoluble in water and yielding on reduction aminodiphenylenoxide and an amino-2-3-hydroxynaphthoic acid-alpha-naphthalid.

1,624,945. EXTENSION FOOT FOR LADDERS. CHARLES A. GLOVER, Lincoln, Mass. Filed Aug. 27, 1925. Serial No. 52,821. 2 Claims. (Cl. 228—63.)

1. An extension foot for ladders and the like comprising a cylindrical socket having a longitudinal slot therein and branch transverse slots, each branch slot being enlarged to provide a shoulder in the upper and lower edges thereof, an extension member projecting from the lower end of the socket and movable longitudinally and rotationally in the socket, and an arm on the extension member for moving the same longitudinally and rotationally in the socket, said arm being adapted to be received in the longitudinal and transverse branch slots and to pass beyond the shoulders therein.

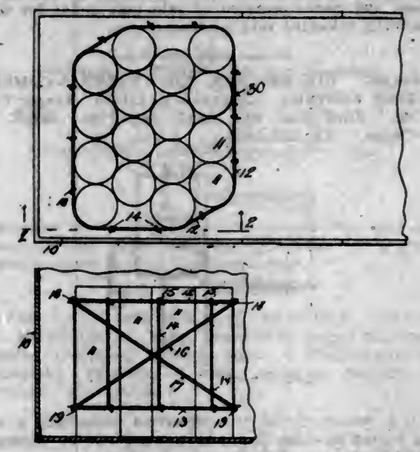
1,624,946. MICROPHONE. HARVEY C. HAYES, Annapolis, Md. Filed June 7, 1923. Serial No. 644,037. 6 Claims. (Cl. 179—122.)



4. A microphone having a felt diaphragm, inertia elements on each side thereof and symmetrically arranged about the center of the diaphragm.

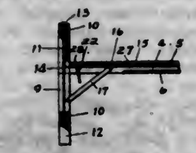
1,624,947. MOTION-PICTURE PHOTOGRAPHY AND PROJECTION. ARTURO HERNANDEZ-MEJIA, New Rochelle, N. Y.; Margaret N. Hernandez, administratrix of said Arturo Hernandez-Mejia, deceased, assignor to Colorgraph Laboratory, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 6, 1918. Serial No. 265,657. 5 Claims. (Cl. 88—16.4.)

1. In motion picture photography and projection, the method of producing color motion pictures, which consists in the utilization of a film having a series of sets of color records, projecting said records in black and white upon the screen, and during the period of film movement occurring subsequent to the projection of each record, casting upon the screen a flood of light which is of a color corresponding to such record.



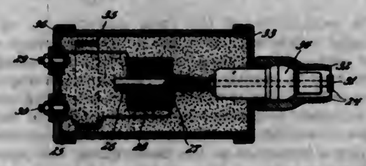
1,624,948. SWIVEL BAILER TOP. FRANK J. HINDERLITER, Tulsa, Okla. Filed Aug. 17, 1925. Serial No. 50,740. 1 Claim. (Cl. 166—19.)

In a bailer top, a neck having a central shouldered aperture, a rope socket seating against said shoulder, a yoke branching out from said neck and terminating in a ring, a threaded extension on said ring, a co-operating threaded bailer top adapted to screw onto said threaded extension, said bailer top having a recess below the threads defining a shoulder, and a back pressure valve and cage, said cage adapted to be clamped against the shoulder by the end of the threaded extension of said ring.



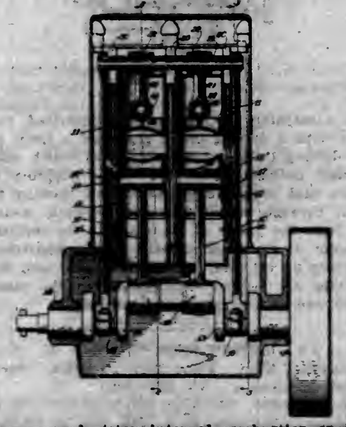
1,624,949. METHOD OF AND APPARATUS FOR BRACING AND SECURING MERCHANDISE PACKAGES FOR TRANSIT. LEROY F. HINTZ, Chicago, Ill., assignor to Alec J. Gerrard, Menlo Park, Calif. Filed Apr. 10, 1926. Serial No. 101,076. 9 Claims. (Cl. 105—369.)

1. The method of bracing and securing merchandise packages for transit which consists in assembling the individual packages or articles of merchandise into a group assembly and applying under tension thereabout binders



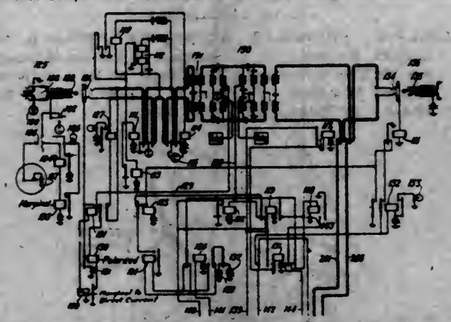
at relatively different portions of the lengths of said articles or packages, and then interconnecting said binders with diagonally disposed braces under tension.

1,624,950. COMBINED UNDERTAKER'S SLUMBER BED, COOLING BOARD, AND CASKET SUPPORT. MILO C. HOARD, Stryker, Ohio, assignor to Wendell P. Grisier, Stryker, Ohio. Filed July 15, 1925. Serial No. 43,669. 3 Claims. (Cl. 5—178.)



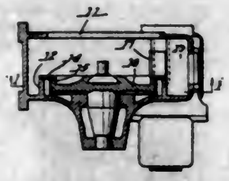
1. In a cooling board, a pair of end boards for supporting the bed from the floor, a pair of side strips and a bed bottom interconnecting the upper edges of the strips, the strips having slots running longitudinally thereof, pins connected to the end boards and movable in the slots, a rod extending between the strips, the ends of the rod located in the slots, links connecting the rod to the end boards, the rods guided by the slots as the end boards are placed upright and when closed, and means for securing the end boards in their upright positions.

1,624,951. HIGH-TENSION CIRCUITS. HARRY B. HOLTHOUSE, Chicago, Ill. Filed July 15, 1922. Serial No. 575,211. 3 Claims. (Cl. 123—148.)



1. In an oscillation transformer and spark plug unit, an oscillation transformer coil, an insulating casing having a chamber with said transformer coil suspended therein, a bottom head for the casing, a spark plug having a central electrode and supporting insulating porcelain therefor extending into the chamber through said head and said plug having a metallic sleeve second electrode for attaching the plug to the casing head in sealed relation thereto and also hold the central electrode and porcelain in the casing, means for connecting the coil to said central electrode, and an insulating compound in the chamber of said casing surrounding the coil and the central electrode in the casing to insulate the central electrode from the sleeve electrode.

1,624,952. INTERNAL-COMBUSTION ENGINE. TERENCE G. JACKSON, Rockford, Ill., assignor to The Jackson Petroleum Motor Company, Augusta, Me., a Corporation of Maine. Filed Mar. 19, 1923. Serial No. 626,005. 7 Claims. (Cl. 123—51.)

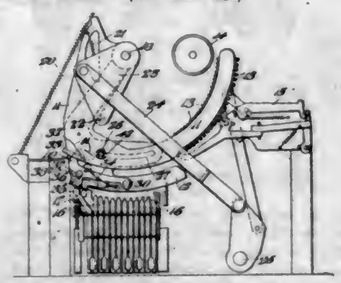


7. An opposed piston internal combustion engine comprising a cylinder, inner and outer pistons reciprocable therein and having piston pins, a crank shaft, a connection between the inner piston and the crank shaft and a connection between the outer piston and the crank shaft comprising connecting rods rockingly mounted on crank pins of said shaft, a cross head whose longitudinal axis is in a plane at a right angle to the axis of the outer piston pin and connecting the outer ends of said rods, and a short connecting rod between and having rocking bearing on said cross head and the outer piston pin, said cylinder being slotted at its outer end to receive said cross head.

1,624,953. TELEPHONE-EXCHANGE SYSTEM. WILLIAM C. JORDAN, Madison, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1923. Serial No. 680,807. 15 Claims. (Cl. 179—27.)

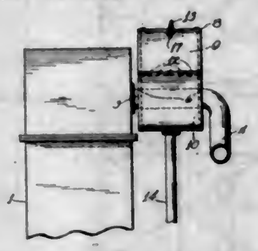
11. In a telephone exchange system, a toll office, a machine switching office, a toll line extending between said offices, a train of selector switches in said latter office for extending connections to desired lines, a signal at said toll office, and means including an interrupter in the first switch of said train for operating said signal in a distinctive manner when a connection is extended to a busy line.

1,624,954. BULL-GEAR INCLOSURE FOR CRANK-SHAPING MACHINES. GEORGE H. KNIGHT, Torrington, Conn., assignor to The Hendey Machine Company, Torrington, Conn., a Corporation of Connecticut. Filed July 14, 1926. Serial No. 122,455. 5 Claims. (Cl. 74—56.)



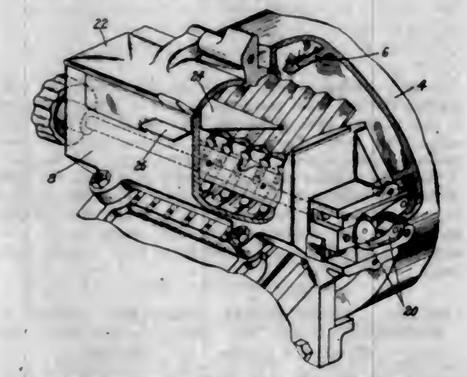
1. In a machine of the character described, the combination with a driving crank gear and a train of gearing for driving it, of a compartment in which said train of gearing is located adapted to be supplied with a lubricant, said compartment having an opening through the wall through which the gear projects, means projecting from the frame of the machine for inclosing the gear except at its junction with said compartment and constituting an oil seal, whereby the gear and its driving gearing are located substantially in the same compartment and receive the same lubrication.

1,624,955. RECEPTACLE. GEORGE H. KNOWLES, Minneapolis, Minn. Filed May 15, 1926. Serial No. 109,300. 2 Claims. (Cl. 206—42.)



1. A receptacle of suitable material comprising an inner cylindrical tube, a cylindrical tube rotatably surrounding said inner tube and shorter at both ends than the latter, a ring secured around one end of said inner tube and against which said outer tube butts, a cap secured to said ring, a second ring secured around the other end of said inner tube and against which said outer tube butts, and a cap extending loosely over said second ring and secured to said outer tube, said tubes having corresponding openings in their sides which may be made to register upon relative rotation of the tubes.

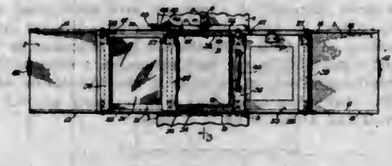
1,624,956. PRINT-BAR MECHANISM. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 7, 1925. Serial No. 13,814. 6 Claims. (Cl. 101—93.)



1. In a mechanism of the character stated, the combination of a type sector, a control or selecting sector therefor, means for actuating said sectors, a latching device for connecting said sectors together, a mechanism for releasing said latching device under certain conditions, and means operated by said type sector for automatically relocking said latching device.

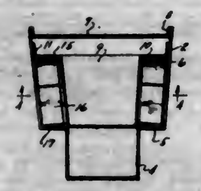
1,624,957. OIL REFINER FOR INTERNAL-COMBUSTION ENGINES. CLARENCE E. LILLEY, Kansas City, Mo. Filed Aug. 31, 1925. Serial No. 53,607. 2 Claims. (Cl. 123—196.)

1. A device of the type described comprising a casing having an upper and a lower compartment therein, a filter disposed in the upper compartment, heating means disposed in the lower compartment for heating the oil flowing through the upper compartment, means for conveying oil to the upper compartment, means for conveying the filtered oil away from the lower compartment, and means for conveying the volatile gases from the oil to the carburetor of the engine.



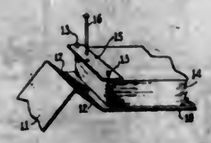
1,624,958. TACK-SUPPLYING MECHANISM. AUSTIN M. LONG, Marshall, Mo., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 17, 1924. Serial No. 720,710. 7 Claims. (Cl. 1—6.)

1. In mechanism of the class described, a raceway, means for delivering tacks upon said raceway, a tack clearer over the raceway, a receptacle in which said tack clearer is mounted, said receptacle having a portion underlying the tack clearer and extending over the raceway, and a readily detachable guard in said receptacle extending over the tack clearer for preventing tacks from falling upon the tack clearer and upon said underlying portion of the receptacle.



1,624,959. PLATE CARRIER FOR MULTICOLOR CAMERAS. GODFREY LUNDBERG, Winnetka, Ill., assignor to The Tribune Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1925. Serial No. 45,178. 9 Claims. (Cl. 95—2.)

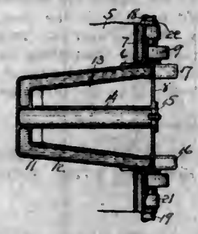
1. A photographic device comprising a wall having an exposure opening, a frame slidable along said wall and having a plurality of openings adapted to be brought successively in register with said exposure opening, and a spring projected latch for automatically stopping the



frame with an opening thereof in register with said exposure opening, said frame having means for holding sensitive plates in said frame openings.

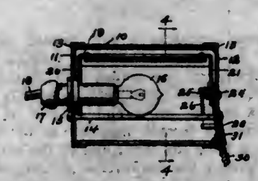
1,624,960. SUPPORT FOR DOOR BUMPERS. HERMAN C. MAISS, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1923. Serial No. 667,423. 4 Claims. (Cl. 16—86.)

1. In a vehicle body, the combination with a hollow post having a transversely extending opening in one wall thereof, of a sheet metal reinforcing member for the post having a pocket cooperating with a wall of the post to form a housing, one end of said pocket being open and in communication with the opening in the post, door buffers in the housing, said buffers being spaced apart to receive a projection on a door, and a wear plate between said buffer members normally holding the same spaced apart against opposite walls of the pocket.



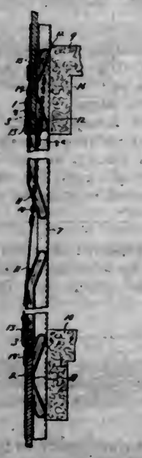
1,624,961. LOOSE-LEAF BINDER. HARRY B. MCBEE, St. Louis, Mo. Filed Sept. 4, 1925. Serial No. 54,895. 4 Claims. (Cl. 129—4.)

3. A loose leaf binder comprising a lower cover, an upper cover and a back, flexibly joined together; filing posts on the lower cover; a locking plate orificed to ride on said filing posts and extend inwardly beyond the sheets to be filed, there being an orifice centrally near the inner edge thereof; a receptacle secured to the back; means whereby the forward end of the locking plate extends into the receptacle secured to the back of the volume, and means to lock the plate in said receptacle.



1,624,962. FURNACE. JOSEPH MCLEAN, South Manchester, Conn. Filed Oct. 29, 1924. Serial No. 746,613. 4 Claims. (Cl. 122—498.)

1. A water heater comprising a firepot, a door to close the opening to said firepot, a projection extending from the back face of the door inwardly within said firepot, said projection being in the form of a hood having a



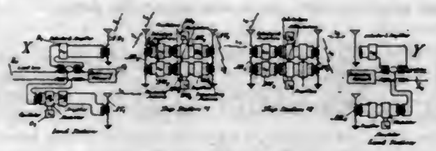
single water compartment within its walls on all sides within the firepot, and circulatory pipes connected with said compartment.

1,624,963. SIGNAL DEVICE. JOHN M. MELE, East Haven, Conn. Filed Aug. 30, 1926. Serial No. 132,476. 5 Claims. (Cl. 116—45.)

1. In mechanism of the character described; a cylinder of glass or the like; a cap closure for both ends thereof; one or more bolts extending through the caps and the chamber within the cylinder for securing the cylinder and caps together as a unit; a display drum within the cylinder, particircular in form, and movably mounted therein, and having plural openings therethrough, one of such openings being formed in the shape of letters; a transparent plate connected with the display drum opposite each of said openings,; and a flexible connection between the display drum and the brake mechanism of the motor vehicle, said bolts being so positioned as to form stops to limit the movement of the drum.

1,624,964. ELEVATOR DOOR. WILLIAM G. MILLER, Detroit, Mich., assignor to The R. C. Mahon Company, Detroit, Mich., a Corporation of Michigan. Filed July 18, 1925. Serial No. 44,477. 10 Claims. (Cl. 20—19.)

1. The combination with a sliding door, of guide rollers carried by said door, and spaced thereupon in the direc-

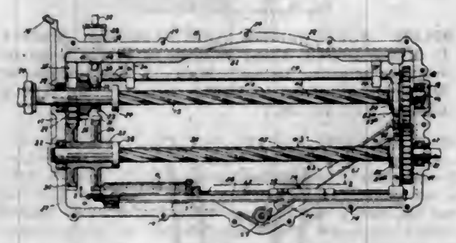


tion of travel of the door, of a track member engaged by said guide rollers, said track member having a portion slightly divergent to its length for receiving one of said rollers in the closed position of the door, and coacting members carried by the door and the track member independently of said rollers for compelling travel of the last mentioned guide roller into said divergent portion of the track when such travel is in the direction of divergency of said portion.

1,624,965. BED. JACOB L. MOORE, Muncie, Ind. Filed Feb. 17, 1925. Serial No. 9,773. 4 Claims. (Cl. 5—114.)

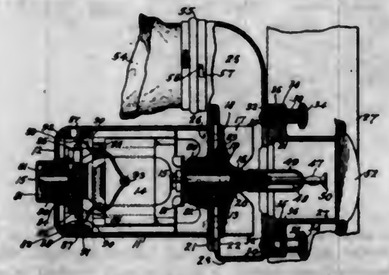
4. A bed frame including a rail formed of similarly disposed angle iron sections having lapping sides extending transversely of the frame, and lapping upright sides, the upright section sides being pivotally connected sufficiently close to the inner end of one of these upright section sides to permit the rail to be folded and sufficiently remote from the inner end of the other upright section side to permit the transverse section sides to lap when the rail is folded; and a strip spring upon and disposed laterally of the first upright section side, the other upright section side frictionally engaging the spring and being received between said strip spring and the first upright section side.

1,624,966. AMBULATORY REPEATING SYSTEM. ROBERT W. MORRIS, Roslyn, N. Y., assignor to American Telephone & Telegraph Company, a Corporation of New York. Filed Aug. 25, 1923. Serial No. 659,290. 6 Claims. (Cl. 250—15.)



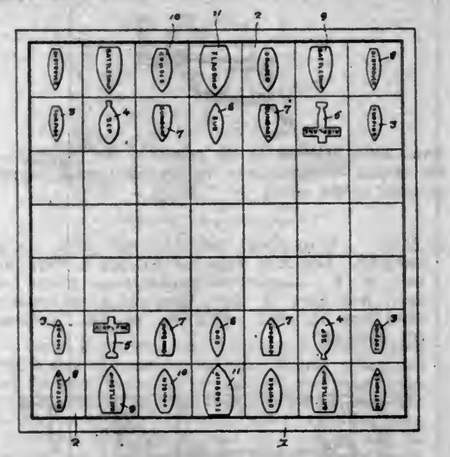
1. A radio repeating system comprising terminal receiving and transmitting stations and a plurality of intermediate stations shifting in position with respect to the terminal stations along routes of travel between said terminal stations, means at each intermediate station for receiving and amplifying signals transmitted from the nearest adjacent station on one side and means responsive to the received signals for transmitting the amplified signals to the nearest station on the other side.

1,624,967. AUTOMOBILE CHAIN TIGHTENER AND FASTENER. GUY NICHOLS, Mount Harris, Colo. Filed May 21, 1926. Serial No. 110,712. 1 Claim. (Cl. 24—69.)



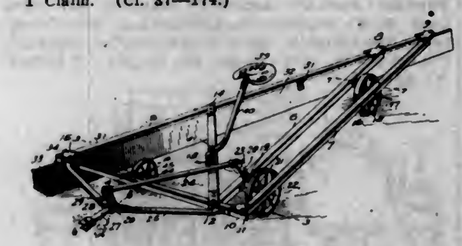
A device of the class described including, in combination, a body comprising a pair of bars, a bolt engaged at one adjacent end of the bars and holding said bars in spaced parallelism, a lever comprising a pair of rods having portions thereof in spaced parallelism and pivotally engaged with the other ends of the bars and adapted to swing between the bars, said straight portions merging at their free ends in converging extensions terminating in arms disposed in abutment with each other and slightly offset at their extremities, one of said arms terminating in a hook extension, a loop engaged on the bolt and engageable by the hook extension, a rivet holding the parallel portions of the rods in spaced relation adjacent the converging extensions, and a shank pivoted on said rivet and terminating in a hook.

1,624,968. TRANSMISSION MECHANISM. EVERETT B. OLIVER, Chicago, Ill. Filed June 10, 1922. Serial No. 567,360. 12 Claims. (Cl. 74—7.)



1. A power transmission mechanism comprising, in combination, threaded driving and driven shafts, a pair of intermeshing gears each mounted on the threaded portion of one of said shafts, means for rotating the driving shaft whereby longitudinal movement of the gears is effected, and means for retarding the longitudinal movement whereby rotation of the driven shaft is effected, said means comprising a fluid-containing cylinder, a piston therein, and a pivoted link connected to said piston and bearing against said gears.

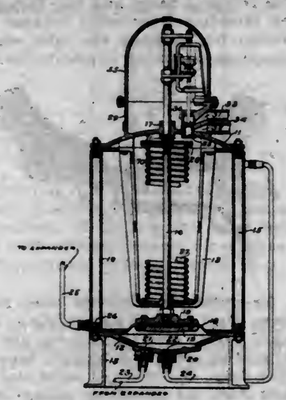
1,624,969. VACUUM CLEANER. FREDERICK J. OSIUS, Miami Beach, Fla., assignor to Hamilton-Beach Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Sept. 29, 1922. Serial No. 591,310. 1 Claim. (Cl. 15—8.)



In a cleaner, and in combination, a motor casing, a horizontally arranged motor therein having a threaded shaft extending beyond the casing, a fan having a hub threaded on the interior for mounting the fan on said shaft extension, a fan casing detachably mounted on the motor casing and having an opening in its rear face greater in diameter than the fan, whereby the fan casing may be removed independently of the fan, a nozzle extending downwardly from the front of the fan casing, a rotary brush in the nozzle, a brush-drive shaft threaded into the hub of the fan, and a detachable belt for driving the brush from said drive shaft.

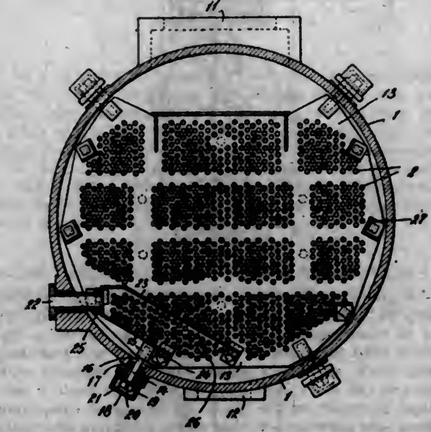
1,624,970. GAME. HARRY K. OWYE, Lovelocks, Nev. Filed July 31, 1925. Serial No. 47,388. 1 Claim. (Cl. 273—131.)

A game apparatus of naval warfare, including a playing surface divided into transverse rows of blocks, playing pieces arranged along certain rows of said blocks and shaped to represent naval aircraft, a battleship, a flagship, torpedoes, aeroplanes and Zeppelins, each of which has a different game valuation, indicia arranged on the bottom of each game piece indicative of the cost of production thereof, and each of said game pieces except the battleship and flagship pieces being adapted to be moved over the playing surface in a predetermined direction and different from the direction of each other, and said battleship and flagship pieces being adapted to be moved in any desired direction.



1,624,971. ROAD PLANER. HENRY C. PICKEL, Pemberton, Minn. Filed Sept. 20, 1926. Serial No. 136,579. 1 Claim. (Cl. 37—174.)

A road machine including a triangular frame, said frame embodying a front bar, a pair of spaced side bars and an obliquely disposed bar, wheels mounted between the bars of the pair of bars, a blade supported by one of the bars, a cutting blade carried at the forward end of the first mentioned blade, and one of said wheels being pivotally supported to move in a horizontal plane to guide the machine.

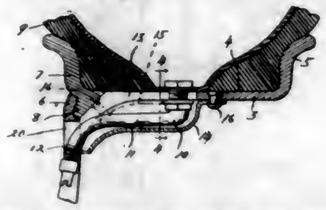


1,624,972. REFRIGERATING APPARATUS. THOMAS IRVING POTTER, Orange, N. J., assignor, by mesne assignments, to Hydro Refrigerator Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 10, 1923. Serial No. 624,801. 6 Claims. (Cl. 62—115.)

5. A motor compressor condenser unit including a container formed with a motor cylinder, a pumping chamber and an annular condenser surrounding the motor cylinder, a diaphragm piston in the container separating the motor cylinder from the pumping chamber, and means

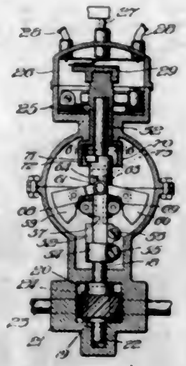
for alternately admitting an exhausting motive fluid into and from the motor cylinder to pump vapor into the condenser and to carry off heat from the vapor after it enters the condenser chamber.

1,624,973. CONDENSER-TYPE HEATER. JOSEPH PRICE, Stapleton, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 13, 1925. Serial No. 15,185. 10 Claims. (Cl. 257—236.)



1. In a heat exchanger of the class described, a shell, heat transferring tubes within said shell, end supports for said tubes, an additional support for said tubes positioned intermediate said end supports, and detachable connections between two of said respective supports and said shell, the detachable connections of said additional support having freedom of motion in three directions, whereby the heating element may be removed as a unit from the shell.

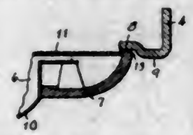
1,624,974. WHEEL RIM AND ATTACHMENT THEREFOR. ALDEN L. PUTNAM, Detroit, Mich., assignor to Whitehead & Kales Company, Detroit, Mich., a Corporation of Michigan. Filed June 14, 1926. Serial No. 115,993. 2 Claims. (Cl. 301—5.)



1. In a vehicle wheel, the combination with the wheel body, of a continuous rim upon said wheel body for re-

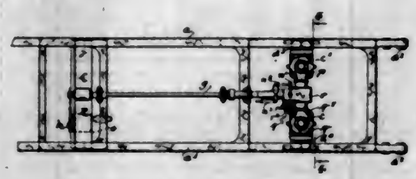
ceiving a pneumatic tire, said rim having a permanent annular tire retaining flange at one edge and a permanent annular flange at the other edge for engagement with a detachable tire retaining flange and also having an elongated opening extending transversely between said first mentioned flanges for receiving the valve stem of the tire and a channel-shaped shield secured to the inner side

of said rim for protecting the valve stem, said shield having an inner closed end and also having an outer end provided with a lateral opening, said rim also provided with a lateral opening spaced substantially below the permanent annular flange aforesaid and registering with the opening in said shield for permitting passage of the end portion of the valve stem from the space inclosed by said shield and rim.



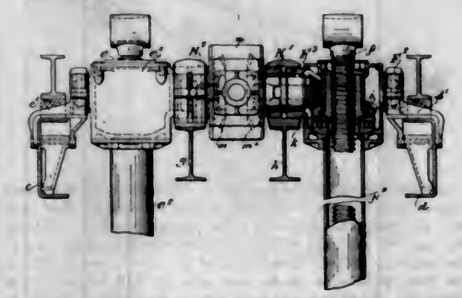
1,624,975. TIMER FOR IGNITION SYSTEMS AND THE LIKE. RAYMOND H. REECE, Joliet, Ill. Filed Aug. 8, 1923. Serial No. 656,337. 2 Claims. (Cl. 123—118.)

1. A distributor for internal combustion engines comprising in combination a shaft, means for driving the same in timed relation with respect to the engine, a distributor head in alinement with said shaft and including timing block, said block being rotatively mounted with respect to the shaft, a sleeve splined to the shaft, a centrifugal governor on the shaft, an operative connection between said governor and said sleeve operative effectively to shift the sleeve on the shaft with change of speed of the shaft, and co-operating clutch elements on the sleeve and timing block operative effectively to establish a driving connection between the sleeve and the timing block when the shaft speed is lower than a pre-determined amount, said clutch elements disengaging from each other when the shaft speed exceeds said pre-determined amount, to destroy the correct operative connection aforesaid substantially as described.



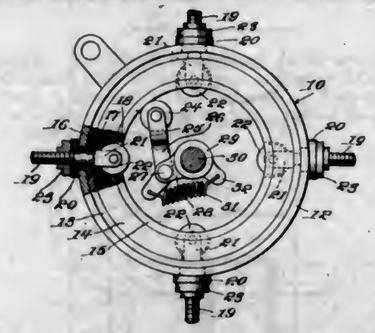
1,624,976. STOVE-DOOR CONSTRUCTION. ALFRED J. REEDY, Battle Creek, Mich., assignor to A. B. Stove Company, Battle Creek, Mich. Filed Apr. 28, 1926. Serial No. 104,071. 5 Claims. (Cl. 126—190.)

1. A structure of the class described comprising a door casing, and a door mounted to close against said casing and comprising a frame having an enameled outer surface, the frame being curved in cross section providing an inwardly facing outer edge closing against said casing, the



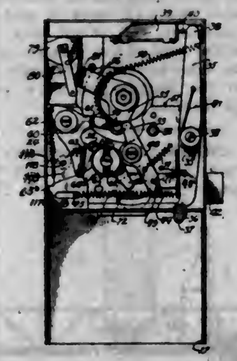
frame being rabbeted on the outside at the edge thereof, the enamel extending over the inwardly facing shoulder provided by the rabbet.

1,624,977. HOISTING MECHANISM FOR DUMP TRUCKS. JOSIAH E. REID and CHARLES L. NEIN, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1923. Serial No. 662,296. 4 Claims. (Cl. 298—21.)



1. In a hoisting mechanism, for dump bodies, brackets providing bearings fastened to the frame of the vehicle, a supporting frame with upwardly projecting end members provided with outwardly projecting stub shafts journaled in the bearings, a jack shaft journaled on the supporting frame in the axis of the stub shafts, a power shaft geared operatively with the jack shafts and disposed in a plane including the axis of the stub shafts, means associated with the jack shaft for hoisting the body, and housings for the device.

1,624,978. HOISTING MECHANISM FOR DUMP TRUCKS. JOSIAH E. REID and CHARLES L. NEIN, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1923. Serial No. 662,297. 2 Claims. (Cl. 298—21.)

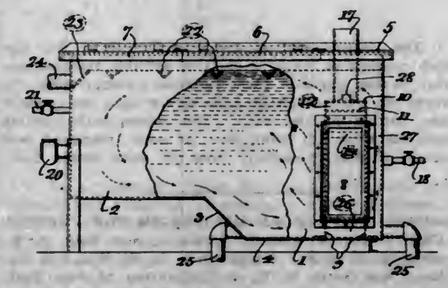


1. In a motor vehicle, in combination with the chassis and propeller shaft extending longitudinally thereof, hoisting mechanism for a dump body mounted on the chassis comprising independent screw jacks disposed at opposite sides of the propeller shaft, revoluble nuts by which the jacks are raised and lowered, means to support the nuts on the chassis frame with capacity for angular movement of each, independent of the other, to conform to the angularity of the respective screws, and means mounted over the propeller shaft and carried by and between the nut supporting means for applying power to the nuts.

1,624,979. TIMER. ARNOLD E. RICHARDS, Midlothian, Md. Filed Dec. 17, 1924. Serial No. 756,580. 1 Claim. (Cl. 200—26.)

In a timer of the character described, a metallic shell member, a ring of insulating material located within and against the inner periphery of said shell, concentric rings of insulating material located within one another and within the confines of said first named insulating ring, said concentric rings being formed with recesses and the first-named ring being formed with holes at said recesses, contact members including threaded shanks and forks, the forks being located within said recesses and carrying rollers projecting inwardly beyond the inner periphery of the innermost concentric ring member, bushings of insulating material surrounding said shank and fitting within openings in the shell, binding nuts upon said shank engaging upon the outer sides of said bushings, a shaft journaled at the center of the shell, an angle lever pivotally mounted with respect to the shaft and carrying a roller adapted to coact with said first named roller, an arm carried by the shaft, and a spring connected with the angle lever and said arm for normally urging the last named roller into cooperative relation to the first named rollers.

1,624,980. CHECK-CONTROLLED LOCK. MYRON H. RICHARDSON, Chicago, and ALBERT E. GEBERT, Wilmette, Ill., assignors to Advance Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1924. Serial No. 701,955. 19 Claims. (Cl. 194—74.)



1. A lock of the character described embodying a spring projected locking bolt, a handle, means for inserting a check, a support for receiving the check, a lever independent of the handle and responsive in its movement to the operation of the said handle, means whereby the lever will act through the check to withdraw the bolt, the said bolt being independent of the handle, and means for releasing the check upon the operation of the bolt independently of the said handle.

1,624,981. TURNING SIGNAL FOR ROAD VEHICLES. AUSTIN ROBERTS, Pretoria, Transvaal, South Africa. Filed Oct. 27, 1925, Serial No. 65,068, and in the Union of South Africa Nov. 3, 1924. 3 Claims. (Cl. 116—41.)

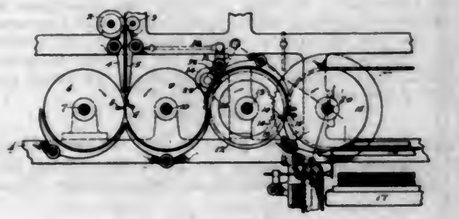
1. A signal for road vehicles, comprising pivotally mounted arms angularly swingable into inclined planes different one from the other, said arms being spaced apart, and a light disposed between the arms and adapted to illuminate opposing surfaces thereof.

1,624,982. APPARATUS FOR CLEANING METAL PARTS. LOUIS ROSENBERG, Milwaukee, Wis. Filed May 14, 1926. Serial No. 109,201. 5 Claims. (Cl. 266—7.)

1. In a chemical solution tank for use in cleaning metal parts, the combination of a tank having hinged lids, an elevated floor at one end of the tank, a lowered floor at the other end of the tank, a sloping floor connecting the elevated and lowered floors of the tank, a heater mounted in the tank on and in spaced relation to the lowered floor and to the adjacent end of the tank and valve-controlled drain conduits opening out of the lowermost portion of the tank.

1,624,983. METHOD OF MAKING HOT-WATER TANKS. GERHARDT F. SCHWARTZ, St. Louis, Mo. Filed Nov. 11, 1922. Serial No. 600,481. 1 Claim. (Cl. 29—157.4.)

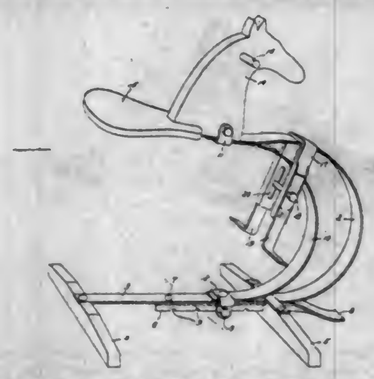
That method of constructing hot water tanks which consists in making a sheet metal body part with open ends, casting copper alloy rigid heads and fitting the same in the open ends of said sheet metal body part to



brace and strengthen the same, sweating the ends of the body part onto said rigid heads to seal the heads therein, riveting the heads to the body part to reinforce the connection between the heads and the body part, and making threaded openings through said rigid cast heads to directly receive pipes leading to and from the tank without the use of spuds and fittings.

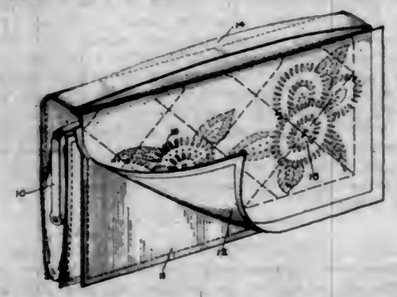
1,624,984. CUE TIP AND MANUFACTURE THEREOF. FRED B. SEEBERGER, Philadelphia, Pa. Filed Feb. 11, 1926. Serial No. 87,679. 10 Claims. (Cl. 273—70.)

1. The improvement in the manufacture of cue tips which consists in taking a block of suitable resilient material having opposite plane surfaces; compressing the embryo cue tip through its axial center upon the opposite plane bottom of the stock; and subsequently cutting therefrom a cue tip blank that, by such treatment, will decrease in density radially from the axial center thereof.



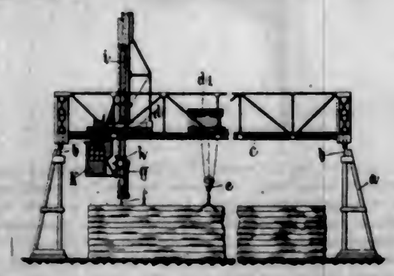
1,624,985. SLOW-DOWN MECHANISM FOR PRINTED PRODUCTS. EDWARD P. SHELDON, New York, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 18, 1922. Serial No. 595,232. 30 Claims. (Cl. 270—60.)

1. The combination of means for forwarding a product at high speed, a delivery operating at a lower speed, an intermediate transfer mechanism operating at the high speed of the forwarding means by which the product is transferred to the delivery, and means for effecting a relative movement between the product and the transfer mechanism whereby the product may be moved at the low speed of the delivery while being transferred thereto.



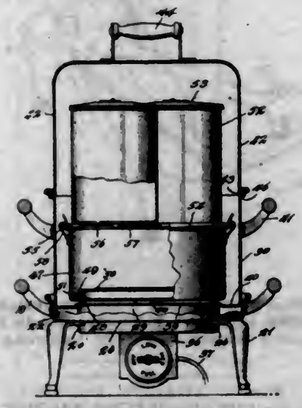
1,624,986. TOY. WILLIAM H. SHERROD, Los Angeles, Calif. Filed Nov. 3, 1925. Serial No. 66,550. 4 Claims. (Cl. 272—55.)

1. A device of the character described comprising; a pair of arcuate springs supported in a vertical plane and having their upper extremities mutually engaged but otherwise free and extending in a substantially horizontal direction; a saddle mounted upon said upper extremities; and a pair of spaced transverse base bars engaging the lower end portion of one of said springs to form a base, with the said end portion constituting a reach bar between



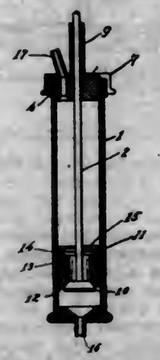
the base bars; the lower ends of said springs being relatively positionable for variably spacing their arcuate portions.

1,624,987. POCKETBOOK. ALBERT H. SHILLMAN, Baltimore, Md. Filed Jan. 29, 1926. Serial No. 84,536. 2 Claims. (Cl. 150—28.)



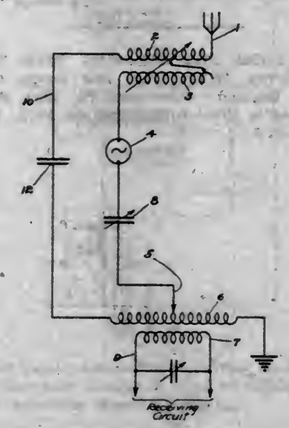
1. An article of the class described comprising a pocketbook substantially complete in itself, in combination with an auxiliary cover permanently attached to the top of said pocketbook, the main body of said cover being free of said pocketbook and of an area substantially equal to that of the side of the pocketbook, and means for attaching the sides and bottom of said cover to the pocketbook upon the working out of a predetermined decorative design thereon.

1,624,988. CRANE. KARL SIECKMANN, Vinenburg, Germany. Filed Nov. 17, 1926, Serial No. 148,944, and in Germany Nov. 16, 1925. 6 Claims. (Cl 143—47.)



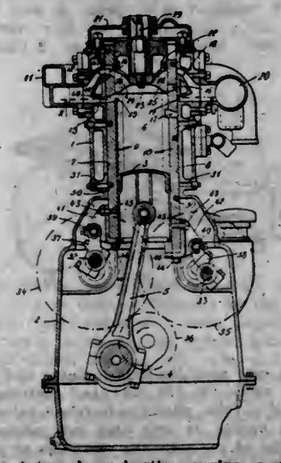
5. A travelling crane for handling stacked timber, comprising a horizontally movable hoisting gear for lifting the timber, and a vertically adjustable cutting-off saw for cutting the timber to length, said saw comprising a circular saw, an electro-motor and a belt drive.

1,624,989. COOKER. CHARLES F. SMITH and CHARLES EDWARDS, New Britain, Conn., assignors to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed July 25, 1924. Serial No. 728,207. 33 Claims. (Cl. 126—275.)



1. A cooker comprising a supporting base, an exposed hot-plate carried by the base, a shouldered wall on the base outside the periphery of the hot-plate, an oven kettle adapted to be removably supported upon the hot-plate and having a shouldered top rim, the two shoulders being of substantially the same diameter, and an oven-hood having a bottom rim of a size to seat on said shoulders, whereby the oven-hood may seat on the oven-kettle when the latter is in place or on the base when the oven-kettle is removed.

1,624,990. SURGICAL SYRINGE. LEMUEL D. SMITH, Milwaukee, Wis. Filed May 25, 1925. Serial No. 32,599. 2 Claims. (Cl. 128—214.)



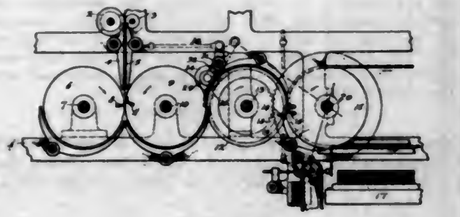
1. In a surgical syringe, a hollow cylinder and a plunger rod with means for retaining the plunger rod slidably within the cylinder, and a hollow member adapted to slide within the cylinder and to form a compression tight joint between its outer walls and the inner walls of the cylinder, and the rod adapted to retain the member and a valve element adapted to form a compression tight joint with the member with movement of the rod in one direction, and to be retained with a loose joint with movement in the opposite direction with a valveless opening in one end of the cylinder adapted to act as an inlet suction and a valveless opening in the other end adapted to act as a discharge from the cylinder.

1,624,991. WIRELESS TELEGRAPH AND TELEPHONE SYSTEM. CHARLES SPEAKER, Cherrydale, Va. Filed Jan. 29, 1921. Serial No. 440,993. 6 Claims. (Cl. 250—9.)

1. In a wireless system for the simultaneous transmission and reception of signals, a radiating system including an antenna-ground system, a transmitter for exciting said system, a non-radiating system within the antenna-ground system, a variable mutual inductance associated with the two systems for controlling the relative distribution of transmitter currents therein, a receiver, and an auxiliary coil coupling said receiver to both of said systems so that the transmitter currents therein are neutralized in said receiver.

1,624,992. INTERNAL-COMBUSTION ENGINE. EDWARD O. SPILLMAN, North Tonawanda, N. Y., assignor to Fischer Motor Company, New York, N. Y., a New York Trust Estate. Filed Aug. 19, 1924. Serial No. 732,914. 12 Claims. (Cl. 123—188.)

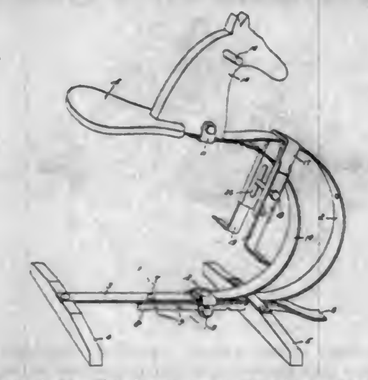
1. In an internal combustion engine, a cylinder having a longitudinal recess in the inner wall thereof, the side walls of the recess diverging inwardly to the cylin-



brace and strengthen the same, sweating the ends of the body part onto said rigid heads to seal the heads therein, riveting the heads to the body part to reinforce the connection between the heads and the body part, and making threaded openings through said rigid cast heads to directly receive pipes leading to and from the tank without the use of spuds and fittings.

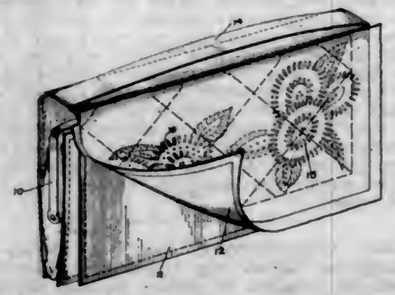
1,624,984. CUE TIP AND MANUFACTURE THEREOF. FRED B. SEEBERGER, Philadelphia, Pa. Filed Feb. 11, 1926. Serial No. 87,679. 10 Claims. (Cl. 273—70.)

1. The improvement in the manufacture of cue tips which consists in taking a block of suitable resilient material having opposite plane surfaces; compressing the embryo cue tip through its axial center upon the opposite plane bottom of the stock; and subsequently cutting therefrom a cue tip blank that, by such treatment, will decrease in density radially from the axial center thereof.



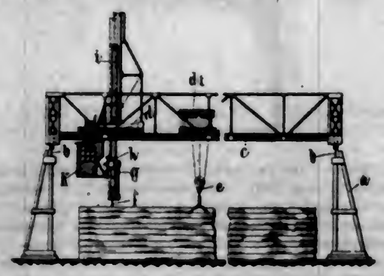
1,624,985. SLOW-DOWN MECHANISM FOR PRINTED PRODUCTS. EDWARD P. SHELDON, New York, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 18, 1922. Serial No. 595,232. 30 Claims. (Cl. 270—60.)

1. The combination of means for forwarding a product at high speed, a delivery operating at a lower speed, an intermediate transfer mechanism operating at the high speed of the forwarding means by which the product is transferred to the delivery, and means for effecting a relative movement between the product and the transfer mechanism whereby the product may be moved at the low speed of the delivery while being transferred thereto.



1,624,986. TOY. WILLIAM H. SHERROD, Los Angeles, Calif. Filed Nov. 3, 1925. Serial No. 66,550. 4 Claims. (Cl. 272—55.)

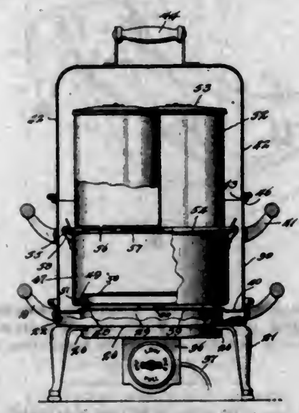
1. A device of the character described comprising; a pair of arcuate springs supported in a vertical plane and having their upper extremities mutually engaged but otherwise free and extending in a substantially horizontal direction; a saddle mounted upon said upper extremities; and a pair of spaced transverse base bars engaging the lower end portion of one of said springs to form a base, with the said end portion constituting a reach bar between



the base bars; the lower ends of said springs being relatively positionable for variably spacing their arcuate portions.

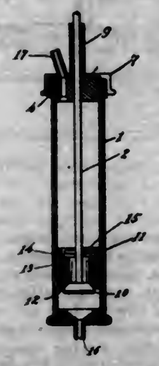
1,624,987. POCKETBOOK. ALBERT H. SHILLMAN, Baltimore, Md. Filed Jan. 29, 1926. Serial No. 84,536. 2 Claims. (Cl. 150—28.)

1. An article of the class described comprising a pocketbook substantially complete in itself, in combination with an auxiliary cover permanently attached to the top of said pocketbook, the main body of said cover being free of said pocketbook and of an area substantially equal to that of the side of the pocketbook, and means for attaching the sides and bottom of said cover to the pocketbook upon the working out of a predetermined decorative design thereon.



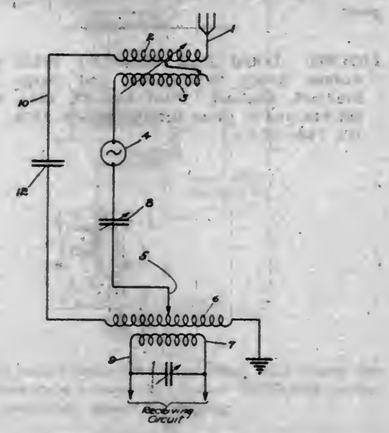
1,624,988. CRANE. KARL SIECKMANN, Vinenburg, Germany. Filed Nov. 17, 1926, Serial No. 148,944, and in Germany Nov. 16, 1925. 6 Claims. (Cl 143—47.)

5. A travelling crane for handling stacked timber, comprising a horizontally movable hoisting gear for lifting



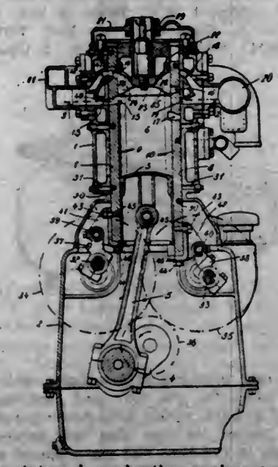
the timber, and a vertically adjustable cutting-off saw for cutting the timber to length, said saw comprising a circular saw, an electro-motor and a belt drive.

1,624,989. COOKER. CHARLES F. SMITH and CHARLES EDWARDS, New Britain, Conn., assignors to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed July 25, 1924. Serial No. 728,207. 33 Claims. (Cl. 126—275.)



1. A cooker comprising a supporting base, an exposed hot-plate carried by the base, a shouldered wall on the base outside the periphery of the hot-plate, an oven kettle adapted to be removably supported upon the hot-plate and having a shouldered top rim, the two shoulders being of substantially the same diameter, and an oven-hood having a bottom rim of a size to seat on said shoulders, whereby the oven-hood may seat on the oven-kettle when the latter is in place or on the base when the oven-kettle is removed.

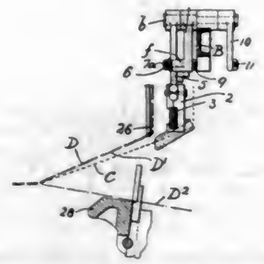
1,624,990. SURGICAL SYRINGE. LEMUEL D. SMITH, Milwaukee, Wis. Filed May 25, 1925. Serial No. 32,599. 2 Claims. (Cl. 128—214.)



1. In a surgical syringe, a hollow cylinder and a plunger rod with means for retaining the plunger rod slidably within the cylinder, and a hollow member adapted to slide within the cylinder and to form a compression tight joint between its outer walls and the inner walls of the cylinder, and the rod adapted to retain the member and a valve element adapted to form a compression tight joint with the member with movement of the rod in one direction, and to be retained with a loose joint with movement in the opposite direction with a valveless opening in one end of the cylinder adapted to act as an inlet suction and a valveless opening in the other end adapted to act as a discharge from the cylinder.

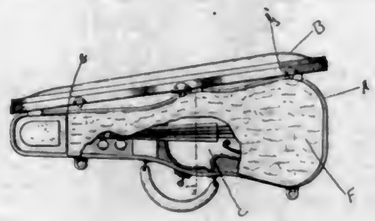
1,624,991. WIRELESS TELEGRAPH AND TELEPHONE SYSTEM. CHARLES SPEAKER, Cherrydale, Va. Filed Jan. 29, 1921. Serial No. 440,993. 6 Claims. (Cl. 250—9.)

1. In a wireless system for the simultaneous transmission and reception of signals, a radiating system including an antenna-ground system, a transmitter for exciting said system, a non-radiating system within the antenna-ground system, a variable mutual inductance associated with the two systems for controlling the relative distribution of transmitter currents therein, a receiver, and an auxiliary coil coupling said receiver to both of said systems so that the transmitter currents therein are neutralized in said receiver.



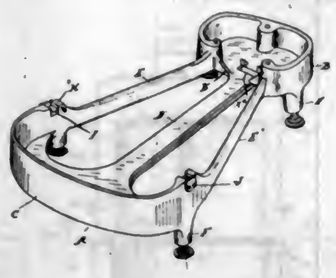
1,624,992. INTERNAL-COMBUSTION ENGINE. EDWARD O. SPILLMAN, North Tonawanda, N. Y., assignor to Fischer Motor Company, New York, N. Y., a New York Trust Estate. Filed Aug. 19, 1924. Serial No. 732,914. 12 Claims. (Cl. 123—188.)

1. In an internal combustion engine, a cylinder having a longitudinal recess in the inner wall thereof, the side walls of the recess diverging inwardly to the cylin-



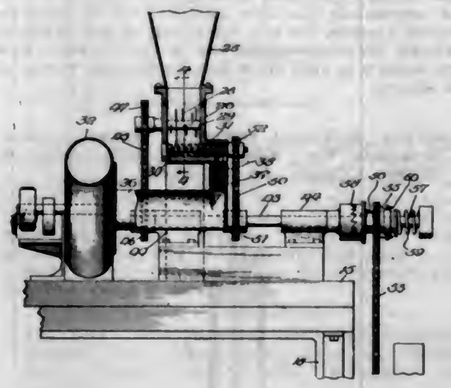
der, a substantially crescent shaped valve member adapted to slide longitudinally in said recess, and mechanism operatively connected to the valve member to reciprocate the same, said cylinder having two longitudinally spaced inlet ports for gaseous fuel near one end of the recess therein, and said substantially crescent shaped valve member having corresponding longitudinally spaced ports for controlling the cylinder ports arranged to direct their respective streams of gaseous fuel toward one another so as to produce a turbulent movement of the incoming gases.

1,624,993. LOOM FOR WEAVING PILE FABRICS. ALFRED SPINK, Whitehaven, and DAVID CRABTREE, Bradford, England. Filed Jan. 23, 1924, Serial No. 687,949, and in Great Britain Jan. 26, 1923. 5 Claims. (Cl. 139—17.5.)



1. In a loom for weaving chenille or fur pile fabrics, the combination of a fur weft carrier, a supporting bar on which said carrier is adapted to travel, a lever adapted to engage the carrier and move it on said bar, a spring connected with the lever, means for placing the spring under tension, means for retaining the carrier actuating lever in inoperative position with the spring under tension, and means for releasing the lever and permitting it to actuate the fur weft carrier.

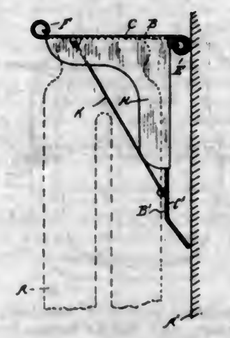
1,624,994. VIOLIN CASE. THEODORE H. STARK, New York, N. Y., assignor to C. Bruno & Son, Inc., New York, N. Y., a Corporation of New York. Filed June 18, 1924. Serial No. 720,718. 2 Claims. (Cl. 206—14.)



1. A violin case provided with a lining and having a supplemental cover for the tray and instrument, said cover being of a thick pliable soft fabric extended over the tray and having its rear edge only secured to the upper rear edge of the tray, the rear edge of said cover extending between the rear of said lining and the rear of the tray, the remaining edges of said cover being free whereby the cover may be folded back at said rear edge from over the tray for the placing of the instrument unimpeded within said tray, said cover forming a shock absorber to prevent injury to the instrument during transportation.

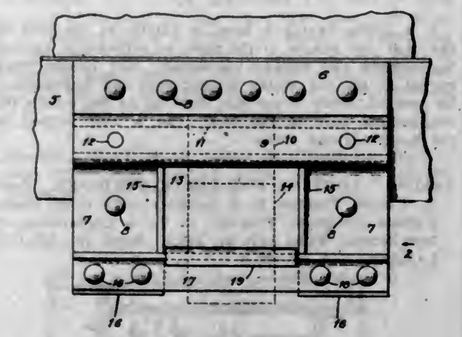
1,624,995. SCALE. WALTER F. STIMPSON, Louisville, Ky. Filed Dec. 11, 1922. Serial No. 606,189. 15 Claims. (Cl. 265—60.)

1. A scale base comprising a column base portion, a fulcrum portion of greater width arranged in alignment therewith, and a skeleton open frame connecting said portions.



1,624,996. POWDER-DUSTING MACHINE. LOUIS CARROLL STUKENBORG, Memphis, Tenn., and JAMES HAROLD COOPER, Lonoke, Ark. Filed Aug. 13, 1923. Serial No. 657,167. 7 Claims. (Cl. 43—148.)

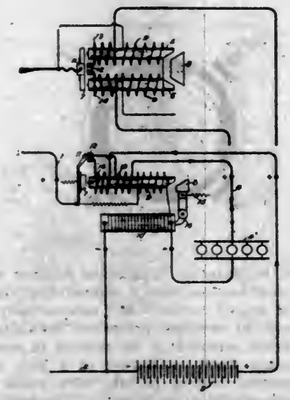
1. A powder dusting machine comprising a frame and supporting and traction wheels therefor, a receptacle for powder on the frame, a fan having an intake provided with an inlet conduit and an outlet terminating in a distributing nozzle, a powder feed and measuring device to receive powder from said hopper and to deliver it by gravity into said conduit, driving connections between a traction wheel and the feed means, and a motor carried by said frame for separately driving said fan.



1,624,997. RADIATOR WALL SHIELD. HENRY G SWEITZER, Detroit, Mich. Filed May 12, 1924. Serial No. 712,779. 5 Claims. (Cl. 237—79.)

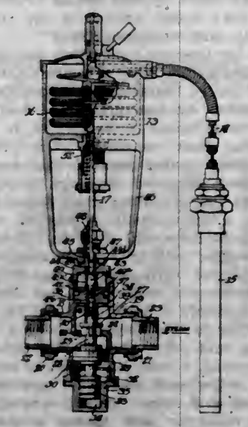
2. A radiator wall shield formed of sheet-metal and comprising a top member having an integral downwardly bent end portion, forming an end wall of said shield, and further comprising a rear member depending from and

carried by said top member, the rear edge portion of said end wall having interlocking engagement with said rear member.



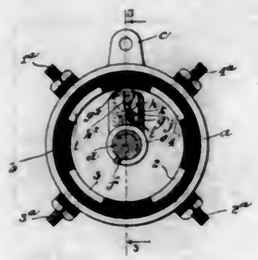
1,624,998. COUPLER STRIKING PLATE. JOHN J. TATUM, Baltimore, Md. Filed Oct. 3, 1923. Serial No. 666,287. 3 Claims. (Cl. 213—60.)

1. A coupler striking plate, adapted for attachment to the end sill of a car, comprising a channel-shaped projection for receiving the impact of the coupler, a pair of spaced depending portions having flanged ends defining an opening for the passage of said coupler, said ends extending along the width of said portions, and an angle iron resting on said flanged ends and secured to said portions for supporting said coupler.



1,624,999. SYSTEM HAVING COMBINED AUTOMATIC SWITCH AND LAMP REGULATOR. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor, by mesne assignments, to The Safety Car Heating and Lighting Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 9, 1920, Serial No. 372,561. Renewed Aug. 12, 1926. 10 Claims. (Cl. 171—313.)

10. In a system, in combination, a source of electrical energy, a storage battery, a translation circuit, a compressible pile for regulating said translation circuit, voltage means and current means for controlling said pile, switch means for connecting said source to said battery and to said translation circuit, said voltage means and current means being adapted to control said switch

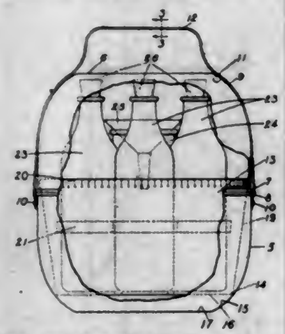


means, said switch means being provided with means for ensuring that said pile shall have no regulating action until said switching means is closed.

1,625,000. CONTROLLING APPARATUS. EDGAR A. ULMANN, Los Angeles, Calif., assignor, by mesne assignments, to Tower Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1923. Serial No. 658,233. 1 Claim. (Cl. 236—80.)

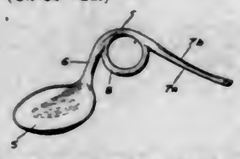
In a heat control system the combination with a steam supply, of a valve casing interposed in the supply line having a valve seat and a main valve cooperating therewith, a separate piston member coaxial with said valve and resilient means pressing said valve and piston into engagement, a cylinder for said piston, a pilot valve and seat coaxial with said valve and piston, means connecting one side of said pilot valve to the steam supply, means connecting the other side of said pilot valve to the cylinder on the side of said piston opposite said main valve, and coaxial thermostatically operated means for actuating said pilot valve to control the pressure on said piston and operate said main valve by the steam from said supply line.

1,625,001. TIMER FOR INTERNAL-COMBUSTION ENGINES. BERNHARD VOLKMAR, New York, N. Y. Filed May 17, 1922. Serial No. 561,601. 7 Claims. (Cl. 200—26.)



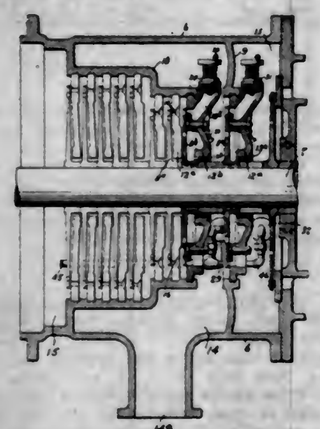
1. A timer for internal combustion engines embodying therein the combination with a commutator ring having a sequence of spaced contacts and substantially flush interposed insulated sections presented inwardly of said ring, of a brush adapted to be rotated in synchronism with the engine shaft, consisting of a hub, a radially extending housing having parallel side walls with oppositely disposed elongated openings therein extending radially of said hub, a bearing shaft slidably mounted in said openings, a substantially cylindrical contact roller rotatably mounted upon said shaft and slidably mounted within said housing with its sides in substantial engagement with said side walls, whereby continued wear will be distributed between said roller and said shaft, and between the perimeter of said roller and the wall of said housing, a spring in said housing having a normal tendency to thrust said roller through and beyond the open end of said housing, and a wear plate slidably mounted within said housing below said shaft and positioned between said spring and said roller, whereby scoring of the surface of said roller by said spring is prevented, said spring being held under tension by the engagement of said roller with said commutator ring.

2. A timer for internal combustion engines embodying therein the combination with a commutator ring having a sequence of spaced contacts and substantially flush interposed insulated sections presented inwardly of said ring, of a brush adapted to be rotated in synchronism with the engine shaft, consisting of a hub, a radially extending housing having parallel side walls with oppositely disposed elongated openings therein extending radially of said hub, a bearing shaft slidably mounted in said openings, a substantially cylindrical contact roller rotatably mounted upon said shaft and slidably mounted within said housing with its sides in substantial engagement with said side walls, whereby continued wear will be distributed between said roller and said shaft, and between the perimeter of said roller and the wall of said housing, a spring in said housing having a normal tendency to thrust said roller through and beyond the open end of said housing, a wear plate slidably mounted within said housing below said shaft and positioned between said spring and said roller, whereby scoring of the surface of said roller by said spring is prevented, said spring being held under tension by the engagement of said roller with said commutator ring, and a wear plate in the form of a U-shaped spring adapted to receive between its arms said spring, said wear plate and said roller with its shaft.



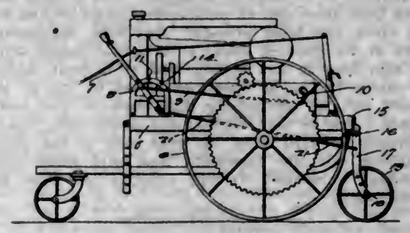
1,625,002. NURSING-BOTTLE CONTAINER. MATTHIAS A. WAGNER, Toledo, Ohio. Filed May 29, 1925. Serial No. 33,780. 2 Claims. (Cl. 220—9.)

1. In a device of the class described the combination with a lower container having an enlarged beaded mouth, an upper container having a similar enlarged beaded mouth adapted to be placed in abutment with the mouth of the lower container, a pan having tapered sides and a curved corrugated mouth adapted to be nested in the lower container with the corrugated mouth projecting above the beaded mouth of the lower container, the projecting portion of the pan serving as a frictional ledge



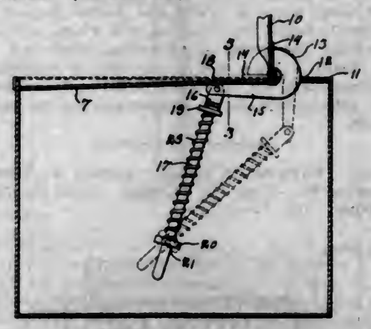
for the upper container when said containers are mounted one upon the other, and handle means for binding the containers and pan one upon the other in the position mentioned.

1,625,003. BABY SPOON. MARGARET W. WALKER, Wyncote, Pa. Filed Feb. 2, 1926. Serial No. 85,607. 3 Claims. (Cl. 30—22.)



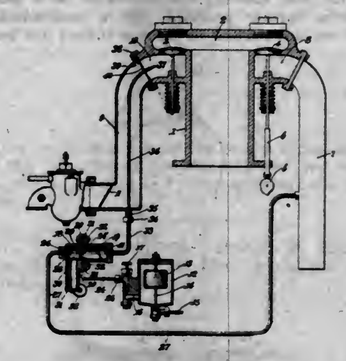
1. A spoon having a bowl, a handle at the rear of the bowl, the handle at the point of attachment extending upward and sloping rearwardly, said handle being curved at the top of the sloping part and intermediate its over all length to one side, forming an angle with the longitudinal axis of the bowl, and a ring formed in the handle at the curve.

1,625,004. CONTROL FOR STEAM TURBINES. CARL R. WALLER, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a Corporation of New Jersey. Filed July 31, 1922. Serial No. 578,573. 5 Claims. (Cl. 60—67.)



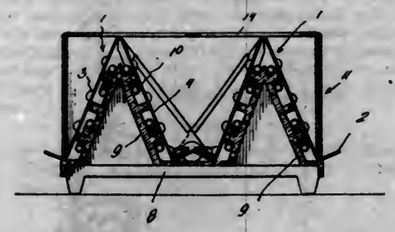
2. A steam turbine having a casing, diaphragms therein dividing the casing into high pressure, low pressure and intermediate pressure chambers, there being a steam bleed leading from the intermediate pressure chamber, a rotor having a blade in each pressure chamber, there being a plurality of nozzle chambers in one of the diaphragms, each having nozzles opening into the adjacent chamber of lower pressure, there being a port communicating with each nozzle chamber and the adjacent higher pressure chamber, a valve for controlling each port mounted on the diaphragm, a separate steam pressure actuated valve-actuating mechanism for each valve mounted on the diaphragm within a pressure chamber, a master valve, steam connections between the master valve and each of the valve actuating mechanisms, and means for actuating the master valve for controlling the opening and closing of the valves for the ports.

1,625,005. SAFETY ATTACHMENT FOR TRACTORS. ELMER E. WATERMAN, Remus, Mich. Filed June 28, 1926. Serial No. 119,094. 1 Claim. (Cl. 180—82.)



In combination, a tractor including a chassis and a gear shifting lever, a member pivoted on the forward end of the chassis, a wheel journaled on the free end of the member, and means connecting the member with the gear shift lever so that when said gear shift lever is in forward speed position, the wheel is swung out of engagement with the ground and when the lever is in reverse speed position, the wheel is in engagement with the ground for preventing tilting of the tractor.

1,625,006. BAIT BOX. JOHN M. WATTAWA, Manitowoc, Wis. Filed June 11, 1926. Serial No. 115,830. 2 Claims. (Cl. 220—35.)

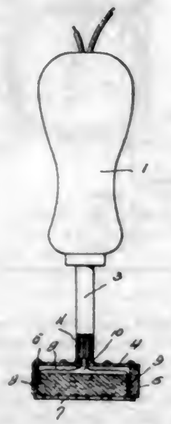


1. A bait box of the character described comprising a receptacle, a pair of spaced plates arranged transversely of the receptacle and providing a partition forming separate compartments, a hinged cover for the receptacle, a hook shaped arm having one end secured to said cover and its opposite end arranged in the partition, a plate mounted for pivotal movement between the side walls of the partition, a rod having a bifurcated upper end for pivotally receiving the inner end of said hook shaped arm, and means surrounding said rod, and adapted with the latter and the hook shaped arm respectively for retaining the cover in a closed or open position.

1,625,007. FUEL SYSTEM FOR INTERNAL-COMBUSTION ENGINES. CHRISTIAN F. WEBBER, Albany, N. Y. Filed Aug. 3, 1920. Serial No. 400,905. 7 Claims. (Cl. 123—119.)

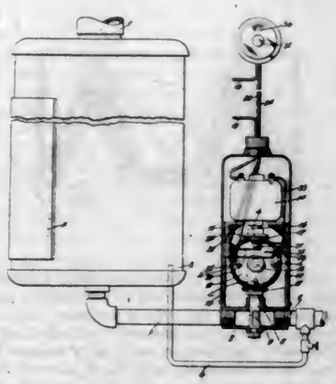
1. In a fuel system for internal combustion engines, in combination with the engine, a supply of liquid fuel and a fuel nozzle, means for entraining from the exhaust conduit of the engine a stream of exhaust gases, means for gauging said stream to a reduction sufficient to atomize said liquid fuel, and for directing said gauged stream into atomizing relation with the fuel nozzle, an enclosure open to the resulting mixture of exhaust gases and atomized liquid fuel and adapted to maintain without admixture of air the ingredients of said mixture in intimate contact to vaporize said atomized liquid fuel, a throttle in said enclosure, means for delivering said vaporized fuel from said enclosure and for adding air thereto to form an explosive mixture, and means for delivering said explosive mixture to the engine cylinder.

1,625,008. TOASTER. MAX WERTHEIMER, Chicago, Ill. Filed July 29, 1926. Serial No. 125,725. 2 Claims. (Cl. 219—19.)



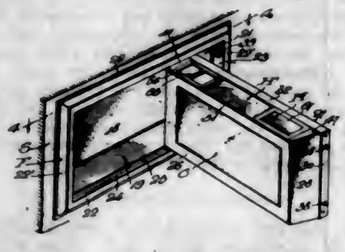
1. In a toaster of the class described, a heating unit comprising a base including a pair of spaced upstanding V-shaped elements having their external faces formed with recesses, electrical resistance coils located in said recesses, a shell including a pair of V-shaped members fitting over said elements, said shell having its downwardly inclined walls formed with a plurality of heat passages and intervening outstanding protuberances.

1,625,009. PORTABLE ELECTRIC LUMBER AND TIMBER GRADE-MARKING DEVICE. HARRY W. WHITED, Nacogdoches, Tex. Filed Aug. 5, 1925. Serial No. 48,824. 1 Claim. (Cl. 219—30.)



A branding tool of the class described comprising an elongated tubular shank, a handle enclosing the upper portion thereof, a flange formed on the lower end of the tubular shank, a head of insulated material secured

on the bottom of the flange, branding characters formed of resistance wires arranged on the bottom of the head, certain characters being connected together, the head being provided with vertical end passages through which the free ends of the resistance wire pass, said head being further provided with a longitudinally extending cut out portion in the top thereof for communi-

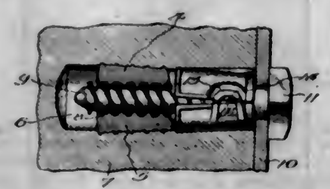


cation with the upper ends of the respective vertical passages in which the free ends of the resistance wires are disposed, lead wires extending through the tubular shank and the handle and connected at their lower ends to the free ends of the resistance wires, and a thumb switch associated with the lead wires and arranged transversely in said handle.

1,625,010. GAS-BURNER-CONTROL MECHANISM. RUDOLPH T. WINDT, St. Louis, Mo. Filed May 14, 1926. Serial No. 109,066. 5 Claims. (Cl. 137—139.)

2. A device of the character described comprising a valve rotative successively in one direction, a pinion attached to said valve, a pinion supported on an axis at right angles to the axis of said first pinion and meshing therewith, a motor, a pinion rotative on an axis at right angles to the axis of said second pinion and meshing with said second pinion, a circuit for supplying energy to the motor, a switch for closing said circuit, and devices operated by said second pinion for opening said circuit and causing the motor to stop and hold said valve in closed position.

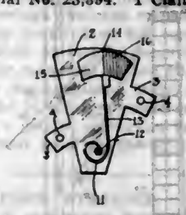
1,625,011. ARTICLE CONTAINER. ARTHUR H. WOLFE, West Philadelphia, Pa., and DURWARD A. WOLFE, Grand Rapids, Mich. Filed Nov. 16, 1925. Serial No. 69,447. 15 Claims. (Cl. 206—1.)



1. A device of the class described comprising a housing adapted to be inset in a support, said housing having an open front and an outstanding frame around said open front and being provided also with longitudinal tracks at its opposed sides, a reversible casing fitting into said housing and closing said open front thereof, said casing having an open side closed by one of said opposed sides of the housing, and shoes on said casing slidably engaging said tracks, said shoes being spaced sufficiently forward from the rear side of the casing to dispose this side forwardly from said frame when the casing is reversed, thereby exposing said open side of the casing.

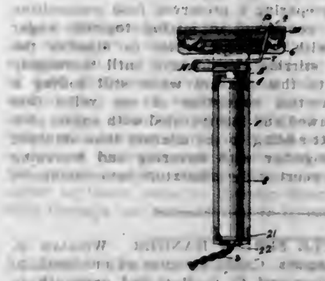
1,625,012. AEROPLANE. ALBERT WORMAN, New York, N. Y. Filed Nov. 3, 1925. Serial No. 66,456. 1 Claim. (Cl. 244—17.)

In combination with an aeroplane of the character designated, a plurality of vibratory propulsive wings mounted on the planes thereof and a plurality of propulsive wings mounted on the rear portion thereof, electro-magnetic means for actuating said wings, and means for varying the speed of operation, consisting of a switch board, a rotor, and a plurality of commutators of different diameters interposed in the operative electric circuit, substantially in the manner and for the purpose set forth.



1,625,013. EXPANSION BOLT. LOTHAR R. ZIFFERER, Columbia, Pa. Filed Apr. 16, 1925. Serial No. 23,576. 2 Claims. (Cl. 85—2.4.)

1. In an expansion bolt, a shield divided longitudinally in a straight line on opposite sides whereby to provide two complementary parts each having a pair of abutting edges extending straight from end to end, a pair of loops formed on one part and extending past the abutting meeting edges to overlap the other part in closely adjacent relation, and a pair of studs upstanding from the



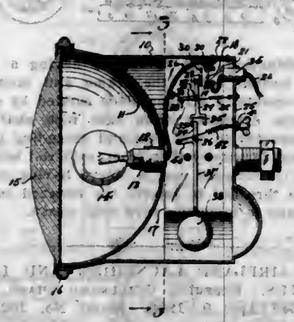
latter shield part, each adjacent the straight edge thereof and within one loop extending from the other shield part, whereby to provide a hinge connection between the two shield parts, substantially as described.

1,625,014. HEAT INDICATOR FOR HEATED TOOLS. ROBERT AMODIO, Rochester, N. Y., assignor of one-half to Harry C. D'Annunzio, Rochester, N. Y. Filed Apr. 15, 1925. Serial No. 23,394. 1 Claim. (Cl. 73—118.)

An automatic heat indicator for heated bodies embodying a casing having a side for engagement with the heated body and an opening in its opposite side, a volute thermostatic expansion member having one end secured to the side of the casing engaging the heated body and lying substantially parallel with said side but out of line with the opening, a movement amplifying arm supported by an end of the volute member and extending substantially parallel with that side of the casing arranged for engagement with the heated body, and a plate carried by said arm and extending from opposite sides thereof, said plate having two distinct markings, one of which lies under the opening when the thermostatic device has a temperature below a certain point and the other of which moves under the opening when the temperature of the thermostatic device passes above such certain point.

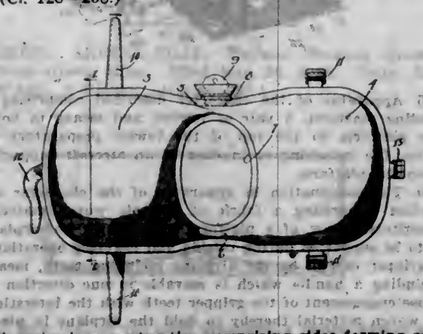
1,625,015. ELECTRICAL SAFETY RAZOR. WILLIAM P. ARON, Dallas, Tex., assignor, by direct and mesne assignments, to Aron Electric Razor Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 8, 1926. Serial No. 80,014. 5 Claims. (Cl. 30—12.)

1. An electrical razor including a hollow handle and a head, an electromagnetic coil within the handle; a blade mounted for reciprocation parallel to its edge in said head and provided with an aperture; and a spring armature interposed between said blade and said coil and having a portion engageable in the aperture of said blade and adapted, when actuated by the coil, to reciprocate said blade positively in both directions.



1,625,016. REINFORCEMENT FOR SPRINKLER TOPS. EDWIN H. BARKER, Moylan, Pa., assignor to A. H. Wirz, Inc., Chester, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1925. Serial No. 5,940. 8 Claims. (Cl. 215—43.)

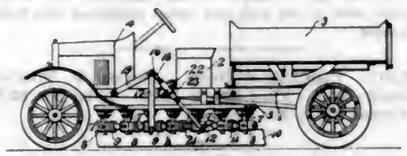
1. In a dispensing closure, a container for said having an outlet opening, an axially perforated cork fitting into the opening, a metal cap having a circumferential wall secured to the container about the outlet opening and having a perforation in registry with the cork perforation, an annular boss on the cap adjacent to and around the



perforation on the side toward the cork, a second annular boss on the cap circumferentially adjacent the wall on the same side as the first and radial stiffening ribs joining the bosses.

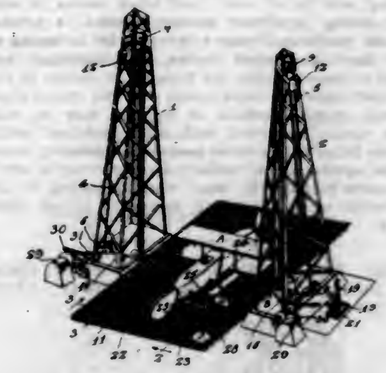
1,625,017. CIRCUIT CLOSER. EDWARD P. BIRKHOLZ, Colonia, N. J. Filed Feb. 3, 1926. Serial No. 85,625. 2 Claims. (Cl. 200—52.)

1. In an electric circuit control device, a circuit make and break means for said circuit, means for yieldably retaining said circuit make and break means in either circuit closing or circuit opening position, a pivotally suspended pendulum having trip means for actuating said circuit make and break means, said pendulum being adapted to operate under the force of its inertia to move said circuit make and break means to either circuit closing or circuit opening position as the case may be, and a tension means connected with said pendulum adapted when the latter is in neutral position to yieldably restrain the same against undue oscillation but serving to more or less counter-balance the same when operating to move said circuit make and break means to circuit closing position.



1,625,018. HOT-WATER BAG. TOBIAS BLUNT, Chicago, Ill. Filed Aug. 29, 1925. Serial No. 53,261. 1 Claim. (Cl. 128—238.)

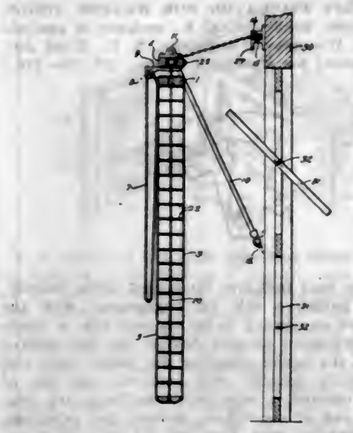
A water bag construction comprising sides forming confining walls for two main hollow sections and two narrow hollow necks connecting said main sections, there being



a central space bounded by the free unobstructed walls of the main sections and the narrow necks, said narrow necks being continuous of the walls forming the sections and providing passageways between said main sections at opposite sides of said central space, substantially as described.

1,625,019. ROAD-SCRAPER-ADJUSTING MECHANISM. DAVID E. BURNS, Grand Rapids, Mich.; Grand Rapids Trust Company executor of said Burns, deceased, assignor to Charles G. Willett, Grand Rapids, Mich. Filed Sept. 8, 1925. Serial No. 54,890. 8 Claims. (Cl. 37—155.)

5. In combination with a vehicle having a frame, a rock shaft located below the frame and mounted for rocking movements, a scraper blade carried by said rock shaft, an arm extending from said rock shaft, a rod pivotally connected to said arm and extending upwardly, outwardly and forwardly therefrom, said rod being screw threaded at its forward end, a sleeve having connection to the frame threaded to receive the forward end of the rod, and means to manually turn said sleeve.

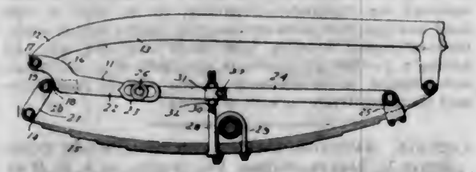


1,625,020. AIRPLANE LAUNCHING AND LANDING APPARATUS. FEDERICO GUILLERMO DIAGO, Habana, Cuba. Filed Apr. 9, 1926. Serial No. 100,935. 22 Claims. (Cl. 44—2.)

5. Apparatus of the character described comprising a landing platform, a pair of towers, and means to hoist the platform to the top of the towers preparatory to either the launching or landing of an aircraft supported upon the platform.

9. The combination in apparatus of the character described comprising a fabric of suitable woven material constituting part of a platform upon which an airplane is to be supported during raising and lowering operations, a gripper carried by the airplane including teeth, means including a handle which is movable in one direction to cause engagement of the gripper teeth with the interstices of woven material thereby to hold the airplane in place, and means associated with the gripper being engageable with the material upon reverse movement of the handle to facilitate extraction of the teeth from said interstices.

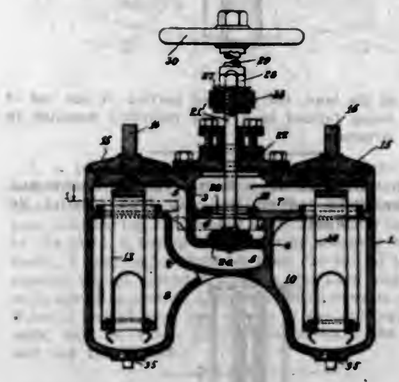
1,625,021. OFFSETTING SUPPORT FOR VENETIAN BLINDS. ARTHUR H. DODGE, New York, N. Y., assignor to The J. G. Wilson Corporation, New York, N. Y., a Corporation of Virginia. Filed Feb. 8, 1926. Serial No. 86,760. 13 Claims. (Cl. 156—17.)



5. In a structure for Venetian blinds, in combination, a supporting bar, a tilting bar pivotally suspended from the supporting bar, a series of parallel slats, means for connecting the slats and for suspending the same from the tilting bar for tilting movement therewith, means for mounting the supporting bar for adjustment toward and from a window, a bracket carried by the supporting bar, a roller mounted in the bracket, and a cord passing over the roller and secured to the tilting bar in a manner to rock the same on its pivotal supports.

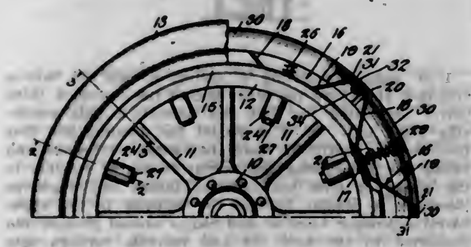
1,625,022. PASTRY DOUGH. JOSEPH FOUSEK, San Francisco, Calif. Filed Apr. 20, 1925. Serial No. 24,682. 1 Claim. (Cl. 99—10.)

The method of preparing a preserved food composition for making cakes, consisting in mixing together sugar and corn syrup with sufficient water to dissolve the sugar, boiling and stirring the mixture until thoroughly dissolved, adding to this mixture while still boiling a ripened egg preparation consisting of egg yolks first frozen and then thawed and incorporated with sugar, corn syrup and salt, next adding to the mixture thus obtained butter and flour together with flavoring and leavening agents, and finally pouring the admixture into containers and sealing.



1,625,023. VEHICLE SPRING HANGER. WILLIAM R. GARDNER, Los Angeles, Calif., assignor of one-tenth to Wallace B. Truslow and C. C. Post and one-tenth to D. G. Collins, Los Angeles, Calif. Filed Jan. 2, 1926. Serial No. 78,854. 8 Claims. (Cl. 267—19.)

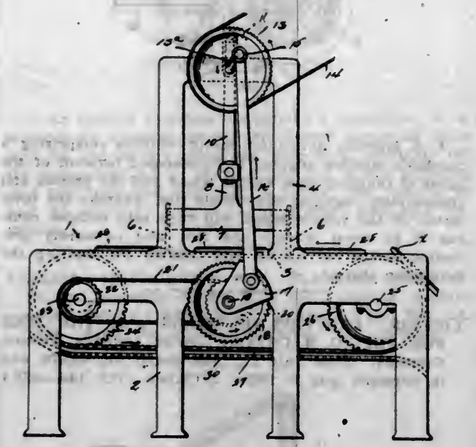
5. In a counterpoise spring suspension for vehicles, the combination with a vehicle chassis bar and a vehicle spring extending beneath the chassis bar, and the vehicle axle, of a bracket fixed to the axle and extending upwardly therefrom and terminating intermediate the chassis bar and axle, and serving to shift the vibratory movement of



the axle to said intermediate point, a counterpoise lever having opposed lever arms, one serving as a weight arm and the other as a power arm, and having an intermediate fulcrum point at the junction of said arms and having the weight arm pivotally connected to the end of the chassis bar, a shackle link connected at one end to the said fulcrum point of the counterpoise lever, and having its opposite end connected to the eye-end of the vehicle spring, whereby said fulcrum point is beyond a plane passing through the ends of chassis bar and vehicle spring, a clip mounted on the opposite and forward end of the vehicle spring, an equalizing lever having one end pivotally connected to the clip, a roller on the opposite end of the equalizing lever and working in a corresponding slot in the free power arm of the counterpoise lever, and a pivotal connection between the bracket and an intermediate point on the equalizing lever.

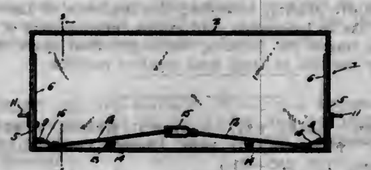
1,625,024. DUPLEX STRAINER. FREDERICK HALL, Plainfield, N. J., assignor to Berggren Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 26, 1925. Serial No. 77,692. 3 Claims. (Cl. 210—168.)

1. A fluid strainer of the duplex type comprising a casing having ribs dividing its interior into a plurality of chambers in two of which strainers are mounted, another of said chambers serving as an inlet to the strainers and another as an outlet from the strainers, said inlet and outlet chambers having aligned upper and lower valve seats, valves in the inlet and outlet chambers, and a common operating means connected to the valve stems for simultaneously seating the valves on either their upper or lower seats to thereby direct the flow of the fluid through one strainer and to by-pass the other.



1,625,025. SPRING WHEEL. O'DELL HINES, Burnsville, Miss. Filed Mar. 13, 1926. Serial No. 94,615. 7 Claims. (Cl. 152—8.)

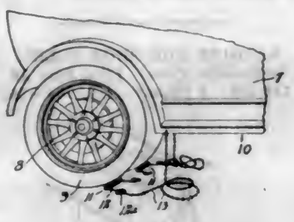
4. A wheel of the class described including a hub, spokes and rim, a plurality of substantially V-shaped supporting members encircling the said rim and being se-



cured thereto, the adjacent ends of said members overlapping one another and provided with registering slots, a plurality of tire supporting shoes carried by said members, the adjacent ends of said shoes overlapping one another, certain of said overlapping ends being provided with slots, fastening means secured to other of said overlapping ends and passing through the slots in the ends of said shoes and also through the registering slots in the ends of the supporting members, whereby the said tire supporting shoes and supporting members are permitted to slide relative to one another, and spring means carried by said rim and passing there through and secured to the said shoes intermediate their ends, for holding the same in inflated position.

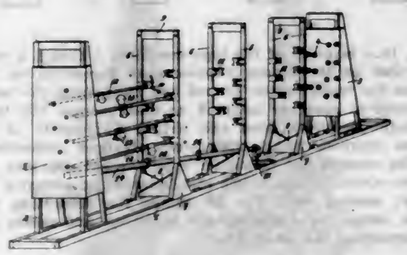
1,625,026. MACHINE FOR SHOE SOLES. GEORGE A. HOLMES, Naugatuck, Conn. Filed June 16, 1926. Serial No. 116,389. 3 Claims. (Cl. 164—24.)

1. In a machine of the type described, a frame, a table provided on the frame, a press head supported on the frame for reciprocation toward and away from the table, an endless conveyer adapted to slide across the table beneath the press head and having a plurality of die plates thereon, rotating elements arranged respectively at the ends of the frame for receiving the conveyer, an apron carried by the frame and beneath the conveyer for direct contact with the die plates for supporting the same, means for actuating the conveyer, and means for reciprocating the press head.



1,625,027. ANIMAL TRAP. THOMAS WILLIAM HULSE, Inver Grove, Minn. Filed Mar. 26, 1926. Serial No. 97,630. 2 Claims. (Cl. 43—67.)

1. In a trap of the class described, a casing having an animal entrance opening, a door pivotally and swingably mounted in the casing in a position to cover said opening, said door being adapted to swing by gravity to clos-



ing position, a pivotally mounted animal actuated platform in the casing, a lifting finger carried by the platform, and a tongue carried by said door, said finger being engaged with said tongue when the door is in an open position whereby when the platform is tilted an impetus is given to the door to permit it to gravitate to closing position.

1,625,028. TRACTION DEVICE FOR MOTOR VEHICLES. CHARLES H. HYATT, Cottagewood, Minn. Filed Mar. 22, 1926. Serial No. 96,518. 6 Claims. (Cl. 180—7.)

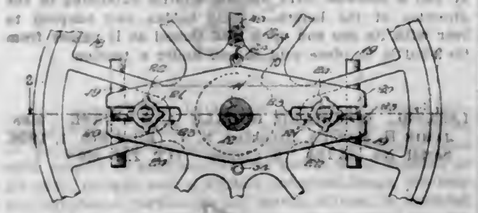
1. A traction device for motor vehicles comprising a revoluble member adapted to be disposed forward of the point of tangency of a vehicle wheel and the ground and transversely engaging the vehicle tire, whereby the revolution of the vehicle wheel will turn said member causing it to creep beneath the tire, and outwardly projecting means carried by said member for limiting the revolution thereof.

1,625,029. ERECTION OF WINGS AND THE LIKE FOR FLYING MACHINES. HUGO JUNKERS, Dessau, Germany. Filed July 22, 1925. Serial No. 45,379, and in Germany Aug. 8, 1924. 5 Claims. (Cl. 144—288.)

1. Fixture for the erection on edge of wings and similar parts of flying machines and the like comprising the combination of a longitudinal foundation frame and a plurality of vertical cross frames, some of them displaceable on said foundation frame, all said frames having a width slightly exceeding the thickness of the wing or the like to be erected, and means forming part of said vertical frames for securing the longitudinal spars of the wing or the like in their final relative position.

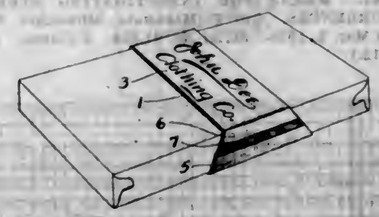
1,625,030. DRILL BIT. ERNEST U. KELLER, Pawhuska, Okla. Filed May 1, 1926. Serial No. 106,113. 2 Claims. (Cl. 255—61.)

1. In combination with a bit comprising a body having at its upper end a shank, the upper end of the shank being provided with the usual pin, of a bore extending from the top of the pin into the upper end of the body, said bore being axial to the shank and being enlarged at its opposite ends and a metallic filling for the bore consisting of a metal softer than the metal of the drill bit and having its ends enlarged to fit the enlarged



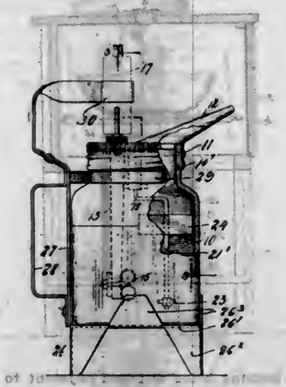
portions of the bore, the enlarged portion at one end of the bore being formed in a block rotatably mounted in the drill structure.

1,625,031. OIL PUMP. LOUIS PHILIP KESSELMAN, Whittier, Calif. Filed Mar. 12, 1925. Serial No. 15,061. 5 Claims. (Cl. 103—5.)



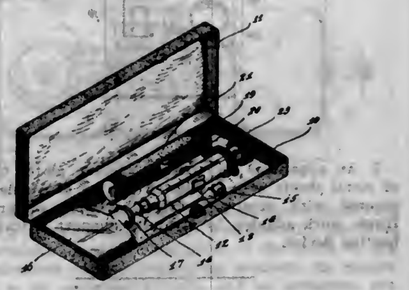
1. A pump comprising a casing, a pair of barrels arranged one above the other within the casing, a third barrel connecting the first two barrels, a plug removably fitted into the third barrel for dividing the first two barrels, partitions associated with the barrels and casing for maintaining the barrels in spaced relation to the casing to form therebetween intake and discharge chambers, a tubular plunger rod movable in the upper barrel a plunger fixed to said rod, a second plunger rod connected to the first rod and movable through said plug and in all of the barrels, a second plunger fixed to the second rod, inlet ports in the second rod providing communication between the upper barrel and the tubular rod, a valve outlet port in the upper end of the tubular rod to open on downward movement of the third rod, valve inlet ports for placing the intake chamber in communication with the upper or lower barrels according as the plungers are moved upwardly or downwardly in said barrels, valved outlet ports for placing the discharge chamber in communication with the upper barrel or lower barrel according as the plungers are moved downwardly or upwardly in the barrels, and a valved intake port with the lower end of the lower barrel.

1,625,032. RECENTERING DEVICE. HENRY KETTLER, Detroit, Mich. Filed Feb. 13, 1926. Serial No. 88,091. 2 Claims. (Cl. 77—13.)



1. A re-centering device comprising a plate having a central opening and slots disposed radially relative to the central opening, a sleeve erected perpendicular upon said plate and having an opening registering with the opening in the plate, a boring tool rotatably mounted within the sleeve, a feed collar threaded upon the end of the sleeve, tension screws extended through the slots and provided with means to prevent rotation of the screws in said slots, T-heads formed upon said screws at the ends opposite the nuts, and an offset formed intermediate the threaded end and the T-head.

1,625,033. BOX CLOSER. JOHN E. KNOPP, Tulsa, Okla. Filed Oct. 26, 1925. Serial No. 64,820. 1 Claim. (Cl. 229—43.)

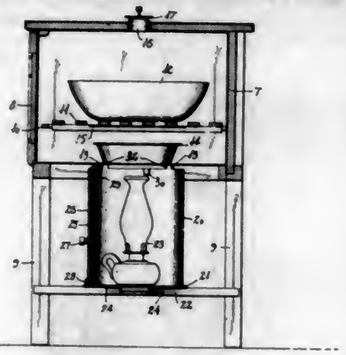


The combination with a box having a top, a bottom and side walls, of a flat strip of box board having parallel and oblique edge portions scored transversely to form rectangular top, and bottom portions and tapering side wall portions, the ends of the strip being secured together to form a pre-formed, stiff walled band open at opposite ends thereof, narrower than the length of the box and substantially rectangular in cross section, slidable into position on said box to closely engage the top, bottom and side walls of the box to hold the same closed, said top and bottom portions of said band being of different widths to provide clearance for the box to enter the band with a tilting movement of the band.

1,625,034. VAPORIZER. NICHOLAS LAWNER, Brooklyn, N. Y., assignor to American Sundries Co., Inc., a Corporation of New York. Filed June 8, 1926. Serial No. 114,448. 2 Claims. (Cl. 219—40.)

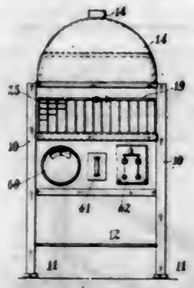
1. An electric vaporizer comprising a receptacle, a removable lid therefor, an electric heater suspended from said lid and having outwardly projecting terminals for the engagement of an electric plug and means engaging said receptacle and said plug to prevent the removal of said lid while the plug is in engagement with said terminals.

1,625,035. HYPODERMIC KIT. ELI LILLY, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 23, 1925. Serial No. 70,735. 3 Claims. (Cl. 206—43.)



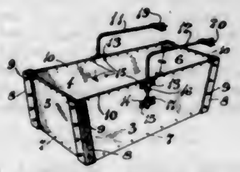
2. A hypodermic kit, comprising an openable case, hypodermic syringe and needle, a bottle for holding a liquid antiseptic, said bottle being provided with a rubber stopper which permits the insertion of the needle point therethrough into the liquid antiseptic and automatically closes the needle opening upon the withdrawal of such needle point and supporting means provided in said case for supporting said hypodermic syringe with the needle inserted through the stopper of said bottle.

1,625,036. DOUGH RAISER. WILLIAM J. LOUDENSLAGER, New Martinsville, W. Va. Filed Aug. 31, 1925, Serial No. 53,708. Renewed Sept. 13, 1926. 2 Claims. (Cl. 126—282.)



1. A dough raiser comprising a dough chamber having an upper outlet, a shelf in the chamber for supporting a dough receptacle, a water receptacle on the bottom of the chamber below said shelf, said bottom of the chamber having apertures surrounding said water receptacle, a

heater below the bottom of said chamber and said water receptacle, and a housing surrounding said heater having an air inlet at its lower end below the heater, the upper

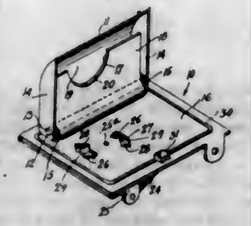


end of said housing being disposed adjacent to but spaced slightly from the bottom of the chamber at a point slightly outwardly beyond said apertures.

1,625,037. BURNING-IN MACHINE. LOUIS LORENZ, New York, N. Y. Filed Mar. 26, 1926. Serial No. 97,590. 8 Claims. (Cl. 263—2.)

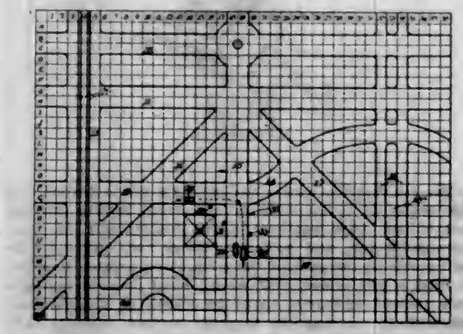
1. An apparatus for treating etching plates composed of metal sheets with a selected portion of a side thereof covered with erosive resisting coating, comprising a frame work adapted to pivotally support a tray and a heating device.

1,625,038. RECEPTACLE FOR CARRYING INFANTS. THOMAS H. LOVE, Cincinnati, Ohio. Filed June 1, 1926. Serial No. 112,875. 8 Claims. (Cl. 224—45.)



1. Means for carrying infants, comprising an open top receptacle having a vertical bearing centrally thereof on opposite sides, respectively a pair of L-shaped handles pivotally mounted centrally of the receptacle upon opposite sides thereof in said vertical bearings and adapted to be swung into parallel spaced apart position when opened or into parallel adjacent position when closed.

1,625,039. TENSION DEVICE FOR LOOMS. JONATHAN LUCAS, Savannah, Ga., assignor to Lucas-Lamborn Loom Corporation, New York, N. Y., a Corporation of New York. Original application filed May 16, 1925, Serial No. 30,656. Divided and this application filed Oct. 31, 1925, Serial No. 65,935. Renewed Sept. 17, 1926. 4 Claims. (Cl. 139—141.)



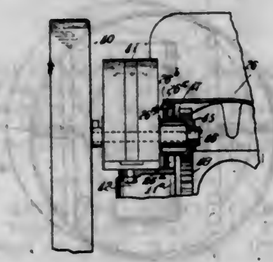
1. In a loom, a shuttle, a bobbin of thread carried thereby and a movable lever on said shuttle extending in the direction of the length of said bobbin and adapted to bear with its one end upon said thread as it passes from the shuttle to place said thread under a tension.

1,625,040. COMBINED BUCKLE AND PURSE. BENJAMIN H. MARCUS, Brooklyn, N. Y. Filed Feb. 1, 1926. Serial No. 85,134. 5 Claims. (Cl. 224—26.)

1. In a purse, a base, a cover hingedly associated with the base, a projection integral with the cover and bent inwardly therefrom to form a compartment within the said cover, a bead on the base surrounding the cover when said cover is closed and a projection on the base associated with the cover to keep same in closed relation with the base.

1,625,041. MEANS FOR INVESTIGATING STREET OCCURRENCES. GUY F. MARSHALL, Milwaukee, Wis. Filed Mar. 2, 1926. Serial No. 91,824. 3 Claims. (Cl. 35—12.)

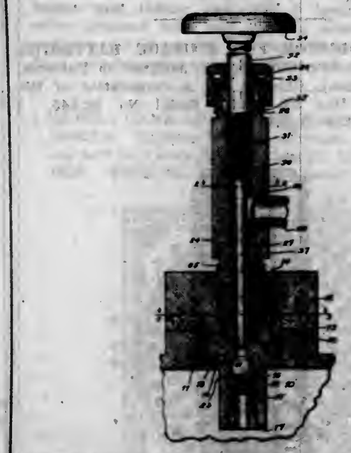
1. A device for investigating roadway or street occurrences comprising a chart of the character described having indications thereon representing such passageways for



vehicular traffic, scale marking associated with said passageways respectively whereby distances or locations on the chart device corresponding to given distances or locations on the actual passageways may be determined according to the scale markings of the chart device, and markers representing objects involved in the street occurrence and adapted to be positioned on the chart according to the scale indications thereon for showing the relative positions of the actual objects involved in a given occurrence at the time thereof.

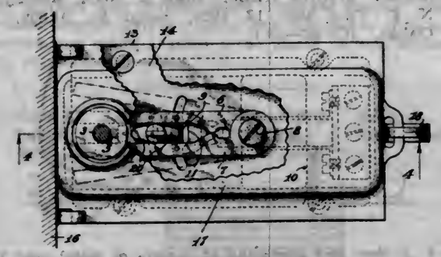
1,625,042. SPRAY NOZZLE. MICHAEL W. MCARDLE, Chicago, Ill. Filed Feb. 6, 1926. Serial No. 86,370. 2 Claims. (Cl. 299—131.)

1. A spray nozzle having its discharge terminal furnished with a widely tapered smooth mouth for spread of the spray and a water inlet thereto substantially axial with respect to said mouth, said mouth being finished at its outer margin with a slightly inturned flange, whereby the outermost portion of the spread stream is deflected inward for covering the central area from which the discharge is diverted by the spreading means of the nozzle including said widely tapered mouth.



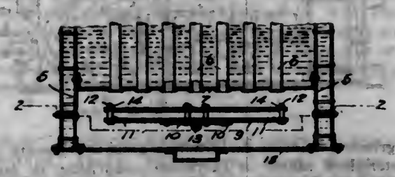
1,625,043. INTERNAL-COMBUSTION ENGINE. HAROLD E. MCCRAY, Waterloo, Iowa, assignor to John Deere Tractor Company, Waterloo, Iowa, a Corporation of Iowa. Original application filed Feb. 15, 1923, Serial No. 619,081. Divided and this application filed Apr. 27, 1925. Serial No. 26,152. 8 Claims. (Cl. 123—195.)

2. In an internal combustion engine, the combination of a crank case, a removable cover therefor, a crank shaft disposed transversely of said crank case, a magneto mounted exteriorly on said crank case and having an armature shaft extending through said cover into the crank case, said cover being removable independently of said armature shaft, a pinion carried by said armature shaft, a collar around the armature shaft and extending through said cover, and means for driving said pinion from said crank shaft.



1,625,044. DISCHARGE MANIFOLD FOR PRESSURE CONTAINERS. WILLIAM C. MCKNOWN, Baltimore, Md., assignor to Modern Household Appliance Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 4, 1925. Serial No. 73,146. 6 Claims. (Cl. 221—73.5.)

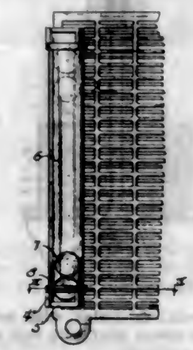
1. The combination with a container having a passage provided with a valve seat communicating with the interior thereof, of a discharge manifold movably mounted in said passage, and a head attached to one end of said manifold and capable of movement relative thereto, said



head having a hole registering with said passage and adapted to effect a sealed joint with said seat through the movement of said manifold.

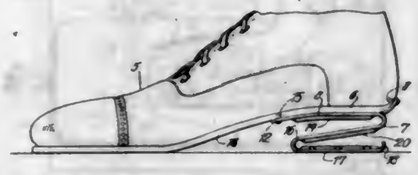
1,625,045. SAFETY DEVICE FOR CLUTCH MECHANISM. JAMES B. MONAHAN, New York, N. Y., assignor to Litho Etching Corporation, New York, N. Y., a Corporation of New York. Filed May 28, 1925. Serial No. 33,330. 2 Claims. (Cl. 192—131.)

1. A safety device including: a reciprocable controlling member, a collar on said member, two pivotally supported arms normally urged into the plane of the collar to prevent movement of the controlling member, an electromagnet to be energized at will, and an armature controlled by the electro-magnet to spread the arms apart and into positions beyond the plane of the collar.



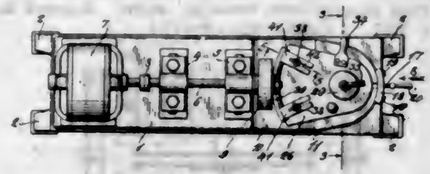
1,625,046. BOILER. MICHAEL MORLEY, Brooklyn, N. Y. Filed June 29, 1925, Serial No. 40,346. Renewed Mar. 1, 1927. 1 Claim. (Cl. 110—97.)

In a boiler, the combination of a body having a plurality of flues, a shaft connected to the body, a plate consisting of a pair of semi-circular sections hingedly connected to said shaft, and a second plate consisting of



semi-circular sections rigidly connected with said first named sections, said sections of the second named plate being in spaced parallel relation to the sections of the first named plate.

1,625,047. INDICATOR FOR STORAGE BATTERIES. ROBERT D. MOWRY, Chicago, Ill., assignor to Universal Battery Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1925. Serial No. 32,245. 1 Claim. (Cl. 136—182.)

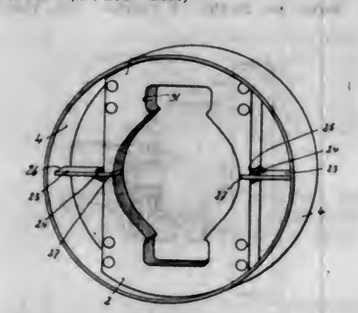


The combination with a storage battery plate, of spaced supporting brackets associated with one edge thereof, a transparent open end tube supported by said brackets and specific gravity indicating means in said tube.

1,625,048. SPRING HEEL. JOHN R. NOCK, Brooklyn, N. Y. Filed Mar. 13, 1926. Serial No. 94,609. 2 Claims. (Cl. 36—38.)

1. A shoe heel consisting of a strip of metal bent to provide opposing portions one of which is adapted to be attached to a shoe and one of said portions constituting a ground engaging member, and outstruck rib members formed longitudinally of said opposing heel portions.

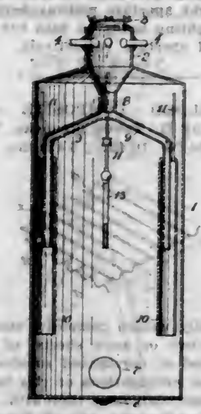
1,625,049. GRINDING MACHINE. GEORGE A. OLIVER, Cleburne, Tex. Filed Nov. 21, 1925. Serial No. 70,479. 1 Claim. (Cl. 51—124.)



A grinding machine for grinding arcuate segments to a predetermined radius of curvature comprising, in combination, a base member having a plurality of bearings, a shaft mounted for rotation in said bearings, a grinding wheel secured to said shaft, said wheel having a plane grinding surface, a plate supported by said base and mounted for oscillation in a plane perpendicular to the plane of the grinding surface of the wheel, a pivot about which said plate oscillates, means for moving said pivot towards and away from the grinding wheel, means for supporting the outer end of said plate and an arcuate extension plate secured to the movable end of said first mentioned plate.

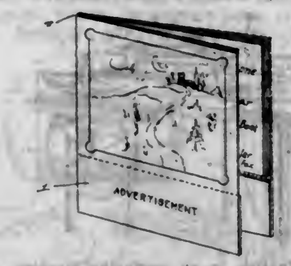
1,625,050. EXTENDIBLE SPECTACLE TEMPLE. LOUIS A. PAGE, Providence, R. I., assignor of one-half to Harry C. Messinger, Providence, R. I. Filed Jan. 21, 1926. Serial No. 82,678. 2 Claims. (Cl. 88—52.)

1. A temple for spectacle frames having an elongated tubular shank with an ear-engaging loop portion at one end thereof, a cap on the other end of the tube, a wire core in the tube having an abutment thereon, a spring in the tube about the core acting between said cap and abutment to yieldingly permit a relative extending action of the tube and core, the outer end of the core being hinged to the frame.



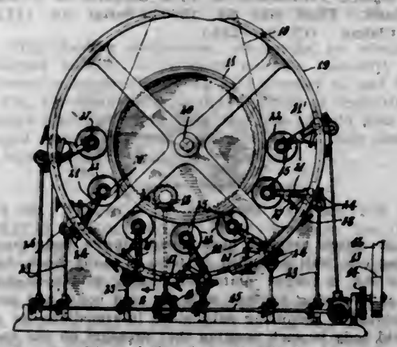
1,625,051. SUPPORTING HOUSING FOR ELECTRIC MACHINES WITH SPLIT POLES. HERMANN PAPST, Vienna, Austria, assignor, by mesne assignments, to Francis B. Keane, Bridgeport, Conn. Filed May 25, 1926, Serial No. 111,588, and in Austria Mar. 11, 1925. 6 Claims. (Cl. 171—209.)

1. The combination with a dynamo electric machine having a field structure comprising a plurality of polar projections, of a supporting housing comprising a thin sheet metal shell adapted to encircle said field structure, bearing shields arranged at each end of said shell and adapted to shape and support said shell, and spacing and reinforcing members associated with said poles and contacting with said shell to rigidly position said structure in said shell.



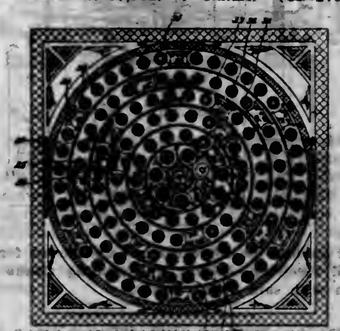
1,625,052. TANK FOR SEPARATING OIL AND WATER FROM GAS. FELBERT A. RAY, Wichita Falls, Tex. Filed Sept. 5, 1925. Serial No. 54,613. 8 Claims. (Cl. 183—2.7.)

1. In a tank of the character described for separating gas and water from oil, the combination with the fluid inlets of said tank of tubular members concentrically surrounding said inlets and closed at their tops to prevent ingress of gas therethrough, means to elevate the entrapped gas within said tubular members and pass the



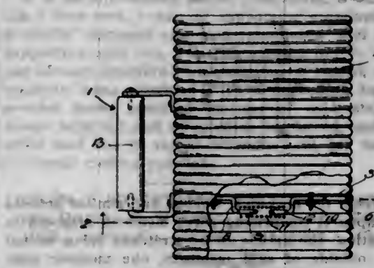
same above the level of the fluid within said tank and means for urging water from said tank by the pressure imposed upon the fluid by said gas.

1,625,053. LITERARY SAVINGS DEVICE. REGINALD C. REQUA, Cold Spring Harbor, N. Y. Filed Dec. 31, 1925. Serial No. 78,591. 4 Claims. (Cl. 281—29.)



4. A device for encouraging and promoting systematic savings, in the form of a book, the said device having a cover and leaves with edges spaced inwardly from an edge of the cover and also having coin holding means carried by the cover portion between the leaf edges and a cover edge.

1,625,054. REVOLVING STENCIL-CYLINDER MACHINE. VICTOR ROSATO, Bronx, N. Y. Filed Jan. 13, 1926. Serial No. 80,901. 5 Claims. (Cl. 101—116.)

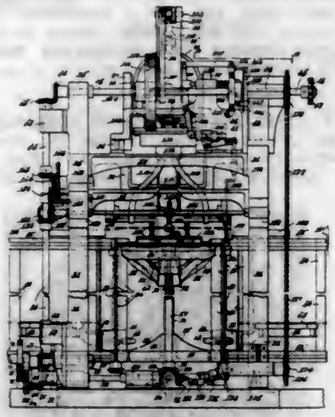


1. In a machine of the class described, a stencil member of cylindrical shape, an inking member in said cylindrical member, a concentrically arranged cylindrical pad within said inking member, an ink reservoir disposed within said cylindrical stencil member having a longitudinal V-shaped opening in the bottom thereof adjacent said inking pad, and a longitudinal V-shaped valve disposed over said opening adapted to be raised and lowered thereinto for controlling the flow of ink from said reservoir to said inking pad.

1,625,055. GAME APPARATUS FOR MULTISIX-COLOR GAMES. ALBERT SANDEL, Chicago, Ill., assignor of one-half to Frank Scholz, Chicago, Ill. Filed Nov. 19, 1925. Serial No. 69,982. 9 Claims. (Cl. 273—131.)

1. A game apparatus comprising a game-board having a plurality of enclosures with groups of play-circles or stations thereon, several of said groups containing circles or stations with certain colors displayed thereon which colors denote certain values, and play-pieces with corresponding colors adapted to be placed on said stations to score certain values.

1,625,056. ADJUSTABLE MEASURE. RICHARD E. SANDY, Cloverdale, Ind. Filed Mar. 3, 1926. Serial No. 91,981. 3 Claims. (Cl. 73—165.)



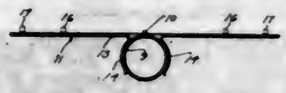
1. An adjustable measuring receptacle comprising a corrugated cylinder open at its respective ends, a bottom forming member slidable within the cylinder, means for holding said bottom forming member in any adjusted position in the cylinder, said means comprising a pair of opposed jaws slidably mounted on the under side of said bottom forming member, said jaws being adapted to be disposed within one of said corrugations.

1,625,057. CARTON-FEEDING MACHINE. JOSEPH M. SCHNUR, FRANK KNESELENG, JACOB SCHNUR, and STEVEN JONISCIK, Chicago, Ill., assignors to Katherine Schnur, as trustee, Chicago, Ill. Filed Oct. 12, 1925. Serial No. 61,955. 21 Claims. (Cl. 271—12.)

1. A carton feeding machine comprising platform means for supporting a stack of cartons; a track and

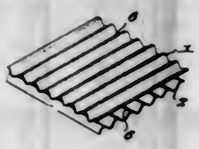
means movably mounted thereon for lifting the upper one of the cartons; movable means for receiving, holding and guiding the lifted carton; and means for operating said receiving, holding and guiding means in conjunction with said lifting means.

1,625,058. PROCESS OF DEWATERING PEAT. GEORGE A. SCHROTER, Denver, Colo. Filed July 13, 1925. Serial No. 43,397. 2 Claims. (Cl. 44—27.)



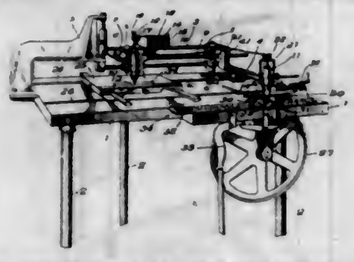
1. The process of dewatering peat comprising coagulating wet peat in the form of a slurry with just sufficient lime to render the mass slightly alkaline, decanting the liquid from the slurry, adding a drying agent such as burnt lime to the decanted peat, compressing the decanted mass, and then drying the compressed mass in the atmosphere.

1,625,059. STRETCHER FOR NECKTIES AND THE LIKE. CHARLES SNOWDON and FRANK BROWN, Wolsingham, England. Filed Oct. 19, 1925, Serial No. 63,328, and in Great Britain Nov. 25, 1924. 2 Claims. (Cl. 223—19.)



1. A stretcher for neck-ties, ribbons and similar articles of wearing apparel comprising three members disposed in close association, the article to be stretched being wound around the outside of said members, one member comprising a plurality of parts, a wedge for expanding the compound member to stretch the article, and means for guiding the movement of said parts.

1,625,060. LEAD SIGHT FOR FIREARMS. ADOLPH STORM, Minneapolis, Minn., assignor of one-half to Charles G. Strand, Minneapolis, Minn. Filed Aug. 15, 1925. Serial No. 50,386. 1 Claim. (Cl. 33—51.)



A lead sight for firearms comprising a flat straight horizontal bar, the end portions of which are folded inwardly under the intermediate portion of said bar and terminate in spaced reversely formed arcuate spring jaws applicable to grip the barrel of a firearm, said bar having a gun sight aperture midway between said jaws, and a pair of sighting beads on said bar located one on each side of said aperture respectively.

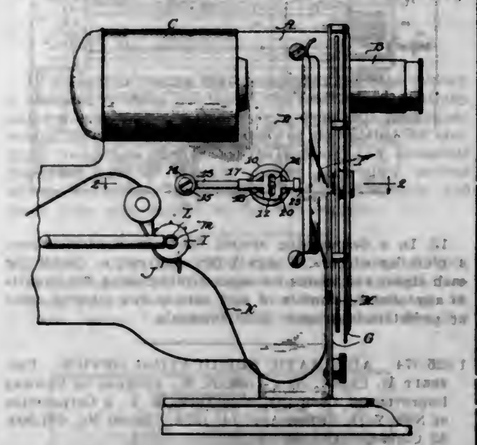
1,625,061. WELDED COMPOSITE CORRUGATED SHEET. PHILIP H. TROUT, Roanoke, Va. Filed Feb. 19, 1925. Serial No. 10,422. 3 Claims. (Cl. 219—10.)

1. An electrically welded composite sheet metal structure, comprising two or more sheets, of which at least one sheet is ribbed or corrugated substantially throughout its extent, the corrugations or ribs being electrically welded to the sheet contacting therewith, the surfaces of said sheets being otherwise out of direct contact with each other.

1,625,062. ENGRAVING MACHINE. HARRY G. TURNER, Chicago, Ill. Filed Jan. 11, 1926. Serial No. 80,597. 9 Claims. (Cl. 33—25.)

5. In combination in an engraving machine, a work support, slidable in one direction, a pattern holder movable in the same direction, a lever having a connection to said support and having a connection to said holder fixedly spaced from said connection and a fulcrum for the lever adjustably spaced from said connections.

1,625,063. BRACELET HOOK. LOUIS EDMOND VALCOURT, Pawtucket, R. I., assignor to Louis Stern Company, Providence, R. I., a Corporation of Rhode Island. Filed May 24, 1926. Serial No. 111,201. 5 Claims. (Cl. 24—233.)

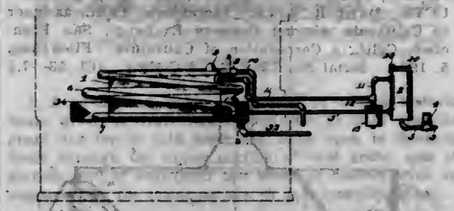


1. A watch bracelet hook comprising a body portion having one wall extended to form a shank hook-shaped at its end, a tongue plate for closing said hook-shaped end and forming another wall for said body, and means for pivotally mounting said plate intermediate its ends in said body in such position that pressure on one end of said plate causes the hook closing end thereof to move outwardly from said hook-shaped end and permit the insertion of a watch ball therein.

1,625,064. COMBINATION TOOL. NICOLA VELLO, Akron, Ohio. Filed June 7, 1926. Serial No. 114,125. 5 Claims. (Cl. 81—5.1.)

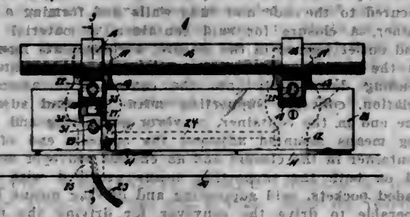
2. In a tool of the plier type, a jaw designed to enter and support the eye of a cotter-pin with its point projecting toward the opposite jaw, and an opposing jaw provided with a V-shaped face for spreading the pins.

1,625,065. INTERMITTENT-FILM FEED. ALEXANDER FERDINAND VICTOR, Davenport, Iowa. Filed Dec. 10, 1923. Serial No. 679,798. 9 Claims. (Cl. 88—18.4.)



1. Film feeding mechanism comprising an elongated oscillating member, an element movable therewith and reciprocable longitudinally on said member to and from the film, a rotatable disk, and a plurality of eccentrically disposed pins projecting from the face of said disk and engaged respectively with said member and said element for independently actuating the same.

1,625,066. METHOD OF MAKING DECORATIVE MATERIAL FROM PEAT. TIETE VIERSEN, Ter Apel, Netherlands. Application filed June 1, 1926. Serial No. 113,075, and in Netherlands May 30, 1925. 1 Claim. (Cl. 18—47.5.)



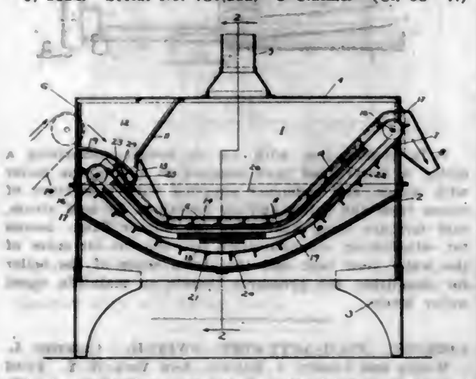
A process for the production of decorative materials from pieces of peat or bog deposit having long fibers, comprising the successive steps of drying raw pieces of peat or bog in their original state to reduce their water-content to about 10%, and then pressing said pieces directly together so as to consolidate them into a single integral mass or object of extreme firmness and density and of the desired size in which the fibres extend in various directions throughout the mass and are caused to interlace with one another.

1,625,067. OIL BURNER. SAMUEL E. WEAVER, Brooklyn, N. Y. Filed Jan. 21, 1925. Serial No. 3,709. 7 Claims. (Cl. 158—56.)

1. In combination with an oil burner comprising a boiler, a water feed tank adapted to supply the boiler with water, and a burner supplied with a mixture of steam from the boiler and oil entrained by said steam, said mixture being heated by the burner flame, means for establishing communication between the air space of the water feed tank and the steam space of the boiler for equalising the pressures therein to maintain equal water levels.

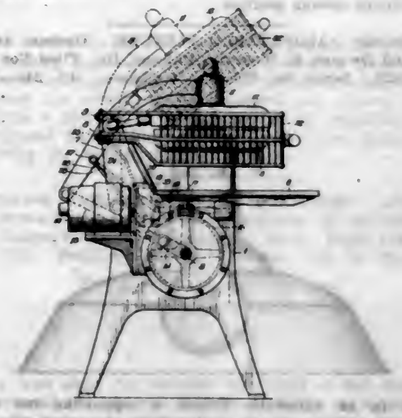
1,625,068. FOOT-ACTUATED SWITCH. CLINTON L. WOLFE and JOSEPH A. FAUROT, New York, N. Y. Filed May 19, 1924. Serial No. 714,474. 2 Claims. (Cl. 200—82.)

1. A circuit closing device comprising a bar constituting a foot rest, a pair of supporting standards, brackets pivotally mounted on said standards and swingingly supporting said bar, a circuit closing device actuated by one of said brackets when said bar is raised, one of said brackets being provided with a depending leg, a spring pressed latch mounted on one of said standards adjacent said leg and adapted to be forced under said leg when said bar is raised whereby said bar may be held in circuit closing position.



1,625,069. ADJUSTABLE FIXTURE. GEORGE ARRAS and DWIGHT E. WORRELL, Chicago, Ill. Filed Nov. 26, 1923. Serial No. 676,893. 5 Claims. (Cl. 240—78.)

1. In an adjustable fixture, a supporting rod with spaced notches, an insulating lamp socket having an

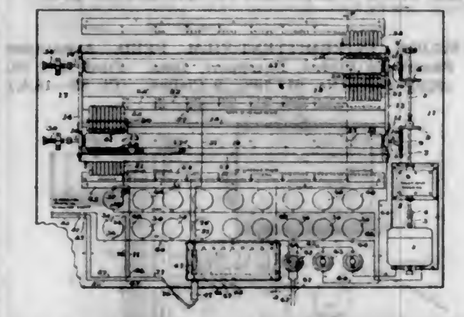


integral perforated projection through which the rod slides, and clamping means comprising a bent resilient strip, one end of which is adapted to engage the notches in the rod, and means to secure the other end of the strip to the socket and to press the first end against the rod.

1,625,070. APPARATUS FOR TREATING FOOD PRODUCTS. DAVID R. BAILEY, Sacramento, Calif., assignor to California Almond Growers Exchange, San Francisco, Calif., a Corporation of California. Filed Aug. 5, 1924. Serial No. 730,212. 3 Claims. (Cl. 53—7.)

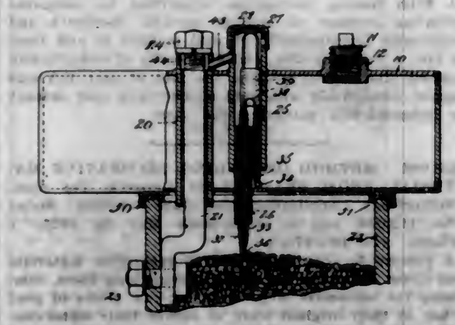
1. A processing apparatus comprising a pair of spaced parallel side walls joined by end walls, a bottom secured to the side and ends walls and forming a container, a closure for said container, a material inlet and outlet formed in the closure, a guide plate mounted in the closure, said material inlet and guide plate extending downwardly into the container in assembled relation, conveyor supporting means mounted adjacent one end in the container, conveyor supporting and driving means mounted adjacent the opposite end of the container in the closure and an endless conveyor mounted on both the supporting means provided with open ended pockets, said supporting and dirving means being operable to drive the conveyor for driving the upper flight toward said means for maintaining a bearing contact between the guide plate and the pockets on said conveyor for maintaining the pockets normally closed.

1,625,071. GARMENT PRESS. FRITZ BALZER, Moline, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Oct. 20, 1924. Serial No. 744,612. 8 Claims. (Cl. 192—138.)



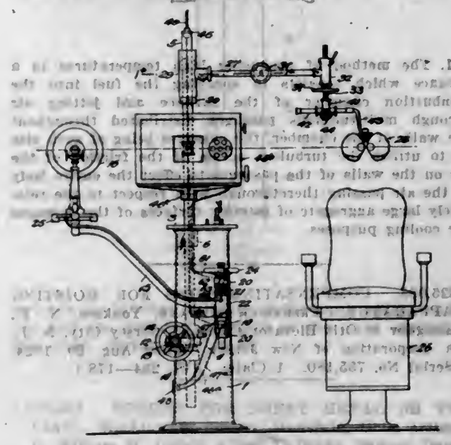
1. A garment press, comprising a movable buck, means for transmitting power to said buck, said power transmitting means including a worm and worm wheel, means responsive to said buck for controlling said power transmitting means, a guard, and means responsive to said guard for governing said controlling means.

1,625,072. PILE-WIRE CUTTER AND METHOD OF MAKING IT. MARCUS B. BEHRMAN, Brooklyn, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 25, 1924. Serial No. 752,146. 13 Claims. (Cl. 139—44.)



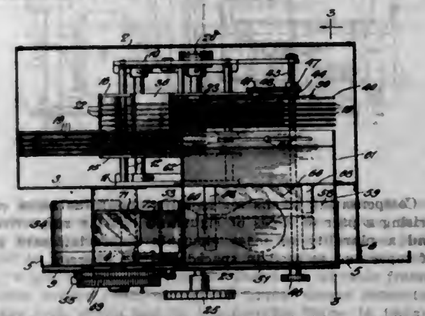
1. The method of forming a pile wire with a U-shaped blade holder attached thereto, which comprises the step or steps of simultaneously welding the ends of the walls of the U-shaped holder to each other, and such welded end to the pile wire.

1,625,073. APPARATUS FOR CONTROLLING ELEVATORS. FRANK E. BOARDMAN, Memphis, Tenn., assignor of one-half to Pleasant P. Williams, Memphis, Tenn. Filed Apr. 15, 1922. Serial No. 553,025. 15 Claims. (Cl. 177—336.)



13. In a despatching system for a bank of elevators, a plurality of cars, a signal for each car, a circuit for each signal and means for successively closing the circuits to any selected number of said cars in any selected order at predetermined equal time intervals.

1,625,074. AUTOMATIC LUBRICATING DEVICE. LEVERETT M. CLARK, New York, N. Y., assignor to Railway Improvement Company, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1923. Serial No. 631,994. 33 Claims. (Cl. 308—87.)

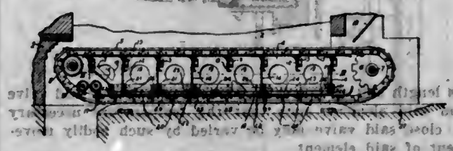


1. In an apparatus for lubricating bearings or the like, the combination with closed reservoir to contain the lubricant, said reservoir having a closable refilling opening, of a tube system extending into said reservoir, a support arranged in said tube system, and a feed wick having capillary lift and gravity feed portions, said wick being connected to said support, said tube system having a vent opening to atmosphere.

1,625,075. OPHTHALMOLOGICAL APPARATUS. HANS CLEMENT, New York, and GILBERT S. DEY, Mount Vernon, N. Y., assignors to General Optical Company, a Corporation of New York. Filed Nov. 9, 1923. Serial No. 673,728. 12 Claims. (Cl. 88—20.)

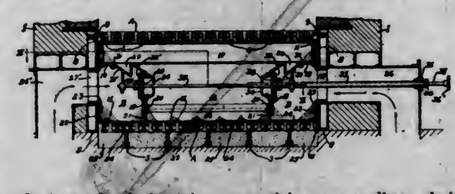
1. An optical testing device comprising a base cabinet, a standard entering the top of the cabinet and vertically adjustable therein, a support for a diagnostic instrument carried by the standard externally of the cabinet, an electrical receptacle carried by the cabinet and accessible from the exterior thereof, current controlling devices within the cabinet connected to the said receptacle, and leads from said devices to the said support.

1,625,076. OPTICAL TEST CHART. GILBERT S. DEY, Mount Vernon, N. Y., assignor to General Optical Company, Inc., a Corporation of New York. Filed Aug. 21, 1924. Serial No. 733,247. 17 Claims. (Cl. 88—20.)



1. An optical test chart comprising a casing having a front observation opening, a carriage within the casing movable toward and from the opening, a plurality of charts on the carriage mounted to move to and from observation position before the opening, means for imparting a step-by-step movement to the carriage, and chart-shifting means so operatively connected to the carriage moving means as to operate upon the charts between the steps of the carriage movement.

1,625,077. MECHANICAL STOKER. WILLIAM M. DUNCAN, Alton, Ill. Filed June 13, 1923. Serial No. 645,036. 11 Claims. (Cl. 110—40.)

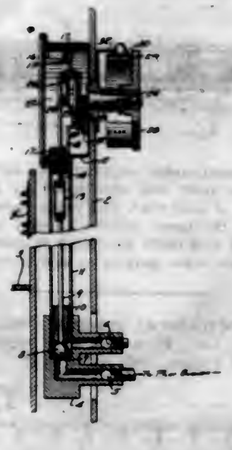


1. A mechanical stoker comprising an endless traveling chain grate, a draft box surrounded by said traveling grate, the top of said draft box being open to discharge draft through the upper portion of said grate, and the bottom wall of said draft box being in contact with and supported by the lower portion of said traveling grate.

1,625,078. MECHANICAL STOKER. WILLIAM M. DUNCAN, Alton, Ill. Filed Nov. 17, 1923. Serial No. 674,196. 22 Claims. (Cl. 110—40.)

1. A mechanical stoker comprising an endless traveling chain grate, a draft box surrounded by said grate, the top of said draft box being open to discharge draft through the upper portion of the grate, said draft box having side and bottom walls to confine the draft, and the bottom wall being made of independently yieldable sections contacting with and supported by the lower portion of the traveling grate.

1,625,079. MECHANICAL STOKER. WILLIAM M. DUNCAN, Alton, Ill. Filed Aug. 8, 1924. Serial No. 730,873. 5 Claims. (Cl. 110—40.)



1. A mechanical stoker comprising an endless chain grate, draft boxes surrounded by the grate and arranged transversely thereof to form a series of draft zones in the grate, said draft boxes being open at the top for the discharge of draft through the upper portion of the grate, a draft manifold surrounded by said grate and located below portions of said draft zones so as to lie within the grate and between said portions of said draft zones and the lower portion of the grate, the top wall of said draft manifold having discharge openings for the discharge of draft to said draft boxes, and means for regulating the flow of draft through said discharge openings.

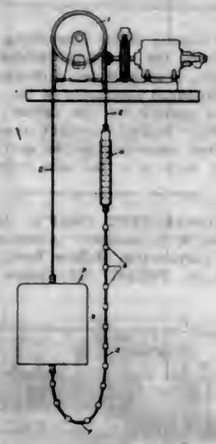
1,625,080. THERMOSTATIC OVEN CONTROL. EDWARD L. FORANCE, Newark, N. J., assignor, by mesne assignments, to The Wilcolator Company, Newark, N. J., a Corporation of Delaware. Filed Feb. 5, 1924. Serial No. 690,797. 21 Claims. (Cl. 236—15.)

1. In a device of the type described, the combination of a casing, a thermostatic element adapted to bend

under the influence of heat located within the said casing, a valve, means extending out of such casing for moving said element bodily substantially along the line of

its length and an operative connection between said valve and said element, such that the temperature necessary to close said valve may be varied by such bodily movement of said element.

1,625,081. WEED AND GRASS CUTTER. PHILIP J. HAAS, Omaha, Nebr. Filed Dec. 29, 1922. Serial No. 609,695. Renewed Sept. 30, 1926. 2 Claims. (Cl. 30—9.)

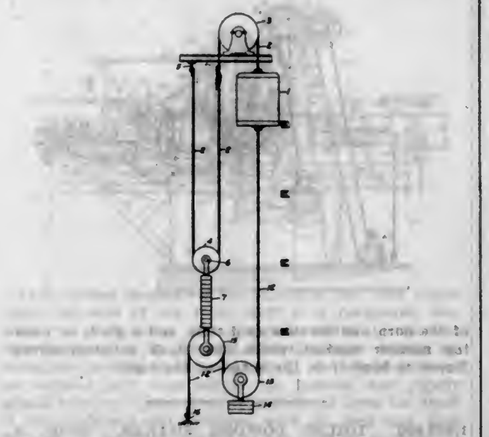


1. An implement of the class described, comprising a crescent-shaped blade having its concave edge sharpened, the main body of the blade being substantially flat and the ends having an upward curvature from the plane of the main body, a member secured on the upper side of the blade adjoining the rear convex edge thereof and equidistant from the ends, said member having an upstanding lug extending longitudinally of the blade, a relatively long straight handle having a bulbous enlargement at its upper end, said handle being connected at its lower end with said upstanding lug and adjustable pivotally about an axis transverse to said lug, whereby said handle is constantly in a plane perpendicular to the plane of the main body of the blade and parallel to a line between the points thereof, and means for securing the handle in fixed relation to the blade at variously adjusted positions in said perpendicular plane.

1,625,082. METHOD OF HEATING FURNACES. FRIEDRICH HELBIG, Karlsruhe, Germany. Filed Mar. 21, 1923, Serial No. 626,644, and in Germany May 17, 1921. 8 Claims. (Cl. 110—72.)

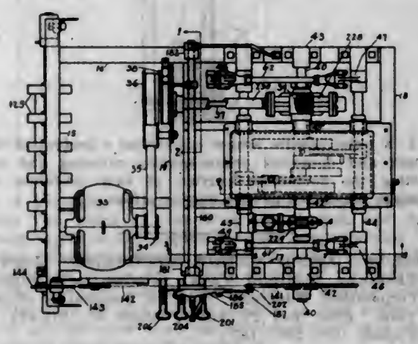
1. The method of producing high temperatures in a furnace which consists in spraying the fuel into the combustion chamber of the furnace and jetting air through multitudinous passages distributed throughout the walls of the chamber, the passages being of such size as to utilize the turbulent action of the friction of the air on the walls of the passages to effect the entire body of the air passing therethrough with respect to the relatively large aggregate of interior surfaces of the passages for cooling purposes.

1,625,083. COMPENSATING ROPE FOR HOISTING APPARATUS. FREDERICK HYMANS, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 30, 1924. Serial No. 735,180. 1 Claim. (Cl. 254—178.)



Compensating means for hoisting apparatus ropes comprising a pair of ropes of right and left lay respectively, and a plurality of mass elements embracing said pair of ropes and secured in spaced relation thereon.

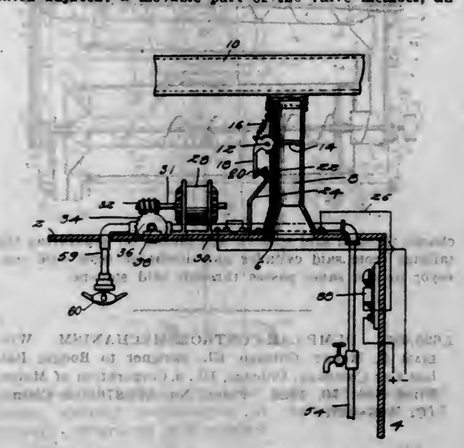
1,625,084. ROPING FOR HOISTING APPARATUS. FREDERICK HYMANS, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 12, 1924. Serial No. 737,300. 5 Claims. (Cl. 187—94.)



4. Hoisting apparatus comprising the combination with a cage, a counterweight, driving mechanism, roping supporting said cage and counterweight and comprising means for effecting movement of said counterweight in reduced ratio to cage movement; of a compensating rope

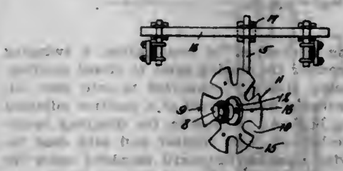
the entire length of which is supported by said cage and counterweight, and means for transferring from the one to the other the support of a length of compensating rope

equal to the increase in length of the ropes supporting the one and the decrease in length of the ropes supporting the other, during cage travel.



1,625,085. FEEDER FOR SHEET METAL OR THE LIKE. WILLIAM W. LEACH, Mansfield, Ohio, assignor to William H. Davey, Albert I. Davey, Samuel Davey, John Davey, Francis A. Davey, and James G. Davey, Mansfield, Ohio, and Harold Davey, Detroit, Mich. Filed Sept. 10, 1924. Serial No. 736,965. 41 Claims. (Cl. 271—27.)

1. In a feeder, a plurality of cams rigidly mounted on a driven shaft, rock shafts spaced from the driven shaft and journaled in parallel relation thereto, means journaled on the rock shafts and actuated by the cams to impart a partial rotary movement thereto, a movable frame, vacuum means mounted on the frame, means connected to the rock shafts and to the movable frame to impart in combination with the cams a predetermined movement to the frame, as set forth.

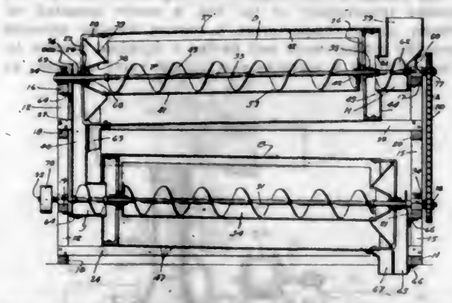


1,625,086. AUTOMATIC FIRE EXTINGUISHER. GENTARO MATSUSHITA, Selma, Calif. Filed Mar. 24, 1923. Serial No. 627,371. 2 Claims. (Cl. 169—2.)

1. In combination with a compartment provided with a vertically disposed flue upon its ceiling wall, fire extinguishing apparatus comprising a valve member pivoted to the flue and having an end portion disposed therein, spring means for holding said end portion of the valve member transversely of the flue, a motor mounted exteriorly of the compartment, a contact member mounted upon the compartment and having a terminal portion located adjacent a movable part of the valve member, an

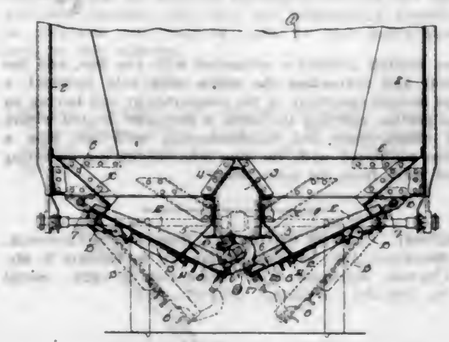
open electric conductor connected with the flue, and the motor and connecting the motor with said terminal, a pipe located exteriorly of the compartment and having an end portion entering the same, a sprinkler located within the compartment, and communicating with said pipe, a valve connected with the pipe and means for operating said valve from the motor shaft.

1,625,087. COTTON CHOPPER. ROBERT S. MCCLINTOCK, Marianna, Ark., assignor of one-half to William S. McClintock, Marianna, Ark. Filed Oct. 2, 1926. Serial No. 666,170. 1 Claim. (Cl. 97—22.)



A cotton chopper including a sectional hub, a spider, a disk-like cutting member having cut out portions defining blades, said disk-like cutting member and spider being supported between the sections of the hub, the rear cutting edges of the blades of the cutting member being curved outwardly and having their outer edges beveled to provide cutting surfaces, bolts passing through the hub sections, spider and disk-like cutting member to removably secure the spider, cutting member and hub sections together, said hub sections having extensions providing bearings, said chopper having a central opening, and a shaft extended through the opening and on which the chopper rotates.

1,625,088. GRAIN SEPARATOR. HAAKON MJOLANESS, Chaffee, N. Dak. Filed Apr. 12, 1923. Serial No. 631,601. 6 Claims. (Cl. 209—95.)

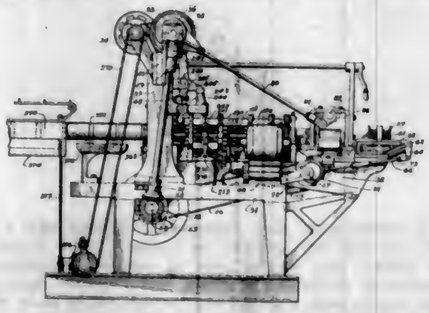


1. A grain separator comprising a cylinder, a conveyor within said cylinder coaxially mounted relative thereto,

spiders for supporting said cylinder and conveyor at one end, said cylinder and conveyor being adapted to dis-

charge through said spiders, and means for separating the tailings from said cylinder and discharge from said conveyor as the same passes through said spiders.

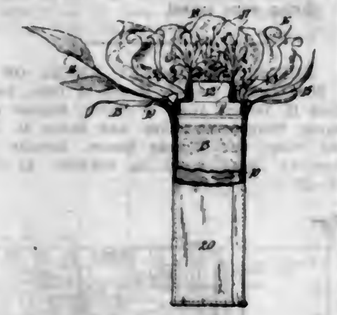
1,625,089. DUMP-CAR-CONTROL MECHANISM. WILLIAM E. MORRY, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 10, 1923. Serial No. 673,876. 5 Claims. (Cl. 105—251.)



1. In dumping mechanism, in combination, a swinging dump door, a member for moving same to closed position, said member being pivotally connected to said door adjacent to the swinging edge thereof at a position adjacent to which lading is likely to pass in the dumping operation of said mechanism, said member and said door being provided with cooperating guard members operative at all relative positions of said member and said door to keep lading at a relatively great distance from the region of pivotal connection of said member to said door.

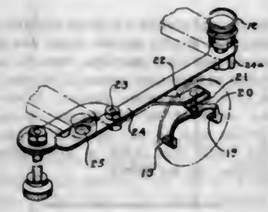
1,625,090. MANUFACTURE OF STRAWBOARD. MARY E. PENNINGTON, St. Davids, Pa., and ALEX BROOKING DAVIS, Cincinnati, Ohio. Filed Apr. 18, 1925. Serial No. 24,273. 15 Claims. (Cl. 92—3.)

1. Strawboard comprising disintegrated new straw disinfected and steam distilled, the strawboard being inodorous and sterile.



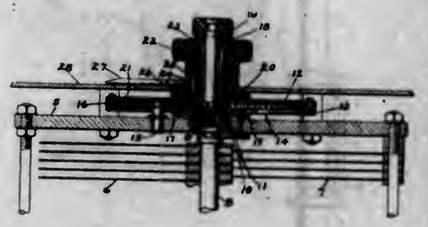
1,625,091. CAN-BODY-MAKING MACHINE. JOHN F. PETERS, Rochester, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 10, 1922. Serial No. 599,991. 55 Claims. (Cl. 113—11.)

1. A machine for making can bodies, comprising a forming horn, means for arranging body blanks in horizontal position adjacent said horn, feed rolls mounted beneath the horn and in position to receive an end of the blank, means moving the blank to the under side



of the horn and between said rolls, and a guide or bending member against which the blank is progressively forced to bend it to the shape of the horn.

1,625,092. TOILET POWDER SHAKER. ETHEL A. POILLON, Brooklyn, N. Y. Filed Nov. 19, 1926. Serial No. 149,899. 7 Claims. (Cl. 41—14.)



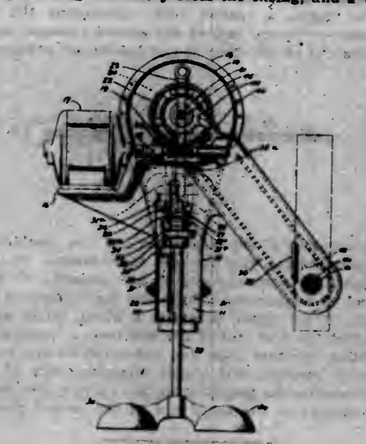
1. A toilet powder shaker comprising a perforated container and openwork ornamentation covering and concealing the perforated portion of said container but through which the powder may be sifted.

1,625,093. SPEED-CONTROL MECHANISM. JOHN E. RENHOLDT, Stratford, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed May 29, 1924. Serial No. 716,674. 9 Claims. (Cl. 188—187.)

1. A speed-controlling mechanism comprising a supporting-plate; a governor brake device; means for shifting the governor brake device; and means for securing said shifting means to said supporting-plate; and means for securing said plate to a motor-frame.

1,625,094. ELECTRIC CONDENSER. HUGH E. REPPERT, Washington, D. C. Filed June 24, 1922. Serial No. 570,735. 1 Claim. (Cl. 74—7.)

In a control mechanism for adjusting the rotor plates about the axis of the rotor shaft of a condenser, consisting of a housing, means rigidly affixed thereto for directly rotating the housing, and means for rigidly affixing the housing to the rotor shaft, the combination of an annular gear race within the housing and rigidly affixed thereto, a gear fixed at a distance from the shaft of the condenser and enmeshed with the gear race with its axis of rotation parallel to the axis of rotation of the shaft, a spindle extending through the housing, a gear upon the end of the spindle and enmeshed with the fixed gear and means upon the outer end of the spindle for imparting rotation to the spindle, housing and shaft of the rotor plates for slow movement of rotation of the rotor plates of the condenser.



1,625,095. FIBER PACKING. CLEMENT REETZIN, Hatboro, Pa. Filed Nov. 4, 1922. Serial No. 599,164. 2 Claims. (Cl. 154—45.5.)

2. A generally rectangular duck and rubber packing having two series of parallel layers of duck and the parallel layers in the respective series being disposed in angular relation to present some of the converging ends of the layers at one flat bearing surface of the packing and the other flat bearing surface of the packing being provided with an open groove common to each series of layers and narrower than the last mentioned face and adapted to afford space for crowding.

1,625,096. WASHING MACHINE. HOWARD W. ROUTSON, Oakland, Calif., assignor, by mesne assignments, to Minimax Utilities Corporation, a Corporation of California. Filed Oct. 7, 1925. Serial No. 60,987. 4 Claims. (Cl. 74—14.)

1. A washing machine comprising a casing adapted to be arranged in a vertical position and secured against an upright support, a motor supported thereby, a worm journalled in the casing and connected with the motor, a gear journalled in the casing and in mesh with the worm, a cross-head disposed below the gear and reciprocably connected to the casing and guided thereby for vertical reciprocation, a connecting rod connected to said cross-head and to an eccentric point on said gear whereby rotation of the gear will vertically reciprocate the cross-head, said cross-head having a lateral extension projecting outwardly from the casing, and a vertical-

ly reciprocable member connected with said lateral extension whereby reciprocation of the cross-head will vertically reciprocate said member.

1,625,097. AIR PUMP. WALTER J. RUDOLPH, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 23, 1921. Serial No. 517,208. 3 Claims. (Cl. 230—27.)

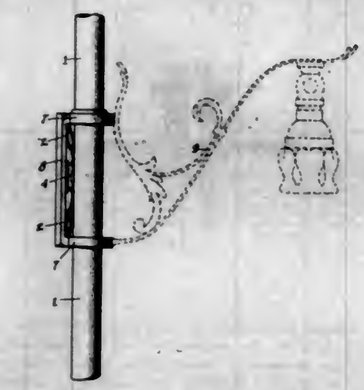
1. In a pump, the combination with a barrel, of a piston rod reciprocable therein, a handle, a spring fork carried by the handle with apertures in the fork, a pin secured transversely in the end of the piston rod and entering the apertures, and means for securing the fork in alignment with the piston rod.

1,625,098. ATOMIZING CLEANER. WALTER J. RUDOLPH, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 23, 1922. Serial No. 531,803. 5 Claims. (Cl. 299—140.)

1. In a device of the class described, the combination with a body having two passages therethrough, of a fine tube connecting with one end of one passage, the other end of which is provided with means for connecting it

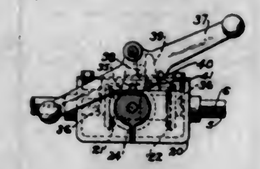
to a supply of air under pressure, said means comprising a nipple adapted to co-operate with an air chuck and a thumb screw which can be used to force the air chuck upon the nipple, a coarser tube surrounding the first and connected to one end of the second passage, and a tube connected to the other end of the second passage.

4. In a device of the class described, the combination with a body having two passages therethrough, of a fine tube connecting with one end of one passage, the other end of which is provided with means for connecting it to a supply of air under pressure, a short coiled spring surrounding the free end of the fine tube, a coarser tube surrounding the first tube and connected to one end of the second passage, said spring engaging both of said tubes to center the fine tube in the coarser one, and a tube connected to the other end of the second passage.



1,625,099. PUMP. WALTER J. RUDOLPH, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Nov. 23, 1921, Serial No. 517,208. Divided and this application filed Dec. 20, 1924. Serial No. 757,224. 3 Claims. (Cl. 230—27.)

1. In a valved piston construction, the combination with an integral piston rod having a hollow lower end and two shoulders of different diameters on said hollow portion formed by twice reducing the diameter of the piston rod, and a packing disc against each shoulder, the lower disc secured in place by swaging the metal below it, and the valve outlet from the hollow end adjacent the upper shoulder, of a sleeve sliding between the packing discs, and a piston secured to the sleeve.

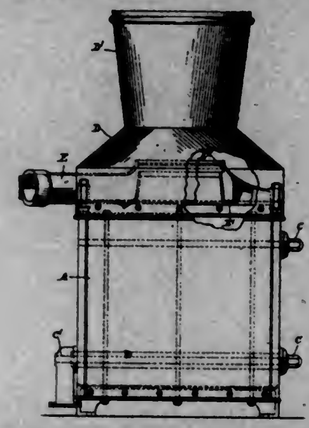


1,625,100. LAMP SUPPORT. RICHARD M. RUNOS, Meriden, Conn., assignor, by mesne assignments, to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 695,487. 2 Claims. (Cl. 248—7.)

1. An adjustable lamp support comprising a post, a member encircling the post and slidable thereon, a lamp bracket attached thereto, and a vertical spring lying between the sliding member and the post and provided with horizontal arms extending beyond the post adapted

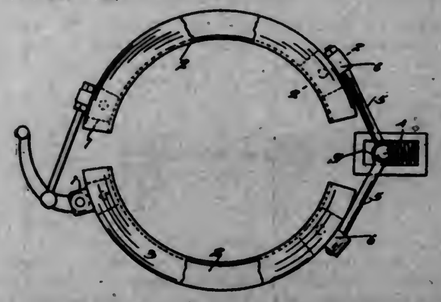
to release the spring pressure when bent backward to permit the sliding member and bracket to move freely on the post.

1,625,101. WRINGER ATTACHMENT. FRANK B. SCHUYLER, Berkeley, Calif., assignor to Johnson Washer Company, Oakland, Calif., a Corporation of California. Filed Oct. 2, 1924. Serial No. 741,142. 2 Claims. (Cl. 68—3.2.)



1. A clothes wringer and driving and supporting mechanism therefor comprising a frame, a main shaft extending from end to end of the frame and journalled therein, a gear transmission case slidably mounted on said shaft, a clothes wringer secured to said gear transmission case, said transmission case and clothes wringer being movable from end to end of the shaft, wringing rollers in the wringer, a pair of interspaced bevel gears splined on the main shaft and disposed within the transmission case, a bevel gear secured to a shaft carrying one of the wringer rolls, said bevel gears being also disposed within the transmission case, a sliding cover on the transmission case, lugs on said cover engaging the pair of bevel gears, and means for transmitting movement to the cover and the gears to shift the same either to a neutral position with relation to the single bevel gear, or to a position where one or another of the pair of bevel gears will intermesh therewith.

1,625,102. EXHAUST NOZZLE AND ASSEMBLY. JOHN A. SECOR, La Porte, Ind., assignor to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Original application filed Apr. 12, 1922, Serial No. 552,019. Divided and this application filed Dec. 11, 1922. Serial No. 606,175. 5 Claims. (Cl. 123—174.)

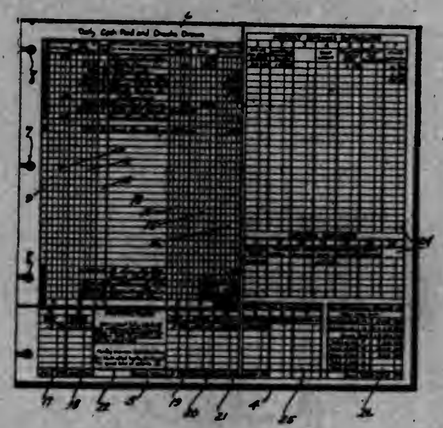


1. In combination with a radiator a casing enclosing the same, said casing open at its top and bottom and means for positively drawing air in at the bottom of said casing and through said radiator and for forcing the same out at the top of the casing, said means comprising a combined muffler and ejector, said muffler of

generally annular plan and provided with a single annular outlet port extending about said muffler, said means adapted to receive the exhaust gases from an internal

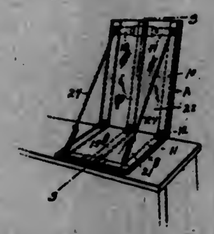
combustion engine and a connection from said engine entering said muffler in a plane generally at a right angle to the plane of such annular outlet port.

1,625,103. V-SECTION BANDLESS BRAKE. FREDERICK W. SMITH, Whittier, Calif. Filed Dec. 8, 1924, Serial No. 754,576. Renewed Feb. 28, 1927. 3 Claims. (Cl. 188—74.)



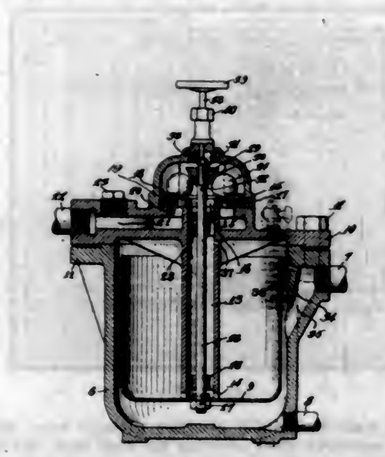
1. A bandless brake-shoe assembly including a set of arcuate, sheet-metal elements which are each bent to a V-section transversely and whose ends are provided with mounts in the hollows of the shoes, whereby the shoes are connected in train for circumferential tension when applied to a drum.

1,625,104. SNAP FASTENER. HENRY SPENGLER, New York, N. Y. Filed Apr. 19, 1921, Serial No. 462,516. Renewed Aug. 16, 1926. 5 Claims. (Cl. 24—216.)



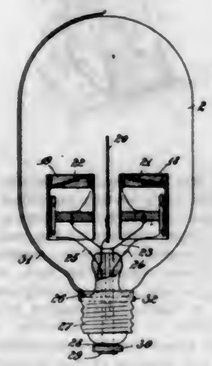
1. A snap fastening comprising companion members, one having curled-over spring holding fingers at the rim thereof and the other having an angularly outstanding flange to be marginally forced between the spring fingers and peripherally engage behind the curled-over terminals thereof.

1,625,105. DOUBLE-ENTRY AND TRIAL-BALANCE BOOK. FRANK H. STERLING, Minneapolis, Minn. Filed Sept. 15, 1922. Serial No. 588,345. 3 Claims. (Cl. 283—63.)



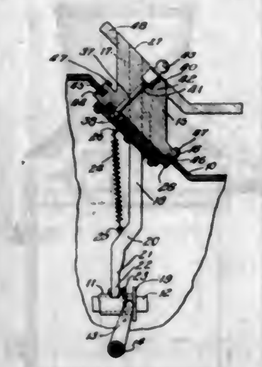
1. A book of the kind described having a main sheet, and a secondary sheet overlying the main sheet and terminating short of the bottom and one side thereof, said secondary sheet having a vertical memorandum column appropriately designated and a vertical figure column appropriately designated, said main sheet having a vertical figure column appropriately designated that is aligned with the vertical figure column on the secondary sheet, said main sheet having at one side of the secondary sheet upper and lower distributing columns appropriately designated for items entered on the secondary sheet.

1,625,106. FOLDING BACK-REST. JOSEPHINE W. SULLIVAN, New York, N. Y. Filed Apr. 23, 1924. Serial No. 708,340. 2 Claims. (Cl. 155—131.)



1. A combined seat and back rest having a seat section and a back section, each section including a pair of side frame members and an intermediate frame member parallel thereto, each frame member of the back section being hinged to the corresponding frame member of the seat section, flexible means connecting each side member of the seat section to the corresponding side member of the back section to limit the swinging of one section in respect to the other, a fabric covering having pockets within which said frame members are positioned, whereby the fabric limits the spacing of the members but permits the seat section and the back section to be rolled up with the two sections in superposed relationship, and a plurality of members outside of said covering and adapted to extend from one side frame member to the other to hold said side frame members in spaced relationship and to support said intermediate frame member or to lie parallel to said frame members, and permit said rolling of said covering

1,625,107. HAMMER-BLOW STEAM TRAP. CHARLES H. THOMPSON, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 6, 1924. Serial No. 711,344. 3 Claims. (Cl. 137—103.)



1. In a steam trap for intermittent discharge, a trap bucket, a compartment therefor, a plurality of independent discharge valves, a valve operating member common to all the valves and in simultaneous contact therewith, and a second member loosely connected with the first and operative to strike the first a hammer blow as the trap is filling to open the discharge valves.

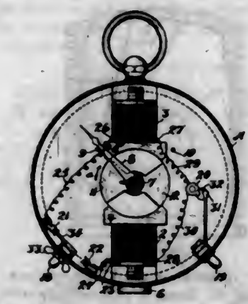
1,625,108. FLASH-LIGHT LAMP. PAUL VIERKÖTTER, Munich, Germany. Filed Dec. 29, 1926, Serial No. 157,844, and in Germany Aug. 15, 1925. 13 Claims. (Cl. 67—31.)

1. A flash-light lamp, comprising, in combination, a hollow, transparent body which is at least partially evacuated, a carrier for a flash-light charge enclosed in said body, and means for exploding said charge within the said body.

1,625,109. AUTOMOBILE LOCK. FRANK P. VOOT and EDWARD C. DORN, Chicago, Ill. Filed Dec. 2, 1921. Serial No. 519,316. 8 Claims. (Cl. 70—90.)

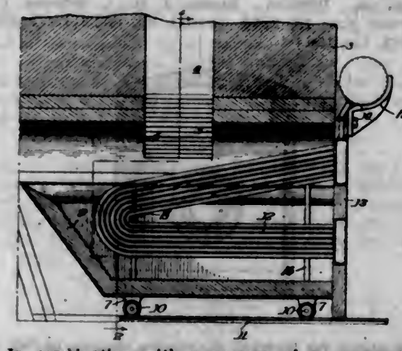
1. In an automobile, a clutch for transmitting driving power, a casing for said clutch, means for releasing said clutch, locking means mounted on said casing and adapted to lock said clutch releasing means with said clutch in released position, and means normally out of engagement with the casing and adapted to be operated by said locking means to lock said locking means to said casing when said clutch releasing means is locked.

1,625,110. BOTTLE CLOSURE. WALLACE M. WEEKS, Skaneateles, N. Y., assignor of one-half to John A. Pease, Skaneateles, N. Y. Filed Aug. 7, 1926. Serial No. 127,869. 1 Claim. (Cl. 215—38.)



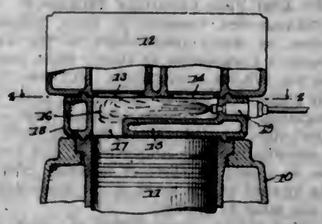
A bottle closure comprising a thin and freely flexible member of uniform diameter throughout having a central substantially flat portion and a curved annular portion formed to overlie the bead of a bottle mouth, a disk underlying the central portion of the member and being formed to seat on the ledge of the bottle mouth, said disk being stiff and of greater thickness than that of the body and means to secure the disk to the central portion of the member with the entire area of the disk in intimate contact therewith and at points throughout and adjacent to the periphery of the disk consisting of a series of staples arranged in circular formation and disposed spaced from the center of the disk and adjacent the periphery thereof whereby upon lifting of the curved annular portion of the member, the disk will be lifted from the ledge by power applied at a point adjacent to the disk periphery thereby to prevent tearing or distortion of the disk.

1,625,111. UNIVERSAL ELECTRIC TESTING INSTRUMENT. EMILE WEINAUG and REGINALD L. MACFARLANE, San Francisco, Calif., assignors, by direct and mesne assignments, of one-half to Joseph Silven and one-half to Walter E. Waechtler, San Francisco, Calif. Filed Mar. 14, 1922. Serial No. 543,687. 3 Claims. (Cl. 175—183.)



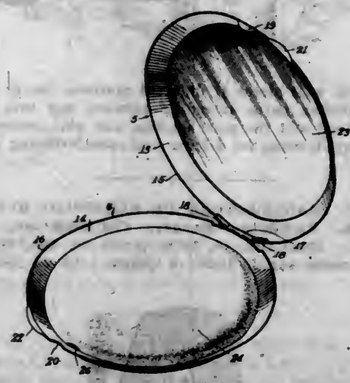
1. In an instrument of the character described, a casing, a pair of opposed magnets mounted therein, one having a fine and the other a coarse wire winding, a core in each magnet, the core of one magnet extending

beyond the casing, an armature pivotally disposed between the cores of the magnets and actuated thereby, a pointer movable in unison with said armature, an index



and a volt, ampere, and a magnet strength indicating scale on said index over which the pointer is movable to indicate either voltage, amperage or magnetic strength.

1,625,112. WASTE-HEAT BOILER FOR REGENERATIVE FURNACES. BRADLEY P. WHEELER, Duluth, Minn. Filed June 17, 1921. Serial No. 478,268. 5 Claims. (Cl. 122—7.)



1. In combination with a passage of a regenerative furnace, a truck and a waste heat boiler located in said passage, which passage is adapted for transmission of heated incoming and outgoing gases, said truck supporting said boiler and serving as a removable bottom for a portion of said passage.

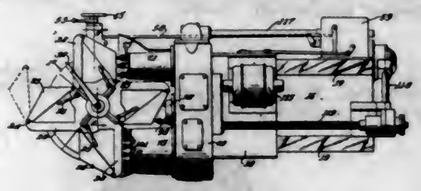
1,625,113. OIL ENGINE. OTTO A. BANNER, Milwaukee, Wis., assignor to The Falk Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 17, 1922. Serial No. 544,414. 4 Claims. (Cl. 123—32.)

1. In an internal combustion engine the combination of a cylinder having an elongated chamber extending transversely thereof, intake and exhaust valves in one wall of said chamber, a restricted passage through the opposite wall of said chamber at one end thereof, means for cooling the walls of said chamber, and means at the other end of said chamber for directing a fuel spray extending longitudinally thereof.

1,625,114. COMPACT CASE. CHARLES N. CORYELL, New York, N. Y. Filed Apr. 26, 1926. Serial No. 104,511. 8 Claims. (Cl. 132—83.)

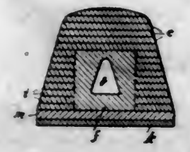
1. A compact case comprising a cup, a lid hinged thereto, said lid having an annular recess means to secure the lid to the cup, a mirror permanently fastened in the recess of said lid, said fastening means being integral, a notched compact body removably engaged in said cup, and means to release said compact body therefrom.

1,625,115. PENHOLDER. MIKE FALCO, Canonsburg, Pa. Filed July 1, 1926. Serial No. 119,920. 3 Claims. (Cl. 120—101.)



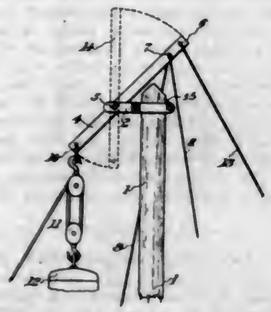
1. A pen holder provided at its outer end with a reduced extension formed with a longitudinal groove, and a circumferential groove, a metal ferrule fitted on said extension and provided with a longitudinal rib fitted in the longitudinal groove and a circumferential rib fitting into the circumferential groove, the outer end portion of said ferrule being pressed to form a seat for reception of the shank of a pen, a sleeve mounted for rotation upon said ferrule, said sleeve having one half portion cut away to provide an elongated notch opening through the outer end of the sleeve, said notch serving to release said pen when it is aligned with the shank of the pen.

1,625,116. MULTIPLE-TOOL-SPINDLE MACHINE. SAMUEL W. FISH, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 28, 1922. Serial No. 584,738. 10 Claims. (Cl. 77—23.)



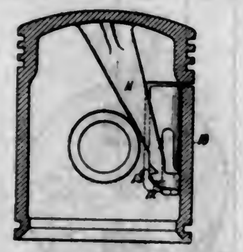
1. A multiple-spindle metal-working machine comprising, in combination, a work-carrier adatped to carry work-pieces in circumferentially spaced relation and to be indexed for moving the work-pieces from station to station, a tool-carrier adapted to travel back and forth in a plane at right angles to the index axis of the work-carrier and having a gear housing the front wall of

which faces the work-carrier in a plane at right angles to the travel of the tool-carrier, a plurality of spindle heads detachably mounted on said front wall in align-



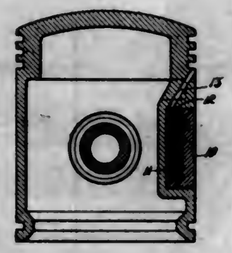
ment with work-pieces at different stations, one or more spindle-driving parts extending between and into each spindle head and the gear housing, and gear mechanism within said housing for driving said spindle-driving parts.

1,625,117. MANUFACTURE OF SEMISOLID RUBBER TIRES. REINHOLD GOLLEAT, Charlottenburg, Germany. Filed Dec. 14, 1926, Serial No. 154,797, and in Germany Aug. 5, 1925. 9 Claims. (Cl. 18—55.)



1. A method of manufacturing semi-solid tires which consists in forming a rubber body with a totally enclosed hollow space therein, filling said hollow space with a lump-free powdered mass, and forming said rubber body with its enclosed powdered mass into a ring, so that the resultant rubber body is adapted to be vulcanized to the felly of a wheel, preferably over the whole peripheral surface thereof, the powdered mass constituting the core being afterwards withdrawn through small holes.

1,625,118. LINEMAN'S LIFTING AND HOISTING DEVICE. SIMON P. GRANT, New Westminster, British Columbia, Canada. Filed Oct. 1, 1926. Serial No. 138,891. 3 Claims. (Cl. 254—139.)



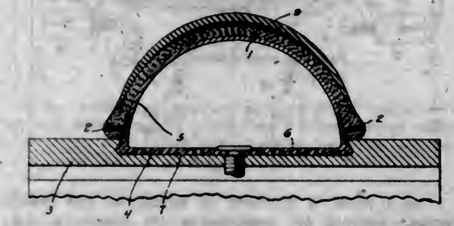
1. In a lineman's pole hoisting device of the character described the combination comprising, a clamping member adapted to encircle a post, said member having a radial projection, said projection being forked at its extremity, said fork being spanned by a fulcrum pin, a lever of the first order pivoted on said pin, a hauling cable attached to one extremity of said lever, and a block and tackle attached to the other.

1,625,119. PISTON. ELBERT J. HALL, Berkeley, Calif. Filed Apr. 18, 1923. Serial No. 632,918. 1 Claim. (Cl. 74—108.)

A piston for internal combustion engines having its skirt portion cut to form a tongue extending over approximately one-third the circumference of the piston and means automatically responsive to changes in the temperature of the piston to cause the tongue to be projected when the engine is relatively cool and to be retracted when the piston becomes heated, said tongue being cut inwardly at each side of its anchored end to form at each side a wing portion whose upper and lower ends are free to move.

1,625,120. PISTON. ELBERT J. HALL, Berkeley, Calif. Filed Apr. 18, 1923. Serial No. 632,914. 1 Claim. (Cl. 74—108.)

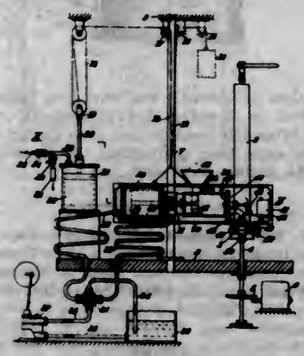
A piston for internal combustion engines having near its upper portion a groove for retaining a scraper ring, a movable segmental portion forming part of the piston skirt, a chamber to contain oil arranged between the segmental portion and the wall of the piston, and a duct leading from said chamber to the outside of the piston adjacent the scraper ring groove, whereby oil scraped by the ring will be admitted to the chamber for the purpose of forming a check against inward movement of the segmental portion.



1,625,121. METHOD OF TREATING AND PREPARING YEAST AND THE PRODUCT THEREOF. FRANK M. HILDEBRANDT and CHARLES N. FREY, Pittsburgh, Pa., assignors, by mesne assignments, to The Fleischmann Company, a Corporation of Ohio. Filed June 4, 1921. Serial No. 475,161. 10 Claims. (Cl. 99—10.)

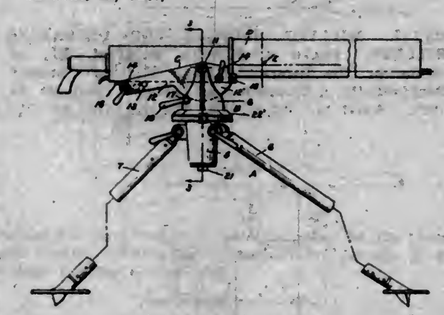
1. The steps of a method of treating yeast subsequent to propagation, which comprise causing yeast to pass into a dormant state by surrounding the cells with a coating having osmotically-acting properties of such strength that it tends so slowly to abstract moisture from the cells that the vitality of the yeast is not destroyed, and subjecting the mass to drying.

8. A dried bakers' yeast product in which a majority of the yeast cells present are adapted to retain their viability when preserved at ordinary atmospheric temperatures for a period of at least one month, and which



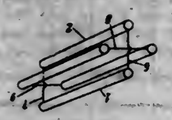
has been prepared by causing bakers' yeast to pass into a dormant state by surrounding the cells with a coating having osmotically-acting properties of such strength that it tends slowly to abstract moisture from the cells, mixing therewith a solid insoluble absorbent filler, and drying the mass under normal pressure at low temperature conditions.

1,625,122. PROCESS OF MANUFACTURING TIRE CASINGS FOR MOTOR VEHICLES. ERNEST HOPKINSON, New York, and WILLIAM J. STEINLE, Flushing, N. Y.; said Steinle assignor to The Hartford Rubber Works Company, Hartford, Conn., a Corporation of Connecticut. Filed Nov. 15, 1922. Serial No. 601,009. 9 Claims. (Cl. 154—14.)



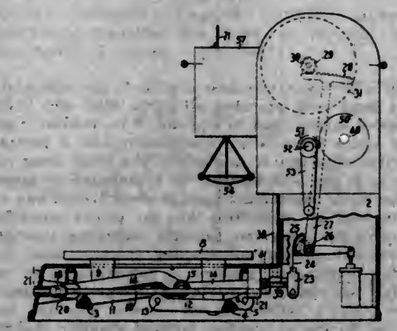
1. A method of manufacturing tire casings for motor vehicles which consists in, making a substantially flat band of strain-resisting-elements and rubber composition, partially forming the band to tire shape, applying a tread of vulcanizable rubber composition to the band to hold it partly shaped, further forming the band substantially to tire shape and mounting it on an annular support, and finally vulcanizing the casing on the annular support.

1,625,123. DEVICE FOR THE PRODUCTION OF CONCRETE PIPES AND ESPECIALLY FOR DEVICES FOR APPLYING THE CONCRETE. ALPHONS HORTEN, Berlin-Wilmersdorf, Germany. Filed June 29, 1926, Serial No. 119,500, and in Germany Sept. 24, 1925. 7 Claims. (Cl. 25—30.)



1. A device for the production of concrete pipes comprising a substantially cylindrical form, means for rotating the said form, a centrifugal wheel, means for rotating the wheel, means for carrying concrete in a uniformly finely divided condition to the periphery of the said centrifugal wheel, vanes at the periphery of the said wheel, means for rotatably supporting the wheel in the neighborhood of the axis of the said form and means for imparting a reciprocating movement to the said wheel and its cooperating parts in a direction parallel to the axis of the said form.

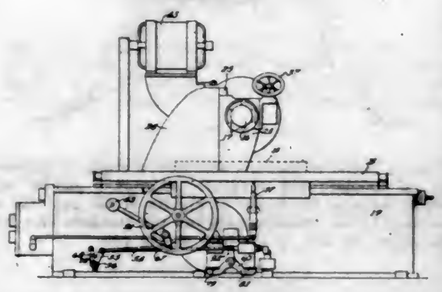
1,625,124. MOUNT FOR MACHINE GUNS. THOMAS M. JERVEY, Aberdeen, Md., and SAMUEL G. GREEN, Gray, Ga. Filed Oct. 9, 1925. Serial No. 61,615. 19 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883. 22 Stat. L., 625.)



19. A tripod including a standard, a cradle trunnioned in the standard and means for securing a gun in said cradle whereby the center of gravity of the gun will be forward of the trunnion axis and the trunnion axis will lie above the axis of the bore of the gun.

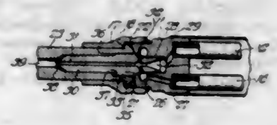
1,625,125. ELECTRICAL CONDUCTOR. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 19, 1921, Serial No. 493,667, and in France Feb. 22, 1916. 3 Claims. (Cl. 173—81.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A pair of electrical conductors for use in a circuit, each conductor consisting of two wires connected in multiple at their ends, the plane of one pair of wires being perpendicular to the plane of the other pair.



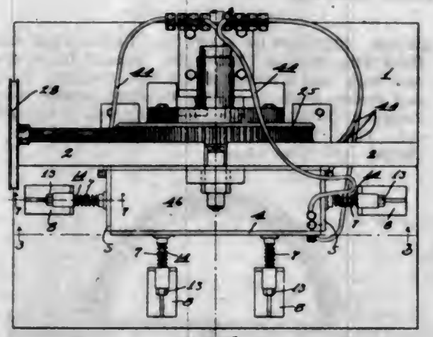
1,625,126. COUNTING SCALE. EDWARD B. LOCKE, Dayton, Ohio, assignor, by mesne assignments, to The Watson Experimental Laboratory Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 25, 1922. Serial No. 546,657. 44 Claims. (Cl. 265—37.)

1. The combination with weighing mechanism, a counting device operatively connected with said weighing mechanism, and means for adjusting said weighing



mechanism to vary its influence on said counting device, of weight operated means to control the adjustment of said weighing mechanism according to the unit weight of the articles to be counted.

1,625,127. MILLING MACHINE FOR DESEAMING BILLETS. FRANK J. MALONE, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Oct. 21, 1922. Serial No. 595,957. 17 Claims. (Cl. 90—21.)



1. In a machine for de-seaming billets and the like, the combination with a reciprocable work table, and a milling cutter, of mechanism for propelling the work table at rapid approach and reverse speeds and feed speeds, means for feeding the cutter into the work, and means for rendering said last mentioned means inoperative at all times except when the feed speed of said table propelling mechanism is engaged.

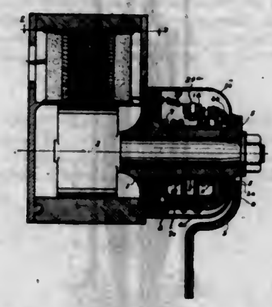
1,625,128. WELDING TORCH. ROBERT D. MCINTOSH, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 2, 1925. Serial No. 72,699. 5 Claims. (Cl. 158—274.)

5. In a device of the class described, the combination with a head piece provided with two inlets and having a threaded exterior and in one end of its interior a seat within which there is an enlargement and a threaded connection with one of said inlets, the other being connected with the enlargement, of a plurality of nipples each having a longitudinal passage therethrough and one end threaded to be screwed into the thread connection and having fine transverse passages registering exteriorly with the enlargement and opening at their inner ends into the longitudinal passage, a tubular member surrounding the nipple and having its flange end engaging the seat, and a connecting nut screwed onto the head piece and having an annular internal shoulder engaging the flange of the tubular member, said nipples having their passage of different sizes for different sized flames and adapted to be connected one at a time in the head piece, substantially as and for the purpose described.

1,625,129. APPARATUS FOR PRESSING CHEESE. JULIUS R. MEYERS, Evanston, Ill., assignor of one-half to C. A. Straubel Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 1, 1921. Serial No. 488,869. 7 Claims. (Cl. 100—57.)

7. In a press, a plurality of adjustable and heated elements adapted for compressing the cheese, a compression head adapted for reciprocation between said elements, a swingable bottom for the press, and operating mechanism for reciprocating said head, adjusting said elements and controlling said swingable bottom.

1,625,130. METHOD OF MAKING, CURING, AND SHIPPING CHEESE IN METAL BANDAGES. JULIUS R. MEYERS, Evanston, Ill., assignor to C. A. Straubel Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 7, 1922. Serial No. 580,005. 1 Claim. (Cl. 31—88.)

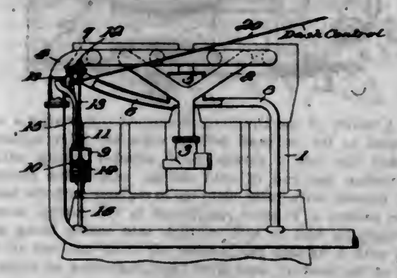


The method of forming and curing a cheese, which consists first in forming and compressing the curds within an adjustable bandage, and then curing the cheese and at the same time contracting the bandage to conform to the shrinkage thereof.

1,625,131. DIE. GEORGE LEE MILLER, Canton, Ohio, assignor, by mesne assignments, to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 26, 1924. Serial No. 688,699. 3 Claims. (Cl. 78—81.)

1. The method of beveling the edges of the ribs of a slotted roller bearing cage, which consists in placing the cage over an expansible die having beveled portions registering with the slots in the cage and expanding said die to bevel the edges of all of said ribs in a single operation by forcing the beveled portions of the die into the slots of the cage.

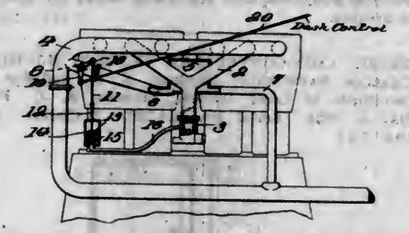
1,625,132. OSCILLATING DEVICE. JOHN LEWIS MILTON, Louisville, Ky. Filed Mar. 10, 1924. Serial No. 698,133. 15 Claims. (Cl. 123—149.)



6. An oscillating mechanism comprising fixed, driving and driven members and two torsion springs which actuate the mechanism and arrest the movable members to a predetermined position.

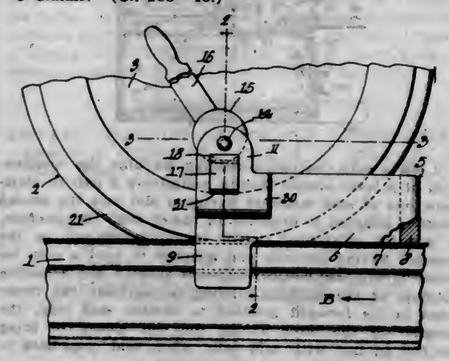
1,625,133. FUEL AND PROCESS OF MAKING SAME. THOMAS B. MOHLER, Burlingame, Calif. Filed Aug. 23, 1922. Serial No. 583,906. 8 Claims. (Cl. 44—14.)

1. A fuel comprising spent tan liquor and organic matter in which the spent tan liquor and organic matter are pre-treated separately before and collectively after admixture.



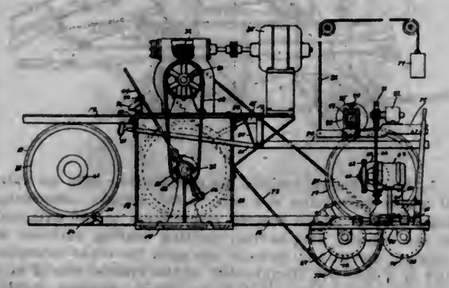
1,625,134. AUTOMATIC CHARGE-HEATING CONTROL FOR INTERNAL-COMBUSTION ENGINES. DONALD PLUMMER MOLONY, Flint, Mich., assignor to Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Filed Oct. 23, 1919. Serial No. 332,702. 7 Claims. (Cl. 123—122.)

2. An internal combustion engine having an exhaust pipe, intake manifold and carbureter connected thereto, a heater arranged to heat the charge in its passage from the carbureter to the engine, means for controlling the admission of exhaust gases to said heater and means located outside of the exhaust pipe actuated by the velocity of the heating fluid for actuating said heating fluid controlling means.



1,625,135. AUTOMATIC CHARGE-HEATING CONTROL FOR INTERNAL-COMBUSTION ENGINES. DONALD PLUMMER MOLONY, Flint, Mich., assignor to Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Filed Oct. 23, 1919. Serial No. 332,703. 9 Claims. (Cl. 123—122.)

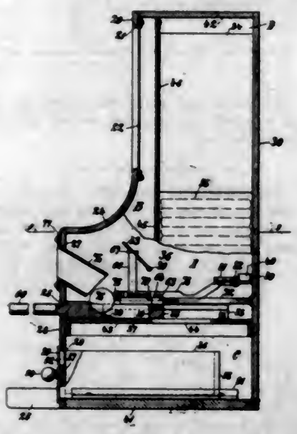
6. An internal combustion engine having an exhaust pipe, intake manifold and charge forming device connected thereto, a heater for heating the charge delivered to the engine, said heater having inlet and outlet pipes connected to the exhaust pipe, a valve for controlling the passage of exhaust gases through said heater and



means for actuating said valve controlled by the changing vacuum existing in the carbureting passage of the charge forming device.

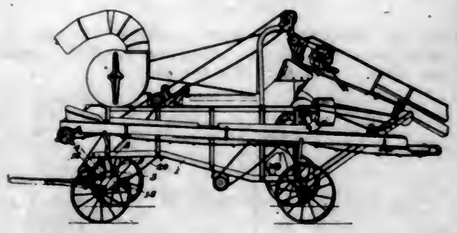
1,625,136. CAR-WHEEL CLAMP. ED MULLINS, Cincinnati, Ohio, and OSCAR B. MULLINS, South Covington, Ky., assignors of one-fourth to Thomas Edwin Mullins and one-fourth to Arch Mullins, South Covington, Ky. Filed Oct. 22, 1926. Serial No. 143,436. 3 Claims. (Cl. 188—45.)

1. A wheel clamp of the class described, comprising a U-shaped body including inner and outer arms, the outer arm being supplied with spaced parts for engaging a wheel and a rail, one of said parts being movable, to bring about a clamping action, the inner arm being a wheel-engaging member which prevents the clamp from moving horizontally out of working position.



1,625,137. WHEEL-CLEANING DEVICE. DANIEL C. MULVIHILL, Hannibal, Mo. Filed Jan. 19, 1925. Serial No. 3,348. 7 Claims. (Cl. 15—21.)

3. In combination, a pair of tracks for engaging the flange of a car wheel for holding the same in upright position, latch means for holding said wheel in non-

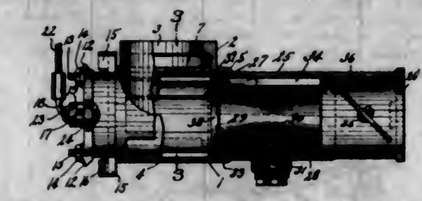


rotatable position on said tracks, a rotating brush at each side of said track for engaging the inner and outer faces of a car wheel, means for moving said brushes to and from each other, and means for rotating said brushes.

1,625,138. COIN-CONTROLLED VENDING MACHINE. CHARLES NADWORNEY, Bayonne, N. J., assignor of two-thirds to Louis Borack, Bayonne, N. J. Filed May 5, 1924. Serial No. 711,136. 3 Claims. (Cl. 194—75.)

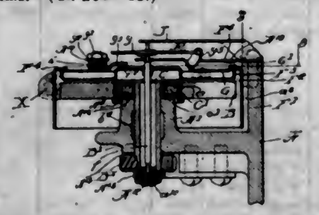
1. In a coin controlled vending machine the combination of a lever hinged therein comprising a pair of members, one of said members having a slot and the second member adapted to dispense an object from the machine, a movable cross-head in the machine adjacent to the member having the slot and adapted to hold a coin between it and said member adjacent thereto, and a flexible medium in the machine tending to maintain the cross-head in its forward position to receive said coin, the member of the lever having the slot moved to bring its slot in line with said coin, when said cross-head is moved to the other end of its stroke.

1,625,139. AXLE CONNECTION FOR VEHICLES. LEONARD B. NEIGHBOUR, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 4, 1921. Serial No. 489,832. 6 Claims. (Cl. 280—126.)



1. In a wheeled vehicle, the combination with an axle, of means connecting the axle to the vehicle, comprising supporting members secured respectively to the axle and to the vehicle, and having coacting bearing surfaces of constant extent and movable one upon the other rotatably and in a direction transversely of the vehicle, one of said supporting members having an oblong tapered socket, and the other having a member extending into said socket and movable therein transversely of the vehicle, and means for holding said members in operative relation to each other.

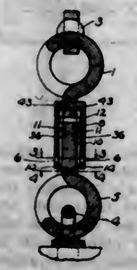
1,625,140. WELL-TESTING TOOL. CONRAD T. NEITZEL, Dallas, Tex. Filed Feb. 14, 1927. Serial No. 167,910. 6 Claims. (Cl. 166—1.)



1. A sand testing tool including a body containing a valve head and a sliding valve therein, each having ports adapted to register; a relatively stationary guide for said valve; a conical seating member below said valve and operatively connected therewith; an annular compressible cushion intermediate said valve and seating member to yield to the movement of the latter to register said ports, and means to permit passage of fluid through said ports to be trapped above the valve when closed.

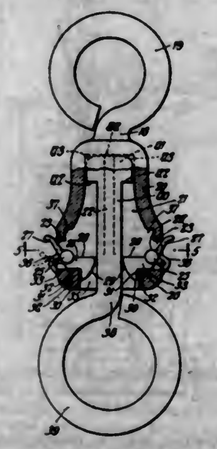
1,625,141. CARBURETOR. EMIL A. NELSON, Halfway, Mich. Filed May 1, 1922. Serial No. 557,608. 3 Claims. (Cl. 261—47.)

1. A device of the character described comprising a casing open at its end and formed with air inlet openings adjacent one end, a rotary valve member fitting within and closing one end of said casing, said valve member being formed with inlet openings to register with the inlets in the casing, a Venturi restriction in the casing, means for supplying fuel to said venturi, said casing being provided with a by-pass for passing air from one end to the other of the venturi, and means for imparting an endwise movement to said valve member to control said by-pass.



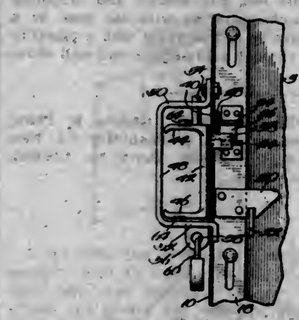
1,625,142. MAGNETIC SPEEDOMETER. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 12, 1922. Serial No. 574,522. 6 Claims. (Cl. 264—13.)

1. In a magnetic speedometer in combination with a rotating magnetic element, a field member extending transaxially with respect to the rotating magnet, and a drag



element comprising a web interposed laterally with respect to the magnet between the same and the field member, the drag element being dished to form a two-ply bead opposite a circumferential marginal portion of the magnet, the field member being intruded into the depression formed within and encompassed by the bead whereby the cross-section of the drag element at the zone into which magnetic flux is deflected, is increased.

1,625,143. UNCOUPLING DEVICE. ARTHUR F. O'CONNOR, Chicago, Ill., assignor to Union Railway Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1924. Serial No. 703,094. 17 Claims. (Cl. 213—170.)

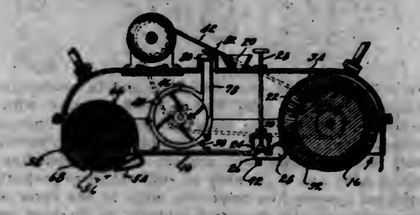


1. In mechanism for coupling and uncoupling cars, the combination with a locking and unlocking device, of separable means adapted to connect said unlocking and locking device to operating mechanism, a flexible abutting means on parts of said separable means provided to restrict motion and to prevent separation of said separable means, rigid abutting means on parts of said separable means, and clamping means provided to make a portion of said flexible abutting means fast to said separable means.

1,625,144. SEPARABLE COUPLER-RELEASE RIGGING. ARTHUR F. O'CONNOR, Chicago, Ill., assignor to Union Railway Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed May 1, 1924. Serial No. 710,289. 11 Claims. (Cl. 213—166.)

1. The combination with an uncoupling lever and a coupler lock of extensible and contractible means connecting said lever and lock comprising a pair of separable members, means for holding said members in assembled relation, and means for moving said holding means out of holding position.

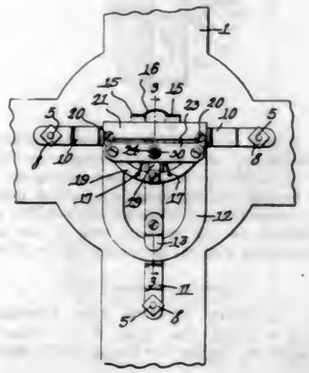
1,625,145. LOCKER LATCH. JOHN B. O'CONNOR, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Nov. 18, 1925. Serial No. 69,768. 8 Claims. (Cl. 292—188.)



1. In a locker, a latch, a vertically movable latch lifter, a stationary element projecting from the locker door adjacent to the latch lifter and having an aperture, the lifter having an extension projectible through the aperture in the stationary element and adapted to engage a locking device on the opposite side of the stationary element to prevent vertical movement of the lifter.

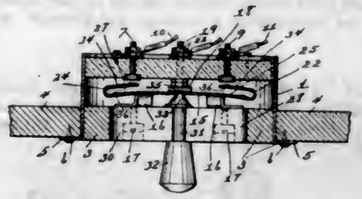
1,625,146. CUSHION DEVICE FOR AUTOMOBILES. JOSEPH A. O'NEILL, New York, N. Y. Filed Jan. 19, 1926. Serial No. 82,296. 6 Claims. (Cl. 267—35.)

1. The combination with the chassis, springs and axles of an automobile, of cushion devices arranged over the axles and under the body and extending from spring to spring, said devices comprising compressed air drums having end extensions to support the springs, curved end walls and air inflated cushions resting on said axles, and means for maintaining a constant air pressure in said drums.



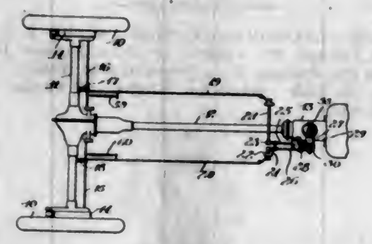
1,625,147. COMBINED SCRUBBING AND VACUUM-CLEANING DEVICE. ANASTAS ONOFRIO, Detroit, Mich. Filed Nov. 21, 1924. Serial No. 751,249. 1 Claim. (Cl. 15—50.)

In a floor cleaning machine, a cleaning fluid tank having an arcuate end wall, a scrubbing brush rotatably supported at the end of the tank in proximity to the arcuate end wall thereof, said end wall terminating at its upper end in a flexible scraper sloping upwardly and engaging



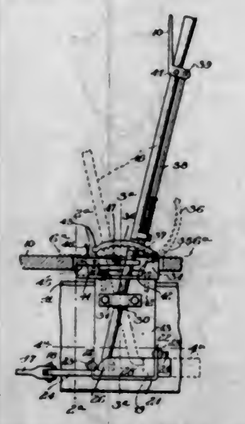
the periphery of the brush during rotation to scrape cleanings therefrom to flow over the scraper into the tank, said end wall terminating at its lower end in a flexible apron sloping downwardly alongside the brush, an independent fluid containing compartment within the tank adjacent to the arcuate end wall thereof and extending alongside the brush communicating with the tank by a valve-controlled passageway and provided with a plurality of discharge openings through said arcuate end wall above the flexible apron.

1,625,148. LOUD-SPEAKER UNIT. GEORGE R. PENN, New York, N. Y., assignor to S. R. Penn Mfg. Co., New York, N. Y. Filed Sept. 30, 1926. Serial No. 138,695. 7 Claims. (Cl. 179—115.)



1. A loud speaker unit including a permanent magnet, pole pieces extending from the terminals thereof, coils mounted on the pole pieces, an armature close to but normally spaced from the pole pieces at one side, and an abutment normally engaging the opposite side of the pole pieces for limiting their movement under the pressure of the armature when attracted to the pole pieces.

1,625,149. ELECTRIC SWITCH. JOSEPH A. PETNEL, Troy, N. Y. Filed Apr. 7, 1924. Serial No. 704,681. 1 Claim. (Cl. 200—6.)



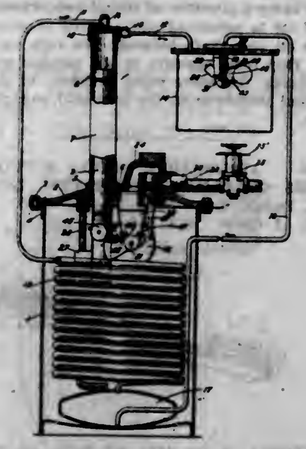
In a device of the class described and in combination, a housing having a base, and a cover provided with a plurality of intersecting slots; a plurality of contacts mounted upon said base; a contact-member mounted within said housing, said contact member including a resilient body and a plurality of resilient arms projecting therefrom opposite the respective slots in the cover and engageable with the respective contacts on the base, each of said arms having a cam-surface, and said body being formed with a depressed seat opposite the point of intersection of said slots; and an actuating member slideable along said slots selectively engageable with said depressed seat, and with the cam surfaces on said arms to cause them to engage the respective contacts on the base, said contact-member and said contacts on the base having means whereby they can be connected in an electric circuit.

1,625,150. BRAKE MECHANISM. FRANK W. PICHÉ, Detroit, Mich. Filed Mar. 5, 1925. Serial No. 13,060. 24 Claims. (Cl. 188—16.)

22. The combination with a vehicle frame having a plurality of traction wheels and brakes therefor, a pivotal support, a pair of levers depending from the support and connected intermediate their ends with said brakes, an operating lever disposed upon the support between said depending levers and adapted both for a pivotal and a lateral rocking movement and arranged to simultaneously or independently engage the lower ends of the depending levers to effect independent or simultaneous operation of the brakes, spring pressed plungers carried by said depending levers on opposite sides of the operating lever to normally maintain the latter in a central position between said depending levers, a ratchet bar disposed beneath said levers, a pawl pivotally disposed upon the operating lever and having projections adapted to prevent locking of the lever in either of its independent operating positions by engagement with the ratchet bar, and an operating member for the pawl operable from a point above said depending levers.

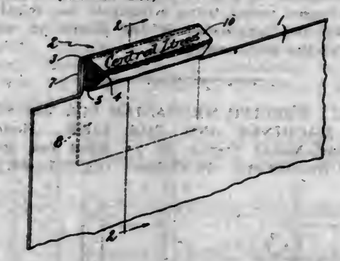
1,625,151. BRAKE MECHANISM FOR VEHICLES. FRANK W. PICHÉ, Detroit, Mich. Filed June 1, 1925. Serial No. 33,954. 24 Claims. (Cl. 188—16.)

23. The combination with a vehicle frame having a pair of traction members and a brake for each of said members, a pair of brake operating members having transversely extending abutments, guiding means for said members permitting longitudinal movement of the same and serving to hold them against lateral movement and a control element for said operating members through which



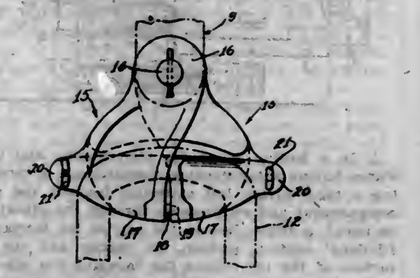
either one is rendered ineffective by movement of said element with respect to said abutments, said element being adapted in one position to engage both abutments to permit simultaneous application of the brakes and being movable from the last mentioned position directly in a single transverse plane in selective operating position with respect to either abutment.

1,625,152. SHIELD FOR CASING-SLIP HANDLES. WILLIAM S. PINE, Ventura, Calif. Filed Mar. 11, 1926. Serial No. 94,102. 2 Claims. (Cl. 294—131.)



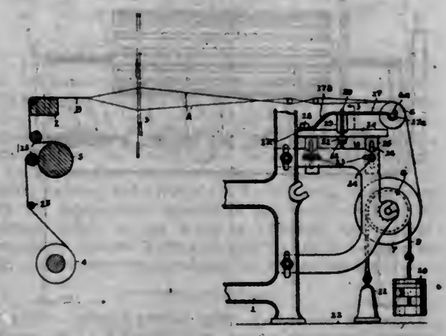
1. In a well drilling apparatus in which slips are used to hold the tools from slipping down the casing when casing joints are broken, the combination of a slip body; a shield comprising a back plate and triangular side plates of heavy sheet metal; a hand bar extending from one side plate to the other side plate and connected to both and spaced from the back plate; and means to connect said shield to said slip body.

1,625,153. PUMP. THOMAS I. POTTER, East Orange, N. J., assignor, by mesne assignments, to Hydro Refrigerator Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1922. Serial No. 587,698. 7 Claims. (Cl. 103—52.)



1. A pump including a cylinder communicating at its lower end with a pressure chamber, a piston in the cylinder, and including an extension operable in the pressure chamber, inlet and outlet valves in the head of the piston, means for alternately introducing and relieving pressure in the pressure chamber, whereby the pump piston alternately moves upwardly in the cylinder under pressure, and downwardly in the cylinder gravitationally, and means for mechanically loading the pump piston to regulate the speed of operation of the pump.

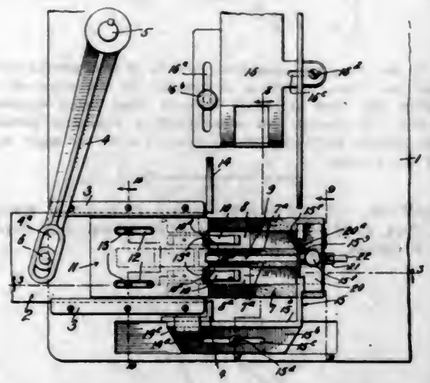
1,625,154. INDEX TAB. JAMES H. RAND, North Tonawanda, N. Y., assignor, by mesne assignments, to Rand Kardex Bureau, Inc., Tonawanda, N. Y., a Corporation of Delaware. Filed Mar. 2, 1923. Serial No. 622,411. 5 Claims. (Cl. 40—17.)



3. An index tab comprising a strip of transparent sheet material bent to form a pocket for the reception of an index slip, one extremity of said strip being disposed within the pocket and constituting a retaining element for holding the index slip in contact with an inner wall of the pocket.

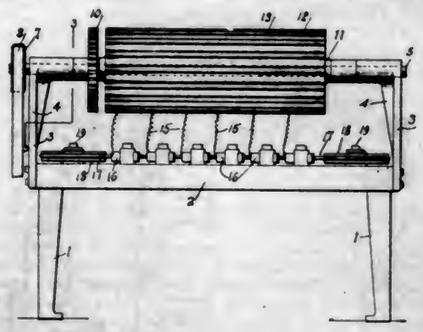
1,625,155. CABLE HOOK. JAMES P. RATIGAN, Walnut Park, Calif. Filed Nov. 13, 1926. Serial No. 148,161. 5 Claims. (Cl. 24—232.)

1. A cable hook comprising a pivot pin, and a pair of hook members mounted on said pin, the open sides of the members being turned toward a plane intersecting both members and said plane being normal to the axis of the pivot pin.



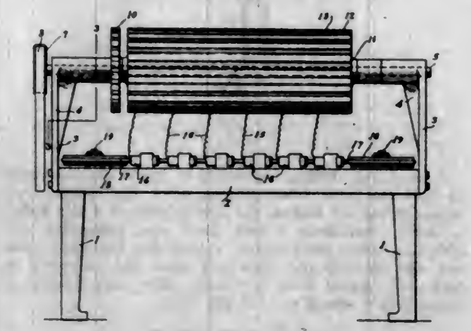
1,625,156. LOOM. ALBERT RIGBY, Paterson, N. J., assignor of one-half to Phillip Diamond, Paterson, N. J. Filed May 28, 1926. Serial No. 112,243. 6 Claims. (Cl. 139—114.)

6. In combination, with a fixed structure and take-up and let-off means therein coacting to maintain taut the sheet of warp and woven fabric, a plate-spring having



a portion thereof supported upon said structure and another portion thereof projecting free of said structure and yieldingly assuming the pressure of said sheet between the take-up and let-off means, and means to secure the plate-spring to said structure, said plate-spring and the last-named means being adjustable one relatively to the other and lengthwise of the former to vary the tension of the plate spring.

1,625,157. FEEDING MECHANISM FOR TAG-STRINGING MACHINES AND THE LIKE. HORACE L. ROBERTS, Mount Vernon, N. Y. Filed Jan. 30, 1924. Serial No. 689,411. 13 Claims. (Cl. 271—44.)

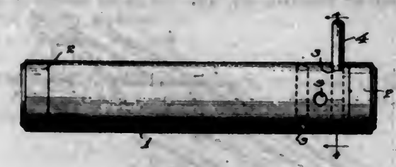


1. In a feeding device for tag-stringing and like machines having a tag-stacking compartment, a carrier having a tag-receiving bed extending beneath the stacking compartment and reciprocable through the stacking compartment, a rubber bed on the carrier for increasing the frictional contact between the carrier and the bottom surface of the tag, means for engaging the edge of the tag and means for overcoming the frictional contact between the lowermost tag and the tags superimposed thereon.

1,625,158. STEEL-WOOL MACHINE. WILLIAM H. ROBBINS, Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Filed June 5, 1925. Serial No. 35,155. 6 Claims. (Cl. 29—4.5.)

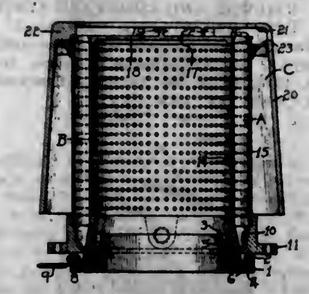
1. In a steel wool machine, cutters for said steel wool machine, means for feeding a wire to said cutters whereby a plurality of individual strands of steel wool are cut simultaneously by said cutters from said wire, means to remove steel wool strands from the cutters consisting of a pair of synchronously moving, closely adjacent steel wool engaging members adapted to frictionally engage the wool strands individually to pull them away from the cutters, said friction engaging members having means for grasping said steel wool strands whereby only the dead weight of the wool strands is lifted by said friction engaging members without tension.

1,625,159. STEEL-WOOL-REMOVING MACHINE. WILLIAM H. ROBBINS, Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Original application filed June 5, 1925, Serial No. 35,155. Divided and this application filed Feb. 18, 1926. Serial No. 89,244. 2 Claims. (Cl. 29—4.5.)



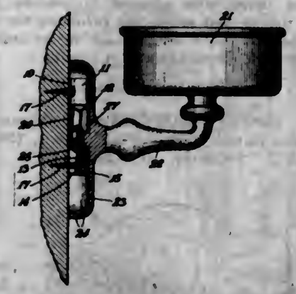
2. In a steel wool machine a plurality of cutters, feeding means for feeding a wire to said cutters, means for removing steel wool strands from said cutters individually consisting of a pair of parallel spaced shafts, means for causing said shafts to rotate together, means on said shafts to carry a plurality of spaced rods whereby a circulation of air is permitted and adapted to project one of the rods on one shaft between two rods on the other shaft as they come opposite to one another without said rods touching, the space being sufficient to pass a steel wool strand therebetween for frictional engagement with the rods.

1,625,160. ADJUSTABLE ROD SUPPORT FOR SHADES, CURTAINS, AND DRAPES. LULA H. ROBINSON, Dallas, Tex. Filed May 5, 1925. Serial No. 28,045. 1 Claim. (Cl. 156—23.)



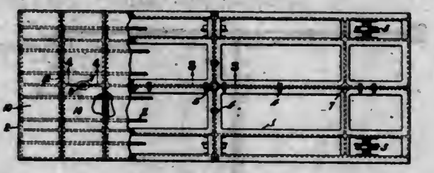
In a hanger of the type set forth, an end support composed of a relatively short rear horizontal part the inner end portion of which part is extended forwardly and then outwardly to lie parallel to the body of the part and which is then further extended forwardly and inwardly to lie parallel to the outwardly extending portion, the opposite end of the part being extended forwardly and inwardly to lie parallel to the inwardly extending portion, the ends of the two inwardly extending portions being each free and formed for connection to curtain holding rods.

1,625,161. DEVICE FOR USE IN MOVING BUILDINGS. JACOB J. ROOS, Hull, Iowa. Filed Sept. 15, 1926. Serial No. 135,596. 1 Claim. (Cl. 280—3.)



A device for moving buildings, comprising a roller, the roller having a series of channels extending entirely through same, said channels being arranged in offset relation and in different transverse planes near one end of the roller.

1,625,162. HYDROCARBON BURNER. FREDERICK H. SCHULENBERG, Lima, Ohio. Filed Sept. 11, 1926. Serial No. 134,787. 7 Claims. (Cl. 158—81.)

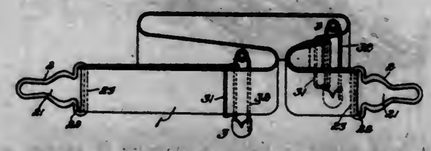


3. In a hydrocarbon burner, a fuel vaporising trough, a priming block having portions engaging a side and a bottom wall of the trough, said block being of heat-retaining but non-conductive material, and an electric heating element carried by said block for heating the walls of the trough.

1,625,163. FIXTURE SUPPORT. WILLIAM H. SCHUBE, Newark, N. J., assignor to Searle Manufacturing Company, Newark, N. J., a Corporation of New Jersey. Filed July 3, 1926. Serial No. 120,283. 3 Claims. (Cl. 248—20.)

1. A fixture support comprising an anchored bracket consisting of a transverse plate, spring detents extending forwardly from the ends of said plate, a raised apron integral with the lower edge of the plate, said apron being inclined rearwardly and containing a slot enlarged at its upper end, a stop on the bottom of said apron limiting its rearward movement, opposed forwardly extending spring flanges on the lateral edges of said apron, a chambered fixture base enclosing said bracket in its entirety, a button headed stud fixed on said base to engage in the apron slot, the head of said stud engaging the rear surface of said apron, and lugs on the inner side walls of said chambered base to engage said spring detents and flanges.

1,625,164. CASTING TABLE. HAROLD R. SCHUTZ, Toledo, Ohio, assignor to The Edward Ford Plate Glass Company, Rossford, Ohio, a Corporation of Ohio. Filed Sept. 15, 1926. Serial No. 135,528. 6 Claims. (Cl. 49—39.)



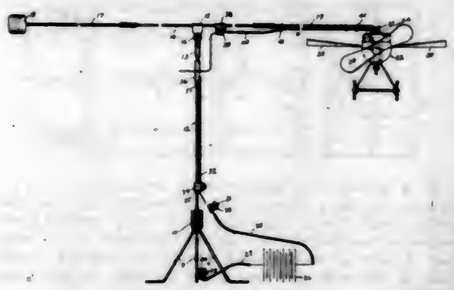
3. A casting table comprising an underframe and a top portion having a plurality of intorengaging connections, with a part of said connections preventing relative movements of the underframe and top lengthwise of the table, and a part permitting such relative movements lengthwise of the table and preventing the same in any other direction.

1,625,165. PRODUCT AND METHOD FOR TESTING SUGAR TOLERANCE. ALBERT SHATON and WILLIAM O. RADER, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 4, 1926. Serial No. 113,811. 6 Claims. (Cl. 167—7.)

1. The process of testing an individual for sugar tolerance, which consists in administering a quantity of sugar mixed with a small amount of an indicator which will appear in the urine within a definite time after ingestion but which is not apparent to the individual being tested, obtaining the urinary specimen, and testing it for the presence of sugar and for the presence of such indicator.

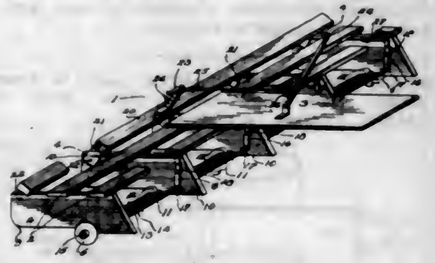
6. A substance for use in making sugar-tolerance tests in individuals, comprising a mixture of sugar with a relatively small amount of saccharin.

1,625,166. TROUSERS SUPPORTER. HENRY M. SIEGEL, Malden, Mass. Filed July 7, 1926. Serial No. 120,942. 3 Claims. (Cl. 241—9.)



1. In a trousers supporter comprising a flexible strap, and end-connectors adapted for detachable engagement with engaging members carried by a garment at opposite points, with at least one end-portion of the strap in looped and sliding engagement with the corresponding end-connector, the combination with the said elements of an intermediate member which is fastened to the extremity of such end-portion and is in sliding engagement with the intermediate portion of the strap, whereby the effective length of the strap is adjusted, the said intermediate member having means for fixed engagement with the garment intermediate the end-connectors.

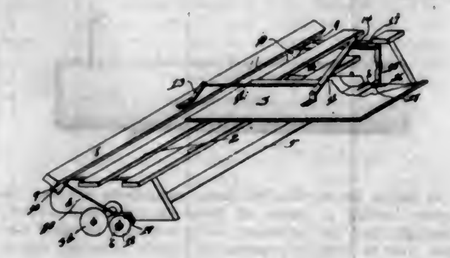
1,625,167. AERONAUTIC TOY. LAWRENCE H. STRAYER, Kent, Ohio. Filed Mar. 31, 1924. Serial No. 703,269. 3 Claims. (Cl. 272—31.)



2. In an electrically driven toy, a supporting standard, an arm rotatably mounted on the top thereof, said arm

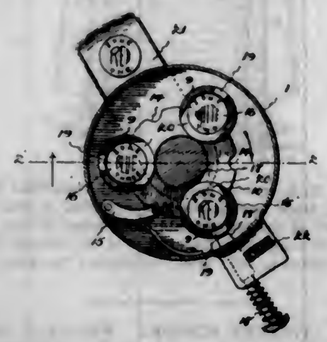
also being capable of rocking vertically on said standard, a balance weight carried by one end of the arm, a toy body carried by the other end of the arm, a shaft rotatably mounted in said body, a propeller on said shaft, electrical mechanism carried by said body to rotate the shaft and propeller, a battery, an elongated insulated contact sleeve fixed to said standard, and a rigid contact arm carried by the rotatable arm to rock therewith in contact with the sleeve, said rigid contact arm maintaining contact with the sleeve during vertical movement of the rotatable arm to complete the electrical circuit.

3. In an electrically driven toy, a toy body, a frame removably secured within the toy body, a propeller shaft rotatably mounted in said frame and projecting exteriorly of said body, a propeller secured to the shaft exteriorly of the body, electrical mechanism carried by the frame to rotate the shaft when connected with a source of electrical supply, and a single means removably securing the shaft, propeller, electrical mechanism and frame to said body as a unit.



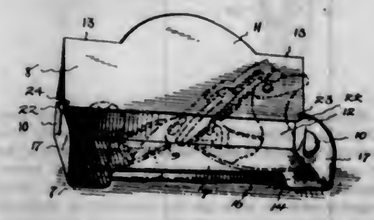
1,625,168. WEEDER. JAMES A. TALBOT, Walla Walla, Wash., assignor of one-half to S. V. Davin, Walla Walla, Wash. Filed Mar. 23, 1925. Serial No. 17,462. 3 Claims. (Cl. 97—144.)

1. In a weeder, a frame, a plurality of runners attached to said frame, a plurality of cutting blades joined together by longitudinally disposed axles, and rotatably mounted in said runners, means to rotate said blades, and a tripping means comprising vertically positioned bars pivotally attached to said runners, complemental to each of said blades, and provided with rollers positioned to contact the rear edge of said blade and directly above it, connecting rods connecting said bars with a lever acting beam extending longitudinally of the weeder, and an operating lever operably attached to said beam.



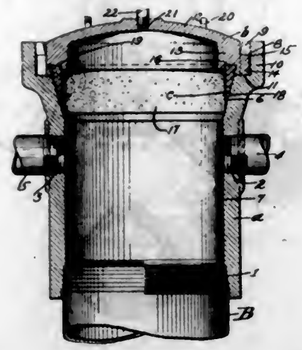
1,625,169. WEEDER. JAMES A. TALBOT, Walla Walla, Wash., assignor of one-half to S. V. Davin, Walla Walla, Wash. Filed July 23, 1925. Serial No. 45,519. 2 Claims. (Cl. 27—144.)

1. In a weeder, the combination with a weeder having a rotatable blade, and tripping means for controlling the rotation of the blade, of a loose ground wheel idly mounted on the axle of said blade, a clutch interposed between



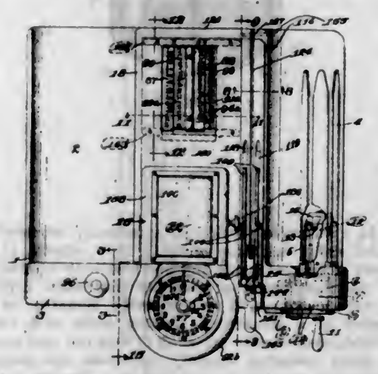
said wheel and the blade, and means to operate said clutch to rotate the blade as the tripping means is released.

1,625,170. RAILWAY AND LIKE FARE SYSTEM AND MEANS USED THEREWITH. ARNOLD J. TANNER, North Haven, Conn., assignor, by mesne assignments, to Sidney S. Gorham, trustee, Chicago, Ill. Filed Sept. 19, 1919, Serial No. 325,011. Renewed Jan. 7, 1926. 4 Claims. (Cl. 235—33.)



4. Fare collection apparatus comprising a zone token distributing mechanism and a zone token collecting mechanism each having a revoluble turret carrying a plurality of tubes each adapted to contain a pile of permanent tokens, and means for revolving the turrets to present tubes in operative position in accordance with the zone through which the car is passing.

1,625,171. DISPLAY CONTAINER. ARNOLD J. TANNER, North Haven, Conn. Filed June 1, 1926. Serial No. 113,073. 2 Claims. (Cl. 206—44.)

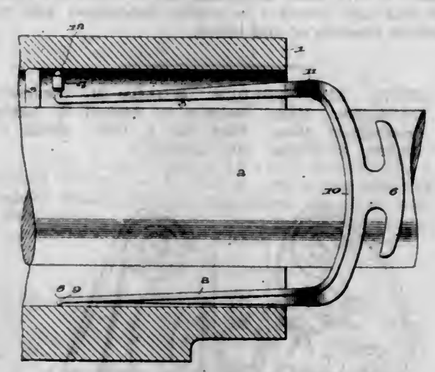


1. A box of the class described, having an outer box member, a separable self-contained folding inner member telescoping into said box member and when removed from said box member alone constituting a complete display container, said inner member having an open front and top, a closed back forming the bottom of the box and a folding cover for said top arranged to form a raised display medium.

1,625,172. CIRCULATING HEAD. WILLIAM A. TROUT, Los Angeles, Calif. Filed Oct. 15, 1923. Serial No. 668,696. 1 Claim. (Cl. 166—14.)

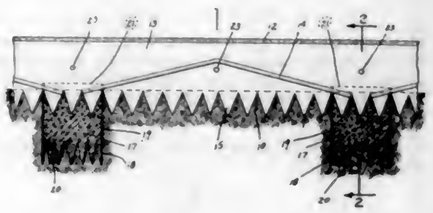
A circulating head adapted for association with well casing, said circulating head including a body and a cap therefor, said circulating head being substantially annular in form with the inner surface portion of the head beveled in part, a triangular wedge-shaped flexible member carried by said cap and having one of its sides beveled to cooperate with said beveled portion on said head, and its other side extending in a substantially parallel plane with said body, said cap being formed with an inwardly tapered groove for holding and locking said flexible member in operative position.

1,625,173. RIBBON MEASURING, COST COMPUTING, AND WINDING MACHINE. DOUGLAS TURNER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 8, 1919. Serial No. 343,335. 21 Claims. (Cl. 33—133.)



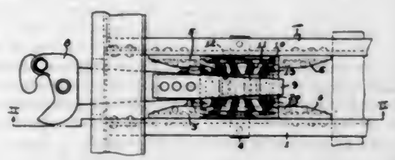
1. A ribbon measuring and cost computing machine, comprising, in combination, a base, length indicating and cost computing devices mounted in the base near opposite ends of the base and on a level with each other and with the upper elevation of said base, a measuring roller operatively connected with said devices, and mounted on the base between the length indicating and cost computing devices and adapted to be rotated by the ribbon being measured to operate said mechanisms, and a winding drum also mounted on said base and substantially parallel with said measuring roller for winding up the ribbon and thereby drawing it over the measuring roller.

1,625,174. GLASS-CLEANING APPLICATOR. ROBERT H. VAN SANT, Chicago, Ill., assignor, by mesne assignments, to Gold Dust Corporation, New York, N. Y., a Corporation of New Jersey. Filed Jan. 22, 1925. Serial No. 4,127. 1 Claim. (Cl. 15—133.)



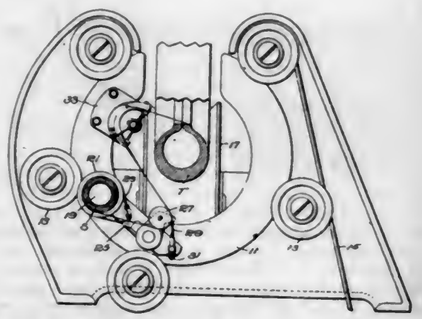
A flexible applicator consisting of a hollow live rubber body of substantially hemispherical form having means for attaching the same to a container with its convex face outermost and with its said body projecting in its entirety beyond the container for free flexible movements in all directions when applied in use, said body having apertures therethrough adjacent to its center and having a thickened wall portion adjacent to said apertures forming an external projection upon its convex face extending beyond the outer ends of said apertures, said apertures extending through the relatively thinner portions of the wall of the body, whereby they will remain open in use as long as the applicator is applied with a force insufficient to flex the said projection inwardly to and beyond the external surface of the body.

1,625,175. MICROMETER. FRANK VOIGT, Milwaukee, Wis. Filed June 17, 1926. Serial No. 116,528. 3 Claims. (Cl. 33—164.)



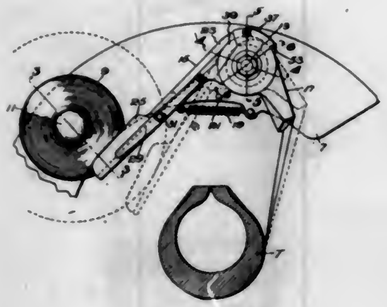
1. A micrometer, comprising a yoke shaped handle portion, a set of substantially parallel rigid arms projecting respectively from the ends of the yoke shaped portion the yoke being in a plane oblique to a plane common to the axes of said arms, a fixed bearing finger upon the free end of one of said arms, and a micrometer gauge mounted on the free end of the other arm and having a bearing finger adapted for contact with the interior surface of a cylinder at a point diametrically opposite the bearing surface of the fixed contact finger.

1,625,176. COMPENSATING AND DRAINAGE JOINT FOR PAVEMENTS. GEORGE W. WARMOTH, Indianapolis, Ind. Filed Jan. 23, 1925. Serial No. 4,205. 13 Claims. (Cl. 94—17.)



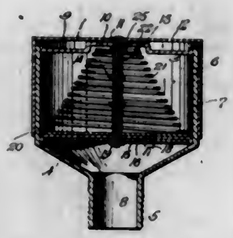
1. A device for roads and the like comprising an elongated member including an inclined lead and a supporting thimble into which the elongated member lead is adapted to discharge.

1,625,177. DRAFT-GEAR UNIT. JAMES M. WAUGH, Chicago, Ill., assignor to Waugh Equipment Co., Chicago, Ill., a Corporation of Maine. Filed Jan. 16, 1925. Serial No. 2,771. Renewed Nov. 8, 1926. 7 Claims. (Cl. 213—30.)



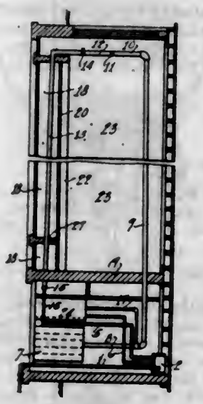
6. A draft gear unit comprising a casing having locking members formed thereon, followers movably positioned in said casing and having notches therein for receiving said locking members seated therein, and friction elements in said casing separating said followers and acting to hold said followers in locking engagement with the locking members of said casing.

1,625,178. EDGE FOLDER. WILLIAM M. WHEILDON, Framingham, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Feb. 4, 1922. Serial No. 534,126. 32 Claims. (Cl. 270—93.)



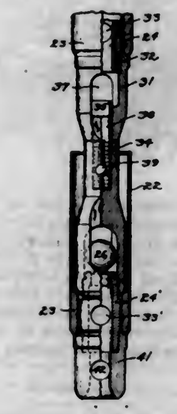
1. A folding device for a strip comprising a trough adapted freely to receive from above an unfolded portion of the strip between the ends thereof, an edge turning surface on a flange of said trough and a laterally yieldable presser beyond the said surface.

1,625,179. MECHANISM FOR DISPENSING MATERIAL FROM ROLLS. WILLIAM M. WHEILDON, Framingham, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Feb. 4, 1922. Serial No. 534,127. 34 Claims. (Cl. 270—93.)



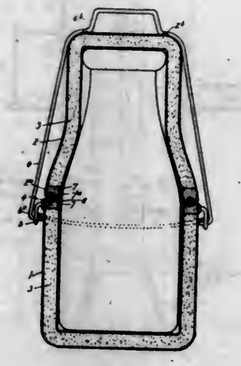
1. In combination with a support for a roll of material means for controlling the feed of material therefrom comprising a member opposing the side of the roll and having flanges adapted forcibly to bear against the bases thereof as said member is moved toward the side of the roll.

1,625,180. MAGAZINE LUBRICATOR. JERRY H. WONSER, Port Angeles, Wash. Filed May 2, 1925. Serial No. 27,400. 3 Claims. (Cl. 184—45.)



1. In a magazine lubricator, a magazine provided with an inlet and a discharge orifice, a head adapted to close one end of said magazine and provided with a raised portion, and containing a centrally positioned orifice in said raised portion, a cap slidably mounted on said magazine in a manner to slidably cover said inlet, a regulating stem rigidly attached to said cap and provided with studs extending laterally therefrom, and positioned in staggered relation to each other, a plunger attached to said stem and slidably mounted in said magazine, a yielding means designed to conform to the shape of said head when compressed, and interposed between said plunger and said head, said raised portion forming means to prevent a lateral motion of said yielding means, and a latch attached to said head to operably register with said studs.

1,625,181. PROCESS AND APPARATUS FOR INDUCING GERMINATION AND GROWTH OF SEEDS AND PLANTS. JOHN ZELLWEGER, St. Louis, Mo. Filed Aug. 1, 1924. Serial No. 729,515. 2 Claims. (Cl. 47—17.)



1. An apparatus for inducing the germination and growth of seeds and plants, comprising a perforated or porous support that sustains a soil bed, an air passageway arranged so that air can pass from same upwardly into said soil bed, a humidifying fan for forcing air through said passageway provided with a filter ring through which the air passes, and means for supplying moisture at a high temperature to said fan so as to cause the seeds or plant roots in said bed to be subjected to the action of moisture, air and heat.

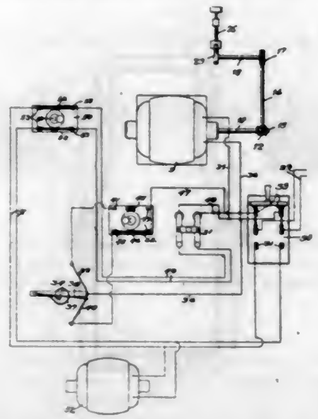
1,625,182. RECIPROCATING PUMP. JOHN A. ZUBLIN, Los Angeles, Calif. Filed Mar. 29, 1924. Serial No. 702,792. 8 Claims. (Cl. 103—179.)

1. In a reciprocating pump: a plurality of plunger sections, each including a lifting element; and flexible connection means connecting said plunger sections and including valve seats.

1,625,183. CONTAINER FOR MILK BOTTLES. JOHN E. ABBOTT, Spring Valley, Calif. Filed Apr. 19, 1924. Serial No. 707,614. 4 Claims. (Cl. 215—12.)

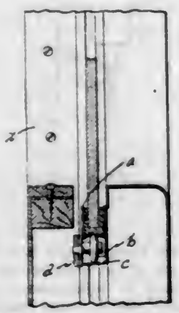
1. In a sectional heat insulated container for conventional milk bottles, an insulated container separated in the middle and conforming substantially with the shape of a conventional milk bottle, and a gasket interposed between the edges of the separate sections.

1,625,184. CHILD'S GARMENT. MILDRED COALE ALLEN, Highland Park, Ill. Filed July 27, 1922. Serial No. 577,900. 3 Claims. (Cl. 2—75.)



1. A child's garment comprising a body portion, sleeves connected with the top of the body portion and extending therefrom substantially in longitudinal alignment with the body portion, said sleeves being formed and extending upward from the shoulder portion of the garment.

1,625,185. AUTOMATIC FLUID-CONTROLLING DEVICE. AUGUST P. ANDERSON, Toledo, Ohio. Filed May 29, 1922. Serial No. 564,439. 2 Claims. (Cl. 62—4.)

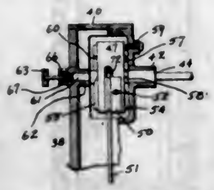


1. In an automatic refrigerant controlling device for electric thermic systems, a source of current, a source of cooling water, an electric motor for operating the thermic system and connected to the said source of current, a second motor connected to the source of current, cooling pipes connected to the source of supply of water, a valve for regulating the flow of the water, a switch for connecting the first named motor with the said source of current, and enclosed diaphragm connected to the said switch the said diaphragm operated by the pressure of the water in the said pipes and controlled by the said valve, a thermostatic switch having high and low temperature contact points, a switch located in the circuit

of the second motor for connecting the second motor with the said circuit and operated by the second motor when the valve has been opened and when it has been

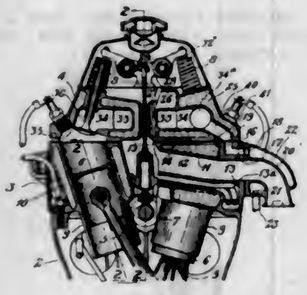
closed to connect the second motor to the low temperature contact point and the high temperature contact point of the thermostat respectively.

1,625,186. WINDOW REGULATOR. THOMAS P. ARCHER and ERNEST E. HEINTS, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 26, 1924. Serial No. 758,085. 2 Claims. (Cl. 268—126.)



1. In a window regulator, the combination of a sash bar provided with a track or recess, a lifting arm having a roller running in said track or recess, and a flat spring supported on the end of the arm and between the roller and the lever and arranged to bear against the track.

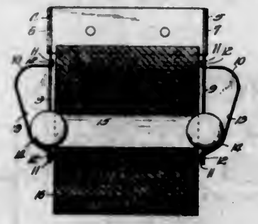
1,625,187. FOOT PAD. WILLIAM T. BIRCH, Chicago, Ill. Filed May 13, 1925. Serial No. 29,936. 1 Claim. (Cl. 20—79.)



A foot mat comprising two layers of rubber composition vulcanized together, the upper layer having a greater degree of contraction in all directions when cooling than the lower layer and the lower layer distorted by effect of the contraction of the upper layer, to produce a dished-form mat with the central zone of the lower layer in a lower horizontal plane than its marginal edges.

1,625,188. PRESELECTING AND SHIFTING MECHANISM FOR SLIDING-GEAR TRANSMISSIONS. JASPER BLACKBURN, Webster Groves, Mo. Filed Dec. 15, 1924. Serial No. 755,923. 6 Claims. (Cl. 74—39.)

1. A device of the class described comprising a housing, a shaft carried by said housing and projecting from one side thereof, a handle secured to the projecting end thereof whereby said shaft can be freely rotated in one direction, means for limiting the rotation of the shaft in the opposite direction step by step, a flexible member having one end secured to said shaft and projecting from the bottom of said housing, a sliding member secured to the free end of said flexible member and adapted to be longitudinally moved in one direction by the rotation of said shaft, and means tending normally to move the sliding member in the opposite direction.

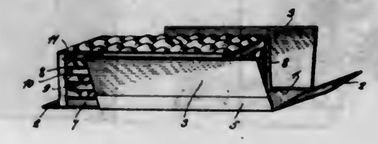


1,625,189. INTERNAL-COMBUSTION ENGINE. MERTON H. BLANK, Indianapolis, Ind. Original application filed Mar. 19, 1921, Serial No. 453,545. Divided and this application filed Jan. 9, 1922. Serial No. 528,104. 5 Claims. (Cl. 123—122.)

1. In an internal combustion engine in combination, a cylinder block unit comprising a plurality of cylinders, a plurality of conduits extending through the said unit, a hollow head unit for the said block unit, intake manifolds within the said head unit and communicating with one of the said conduits in the block unit, and exhaust manifolds within the head unit having an outlet opening through an end wall thereof, and an auxiliary outlet opening communicating with another of the said conduits.

1,625,190. TOILET-PAPER-ROLL HOLDER. OLIVER R. BOYNTON, St. Louis, Mo. Filed Aug. 16, 1926. Serial No. 129,376. 2 Claims. (Cl. 211—31.)

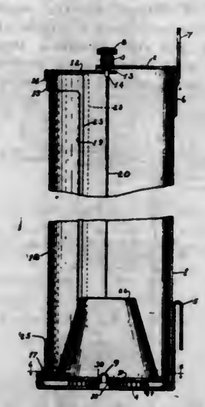
1. A roll paper holder comprising a yoke shaped element including an intermediate portion and a pair of right angular shaped arms each provided with a vertically disposed slotted opening wider at the lower end than at the upper end, a housing member having an inclined outer wall and a spherical bearing member carried with-



in each housing partly protruding the slotted openings when in their lowermost positions and upon which a paper roll is revolubly supported.

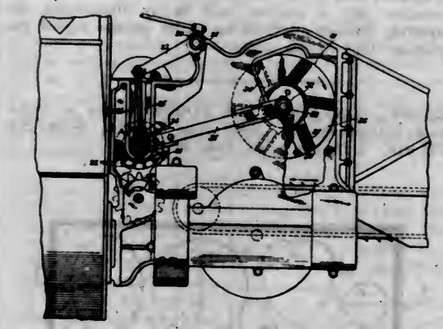
1,625,191. HAND AND FINGER PROTECTOR. GERTRUDE G. CONDON, Oakland, Calif., assignor to The Hoover Company, a Corporation of Ohio. Filed Aug. 24, 1925. Serial No. 52,142. Renewed Feb. 26, 1927. 1 Claim. (Cl. 150—52.)

A hand and finger protector comprising an element made of a flexible material; and a loop at each end of the element, each of said loops being adapted to engage one member of a vacuum-cleaner dust-bag handle comprising two pivotally-connected and self-closing members, so that the element is thereby held in a virtually central relation to the handle pivot, said element being of greater width than said members so that it is adapted to fold over the members and to follow their pivotal movement in order to prevent a person's hand and fingers from being pinched by the members when the handle is gripped and operated so as to cause pivotal movement back and forth of said members.



1,625,192. CANDY BOX. JOSEPH M. COOPER, Denver, Colo. Filed Dec. 7, 1925. Serial No. 73,667. 1 Claim. (Cl. 206—44.)

A candy box and display device comprising, in combination, a plurality of rectangular shallow trays of substantially the same size, each of which has a bottom, two ends and two sides members, said trays being each adapted to receive a layer of candy, the respective superposed trays being of less depth than the pieces of candy they are adapted to receive, the lowermost tray having a guide angular in cross section, secured thereto at each corner, said guides engaging the corresponding corners of each of the superposed trays so as to prevent relative transverse movement.

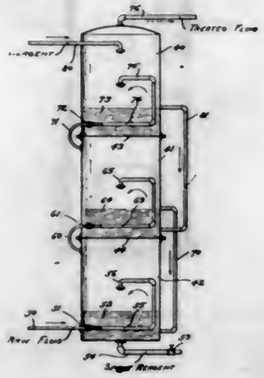


1,625,193. CONTAINER FOR PAPER CUPS. DAVID F. CURTIN, Chicago, Ill., assignor, by mesne assignments, to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed July 3, 1922. Serial No. 572,593. 3 Claims. (Cl. 211—8.)

1. In a dispensing apparatus, a bottom piece, a projection integrally formed in the center of said bottom piece, a container mounted on the bottom piece and having an opening in one side thereof, a closure for the opening, an apertured base piece for said closure rotatably engaged

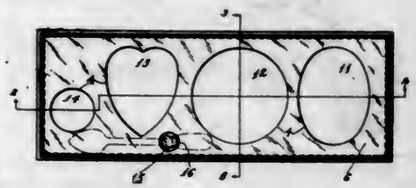
on said projection, a frustum shaped cup support on said base piece, and means connecting said base piece to said projection for automatically returning the closure to closed position.

1,625,194. FODDER CUTTER. JOSEPH DICK, deceased, Canton, Ohio, by Charles F. Dick, executor, Canton, Ohio, assignor to The Joseph Dick Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed July 3, 1925. Serial No. 41,399. 8 Claims. (Cl. 146—109.)



1. Feed mechanism for fodder cutters and the like, including a feed trough having a feed mechanism therein, and a gathering roll in advance of the feed mechanism, and provided with tangential paddles.

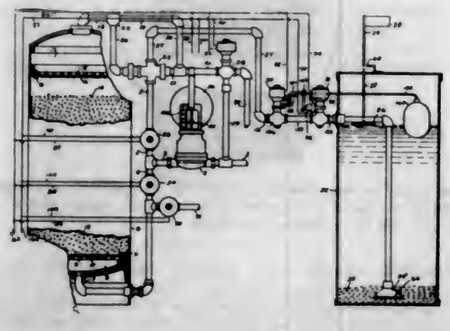
1,625,195. PROCESS OF AND APPARATUS FOR TREATING ONE LIQUID BY ANOTHER. SAMUEL J. DICKEY, Los Angeles, Calif., assignor to General Petroleum Corporation of California, a Corporation of Delaware. Original application filed Jan. 16, 1923, Serial No. 613,064. Divided and this application filed May 14, 1924. Serial No. 713,339. 5 Claims. (Cl. 196—45.)



1. The continuous method of treating an oil with a liquid reagent heavier than and insoluble in the oil, which comprises: maintaining in each of a series of substantially closed tanks arranged in rising order a layer of reagent of predetermined depth, continuously introducing fresh reagent into the uppermost tank, overflowing the reagent from one tank into the tank next below at a

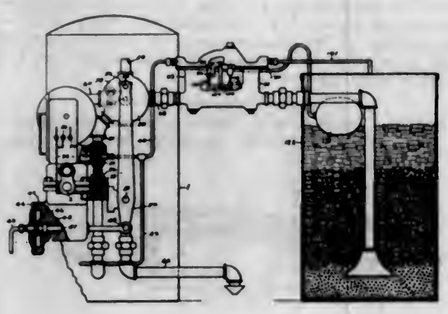
point below the surface of the layer of reagent in such lower tank, continuously withdrawing spent reagent from the lowermost tank at such rate as to maintain the predetermined level of reagent therein, simultaneously injecting into the lowermost tank a stream of raw oil under pressure, drawing into such stream a stream of reagent from the reagent body in said tank, intermixing the two streams through the agency of the velocity of the stream

of raw oil and discharging the intermixed stream into said tank, the treated oil and the reagent continuously separating by gravity difference in said tank, injecting the once-treated oil from the bottom tank into the tank next above, repeating the intermixture, discharge, separation and upward conveyance of oil from tank to tank until the uppermost tank is reached, and finally discharging the completely treated oil from an outlet at the top of the uppermost tank of the series.



1,625,196. CONTAINER FOR FOODS. JOHN A. DONAHOE, Pittsburgh, Pa. Filed June 5, 1924. Serial No. 717,918. 2 Claims. (Cl. 206—65.)

1. A container for foods comprising a plane frame having a plurality of apertures adapted to accommodate the individual containers for said foods; a box and a cover for said frame; a depending tongue struck out of said frame, and means adapted to cooperate with said tongue for removably securing thereto utensils required for eating said foods.

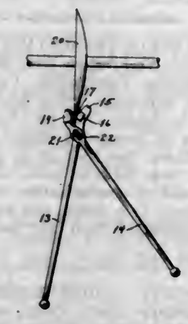


1,625,197. WATER-SOFTENING APPARATUS. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed July 20, 1925. Serial No. 44,716. 16 Claims. (Cl. 210—24.)

1. In an automatic water softening apparatus, a container for a softening means, means to deliver hard water thereto, means to deliver regenerating material thereto, a source of regenerating material, valves for controlling the admission of water and regenerating material, electrical means for actuating said valves, and means ac-

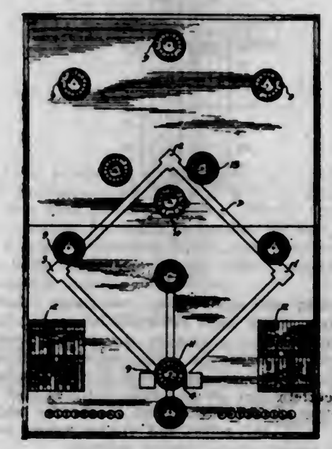
tuated by the incoming hard water for making and breaking a circuit connecting said electrical means whereby said valves are operated or rendered inoperative.

1,625,198. AUTOMATIC WATER SOFTENER. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 12, 1925. Serial No. 62,000. 7 Claims. (Cl. 210—24.)



1. In a water softener, a container for softening means, a container for regenerating means, means controlled by the passage of water through the system for regulating the period of regeneration and softening, an electrical circuit adapted to be made and broken by said means, a needle valve controlled by said electrical circuit, and hydrostatic valves controlled by the hydrostatic pressure passing by said needle valve, said valves being adapted to operate valves for converting the softener from softening position to regenerating position and back to softening position.

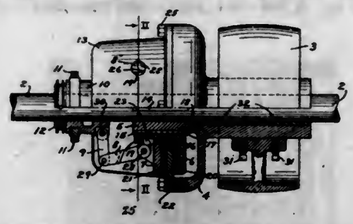
1,625,199. REVERSIBLE DISK-SHARPENING TONGS. ISAAC H. FARMER, Montezuma, Iowa. Filed May 10, 1926. Serial No. 107,948. 3 Claims. (Cl. 76—85.)



1. A disk-sharpening tongs, comprising a support, a blade-carrying arm pivoted thereon, a blade reversibly and

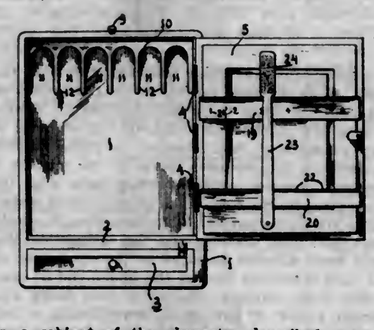
adjustably mounted in said arm, a pivot stud having an elongated head, a second arm formed with a longitudinal

slot arranged to be removed and replaced relative to said headed stud when in a certain position, and a roller pivoted on the second arm in opposition to said blade.



1,625,200. BASEBALL GAME. HENRY CLEVELAND FRANKE, Evanston, Ill., and RALPH CLINTON BANGS, Providence, R. I. Filed Oct. 10, 1925. Serial No. 61,660. 3 Claims. (Cl. 273—93.)

1. In the game of baseball, a plat having a miniature ball field represented thereon, rotatable discs adapted to be spun to show the flight of an imaginary ball and plays, said discs being divided into sectors having notations to show the plays, and concentric series of notations on certain of the discs to represent the result of thrown balls as distinguished from batted balls.



1,625,201. FRICTION CLUTCH. WALTER GEIST, Milwaukee, Wis., assignor to Acme Clutch Company, Milwaukee, Wis. Filed Dec. 24, 1920. Serial No. 432,946. 2 Claims. (Cl. 192—68.)

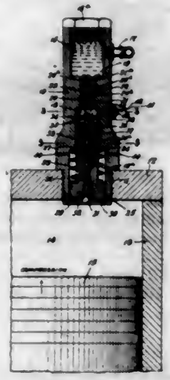
1. In a clutch, a rotary shaft, a collar secured to said shaft and having an abutment, an annular jaw movable along said shaft toward and away from said abutment and having a sleeve slidably engaging said collar, a second annular jaw surrounding said sleeve and movable along said shaft toward and away from said first mentioned jaw, an element rotatably supported upon said shaft and having an annular portion interposed between said jaws, means associated with said second jaw and with said

sleeve for moving said jaws toward said element portion, and means for spreading said jaws and for urging said first mentioned jaw toward said abutment.

1,625,202. TOOTHBRUSH CABINET. RAYMOND H. GINDICK, Waukegan, Ill. Filed Nov. 24, 1924, Serial No. 751,860. Renewed Jan. 5, 1927. 13 Claims. (Cl. 211—14.)

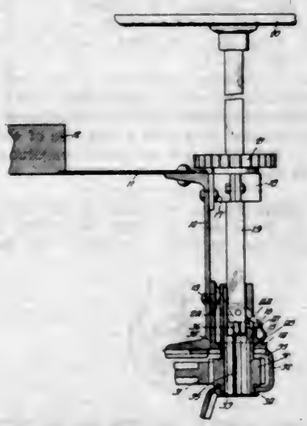
1. In a cabinet of the character described, means to provide a plurality of inverted substantially U-shaped hollow walled compartments each open at the front and bottom, said walls being perforated, means for supplying an antiseptic to and retaining the same in said hollow walls for evaporation through the perforations therein, and means for supporting articles in the cabinet between the perforated walls of the compartment.

1,625,203. ART OF DISPERSING MATTER INTO FINELY-DIVIDED FORM. HERBERT L. GLAZE, South Pasadena, Calif., assignor of one-half to A. R. Maas Chemical Co., Los Angeles, Calif., a Corporation of California. Filed Sept. 30, 1924. Serial No. 740,882. 5 Claims. (Cl. 252—6.)



5. The art of reducing matter to a fine form which includes mixing said matter in a fused form with a matter in comminuted unfused form, coating the particles of said matter in comminuted form with a thin film of said fused matter, and in dissolving said matter in comminuted form out from said film.

1,625,204. SHOE LACE. CHARLES T. E. GOULD, Detroit, Mich. Filed July 29, 1926, Serial No. 125,802, and in Canada Oct. 20, 1925. 3 Claims. (Cl. 24—143.)



1. A shoe lace having a thickened portion intermediate its ends, said thickening being arranged so that a considerable projection is formed at one side of the lace while substantially no projection is formed on the opposite side.

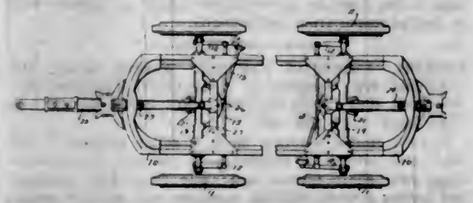
1,625,205. INTERNAL-COMBUSTION ENGINE. WILLIAM F. GRUMME, New York, N. Y. Filed July 3, 1925. Serial No. 41,276. 4 Claims. (Cl. 123—25.)

1. A device for injecting a predetermined fluid into the cylinder of an internal combustion engine, comprising a casing mounted upon the engine cylinder in communication with the combustion chamber thereof, said casing having an internal fluid chamber, a piston movable in said casing by the explosion forces of the mixture in the combustion chamber, and extending into said internal fluid chamber in the form of a plunger; said piston having an axial bore whereby communication is established between said fluid chamber and the combustion chamber, a valve stem movably mounted in the axial bore of said piston and projecting beyond the upper end of said bore into said fluid chamber, said valve stem being arranged to permit a flow of said fluid therethrough, a valve at the lower end thereof, said stem controlling the inner end of said bore and a spring effective to maintain said valve in its closing position and to return it thereto.

1,625,206. SUPPORTING MEANS FOR DROP-BRAKE SHAFTS. WILLIAM B. HALL, Chicago, Ill., assignor to Union Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1925. Serial No. 34,105. 8 Claims. (Cl. 74—113.)

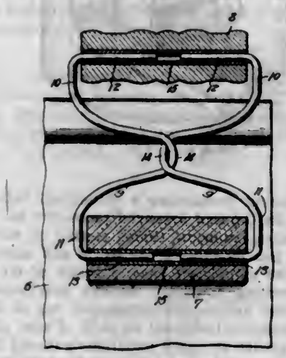
1. In a device of the character described, a brake shaft, means for mounting said brake shaft on a car for vertical movement, a sleeve surrounding said brake shaft and having an internal inclined shoulder intermediate its ends, and means for supporting said brake shaft in raised position comprising a member on said brake shaft engaging said shoulder on said sleeve when said brake shaft is raised.

1,625,207. PROCESS OF PRESERVING FRUIT. OSWALD H. HANSEN, Port Washington, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed May 7, 1924. Serial No. 711,573. 6 Claims. (Cl. 99—8.)



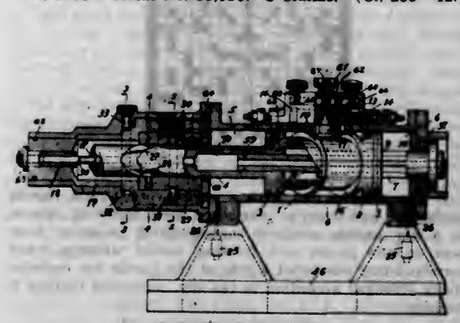
6. The process of preserving fruit, which comprises, temporarily confining the fruit in a container and exhausting the air from the fruit cells, admitting steam to the evacuated cells to preliminarily sterilize the fruit, submerging the fruit in a liquid, and subsequently finally sterilizing the submerged fruit and permanently sealing the container.

1,625,208. ROTARY UNDERREAMER. MERLIN C. HAZARD, Huntington Beach, Calif., assignor, by direct and mesne assignments, to Marvel Oil Tool Company, Huntington Beach, Calif., a Corporation. Filed Oct. 12, 1923. Serial No. 668,306. 8 Claims. (Cl. 255—75.)



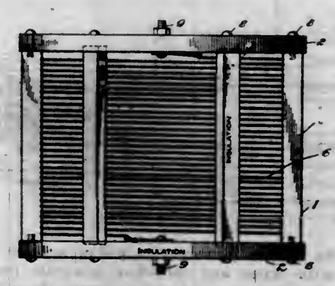
1. A rotary well underreamer comprising a body having undercut cutter ways extending longitudinally along and parallel with the axis of the body, spaced rider surfaces parallel with the cutter ways, cutters slidable in said ways and arranged so that in the reaming position the cutters bear on said rider surfaces back of the cutting edges of said cutters with the cutting edges only extending from the ways, and spring means normally urging the cutters to the reaming position.

1,625,209. TRAILER. JAMES F. HIGBEE, Detroit, Mich., assignor of one-half to Stephen A. Griggs, Detroit, Mich. Filed Nov. 23, 1923. Serial No. 676,484. 4 Claims. (Cl. 280—33.55.)



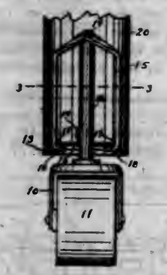
1. In a trailer, an axle provided at its ends with steering knuckles carrying traction wheels, steering arms and a tie rod connecting said steering knuckles, a drag link pivoted to one of said steering arms, a tongue pivoted to the vehicle and adapted to be attached to another vehicle for towing, a bow rigid with the axle extending rearwardly thereof, a steering member pivoted to the axle having an adjustable extension forwardly of its pivot point connected with the tongue for turning and an extension rearwardly of its pivot point connected with the drag link for steering, said steering member having a socket, a spring-pressed plunger in said socket having a nose adapted to travel over said bow, said bow having a recess adapted to engage the nose of the plunger to releasably hold the same to prevent turning movement of the steering member.

1,625,210. JAR HANDLE AND METHOD OF PRODUCING SAME. ARTHUR S. HUNTINGTON, Omaha, Nebr. Filed Apr. 15, 1926. Serial No. 102,161. 2 Claims. (Cl. 215—100.)



1. In a handle for a jar having an apertured lug, a sleeve providing a hand hold, a pair of opposed strands bent near their respective ends to provide rectilinear terminal portions for engaging in said lug and said sleeve, said strands intermediate their rectilinear terminal portions being swung about each other approximately 360 degrees into intertwined relation.

1,625,211. ELECTRIC-DRIVEN ROCK DRILL AND AUTOMATIC HAMMER AND BORING MACHINE. EDWARD P. JONES, Breckenridge, Colo. Filed Mar. 16, 1925. Serial No. 16,016. 3 Claims. (Cl. 255—42.)

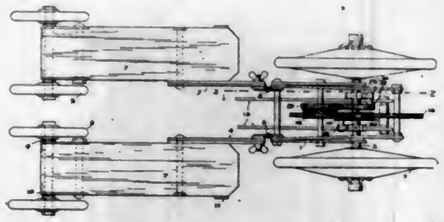


1. An automatic hammer, a hammer element controlled by a rotatable and slidable piston, a driving groove in said piston, a drive member coacting with said groove, and a slidable carriage supporting said drive member.

1,625,212. COIL AND SUPPORT FOR SAME. LELAND L. KARAS, Chicago, Ill. Filed Feb. 20, 1926. Serial No. 89,626. 4 Claims. (Cl. 175—359.)

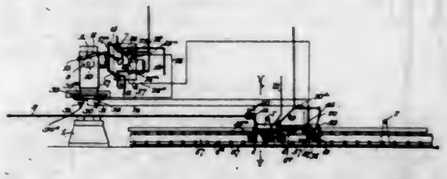
1. In electrical apparatus, a helical coil, and a supporting cage comprising supporting elements and disposed longitudinally of the coil, said elements being identical and being identically notched to receive and separately support the convolutions of the coil and means for holding said supporting elements in spaced relationship about the circumference of said coil and axially offset in progressive relationship to each other so that their coil notches will conform to the pitch of the windings of said coil.

1,625,213. CASTER CENTERING AND RETAINING DEVICE. ROBERT S. KIRKPATRICK, Des Moines, Iowa, assignor to J. B. Ladd, Des Moines, Iowa. Filed Oct. 6, 1922. Serial No. 592,680. 5 Claims. (Cl. 16—39.)



2. The combination with a load object having a socket opening and a caster having a stem of less diameter than said opening, of a centering and retaining device comprising a bearing disk pivotally mounted on said stem and adapted to engage the lower end of said load object, said disk being formed with a central boss adapted to project upwardly within the socket opening, and a one-piece spring yoke carried by said disk in embracing relation to said stem and having a cupped step bearing on the upper end thereof, said boss being formed with diametrically opposed slots in its peripheral wall, said yoke having inturned flanges at its lower ends adapted to enter said slots, whereby said yoke may yield laterally for frictional engagement with the walls of said socket, the inturned flanges of said yoke being radially movable in a plane between the body and boss of said disk.

1,625,214. VELOCIPEDE. PAUL KUHNEL, San Francisco, Calif. Filed Sept. 27, 1923, Serial No. 665,089. Renewed Sept. 7, 1926. 1 Claim. (Cl. 208—113.)

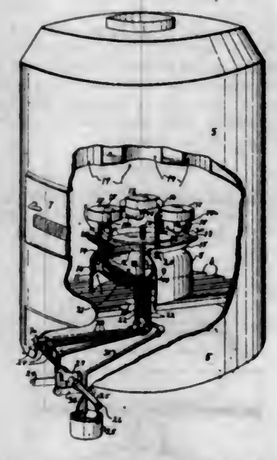


A velocipede of the character described comprising a main frame, an axle on the main frame, wheels mounted on the axle, a pair of trailers pivoted to the main frame

so as to swing rearwardly thereof, on which trailers the operator stands, wheel supporting each of the trailers, and means for driving the wheels for the main frame to

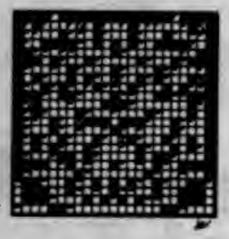
propel the vehicle forwardly including a lever pivoted to the main frame and extending upwardly therefrom, which lever serves as a means for steering the velocipede.

1,625,215. SPACING TABLE. WILLIAM A. LACKE, Chicago, Ill. Filed Sept. 12, 1923. Serial No. 662,186. 53 Claims. (Cl. 164—115.)



1. In combination with a punch press, a spacing device comprising a cylinder, a piston therein, means for effecting movement of the piston and cylinder relatively to each other and in the same direction, and plate gripping means carried by one of said movable members.

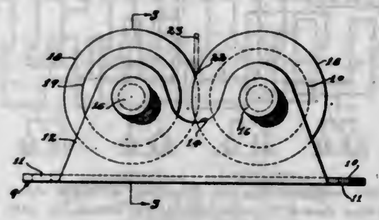
1,625,216. SIGN. JAMES LEMKE, Jr., Troy, N. Y. Filed Sept. 16, 1926. Serial No. 135,777. 2 Claims. (Cl. 40—140.)



1. A support; a frame having spaced apart members; screw-mechanism extending through said frame in engagement with said support; pins projecting from the face of said frame-members; a character-displaying member extending between said frame members and having perforated ears in engagement with pins on the respective frame members, the length of said pins being greater than the thickness of said ears; and clamping members cooperative with the respective frame members to maintain the apertured ears of said character-displaying member in engagement with the pins on the respective frame-members, said clamping members being formed with openings to receive the ends of the respective pins, and with other openings to engage said screw-mechanism, all of said openings being elongated to permit when the screw-mechanism is loosened lateral movement of the clamping members to release said ears from said pins without disconnecting said frame from its support.

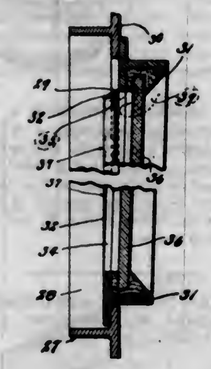
1,625,217. OIL BURNER. CHARLES B. LONGVILLE, St. Paul, Minn. Filed Apr. 26, 1926. Serial No. 104,784. 3 Claims. (Cl. 158—63.)

1. An oil burner comprising a cylindrical hollow base contracted at its top and arranged to receive air into its bottom opening, a truncated funnel resting on said top, a funnel-shaped pan mounted centrally in and spaced from the sides of the cylindrical base, a series of oil delivering pipes extending upwardly through apertures in the truncated funnel and in the contracted top of the base piece, a gas generator mounted on each of said pipes and having a gas burner arranged underneath it and receiving gas from the generator, a central stud fixed in the middle of the pan, and a circular baffle plate centrally threaded on the stud above the central opening in the truncated funnel, and means controlling independently the flow of oil through each of said oil delivery pipes.



1,625,218. CROSS-WORD PUZZLE. ROBERT R. LUNDY, South Bend, Ind. Filed June 15, 1925. Serial No. 37,274. 3 Claims. (Cl. 283—1.)

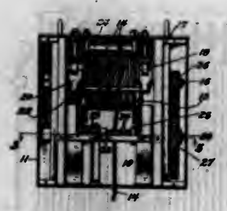
1. The combination with a cross word puzzle having horizontal and vertical numbered word-receiving spaces, of a key having numbers corresponding to space numbers on the puzzle and forming means whereby when corresponding numbered words of the puzzle are consecutively arranged according to the key, connected reading is formed.



1,625,219. KNIFE SHARPENER. WILLIAM H. MCCALL, Philadelphia, Pa. Filed Sept. 2, 1922. Serial No. 585,874. 2 Claims. (Cl. 76—89.)

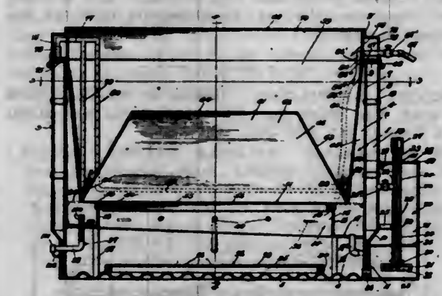
1. In a sharpener for edge tools having cutting disks and spacing disks rotatably mounted on shafts, a support having a flat bottom portion with apertures near its ends and upwardly extending side portions for supporting the shafts, the side portions being shorter than the bottom

portion and having their ends cut away at such an angle as to provide planes for guiding bevel edged tools while being sharpened.



1,625,220. WINDOW CONSTRUCTION. JOHN MESKER and BERNARD T. MESKER, St. Louis, Mo., assignors to Mesker Brothers Iron Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 5, 1925. Serial No. 13,311. 13 Claims. (Cl. 189—69.)

1. In a metallic window construction, the combination of a casing frame provided with flanges disposed in a vertical plane and having web portions extending laterally, and a sash frame operatively mounted in said casing frame and having its flanges disposed in a vertical plane, and web portions extending laterally in a direction opposite to the web portions of the casing frame, the flanges of the sash frame being adapted to enter into overlapping relation with the flanges of said casing frame and the outer edges of the sash frame terminating in close proximity to the web portion of the casing while the inner edges of the casing frame terminate in close proximity to the web portion of the sash thereby diverting the line of contact between the flanges in opposite directions and at right angles to the planes of the coacting surfaces of said flanges.

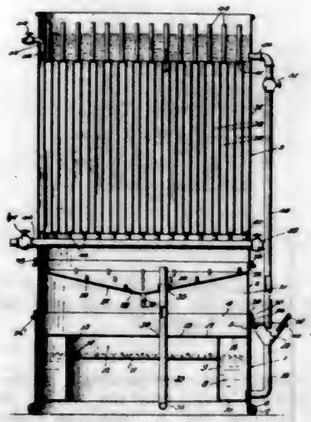


1,625,221. AUTOMATIC FIRE ESCAPE. GEORGE NYKOLYSHAK, Jersey City, N. J. Filed May 22, 1925. Serial No. 32,156. 6 Claims. (Cl. 227—22.)

1. A fire escape comprising a frame, a shaft journalled therein, a reel fixedly mounted on said shaft, a cable normally wound about said reel, brake means operable by said cable for controlling the rotation of said shaft upon the paying out of said cable, a second shaft, means for transmitting motion between said shafts, and a spring means adapted to be placed under tension by the rotation of said last mentioned shaft upon the paying out of said

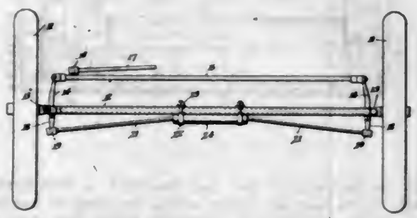
cable when a pull is applied to the free end of the same whereby to automatically rewind said cable about said reel upon the release of said pull.

1,625,222. DISTILLING APPARATUS. ERNON VELSOR OLIVER, Portland, Oreg. Filed Oct. 3, 1921, Serial No. 505,004. Renewed Oct. 6, 1924. 15 Claims. (Cl. 203—5.)



13. In apparatus of the class described, a shell having a well in its bottom, means within the shell to receive water of condensation, a condenser within the shell to deliver water condensed thereby to the said receiving means, a reservoir in communication at its lower portion with the well, a water supply pipe within the reservoir, a valve within the pipe for controlling the supply of water therethrough to the reservoir, a float for controlling the valve, the reservoir being open at its top and the said pipe extending at its upper end above the open top of the reservoir, and lid sections hingedly mounted at opposite sides of the open top of the reservoir and recessed at their meeting sides to accommodate the pipe, said meeting sides of the section being provided with coacting flanges to provide a fluid-tight closure between the sections.

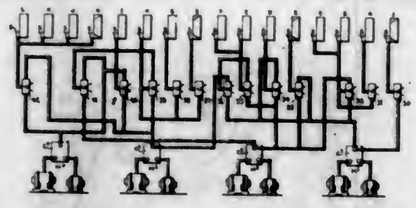
1,625,223. WATER STILL. ERNON V. OLIVER, Portland, Oreg. Filed Dec. 4, 1923. Serial No. 678,450. 2 Claims. (Cl. 203—5.)



1. In distilling apparatus, a condenser comprising alternately arranged concentric annular condensation and cooling-fluid chambers, the former being open at their bottoms, and the latter open at their tops, means for supplying the vapors to be condensed to the space below the open bottoms of the condensation chambers, a cooling-fluid

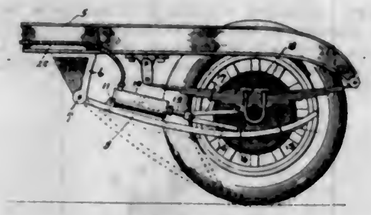
supply pipe extending diametrically beneath the assemblage of chambers, branches leading from the pipe to the bottoms of the said cooling-fluid chambers at diametri-

cally opposite points upon the bottom of each chamber, and means for collecting the condensate from the condensation chambers.



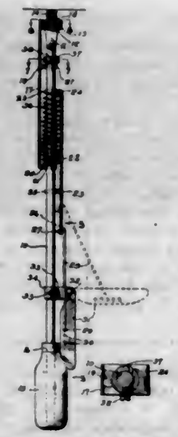
1,625,224. STABILIZER. JOSEPH M. SEAWELL, Richmond, Va. Filed Nov. 18, 1925. Serial No. 69,890. 2 Claims. (Cl. 280—89.)

1. In a vehicle steering mechanism including wheels, an axle, steering knuckles associated with said wheels and axle, a steering knuckle arm on each of said steering knuckles, a reach rod connecting said steering knuckle arms, and yielding stabilizing means connecting said steering knuckles exerting resilient pressure thereon and maintaining said pressure constant in all steering positions of said wheels, and a fixed guide for part of said yielding stabilizing means guiding said stabilizing means in a straight line.



1,625,225. CONTROL SYSTEM FOR PRINTING PRESSES. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 11, 1925. Serial No. 42,899. 5 Claims. (Cl. 172—239.)

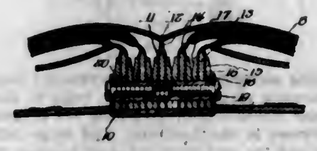
1. In combination a plurality of driven and motor driving units, drive commutating means therebetween to connect said units in different combinations, a controller for each of said driving units, a control station of each of said driven units, circuit commutating means between said controller and said stations including switches to connect said controllers and said stations in



different combinations corresponding with the drive commutations and a common operating means for said commutating switches.

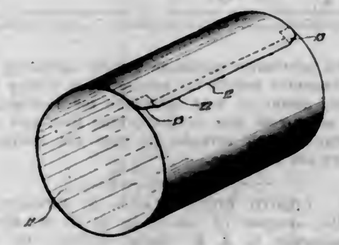
1,625,226. AUTOMOBILE BRAKE AND JACK. CLAUDE SIMMONS, Reno, Nev. Filed Dec. 22, 1925. Serial No. 77,053. 1 Claim. (Cl. 188—5.)

Vehicle brake apparatus comprising a pivoted brake adapted to contact with the ground, a cylinder pivotally mounted on said brake, a piston in said cylinder, a piston rod for said piston, a second rod pivoted to said piston rod at one end and to said brake at its other end, and a third rod pivoted at both ends, one end of the same being pivoted to one of the other said rods and the other end to a relatively fixed support.



1,625,227. SCREW-DRIVER ATTACHMENT. ALTON W. STAUPE, Foxboro, Wis. Filed Dec. 7, 1925. Serial No. 73,791. 4 Claims. (Cl. 145—52.)

1. In combination with a screw driver having a stem, a bit and a handle, a clamping member slidably mounted on the stem to engage a screw and hold it against the bit,



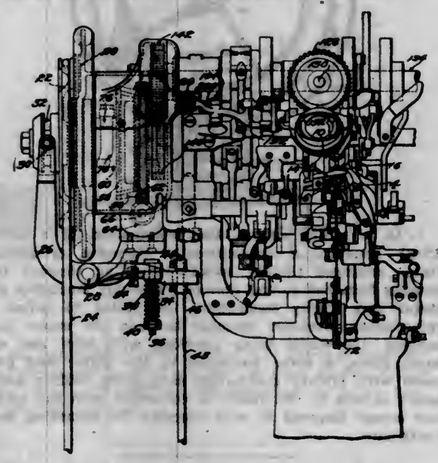
a tension member slidably mounted on the stem, a lever carried by said stem operatively connected to said tension member to move it toward and from the bit, and a spring operatively engaging said clamping and tension members to urge said clamping member in a direction toward said handle when said tension member is drawn away from the bit.

1,625,228. ADVERTISING PORTFOLIO. LOUIS STEIN, Chicago, Ill. Filed Aug. 10, 1925. Serial No. 49,184. 1 Claim. (Cl. 281—24.)

The combination of a folio and an anchoring means therefor comprising a strip of thin flexible fabric, said folio being stitched directly to said strip substantially along the median line of the strip and the strip being folded upon itself along said median line, and a relatively rigid member to which the portions of the folded strip on opposite sides of said median line are secured, the upper edge of said member terminating a short distance below the line of fold so that the upper edge portion of the folded strip projecting above said member constitutes a flexible connection between the folio and the rigid portion of the strip when the latter is held stationary.

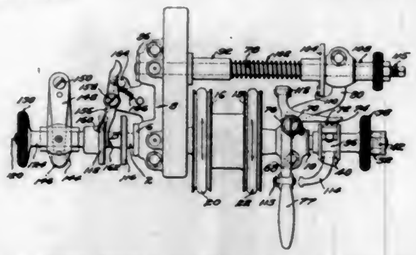
1,625,229. CAN BODY AND METHOD OF FORMING THE SIDE SEAM THEREOF. CHARLES STOLLBERG, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 16, 1925. Serial No. 23,478. 11 Claims. (Cl. 113—112.)

1. The method of forming side seams of can bodies, which consists in interengaging the edges of a blank provided with air vents in the seam area, and applying solder in fluid condition and from the exterior of the seam to the interengaged edges in direction to drive the air therefrom through said vents.



1,625,230. OIL-WELL PUMP. CHARLES B. THURSTON, Oildale, Calif., assignor of one-third to Winfield S. Buchner and one-sixth to Robert B. Thurston, Oildale, Calif. Filed Mar. 10, 1926. Serial No. 93,653. 2 Claims. (Cl. 103—180.)

1. An oil well pump including a casing having a standing valve shoe, a standing valve body fitted in the shoe, a stationary tubular plunger located in the casing, an extension between the lower end of the plunger and the standing valve body, an external coupling between the plunger and its extension, a reciprocable working barrel having a jacket and liners within the jacket and extending from end to end thereof, an adapter connected with the lower end of the jacket and supporting the



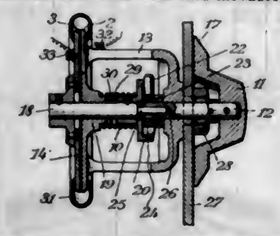
liners at their lower end, a bushing connected to the upper end of the jacket and holding the liners against the adapter, a traveling valve mounted on said bushing, a jacket extension carried by the adapter, and a pull nut carried by the lower end of the jacket extension and engageable with the coupling.

1,625,231. SEWING MACHINE. LAURENCE E. TOPHAM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 29, 1918, Serial No. 231,335, and in Canada Apr. 8, 1918. Renewed July 14, 1922. Serial No. 574,979. 37 Claims. (Cl. 112—180.)

1. A sewing machine, having, in combination, stitch forming devices, a bodily stationary thread supply holder, and movable mechanism controlled from the thread on the supply holder for indicating when less than a predetermined amount of thread is left on the supply holder.

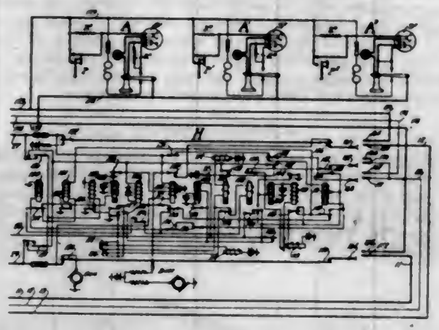
1,625,232. BOBBIN-WINDING MACHINE. LAURENCE E. TOPHAM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 30, 1918, Serial No. 231,611. Renewed Nov. 30, 1925. 16 Claims. (Cl. 242—20.)

1. A bobbin winding machine having, in combination, a winding shaft, driving connections for driving the shaft in reverse directions, a registering mechanism for registering the revolutions of the winding shaft during the first part of the winding operation, and means controlled by the registering mechanism for shifting the driving connections to cause a comparatively short predetermined length of thread to be wound on the bobbin in one direction and the remainder of the thread to be wound on the bobbin in the opposite direction.



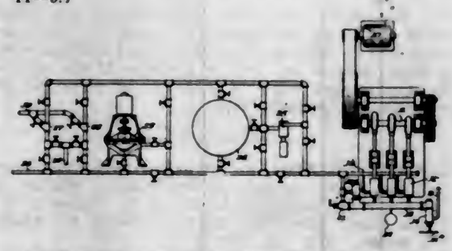
1,625,233. ROTARY ENGINE. ARTHUR J. WILLIAMS, Nashville, Tenn., assignor of one-fourth to Cheever J. Cameron, one-fourth to William F. Glenn, jr., and one-fourth to Ivo B. Glenn, Nashville, Tenn. Filed Aug. 23, 1922. Serial No. 583,842. 6 Claims. (Cl. 121—76.)

1. In a rotary engine, the combination of a cylindrical housing, a concentrically disposed cylindrical stator arranged therein, means extending through the housing from end to end thereof removably mounting the stator and fixedly suspending the stator to define a surrounding lubricant chamber between the stator and housing, the stator being provided with inlet and exhaust ports, a rotor journaled in the stator and provided with pistons controlling said ports, sliding abutments carried by the stator to cooperate with the rotor, and means disposed in said chamber for actuating said abutments.



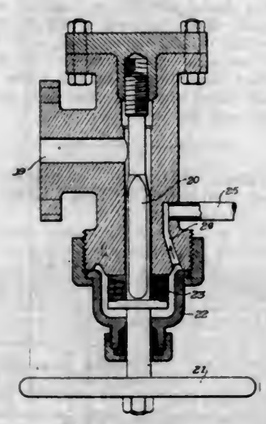
1,625,234. WIRELESS APPARATUS. GERARD FRANCIS WITTGENSTEIN, Zurich, Switzerland. Filed Feb. 16, 1926, Serial No. 88,643, and in Switzerland July 18, 1925. 2 Claims. (Cl. 172—41.5.)

1. An apparatus of the type described, comprising in combination, a condenser having a stationary plate and a movable plate adapted to be parallel displaced to the stationary plate, a knob turnably mounted by means of a shaft, a cam and a roller cooperating with said cam and operatively connected to said knob, means interposed between said cam and roller and said movable plate where-



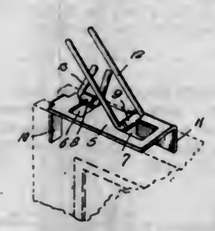
by a turning movement of said knob causes a displacement of said movable plate, the cam face being so shaped that the angular movements of said knob are proportional to the differences in the frequency, and stops defining the minimum and the maximum distances between the plates.

1,625,235. AUTOMATIC TELEPHONE SYSTEM. JOHN I. BELLAMY, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 8, 1921, Serial No. 483,117. Renewed Feb. 4, 1926. 23 Claims. (Cl. 179—17.)



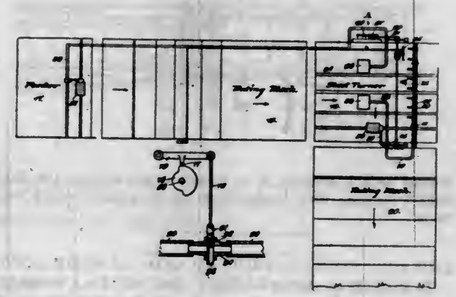
1. In an automatic telephone system including party lines, a connector switch for connecting a calling and a called line, means in said connector for reversing the direction of current flow in the calling line, and means for preventing such reversal in case the calling and called lines are the same.

1,625,236. LIQUID FUEL. LEWIS N. BOWMAN, Chicago, Ill., assignor of one-eighth to H. H. Harrison and one-eighth to A. R. White, Chicago, Ill. Filed July 13, 1925. Serial No. 43,370. 4 Claims. (Cl. 44—9.)



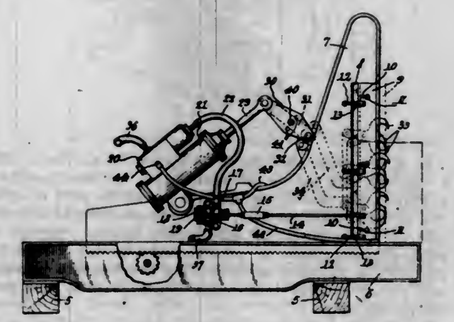
1. A liquid fuel obtained by passing a residual oil containing free carbon in temporary suspension between a pair of closely contiguous surfaces under relatively extremely high pressure.

1,625,237. LIQUID FUEL. LEWIS N. BOWMAN, Chicago, Ill., assignor of one-eighth to H. H. Harrison and one-eighth to A. R. White, Chicago, Ill. Filed Aug. 1, 1925. Serial No. 47,553. 3 Claims. (Cl. 44—9.)



1. A liquid fuel obtained by passing a residual oil from petroleum distillation containing free carbon in temporary suspension between closely adjacent surfaces at high pressure and high velocity and causing an abrupt change in the direction of flow of said oil.

1,625,238. SASH FASTENER. JOHN J. BRADLEY, West Springfield, Mass. Filed July 24, 1925. Serial No. 45,868. 1 Claim. (Cl. 292—54.)

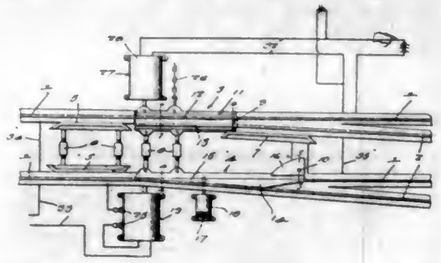


A sash fastener of the class described including a supporting member comprising a base plate adapted to be rested on the upper side of the upper rail of a sash and having an integral depending tongue at one end and an integral depending flange at one side, portions of the plate being partially cut therefrom and rolled to form a pair of sleeves, the axis of one sleeve extending longitudinally of the plate and the axis of the other sleeve extending transversely thereof, and a pair of wire U-shaped jacks having their intermediate portions rotatable in the sleeves, the legs of one jack being angularly disposed in relation to each other and one longer than the other.

1,625,239. FEEDING MECHANISM FOR RULING MACHINES AND THE LIKE. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1926. Serial No. 100,699. 33 Claims. (Cl. 271—27.)

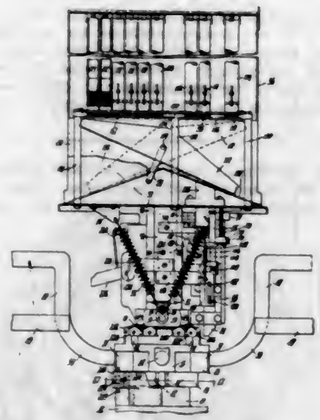
1. In apparatus of the character set forth, the combination with two instrumentalities for successively operating on sheets, of a drive shaft, cams driven by the shaft for periodically operating said instrumentalities, and means for connecting and disconnecting the cam that operates the first instrumentality.

1,625,240. SAWMILL-DOG-ACTUATING MECHANISM. JAMES M. BROPHY, Hattiesburg, Miss. Filed Jan. 21, 1926. Serial No. 82,819. 14 Claims. (Cl. 143—125.)



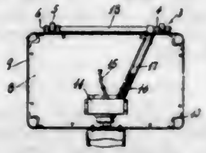
1. In combination with a saw mill carriage and the dogs thereof, means for actuating the dogs, said actuating means being controlled by the movement of a log onto the saw mill carriage.

1,625,241. RAILROAD SWITCH. PERRY O. BROWN, St. Vincent, Minn., assignor of one-half to Gustaf V. Backstrom, St. Vincent, Minn. Filed July 11, 1925. Serial No. 43,016. 5 Claims. (Cl. 246—416.)



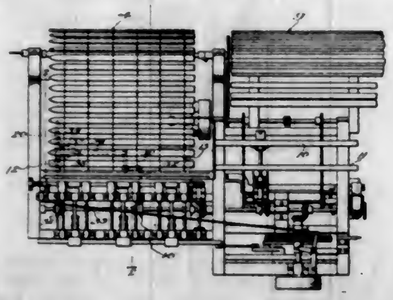
4. In a railway switch structure of the class described, a relatively short section embodying spaced parallel rails

adapted to be alined at one end either with the ball portion of a main rail or the ball portion of a side rail, a



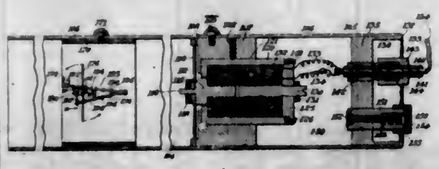
second switch section of a length greater than the first named section, and connections between said switch sections.

1,625,242. COIN-CONTROLLED AND CHANGE-MAKING TURNSTILE APPARATUS. DANIEL L. CHANDLER, Worcester, Mass., assignor, by mesne assignments, to William H. Whitcomb, Newton, Mass. Filed June 30, 1924. Serial No. 723,399. 52 Claims. (Cl. 194—92.)



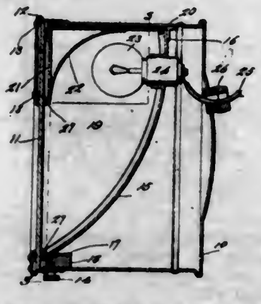
1. A coin controlled turnstile apparatus provided with a coin slot and having, in combination, a rotary member, locking means normally positioned out of the path of rotation of said rotary member, and mechanism rendered operable by the rotation of said rotary member through a predetermined angle to position said locking means in the path of rotation of the rotary member and prevent said rotary member from being rotated beyond said predetermined angle.

1,625,243. QUICK-ACTION WAFFLE IRON. LOUIS CONTZ, Long Beach, Calif. Filed Nov. 27, 1925. Serial No. 71,632. 2 Claims. (Cl. 219—19.)



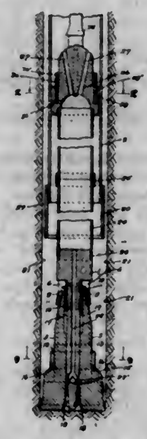
2. An electrically heated waffle iron comprising a rectangular lower plate, a rectangular upper plate, lugs on said lower plate and upper plates, a pin extending through said lugs whereby the plates are hinged together, the abutting faces of said plates being formed with short protuberances set close together, a heating coil in said lower plate, a heating coil in said upper plate, a switch mounted on the bottom of said lower plate adjacent the forward edge thereof and electrically connected to the coil in the lower plate, a tube extending over said pin between the lugs, a conduit on the bottom of the lower plate extending from said switch position to the tube, a second conduit extending from said tube to the upper plate and secured to said upper plate, a lead extending through said tube and conduits to the coil in the upper plate, an apron depending from the lower plate, legs secured to said apron and insulating pads positioned between said legs and the apron.

1,625,244. FENCE MACHINE. JOSEPH M. DENNING, Denver, Colo. Filed Mar. 7, 1925. Serial No. 13,728. 6 Claims. (Cl. 140—26.)



1. In a machine for the manufacture of picket fencing, having cross pickets together with longitudinally extending strand wires joining said pickets together, the combination of means for continuously advancing the fencing in the direction of the strand wires, a frame bar mounted for movement towards and from the line of travel of the pickets of said fencing, a pair of cutters on said frame bar movable parallel to the length of the pickets, means for raising the frame bar to present the cutters at the sides of a picket, and means for moving the cutters longitudinally of the picket to thereby trim the sides of the picket, substantially as described.

1,625,245. RECEIVING SYSTEM FOR COMPRESSIONAL WAVES. HERBERT GROVE DORSEY, Gloucester, Mass., assignor to John Hays Hammond, jr., Gloucester, Mass. Filed June 22, 1918. Serial No. 241,330. Renewed June 20, 1925. 11 Claims. (Cl. 181—0.5.)



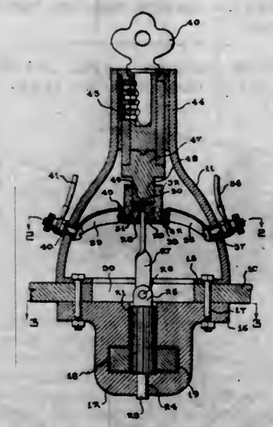
8. A receiver for compressional waves, comprising a hollow member, a diaphragm arranged to produce compressional waves in said hollow member, a second hollow member communicating with and spaced from said first-mentioned member, yielding sound absorbing means connecting said members, and a diaphragm carried by said second member and arranged to respond to compressional waves produced therein as the result of the action of said first-mentioned diaphragm.

1,625,246. HEADLIGHT. GEORGE W. DRAPER, Bristol, Conn. Filed Apr. 6, 1925. Serial No. 21,105. 2 Claims. (Cl. 240—41.)

1. A head lamp comprising a casing, a lens therefor, a retaining ring including a segmental portion disposed in advance of and extending an appreciable distance downwardly on the lens, a curved reflector, a lining formed in one piece to conform to the shape of the casing and said reflector and positioned forwardly of said reflector, said lining including an apron depending from the forward edge thereof and terminating in a plane with the lower edge of the segmental portion of the ring, and arranged at the opposite side of the lens, a curved plate connecting the apron with the upper portion of the lining, and an electric light bulb supported by the reflector and directly behind said plate.

1,625,247. COLLAPSING OIL DRILL. BENJAMIN B. DUDLEY, Visalia, and EDWARD R. DUDLEY, Piedmont, Calif. Filed Aug. 24, 1925. Serial No. 52,238. 3 Claims. (Cl. 255—75.)

1. A well drill comprising a body with jaws slidable longitudinally thereon from a collapsed to an expanded position, and shoulders on said body and jaws adapted to engage one another when the jaws are expanded, and a lug on each of said jaws engaging a portion of the body when the jaws are collapsed, said lug and portion presenting spaced points of contact.

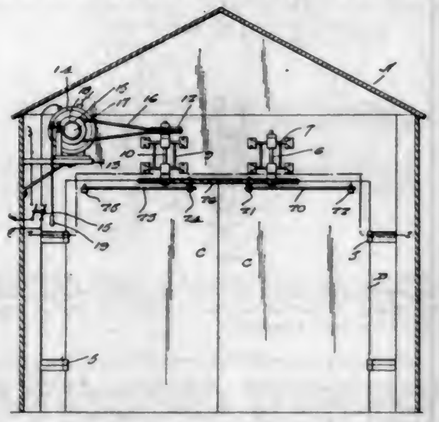


1,625,248. ELECTRIC-MINIATURE-LAMP HOLDER. REUBEN ECKSTEIN, New York, N. Y. Filed Feb. 10, 1922. Serial No. 535,633. 3 Claims. (Cl. 173—358.)

8. A clothes pin like structure forming a holder for miniature electric lamps and comprising a body having integral depending clamping jaws, the end of the body opposite said jaws being counterbored, and a metallic

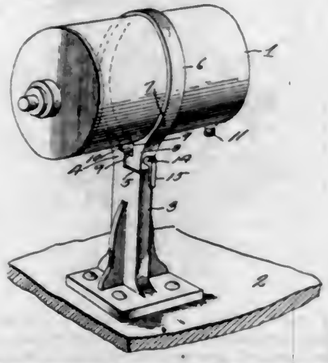
lamp socket shell fitted into said counterbored end, said body having a central passage adapted to receive conductor wires from said shell.

1,625,249. AUTOMOBILE LOCK. MANSOUR FARAH, El Paso, Tex. Filed Aug. 20, 1925. Serial No. 51,421. 2 Claims. (Cl. 70—127.)



1. In a motor vehicle, a transmission casing having shifter rods reciprocal therein, and a cover with an opening, an upstanding casing having an inturned flange about its base adapted to form an opening to register with the opening in said transmission cover, a locking bar mounted in said upstanding casing and adapted to be rotated by a key inserted at the upper end of the casing, a guide member having an outwardly extending flange and adapted to fit upon the lower surface of the transmission cover, bolts for securing together said transmission cover and the flanges of said upstanding casing and said guide member, a gear rotatably mounted in said guide member, connecting means between the gear and locking bar for rotating the gear with said locking bar, and movable members in said guide member adapted to be actuated by the rotation of said gear for locking the shifter rods of said transmission against movement.

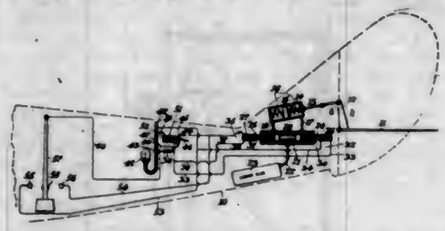
1,625,250. DOOR-OPERATING MECHANISM. THOMAS M. FERGUSON, Stillwater, Minn. Filed May 1, 1925. Serial No. 27,245. 1 Claim. (Cl. 268—68.)



In combination, a building having a doorway, a pair of doors hinged in the doorway, brackets above the doorway, shafts journaled in the brackets one to each side of the center of the doorway and between the sides thereof, sprockets on the lower ends of the shafts, a chain trained

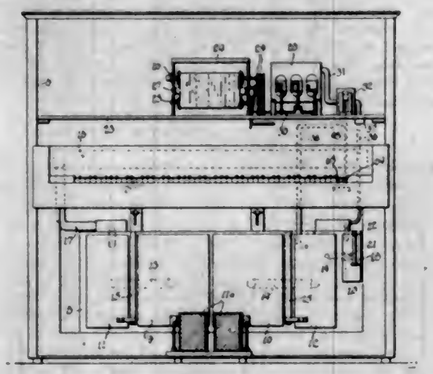
over the sprockets, a pulley on the upper end of one of said shafts, a prime mover supported above, and to one side of the doorway and including a pulley, a belt trained

over the pulleys, and pitman rods connected eccentrically to the sprockets and engaged with the doors adjacent their hinged edges.



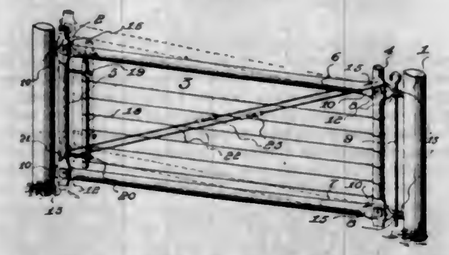
1,625,251. WORK HOLDER. BUELL FODGE, Detroit, Tex. Filed Mar. 8, 1926. Serial No. 93,181. 1 Claim. (Cl. 29—89.)

A work holder comprising a vertically disposed support, the upper end of said support terminating at one side thereof in an upwardly extending arm thereby forming a recess, a contractible band, one end of the contractible band being carried by the upwardly extending arm of the support, the other end of said band terminating in a downwardly extending arm disposed in the recess in the upper end of the support, a bolt extending through the upwardly extending arm of the support and the downwardly extending arm of the band, and a cam lever carried by said bolt and cooperating with the downwardly extending arm, whereby said arm may be forced inwardly and the band contracted.



1,625,252. CONTROL SYSTEM FOR AIRCRAFT. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Feb. 5, 1919. Serial No. 275,174. 18 Claims. (Cl. 244—29.)

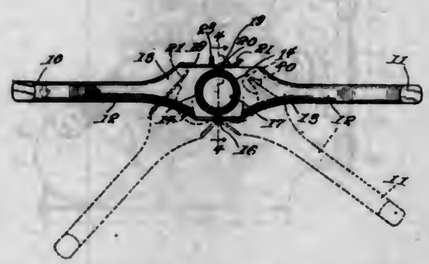
18. The combination with an aircraft, a horizontal rudder for steering said aircraft in its normally vertical plane, a barometer carried by said body and operatively connected to said rudder and preadjusted to remain inert only when external atmospheric pressure thereon is within certain predetermined limits for controlling said rudder, and arranged to control the rudder to steer the aircraft towards the level having atmospheric pressure within the predetermined limits, and a receiving circuit including a receiving element responsive to radiant



energy, a detector for the received energy, and means controlled thereby for varying the predetermined pressure range of the barometer to vary the normal altitude of the aircraft at will.

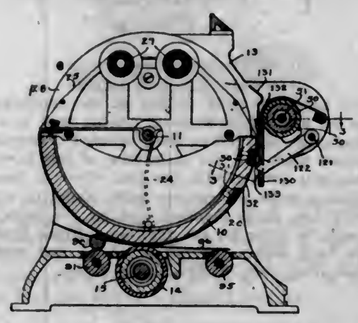
1,625,253. PLAYER-PIANO MECHANISM. STILLWELL R. HARCOURT, Chicago, Ill.; Martha D. Harcourt, administratrix of said Stillwell R. Harcourt, deceased. Filed Nov. 1, 1922. Serial No. 598,262. 7 Claims. (Cl. 84—130.)

1. In an automatic music instrument, the combination of note sheet means, a pneumatic motor for moving said note sheet means, a source of suction, a suction conduit connecting said source and said motor for transmitting the suction from said source to said motor, and means for venting atmosphere directly into the suction connection between the source and motor to decrease the effectiveness upon the motor of a given suction from said source without throttling the suction source or changing the suction therefrom.



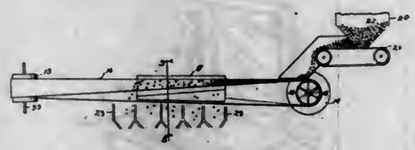
1,625,254. GATE CONSTRUCTION. WILLIAM HODDS, Golden City, Mo. Filed Oct. 23, 1925. Serial No. 64,414. 5 Claims. (Cl. 256—73.)

1. A gate comprising top and bottom bars and end bars hinged to the first mentioned bars, said bars being



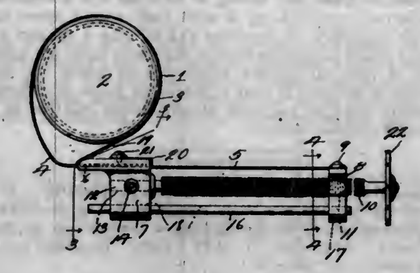
tubular in construction and flattened at the points of intersection, the end bars being extended above the top bar and provided with sockets for the reception of secondary posts.

1,625,255. HOSE HOLDER. BURNIE HUDGINS, Kenova, W. Va. Filed Oct. 28, 1925. Serial No. 65,461. 1 Claim. (Cl. 294—15.)



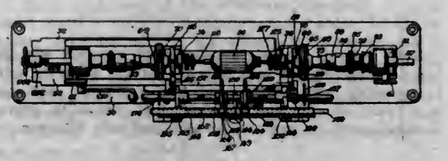
A hose holder of the character described comprising handle members providing substantially enlarged inner ends having semicircular cut-out portions arranged within their meeting ends, a hinge being associated to the undersides of the inner enlarged ends, a spring hasp secured to the upper side of one of the enlarged ends and extending an appreciable distance over the opposite enlarged end and terminating in an upwardly extending end portion, said hasp having an opening adjacent the upwardly extending end portion a yoke straddling the spring hasp upon the respective enlarged portion, and a lug provided upon the upper side of the opposite and companion inner enlarged end and providing a forwardly inclined surface thereon for engagement with the upwardly extending end portion of the spring hasp in automatically bringing the positioning lug within the corresponding opening provided in the spring hasp whereby the gripping surfaces will be locked upon a hose.

1,625,256. PAPER DETECTOR FOR PRINTING MACHINES. JOHN A. HOLT, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 20, 1926. Serial No. 110,432. 18 Claims. (Cl. 101—53.)



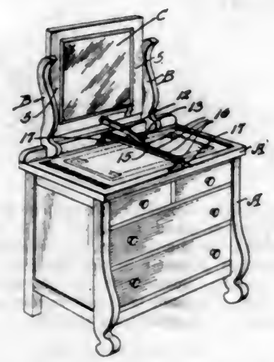
1. In a machine of the character described, the combination of a form for the body of a letter, a changeable form for an address, a platen coacting with both forms, a second platen adapted to cooperate with the address form only, and a paper detector responsive to the presence or absence of an envelope for controlling the envelope platen.

1,625,257. APPARATUS FOR SEPARATING MAGNETIC MATERIAL FROM NONMAGNETIC MATERIAL. LEIF J. INGOLFSAUD and WILLIAM H. SOULE, Coniston, Ontario, Canada. Filed Feb. 9, 1925, Serial No. 7,861, and in Canada Mar. 31, 1924. 2 Claims. (Cl. 209—225.)



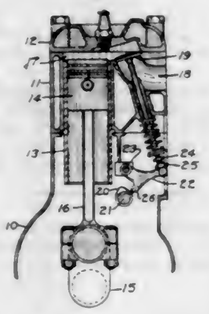
1. In a magnetic separator, an endless travelling belt, said belt being mounted to travel at a gradually increasing inclination sideways to its direction of motion, magnets mounted adjacent to the underside of the belt, means for feeding the material to be separated on to the upper surface of said belt, and means to gather the graded material as it falls from the belt.

1,625,258. PISTON-RING CONTRACTOR. MARTIN JELBERT, Jr., Lead, S. Dak. Filed May 5, 1925. Serial No. 28,118. 3 Claims. (Cl. 29—86.4.)



1. A ring contractor comprising spaced blocks, an operating screw threaded through one of the blocks and rotatably mounted in the other block, a guide rod carried by one of the blocks and slidably mounted in the other block, an expansible loop, one end of said loop terminating in a flat portion, said flat portion having its end anchored to one of the blocks and slidably mounted in a channel of the other block, the other end of said loop extending through the channel of said last named block and anchored to the outer side of the block.

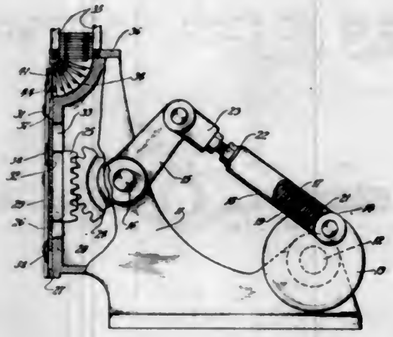
1,625,259. BALANCING MACHINE. GUSTAVE T. JOHNSON, Chicago, Ill. Filed Sept. 1, 1920. Serial No. 407,431. 41 Claims. (Cl. 73—51.)



1. A balancing testing machine of the character described including in combination an inverted pendulum-structure having a certain unresisted rocking movement, means to rotatably mount the body to be tested on said pendulum-structure, and means to rotate said body synchronously with the natural period of oscillation of said pendulum-structure.

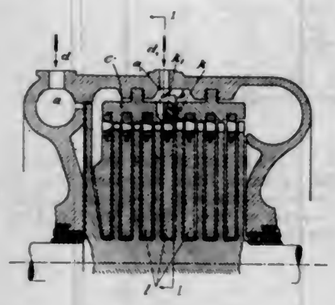
1,625,260. MIRROR ADJUSTER. CHARLES M. LEE, Shreveport, La. Filed Mar. 12, 1926. Serial No. 94,245. 1 Claim. (Cl. 45—18.)

A frame adjuster for furniture comprising an arm having means at one end for its pivotal connection to an adjustable frame and having at its other end a retaining projection, a bar having a solid body spaced above the top of the article of furniture and forming a support for said projection, and transverse shoulders upon the upper face of said bar against either side of which the projection is designed to abut to retain the frame at different opposite angular positions of adjustment relative to a vertical position thereof.



1,625,261. INTERNAL-COMBUSTION ENGINE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Dec. 27, 1923. Serial No. 683,054. 13 Claims. (Cl. 123—90.)

1. In a device of the class described, a rocker arm having a curved seat, a cam follower having a curved outer face mating with said curved seat to permit oscillatory movement of said cam follower, and means to prevent disengagement of said rocker arm and cam follower.

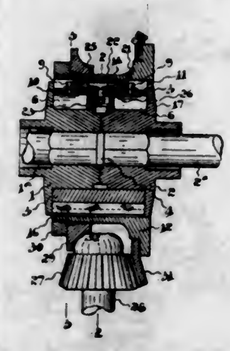


1,625,262. SEPARATING DEVICE FOR CAN CAPS OR THE LIKE. NICHOLAS LOESEL, Richmond Hill, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1925. Serial No. 29,945. 10 Claims. (Cl. 113—114.)

1. Apparatus for separating adjacent articles, as straight-flanged container closures or the like, comprising means for receiving the articles from a stack in which they are arranged in a horizontal plane and conducting them to a substantially vertical position with the edges

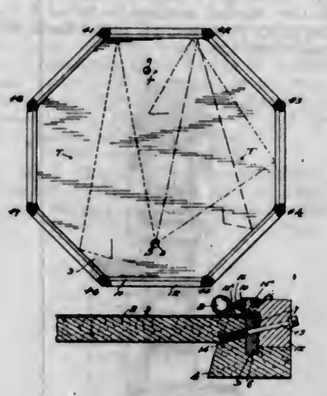
thereof spaced apart to facilitate separation of the articles for individual feeding, and combined therewith means for separating the articles at their spaced-apart portions and for feeding the separated articles.

1,625,263. ELASTIC-FLUID TURBINE. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 4, 1923. Serial No. 655,723, and in Austria Apr. 30, 1923. 16 Claims. (Cl. 253—69.)



1. In an elastic fluid turbine of the multistage type, means for admitting additional driving fluid to an intermediate stage, said means being adapted to introduce the additional fluid into the main flow of the driving fluid substantially parallel with the axial direction thereof and including a series of separate guide blades in which are provided two guide channels, one for the main driving flow and the other for the additional diving fluid, and a carrier body within the turbine casing and with which are connected said separate guide blades.

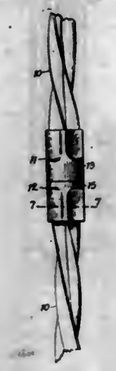
1,625,264. DIFFERENTIAL DRIVE. AARON LOUGHEED, Port Arthur, Ontario, Canada. Filed July 10, 1926. Serial No. 121,589. 4 Claims. (Cl. 74—7.)



1. A drive connection comprising a shaft; a hub fitted on the shaft and having a driving connection therewith; an inner sleeve rotatable on the hub and having a recess formed therein adjacent said hub; a double pawl pivoted in said inner sleeve; teeth having oppositely directed

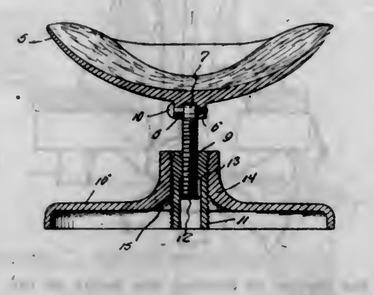
shoulders formed in the hub; an outer sleeve rotatable on the inner sleeve and having a recess formed therein adjacent the inner sleeve; an arm on said pawl extending through the inner sleeve into the recess in the outer

sleeve; a spring carrier fitted into the recess in the outer sleeve; and a bent spring formed with a loop held in said carrier and ends embracing the arm of the pawl and resiliently tending to retain said arm in a given position relative to the sleeve.



1,625,265. GOLF COURT. WILLIAM W. MALLOY, San Pedro, Calif. Filed Oct. 14, 1926. Serial No. 141,532. 3 Claims. (Cl. 273—87.)

1. The combination in a game of a ball, and a generally plane, smooth surface ball court having a surrounding ball cushioning wall; the margin of the court surface adjacent to the cushioning wall being slightly inclined inward and downward so as to cause the ball to gravitate from the wall to a playable position.

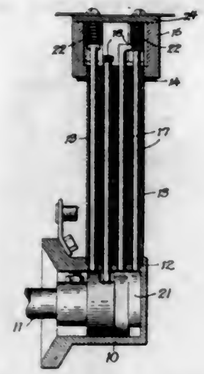


1,625,266. ROD COUPLING. CHARLES O. MAST, Covington, Ohio, assignor to Mast Lightning Rod Company, West Milton, Ohio. Filed May 12, 1926. Serial No. 108,586. 1 Claim. (Cl. 287—109.)

A sectional lightning rod comprising two sections each formed of a solid bar, having a plurality of fins extending spirally about the axis thereof except at the adjacent end portions, where the fins extend parallel to the axis, a coupling between said end-portions comprising two members threaded together at one end and crimped tightly about said parallel fins at their opposite ends, the

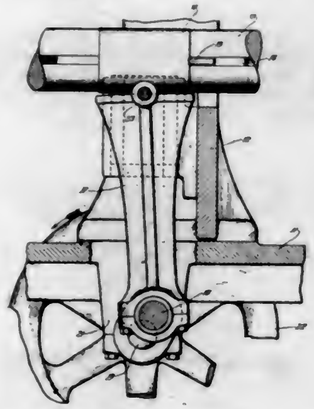
said portions each having an aperture extending transversely through the body thereof, and each coupling member, at the crimped end, having integral, oppositely disposed, rivet projections, dimensioned to occupy and to extend in abutting relation in the respective aperture.

1,625,267. HEADREST. FRANK E. MASTERS and WILLIAM A. HUSSEY, Tulsa, Okla.; said Hussey assignor to C. A. Mechling, Tulsa, Okla. Filed Jan. 12, 1926. Serial No. 80,776. Renewed Jan. 3, 1927. 2 Claims. (Cl. 27—13.)



1. In a head rest of the character described, a plate formed with a central opening around which is an internally threaded sleeve, an externally threaded sleeve threaded within said first mentioned sleeve, and being internally threaded at its upper end, a bolt threaded within the upper end of the externally threaded sleeve, means for limiting the outward threaded movement of the bolt with respect to the sleeve, and a head rest carried by the upper end of the bolt.

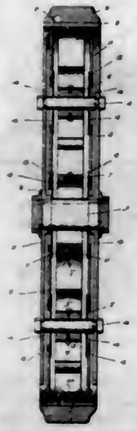
1,625,268. TIMER. VIRGIL H. MATHES, Indianapolis, Ind. Filed Nov. 13, 1925. Serial No. 68,892. 4 Claims. (Cl. 200—27.)



3. A timer comprising a casing, a housing, sleeves connecting said casing and housing, contacts within said housing, rods disposed in said sleeves, said rods having

their upper ends provided with lateral extensions overlying said contacts, insulated springs resting on said

lateral extensions, and a cover for said housing holding said insulated springs against said lateral extension, substantially as set forth.



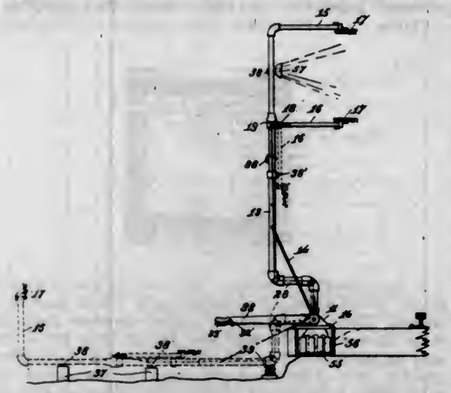
1,625,269. PROCESS AND APPARATUS FOR FORMING SIDE SEAMS ON CONTAINER BODIES. LELAND R. MCCANN, Hawthorne, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 23, 1925. Serial No. 17,604. 5 Claims. (Cl. 113—9.)

1. The process of forming side seams on can bodies which consists in interengaging the edges of said bodies, feeding the same along a forming mandrel, and then bumping said interengaged edges progressively from end to end of the seam with a reciprocating and rocking movement of the bumping means.

1,625,270. SPRING WHEEL. CIRO FIDEL MÉNDEZ, Mexico City, Mexico, assignor to Irving S. Cooper, Los Angeles, Calif. Filed Mar. 26, 1924. Serial No. 701,990. 3 Claims. (Cl. 152—28.)

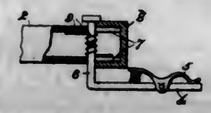
1. In a spring wheel, the combination of a main hub; minor hubs connected with the main hub by radial elements; a series of circular casings, each surrounding one of said minor hubs; a rim connected with said casings; a said minor hubs; a rim connected with said casings; a series of semi-circular springs, each minor hub and its casing being provided with a pair thereof, each spring having one of its ends attached to the minor hub and its other end attached to the casing, the points of attachment of each spring being upon a diameter of the wheel; and a second series of semi-circular springs, each minor hub and its casing having a pair of springs

of said second series, each spring of said second series having one of its ends attached to a casing and its other end attached to a minor hub, the points of attachment of each spring being on a line parallel with a diameter of the wheel disposed at right angles to a first named diameter of the wheel.



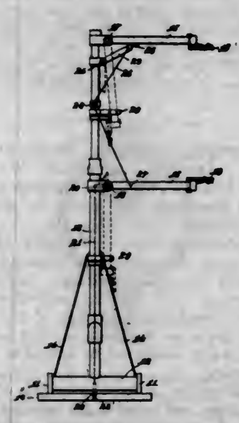
1,625,271. SPRING WHEEL. CIRO FIDEL MÉNDEZ, Mexico City, Mexico, assignor to Irving S. Cooper, Los Angeles, Calif. Filed Dec. 11, 1924. Serial No. 755,228. 2 Claims. (Cl. 152—28.)

1. In a spring wheel, the combination of a rim; springs carried by said rim; discs carried by said springs; a hub carried by said discs; re-inforcing plates attached to said rim and bearings against said discs; and cushioning material applied to the peripheries of said discs and in compressed contact with the faces of said plates, and adapted to act as snubbers against the action of said springs.



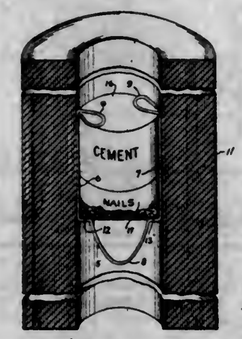
1,625,272. MAIL CRANE. CARL A. MOHNKERN, Curtis, Ark. Filed Apr. 10, 1925. Serial No. 22,086. 8 Claims. (Cl. 258—23.)

1. A mail crane comprising a base, a standard pivotally mounted thereon and provided with a pair of horizontally extending arms, one of said arms being pivotally mounted, a latch carried by said standard and engaging said base to hold the standard in vertical posi-



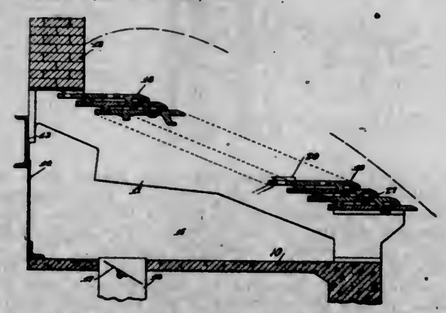
tion and means connecting said latch and said pivotally mounted arm for releasing the former when the latter swings downwardly, substantially as described.

1,625,273. POUCH-HOLDING CLAMP FOR MAIL CRANES. CARL A. MOHNKERN, Curtis, Ark. Original application filed Apr. 10, 1925, Serial No. 22,086. Divided and this application filed Sept. 11, 1926. Serial No. 134,911. 2 Claims. (Cl. 258—23.)



1. In a mail crane, a pouch supporting arm having its end vertically slotted, a pouch supporting clamp, comprising a horizontal finger having a vertical pivot pin arranged within said slot, a cap on the end of said arm holding said pivot pin within said slotted end, and a spring pressed clamp finger carried by said first-mentioned finger, substantially as described.

1,625,274. MAIL CRANE. CARL A. MOHNKERN, Curtis, Ark. Original application filed Apr. 10, 1925, Serial No. 22,086. Divided and this application filed Sept. 11, 1926. Serial No. 134,912. 1 Claim. (Cl. 258—24.)

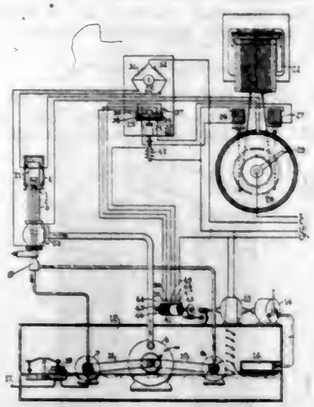


In a mail crane, a standard, upper and lower pouch supporting arms pivotally mounted thereon and adapted to swing downwardly, a detent on said upper arm, a pivotally mounted brace having a free end adapted to engage said detent to support the upper arm in raised position, and means connecting said brace and the lower arm whereby downward movement of the latter will release said brace from said detent, substantially as described.

1,625,275. RESILIENT PACKAGE-HOLDING DEVICE. HENRY C. NATERMAN, Los Angeles, Calif. Filed Dec. 24, 1925. Serial No. 77,474. 5 Claims. (Cl. 206—59.)

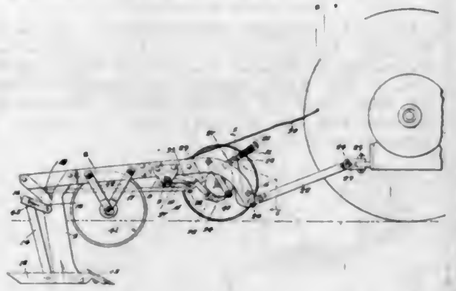
2. A device for holding packages in position within hollow rolls comprising a single length of spring wire bent upon itself at its middle portion to form spring wall gripping arms for the reception of packaged articles therebetween, the ends of said arms being bent towards each other to form stops or supports for said articles.

1,625,276. STOKER AIR CONTROL. OSCAR O. NYGAARD, Saugus, Mass., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Original application filed Mar. 23, 1923, Serial No. 627,065. Divided and this application filed Feb. 9, 1926. Serial No. 87,145. 4 Claims. (Cl. 110—44.)



1. An apparatus for controlling the admission of air from the fuel bed into a stoker, which comprises, in combination, a fuel trough, tuyères arranged along the length of said trough at each side thereof comprising separable tuyère blocks, and means associated with but separable from the tuyère blocks for predetermining the amount of air passing through the tuyères.

1,625,277. METHOD OF AND MEANS FOR DETERMINING THE HEATING VALUE OF COMBUSTIBLE GASES. HORACE N. PACKARD, Wauwatosa, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 24, 1919. Serial No. 347,227. Renewed Feb. 12, 1926. 44 Claims. (Cl. 73—184.)



1. The method of ascertaining the heating value of a combustible fluid which comprises, effecting combustion

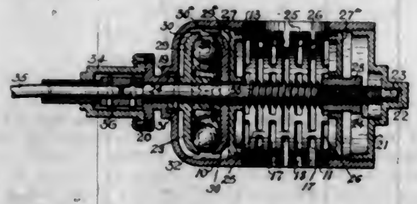
of such fluid in the presence of a sufficient quantity of air and determining the effect of combustion upon a

stream of air bearing a definite quantity ratio to the combustible fluid and maintained separate from the combustion products.

1,625,278. SUBSOIL PLOW. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 25, 1924. Serial No. 734,005. 8 Claims. (Cl. 97—72.)

1. In a traction drawn power lift subsoil plow, the combination with a frame, an axle and supporting wheels, of a support on the rear of the frame, a shoe rockably mounted on said support, a plow blade on the shoe, power actuated mechanism operable to rock the axle to raise the plow, and means coacting with said mechanism and operating to simultaneously rock the shoe to vary the angularity of the plow blade relative to the ground as the plow is raised or lowered.

1,625,279. PROCESS OF UTILIZING OLD PAPER STOCK. JOSEPH E. PLUMSTEAD, Wilmington, Del., assignor to The Jessup & Moore Paper Co., Philadelphia, Pa., a Corporation of Massachusetts. Filed June 21, 1926. Serial No. 117,483. 3 Claims. (Cl. 92—13.)

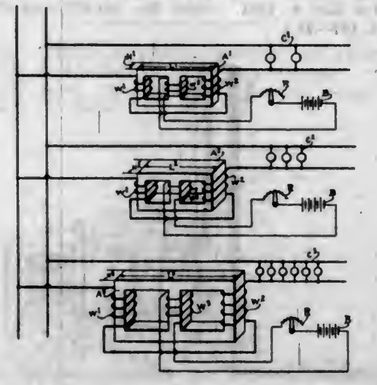


3. A method of producing chemical pulp which consists in chemically cooking under heat and pressure a charge of cellulosic containing material blowing this charge into a suitable receptacle, separately mechanically disintegrating a batch of old stock while wet and relatively cold and mixing the hot and the cold batches whereby the old stock is thoroughly cooked and the cellulosic fibres separated from the undesirable material.

1,625,280. WOODEN CONTAINER. JOHN H. PROCTOR, Andover, Mass., assignor to Gardner W. Pearson, Lowell, Mass. Filed Nov. 28, 1923. Serial No. 677,401. 5 Claims. (Cl. 217—76.)

2. In a shipping container, the combination of a cylindrical wall formed of plywood; with heads formed of circular sheets of veneer of greater diameter than the inner diameter of the wall and having their grain running at different angles and their rims gored in staggered relation, with waterproof glue between the sheets, the gored rims having been upset under pressure and the heads having been forced inside the circular wall; and means to hold the heads in position.

1,625,281. COMBINED SPEED REGULATING AND MIXING VALVE. ARTHUR E. RAQUÉ and PHILIP E. RAQUÉ, Jersey City, N. J. Filed Aug. 9, 1920. Serial No. 402,464. 7 Claims. (Cl. 123—120.)



1. A device of the character described comprising a casing having inlet and outlet openings, a hollow member rotatably mounted in said casing and movable axially; said member having spaced openings therein sufficiently close together whereby to normally permit of the continuous flow of fuel through said inlet opening and out through said outlet opening as said hollow member is continuously rotated, means on said casing facing said hollow member and serving to control the effective area of the openings therein as the same is moved axially, and means for moving said hollow member axially to control the flow of fuel through said device, substantially as specified.

1,625,282. REGULATION OF ELECTRIC CIRCUITS. FREDERICK LA RUE QUA, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 30, 1922. Serial No. 532,711. 7 Claims. (Cl. 171—119.)

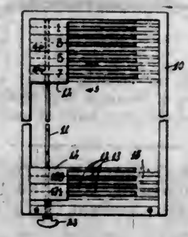
1. The combination with a plurality of load circuits which differ from one another in capacity, of regulating means for said circuits comprising individual reactors therefor, variable with varying individual control currents of lower frequency than that of the load currents, said reactors being so designed as to produce like regulative effects when subjected to influence of like values of control current.

2. The combination with a plurality of load circuits which differ from one another in capacity, of regulating means for said circuits comprising individual reactors variable with varying individual control currents of lower frequency than that of the load currents, said reactors

being so designed as to produce like regulative effects when subjected to influence of like values of control current, and interchangeable devices for varying the value of such control currents individually.

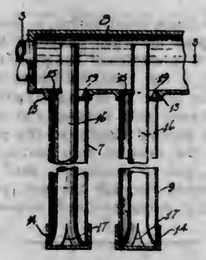
3. Regulating apparatus for a plurality of load circuits which differ from one another in capacity, comprising individual reactors for said circuits, variable with varying individual control currents of lower frequency than that of the load currents, said reactors having their core members substantially similar to one another geometrically and having their windings designed and proportioned to provide like regulating effects of all the reactors upon their respective load circuits when subjected to influence of like values of control current.

1,625,283. PROCESS FOR MANUFACTURING HOMOGENEOUS GLASSLIKE CONDENSATION PRODUCTS OF UREA AND FORMALDEHYDE. KURT RIPPER, Vienna, Austria, assignor to Fritz Pollak, Vienna, Austria. Filed Sept. 9, 1922, Serial No. 587,222, and in Austria May 31, 1921. 5 Claims. (Cl. 260—3.)



1. The process for manufacturing homogeneous glasslike masses by condensation of formaldehyde with a urea which consists in accelerating the gelatinization of the water soluble initial condensation by the addition of water soluble non alkaline compounds having a high degree of electrolytic dissociation, the amount of these compounds being much smaller than that of the initial condensation product to be treated.

1,625,284. MOLD AND METHOD FOR CONSTRUCTING CONTINUOUS TUBES. BENJAMIN C. SEATON, Nashville, Tenn. Filed Oct. 9, 1924. Serial No. 742,680. 7 Claims. (Cl. 18—56.)

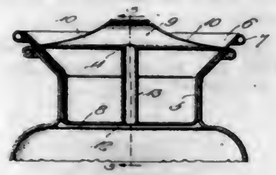


1. A pneumatic tube mold comprising a pair of annular side sections to form the side walls of the tube, a ring associated with the inner sides of said sections at the inner peripheral portions thereof and adapted to form the rim portion of the tube, a relatively wide ring engaging the inner sides of said sections at the outer peripheries thereof and adapted to form the tread portion of the tube, said tread-forming ring being inwardly bowed throughout its circumference, and means for securing said annular mold sections and said rings in assembled relation.

1,625,285. SLUG CASE. HERBERT D. SEIBERT, Brooklyn, N. Y. Filed May 13, 1926. Serial No. 108,724. 5 Claims. (Cl. 276—44.)

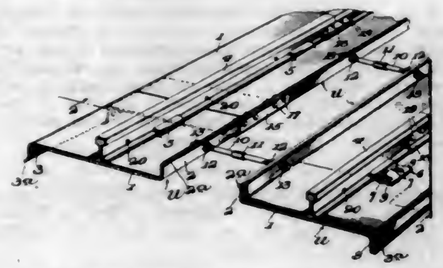
5. In a selecting and arranging device for linotype slugs, a partition structure, comprising a plurality of major numbered partitions, characterized by a front partition member, a side depending spacer, an integral top projecting flange, and a flange extension hinged to said integral top projecting flange, and a plurality of complementary partitions, characterized by a front partition member, and a side depending spacer.

1,625,286. WATER HEATER. DANIEL JUSTIN SHAFFER, Aurora, Ill., assignor of one-half to Lew E. Worth, Aurora, Ill. Filed Feb. 16, 1924. Serial No. 693,315. 2 Claims. (Cl. 122—318.)



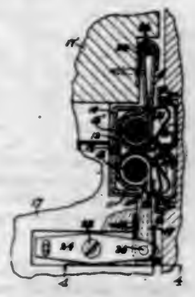
1. The combination with a combustion chamber, of a header, means for introducing water at one end of said header, means for conveying water or steam away from the opposite end of said header, a plurality of pipes carried by and depending from said header, said pipes being arranged in alignment from one end of the header to the other, the upper ends of said pipes being in communication with the header, an interior pipe disposed in each of said first named pipes, the upper ends of the interior pipes being extended into the header and having cut-away portions facing the inlet to the header, the bottoms of said interior pipes having free communication with the interior of said first named pipes, and a current-checking partition between said interior pipes and said first named pipes on the side of said interior pipes adjacent to said cut-away portions.

1,625,287. VENTILATED MILK-CAN COVER. WILLIAM N. SNOW, Beloit, Mich. Filed July 15, 1926. Serial No. 122,641. 1 Claim. (Cl. 220—44.)



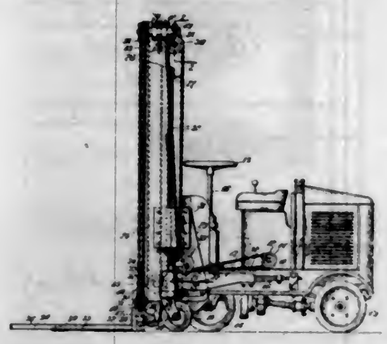
A ventilated milk can cover comprising a cylindrical side wall having a flared upper portion, a bottom secured to the lower portion of the wall and having an opening, a tubular handle extending diametrically across and se-

cured to the flared upper portion of the wall, the upper portion of said tubular handle being cut away and open at the ends of said handle, the lower side of said handle



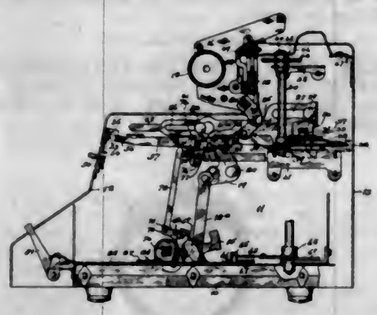
being formed with an opening alined with the opening of said bottom, and a one-piece tube secured to the handle and bottom around the edge walls of said openings.

1,625,288. RAILWAY-TRACK CONSTRUCTION. ROBERT L. SPENCER, Harrisburg, Ark. Filed Sept. 8, 1924. Serial No. 736,590. Renewed Oct. 6, 1926. 4 Claims. (Cl. 238—26.)



1. In a railway track construction, a unit comprising a base plate having an upturned flange at its inner longitudinal edge and a downturned flange at its outer longitudinal edge, and a rail equal in length with the plate and carried by the latter to extend longitudinally of the plate midway between said flanges, and means whereby said plate can be secured rigidly to the plate of an adjacent unit with the rails on said plates in end to end abutting relation and in alignment, said rail having a drain opening formed through the web portion thereof, said drain opening being inclined downwardly toward its outer end.

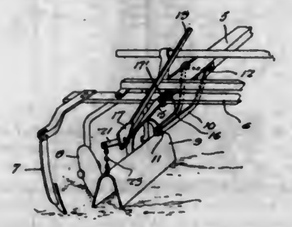
1,625,289. WINDOW-HANGING DEVICE. HARRY B. STEIN, Chicago, Ill. Filed Sept. 11, 1926. Serial No. 134,761. 12 Claims. (Cl. 16—196.)



1. A window hanging device comprising sash parting means connected to the frame, and cable embracing means connected to and movable with the window sash to co-operate with and aid the parting means for containing and concealing the window cable, and keep out wind and weather.

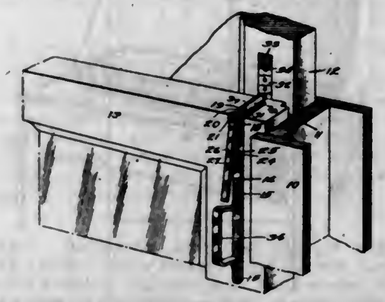
1,625,290. PORTABLE ELEVATING APPARATUS. BERGER STOCKFLETH, Berrien Springs, and FREDERICK W. BURGER, Niles, Mich., assignors to Clark Tructractor Company, Buchanan, Mich., a Corporation of Michigan. Filed May 8, 1924. Serial No. 711,822. 24 Claims. (Cl. 187—11.)

9. In an apparatus of the class described, the combination of a shop tractor, two vertical spaced-apart guiding posts connected with said tractor opposite one end thereof, a load-sustaining member having means engaging with said guiding posts, two sheaves carried by said load-sustaining member near opposite sides thereof, a differential sheave mounted upon each of said posts, means comprising gear mechanism for connecting said two differential sheaves together, two chains each operatively engaged with one of said differential sheaves and one of said other sheaves, and another chain connected with said means that connect said two differential sheaves together, and means for driving said last-named chain from the engine of the tractor.



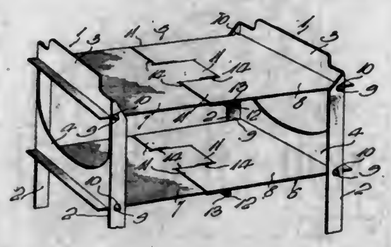
1,625,291. AUTOMATIC SHUTTLE-CONTROL MECHANISM FOR ADDING MACHINES. BRUCE H. TINGLEY, Cincinnati, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 28, 1923. Serial No. 654,453. 14 Claims. (Cl. 235—58.)

10. In mechanism of the class described, the combination of a transversely movable paper carriage, a main operating shaft, connections between the main operating shaft and the paper carriage for normally shuttling the carriage with each movement of the operating shaft, a rotatably mounted stop carriage escapement member, a cam carried by the said member, a slide plate in engagement with said cam, and adapted to be actuated after the escapement has traveled a predetermined distance, connections operable by the movement of said slide plate



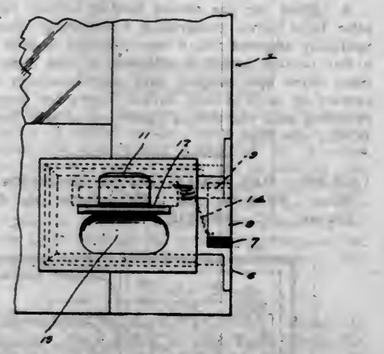
for breaking the train of shuttling connections by movement of said slide plate, and a line spacing block member adapted to move to blocking position by movement of said slide plate, substantially as described.

1,625,292. QUICK-ADJUSTING FENDER OR SHIELD LIFTER ATTACHMENT FOR CULTIVATORS. PETE TOWNS, Ansley, Nebr. Filed May 5, 1926. Serial No. 106,895. 1 Claim. (Cl. 97—188.)



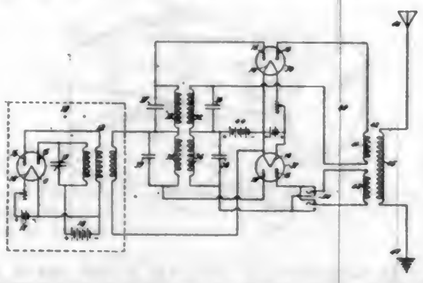
In a cultivator; wherein the cultivator includes a frame and a pivotally mounted fender; a bracket arm twisted throughout its length and having an extension at one end fixed to the frame so that the arm inclines downwardly and rearwardly therefrom, a vertical plate on the other end of the arm having its upper edge arcuate and provided with teeth inclining to one side thereof, a bell crank lever pivotally mounted on the plate on said side thereof, so that one arm engages with the teeth, a bar, spring means for mounting the bar on the plate to engage the lever to normally hold it engaged with the teeth, and a chain engaged with the lever and with the fender, whereby the swinging of the lever will cause the raising and lowering of the fender.

1,625,293. AUTOMATIC SAFETY WINDOW LATCH. HARRY S. WHEATON, Dallas, Iowa. Filed June 6, 1923. Serial No. 643,629. 1 Claim. (Cl. 292—173.)



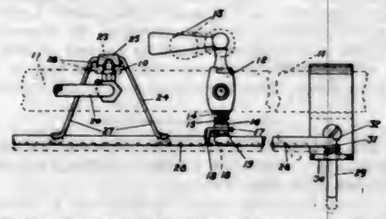
In combination with windows of the sliding double sash type, means for latching one sash relative to the other, said means comprising a supporting plate secured to the upper end of a side rail of the lower sash and having a right angled extension over the top of said sash, a tubular member having a restricted end mounted on said right angled extension, a plunger slidably mounted in said tubular member, a collar secured to said plunger, a spring interposed between the collar and said restricted end, a lip on the other end of said tubular member for engaging the collar a perforated plate secured to the side rail of said upper sash, the perforations in said perforated plate being designed to selectively coact with said plunger, a spring in said tubular member for normally holding said plunger in engagement with any one of said holes, a lever pivoted on said supporting plate for retracting said plunger and a handle secured to said supporting plate adjacent the lower end of said lever.

1,625,294. FOLDING TABLE. WALTER LUNSTEAD WHITESIDES, Long Beach, Calif. Filed Mar. 23, 1925. Serial No. 17,739. 2 Claims. (Cl. 45—116.)



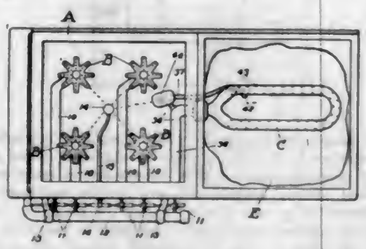
1. In a foldable table; two legs at each end of the table, an upper transverse bar and a lower transverse bar connecting the legs at each end of the table, said bars having straight lower edges, two hingedly connected top sections and two hingedly connected shelf sections having their outer ends passed between the legs at the ends of the table, said top sections and shelf sections passing under said upper and lower bars respectively and contacting with said straight lower edges thereof said bars then forming cheeks at the end portions of the table top and shelf to retain articles thereon, and means inwardly spaced from the ends of said top sections and said shelf sections and pivoting them to said legs on horizontal transverse axes which are inwardly spaced horizontally from the inner opposed sides of said upper and lower bars, tendency of said sections to tilt downwardly about their pivots being resisted by contact of said sections with said straight lower edges of said bars on lines outwardly spaced from the pivotal axes of the sections.

1,625,295. WINDOW RETAINER. JOSEPH CANTORI, St. Charles, Ill. Filed Oct. 8, 1926. Serial No. 140,291. 2 Claims. (Cl. 292—228.)



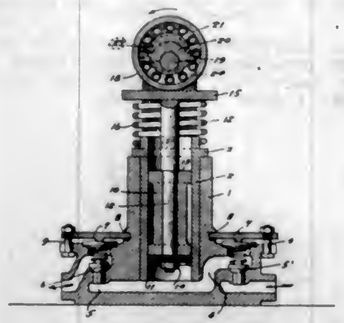
2. A sash retainer of the class described, comprising a body adapted to fit into a recess in the sash frame wherein said recess is substantially dove-tailed in cross section, said body having beveled top and bottom surfaces, being provided with a face plate having its marginal portion projecting beyond said beveled surfaces, a vertically elongated end flange, a latch receiving pocket adjacent said flange, a rock shaft journaled for oscillation upon said body, a latch carried by the outer end of said rock shaft and movable into said pocket, spring means co-operable with said latch to maintain it normally disposed out of said pocket, an operating member carried by the rock shaft, and a right angularly disposed stationary finger piece carried by said face plate and located beneath said operating member.

1,625,296. METHOD OF AND MEANS FOR MODULATING SIGNALING CURRENTS. EMORY LEON CHAFFEE, Belmont, Mass. Filed Aug. 2, 1922. Serial No. 579,288. 20 Claims. (Cl. 250—17.)



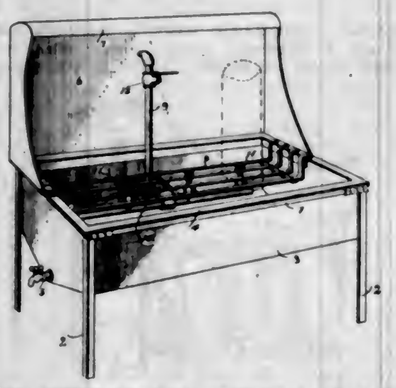
1. The method of producing power for systems for the transmission of intelligence, which consists in producing a series of undamped waves of a given frequency and simultaneously modulating said waves by a second series of waves, generating said second series of waves of a relatively different frequency, and amplifying said first-named series of waves.

1,625,297. AUTOMATIC LIGHTING MEANS FOR GAS STOVES. JACOB COPILOVICH, St. Paul, Minn. Filed Sept. 29, 1926. Serial No. 138,412. 1 Claim. (Cl. 158—115.)



A lighter for gas stoves having burner valves and a pilot light valve, comprising a vertically movable longitudinally disposed rod, a loop fastened to said rod having a flat portion which is adapted to rest upon said pilot light valve and support said rod therefrom and means carried by each of said burner valves for depressing and releasing said rod during operation of said burner valves in one direction.

1,625,298. GAS STOVE. JACOB COPILOVICH, St. Paul, Minn. Filed Oct. 15, 1926. Serial No. 141,729. 3 Claims. (Cl. 158—115.)

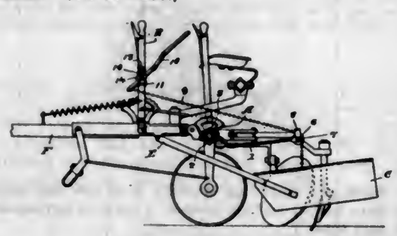


1. An automatic oven burner lighter for a gas stove comprising a burner within an oven, a valve for said burner, a gas pipe connecting said burner and valve, a flashing pilot light outside said oven automatically flashed and spaced from said pilot light and a lighter tube connected to said gas pipe and leading from below said hood to said burner for automatically lighting said burner upon the opening of said valve

1,625,299. PLUNGER PUMP. FRANK T. COSTELLO, Vacaville, Calif., assignor to Standard Spray Pump Company, a Corporation. Filed Mar. 17, 1924. Serial No. 699,957. 1 Claim. (Cl. 74—14.)

In a pump, having a cylinder, a reciprocating piston in said cylinder and a piston rod, secured to said piston, a resiliently mounted plate secured transversely to the outer end of said piston rod, a revoluble ring whose periphery contacts with the outer face of said plate, a rotatable shaft transverse to said rod, an eccentric fixedly secured to said shaft and disposed within said ring, a series of rollers between the eccentric and the inner periphery of the ring and contacting with both.

1,625,300. APPARATUS FOR WASHING ICE-CREAM CANS. CLEVELAND G. DAVIS, Grand Rapids, Mich. Filed June 22, 1926. Serial No. 117,815. 2 Claims. (Cl. 141—7.)



1. Can washing apparatus comprising a tub, a rack suspended within the upper rear portion of the tub, a splash board at the back and ends of the tub adjacent the back, and including a top extending forwardly from the back and connecting it with the end portion, a supply pipe and a distributing pipe connected with the supply pipe and extending beneath the rack and provided at intervals in its length with valved nozzles.

1,625,301. PROCESS OF PRODUCING ALGIN COMPOUNDS AND PRODUCTS DERIVED THEREFROM. BERNARD F. BRDAHL, Duluth, Minn. Filed July 20, 1926. Serial No. 123,808. 25 Claims. (Cl. 252—1.)

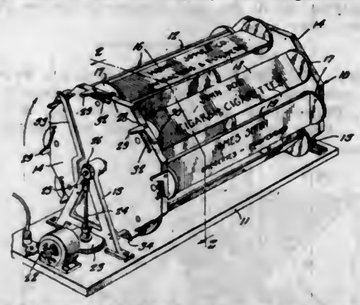
1. The process of preparing an algin material comprising introducing a colloidal solution of an algin base into an acid bath, aging the resulting precipitate in said bath, and recovering the algin reaction product therefrom.

1,625,302. CULTIVATOR. MAURICE EVANS, Barnston, Nebr. Filed Aug. 30, 1926. Serial No. 132,555. 4 Claims. (Cl. 97—188.)

1. An attachment for cultivators comprising a supporting arm having one of its ends secured to the frame of the cultivator, a pulley journaled in the opposite end thereof, a control lever secured to one of the control levers of the cultivator and mounted for adjustment thereon, a flexible element trained over said pulley and having one end secured to a fender of the cultivator, while the opposite end is secured to the control lever first mentioned.

1,625,303. SINGLE-PIN SOCKET. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 4, 1927. Serial No. 165,983. 2 Claims. (Cl. 24—150.)

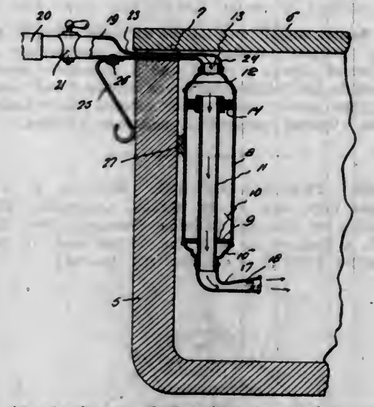
1. A single pin socket, for snap fasteners, composed of a shell having a hole in its face to receive a stud member and provided with a rim flange, and a pin having a head provided with a laterally extending curved portion adapted to engage with the flanged shell to unite the shell and pin, said curved portion having a cross member extending toward the opposite side of the shell and crossing a portion of the hole in the shell and serving as a spring to engage the stud members.



1,625,304. EMULSION AND PROCESS OF MAKING THE SAME. DOZIER FINLEY, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Jan. 17, 1923. Serial No. 613,280. 18 Claims. (Cl. 134—1.)

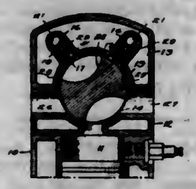
1. An emulsion comprising the results of the mixture of calcium hydroxide, an agent capable of reacting with said hydroxide to produce a relatively insoluble compound, water, and a bituminous material.

9. The process of making a bituminous emulsion which comprises slaking lime with water, maintaining the heat of the mixture and adding a hot solution of papermakers' alum in water, and slowly adding with agitation a hot bitumen.



1,625,305. ADVERTISING DEVICE. GERALD FORDE, New York, N. Y. Filed June 11, 1926. Serial No. 115,315. Renewed Mar. 4, 1927. 4 Claims. (Cl. 40—33.)

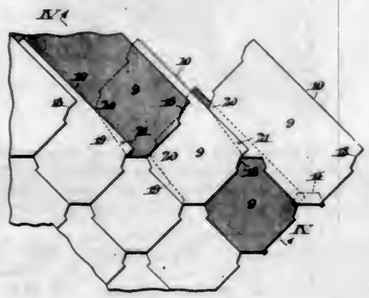
1. An advertising device comprising a revoluble frame member, a plurality of radially arranged panels turnably mounted in said frame member and having advertising indicia on opposite sides thereof, automatic means for reversing said panels to display the respective indicia



thereon on opposite sides of the axis of rotation of said revoluble frame member upon each revolution of the latter, and co-acting means between said frame member and said panels for locking the same in display positions.

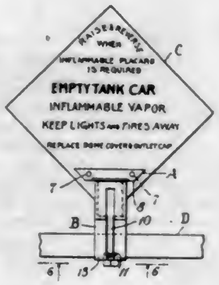
1,625,306. WASHING ATTACHMENT FOR TUBS. THEODORE R. FRATTALLONE, Bronx, N. Y. Filed Oct. 2, 1925. Serial No. 60,062. 4 Claims. (Cl. 261—121.)

1. An attachment of the class described including a pipe adapted to be rested on the upper edge of a wash tub and having one end thereof engageable by the hose of a vacuum cleaner and the other end depending and threaded, a cylinder having a restricted upper end threadedly engaged with the threaded end of the pipe, a tube slidable through the bottom of the cylinder, packing elements on the upper end of the tube contacting against the inner surface of the cylinder, and a nozzle on the lower end of the tube.



1,625,307. ROTARY-VALVE STRUCTURE. PEARL G. FRAZIER, Ankeny, Iowa. Filed May 14, 1923. Serial No. 638,815. Renewed June 10, 1926. 13 Claims. (Cl. 123—80.)

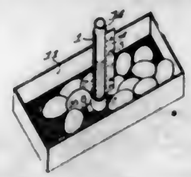
1. In a rotary valve structure, a casing, a rotary valve mounted therein, the casing above the valve being spaced



therefrom, a rotary anti-friction device mounted in engagement with the upper part of the valve for a substantial portion of its length, said structure having means for supplying oil to the anti-friction device for thereby oiling the valve.

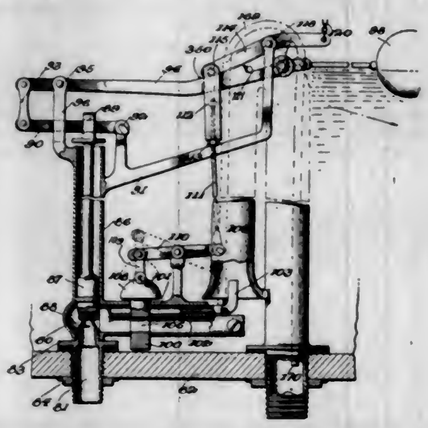
1,625,308. FLEXIBLE SHINGLE. WILLIAM FREEGARD, St. Louis, Mo., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Oct. 30, 1924. Serial No. 746,751. 17 Claims. (Cl. 108—7.)

4. A flexible shingle unit having an upper straight edge, a lower irregularly-configured edge an intermediate portion whereof affords a recess and a diagonally directed retrovertible tab integral with one of the lower corners thereof, the other lower corner affording an indicator point for aligning consecutively laid rows of units.



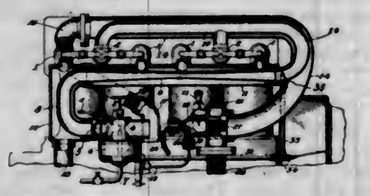
1,625,309. PLACARD DEVICE. WILLIAM A. FRYE, Kansas City, and FRANK HEADY, Coffeyville, Kans., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Sept. 16, 1926. Serial No. 135,776. 7 Claims. (Cl. 40—68.)

1. A reversible placard device comprising a holder to which a placard is attached, a support including a socket, said placard holder having an extension receivable in either of two fixed positions in said socket, whereby the placard attached to said holder is maintained in an upright position, and means attached to said holder and co-acting with said support to prevent the placard attached to said holder from being brought into an upright position save in the two said fixed positions.



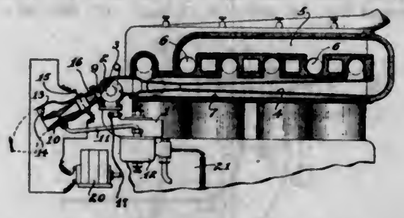
1,625,310. EVAPORATION METER. RICHARD L. GILLES, Fargo, N. Dak. Filed Aug. 30, 1926. Serial No. 132,559. 4 Claims. (Cl. 73—24.)

1. An evaporation meter, comprising a plain glass tube, a semi-cylindrical shield for receiving said tube, a spring member carried by the shield at the bottom thereof for clamping the tube, and an integral flat plate carried by



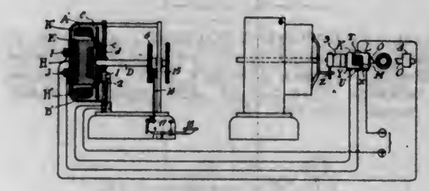
said shield and projecting laterally from one edge thereof, said plate having marked thereon a scale in juxtaposition with said tube.

1,625,311. FLUSHING TANK. NICHOLAS JOSEPH GONDOLF, New Orleans, La. Original application filed June 6, 1922, Serial No. 566,338, Patent No. 1,556,100, dated Oct. 6, 1925. Divided and this application filed Dec. 1, 1924. Serial No. 753,285. 7 Claims. (Cl. 4—44.)



2. A flushing apparatus comprising a valve casing having a seat and priming and tank filling ports, a valve slidable through said ports and having a weight, a lever pivoted to said valve, a link pivoted to said lever and including upper and lower slidably connected sections, a main actuating lever pivoted to the upper section of said link, and an operating member connected to said main actuating lever.

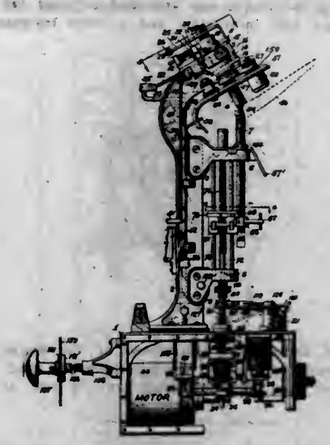
1,625,312. VAPORIZING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 16, 1917, Serial No. 142,602. Renewed Oct. 9, 1926. 17 Claims. (Cl. 123—122.)



1. In an internal combustion engine for automobiles and like uses, the combination of an intake passage including a carburetor having a constant level fuel chamber, a burner containing an igniter and means for producing an ignitible, steady-burning mixture of fuel and air, said means deriving its fuel from said fuel chamber, and an outlet for the burner communicating with said intake, whereby burner products are admitted to the engine.

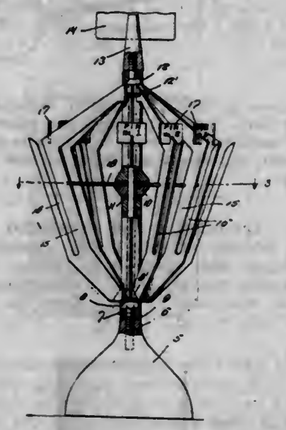
1,625,313. COMBUSTION APPARATUS. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Original application filed Feb. 21, 1917, Serial No. 149,998. Divided and this application filed Mar. 20, 1920. Serial No. 367,441. 4 Claims. (Cl. 123—122.)

1. The combination in an internal combustion engine of a suction intake, an engine carburetting device, a flame-producing combustion device, a common source of liquid fuel for both devices, and a valve for connecting either of said devices to the intake.



1,625,314. ELECTRICAL SYNCHRONIZING SYSTEM. ETIENNE LÉON GRUNENWALD, Paris, France. Filed Oct. 20, 1922, Serial No. 595,852, and in France Nov. 8, 1921. 1 Claim. (Cl. 172—293.)

An electrical synchronizing system comprising a controller, and a driven apparatus caused to rotate in synchronism therewith; said controller comprising commutator rings and a movable element, said commutator rings being angularly adjustable relatively to one another and at will angularly adjustable as a unit relatively to said movable element; a source of direct current, fixed brushes bearing upon the commutator rings and electrically connected to the source of direct current and to the driven apparatus; said driven apparatus comprising a bi-polar stator mounted in fixed position and receiving the alternating currents emitted by the commutator rings, a driven shaft, and a bi-polar rotor on said shaft surrounding the stator and developing a magnetic field of N. S. direction; such field acting conjointly with the alternating field created in the stator to determine the synchronous movement of said driven shaft and its desired angular adjustment relative to the movable element of the controller.

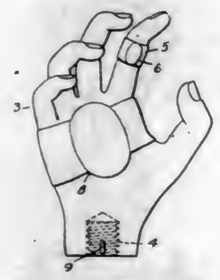


1,625,315. FLAMING-ARC FLOODLIGHT. THEODORE HALL, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 21, 1919. Serial No. 272,328. 10 Claims. (Cl. 176—51.)

1. In an arc lamp, an electrode holder, a metallic head on the forward part of said holder insulated therefrom and adapted to surround an electrode without touching the same, means for feeding an electrode through said

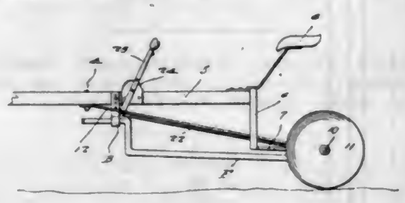
holder, and means electrically connected with said head for controlling said feeding means in response to the approach of the arc flame to said head.

1,625,316. LAUNDRY ASSORTING RACK. WALTER F. HARLOW, Lynchburg, Va. Filed June 1, 1926. Serial No. 112,994. 3 Claims. (Cl. 211—24.)



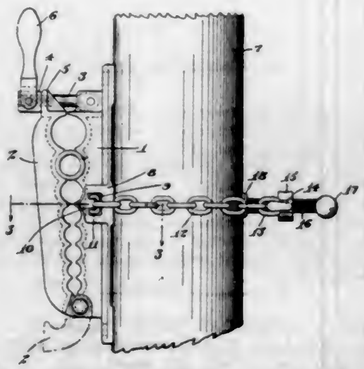
1. A laundry assorting rack of the class described including, in combination, a vertical pole, a sleeve rotatable about the lower portion of the pole, a second sleeve rotatable about the upper portion of the pole, bearing means spacing the sleeves apart, a plurality of arms attached to the bottom of the lower sleeve and inclining upwardly and outwardly therefrom and merging into inwardly disposed extensions attached to the upper portions of the upper sleeve, said arms being provided with longitudinally extending slots.

1,625,317. ARTIFICIAL HAND. HARRIETTE E. HODGSON, New York, N. Y. Filed July 26, 1923. Serial No. 653,865. 1 Claim. (Cl. 3—12.)



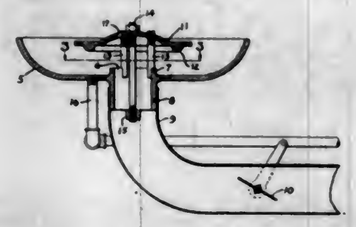
An artificial hand constructed of hollow metallic form with the fingers thereof rigidly arranged in predetermined relative positions, each of the fingers being formed

on their upper surfaces with a plurality of relatively small knobs, one arranged adjacent over the terminal joint indication of the finger, one arranged adjacent the base of the finger nail indication, and a third between the



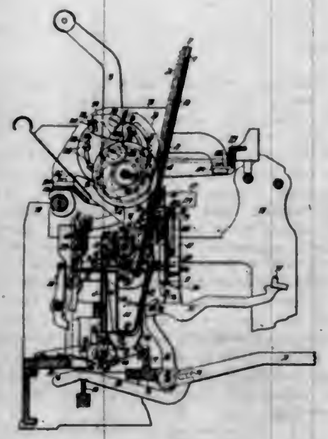
second and third joint indications of the finger, and resilient bands to encircle the finger between and to be held against longitudinal displacement by two of such knobs.

1,625,318. HARROW. ALBIN B. JANOSEK, Corpus Christi, Tex. Filed Jan. 6, 1927. Serial No. 159,384. 5 Claims. (Cl. 55—81.)



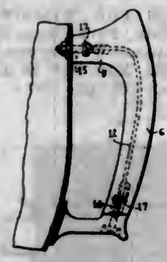
1. A device of the class described including, in combination, a beam, deflecting frames, disk gangs, means for swingably mounting the deflector frames and disk gangs on the beam, and means for operating said frames and said gangs.

1,625,319. APPARATUS FOR SECURING VISES TO POSTS, POLES, OR THE LIKE. JOSEPH E. KENERSON, Saugus, Mass., assignor to Trimont Manufacturing Company, Roxbury, Mass., a Corporation of Massachusetts. Filed May 5, 1926. Serial No. 106,863. 2 Claims. (Cl. 81—41.)



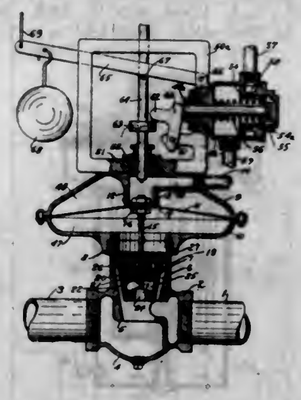
1. Apparatus of the kind described, comprising a vise, a plurality of reinforcing portions on the bottom of said vise and formed arcuate and with relatively sharp edges for firm seating on one side of a support, certain of said reinforcing portions having openings on the sides thereof with projecting lugs therein, chains removably attached to said lugs and adapted to encircle said support, adjustable chain tightening means on the side of the support opposite to the said vise, said tightening means comprising a threaded stem bearing in a swivel against the support, a handle for rotating said threaded stem in said swivel, and a nut mounted on said stem and having a pair of hooks to receive links of said chains.

1,625,320. OIL BURNER. JAMES A. KENWORTHY, Los Angeles, Calif. Filed Aug. 17, 1925. Serial No. 50,662. Renewed Feb. 14, 1927. 2 Claims. (Cl. 158—92.)



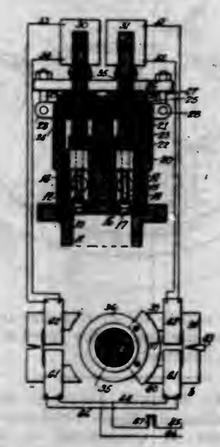
2. A gas generator and burner construction comprising a shallow pan having curved side walls, an air inlet and fuel supply pipes leading thereto, and an air deflecting plate secured above said air inlet opening adapted to direct the air from the inlet pipe downwardly against the fuel in the pan to vaporize the same, said plate having air outlet openings formed therein for controlling the direction of the burner flames.

1,625,321. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 14, 1925. Serial No. 43,492. 52 Claims. (Cl. 197—135.)



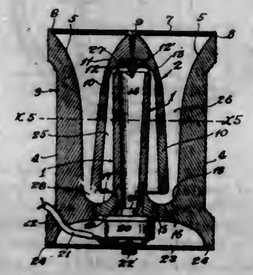
1. In a combined typewriting and stencil-cutting machine having a revoluble platen, typing elements, and a card-holding frame for receiving a stencil-card having a paper-frame and a stencil-sheet stretched across an opening therein, means controlled by the platen to line-space the card-holding frame, and latchable means controlled by the card-holding frame for vibrating a ribbon in front of the types when typing a plurality of lines upon the frame of the card and for silencing the ribbon when typing upon the stencil-sheet.

1,625,322. MOLDED HANDLE AND THE LIKE. FRANK E. LAYMAN, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 5, 1922. Serial No. 558,746. 4 Claims. (Cl. 16—119.)



2. The combination with a handle formed of plastic composition heat insulating material, of a reinforcing wire of relatively small cross section entirely embedded therein and extending between the opposite terminals thereof, said wire having a loop at each end thereof, and metallic members surrounded by said loops and embedded in the respective terminals to provide for attachment of said handle to an article.

1,625,323. AUTOMATIC GAS VALVE. CLAIRE M. LEE, Elyria, Ohio, assignor of one-half to George W. Lee, Wauseon, Ohio. Filed May 21, 1920. Serial No. 383,125. 14 Claims. (Cl. 137—139.)

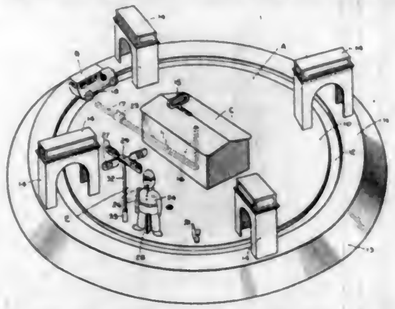


2. Valve mechanism for fluid pressure conduits, comprising a valve casing communicating with supply and discharge connections, a valve controlling the flow of fluid therethrough, said casing having a chamber and a movable abutment in said chamber for operating said valve, said abutment being subject on its lower face to the pressure of the supply only when said valve is open, and on its upper face having valve means controlling the flow of fluid thereto.

1,625,324. VALVE FOR REFRIGERATING APPARATUS. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed May 11, 1926. Serial No. 108,432. 9 Claims. (Cl. 137—139.)

9. In a refrigerating system, the combination of a mechanism comprising a rotating shaft and a valve, a magnet for operating said valve, and a transformer for said magnet, said shaft controlling the magnetic circuit of said transformer.

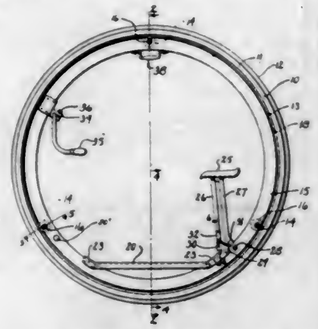
1,625,325. ACOUSTIC HORN. JACK MACARTNEY and ARCHIE V. HAHN, Los Angeles, Calif. Filed Dec. 26, 1924. Serial No. 758,086. 8 Claims. (Cl. 181—27.)



1. An acoustic horn comprising an inner horn, a second horn into which said inner horn extends, said second horn being formed of a plurality of panels, and an outer horn in spaced relation to said second horn, said outer horn being formed of a plurality of panels, which when assembled form a cabinet inclosing the inner and second horn and forming therewith the entire horn.

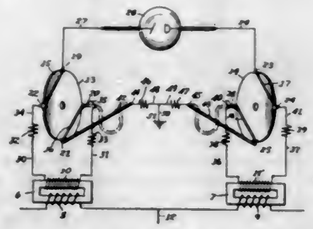
1,625,326. MECHANICALLY-OPERATED TOY. LOUIS MARX, Brooklyn, N. Y. Filed June 9, 1926. Serial No. 114,657. 15 Claims. (Cl. 272—31.)

1. In an amusement device, a platform, a motor on said platform, a figure rotatable cylindrically around said platform and connected to and operated by said motor, and an automatic stop mechanism for the rotatable figure, said stop mechanism comprising means operable to automatically stop the rotation of said figure when the same has moved uninterruptedly a plurality of cycles or revolutions about said platform.



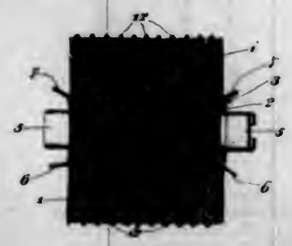
11. In an amusement device, a platform, a motor on said platform, a toy vehicle rotatable cyclically around said platform and connected to and operated by said

motor, a policeman figure on said platform provided with a movable arm, a "go-stop" sign provided with a movable "go-stop" indicating arm and means operated by the rota-



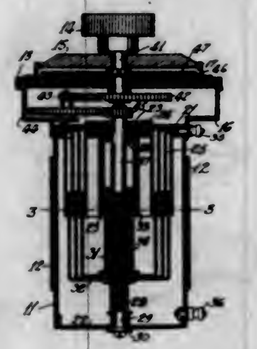
tion of said toy vehicle for moving the arm of the policeman figure and the arm of the "go-stop" sign to the "stop" indicating positions.

1,625,327. GYRAL WHEEL. ARLINGTON MOORE, Worcester, Mass., assignor to Moore Inventions Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 31, 1923. Serial No. 615,991. 8 Claims. (Cl. 208—1.)



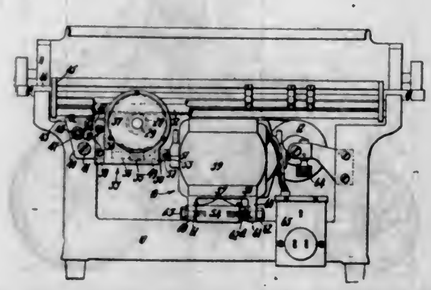
1. In a device of the class described, the combination of an open rim of substantially T-shaped cross-section and having peripheral flanges, a tire on said rim, a circular framework of substantially U-shaped cross-section within the wheel, and a plurality of rollers within said framework and adapted to run on the inwardly projecting rib of the wheel rim.

1,625,328. CONVERTIBLE X-RAY MACHINE. ARTHUR MUTSCHELLER, New York, N. Y., assignor to Wappler Electric Co., Inc., a Corporation of New York. Filed Mar. 1, 1923. Serial No. 622,025. 5 Claims. (Cl. 250—34.)



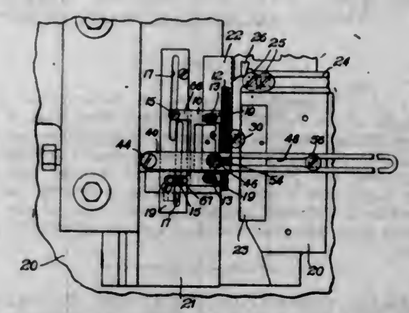
1. A device of the character described comprising a pair of high tension transformers, a pair of high tension rectifying disks, connections from the secondary windings of said transformers to said rectifying disks, for the purpose of enabling said rectifying disks to rectify the current impulses from said secondary windings, a pair of X-ray tubes connected with said rectifying disks, and a pair of flexible conductors connected wth each other and with the ground, said flexible conductor being detachably connected with said rectifying disks and coacting therewith for the purpose of energizing said X-ray tube, and being changeable by the operator relatively to said rectifying disks for the purpose of enabling said secondary windings to pass the high tension current impulses through either one or both of said X-ray tubes, as the operator may prefer.

1,625,329. VALANCE FOR WINDOW DRAPERIES. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1924. Serial No. 751,751. 3 Claims. (Cl. 139—387.)



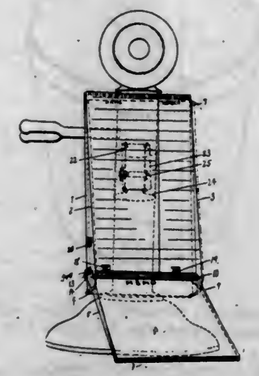
1. As an article of manufacture, a strip of woven fabric adapted for use as a valance for window draperies, said strip having reversely turned threads located at close intervals therein forming a pocket and also having draw strings located upon the opposite sides of said pocket, which strings are interlocked with the transversely extending threads of said fabric and the said fabric being adapted to be adjusted upon the said draw strings to convert the same into ruffled form.

1,625,330. RADIOCONDENSER. ABRAHAM S. PINKUS, New York, N. Y. Filed Apr. 10, 1925. Serial No. 22,230. 3 Claims. (Cl. 175—41.5.)



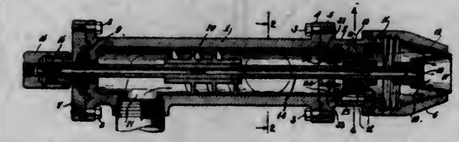
1. In a condenser as described, the combination of a cylindrical shell, a central sleeve in said shell, a bushing of insulation connecting said sleeve with said shell, a plurality of cylindrical plates fixed at one end of said cylinder, a stem sliding in said sleeve, a plurality of cylindrical plates supported by said stem and arranged to move laterally with respect to said fixed plates and a screw shaft in the axis of said cylinder upon which said stem screws back and forth.

1,625,331. TYPEWRITING MACHINE. HENRY L. PITMAN, Westfield, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1923. Serial No. 643,165. 15 Claims. (Cl. 197—65.)



1. In a typewriting machine, a main typewriter framework, including a base, a carriage, carriage-returning mechanism comprising a rack on the carriage, a pinion in mesh with the rack, and means for driving the pinion consisting of a motor-unit which includes a motor-shaft, and a transmission-unit which includes transmission and pinion shafts and gearing connecting said shafts, a bracket supporting the transmission-unit on the back of the machine-frame, means for adjusting said bracket to raise or lower the pinion to engage it properly with the rack on the carriage, a horizontal forwardly-extending bracket supporting the motor-unit on said typewriter base, and means for adjusting the motor-supporting bracket so that the motor-shaft may be connected properly to the end of the transmission-shaft.

1,625,332. MEANS FOR TRIMMING ARTICLES. WILLIAM HENRY POTTER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 25, 1923. Serial No. 653,668. 11 Claims. (Cl. 80—8.)

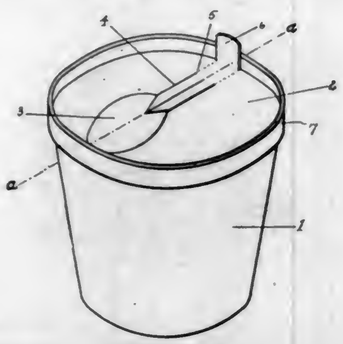


1. In an article processing apparatus, means for rolling the article along a predetermined path, a trimming means, and means controlled by the first-mentioned means for advancing the trimming means toward the axis of rotation of and thereby trimming the article.

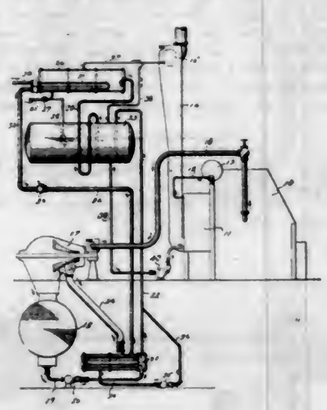
1,625,333. TELEPHONE ATTACHMENT. HARRY BARTLEY REDFIELD, New York, N. Y. Filed July 29, 1922. Serial No. 578,426. 8 Claims. (Cl. 40—10.5.)

1. The combination, in a telephone attachment, of a member the side edges or portions of which are at approximately right angles to the main surface thereof and adapted to hold the bottom portions of cards between said sides so that same may be swung outwardly from the top thereof, and a second member, adapted to hold paper, attached movably to said first member and lying normally adjacent to the edges of the sides of the first member.

1,625,334. OIL BURNER. FRANK RIX, New York, N. Y., assignor of one-half to John F. Siegel, New York, N. Y. Filed Oct. 13, 1923. Serial No. 668,252. 9 Claims. (Cl. 158—77.)



1. An oil burner comprising a casing having an air passage, an oil supply tube revolubly mounted in the casing, a propeller on the tube in the casing, said casing having an air inlet to and an air exhaust from said passage at opposite sides of the propeller, and air throttling means in the casing between the exhaust and the outlet ends of the burner.

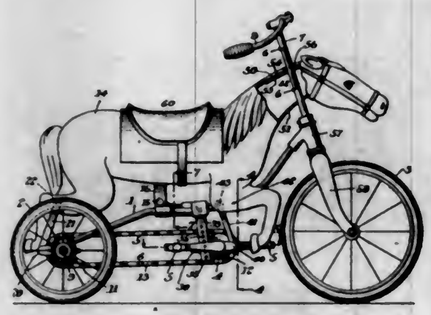


1,625,335. CONTAINER COVER. WILLIAM G. SCHNEIDER, Camden, N. J. Filed Dec. 14, 1925. Serial No. 75,298. 4 Claims. (Cl. 229—48.)

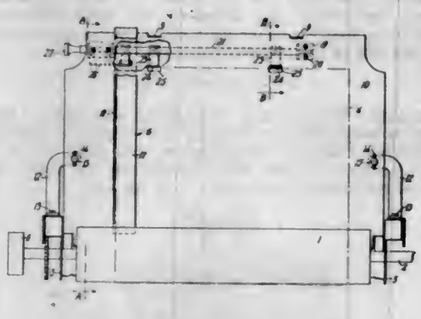
1. A closure for containers having a continuous unbroken rim, comprising; a detachable portion having an upwardly extending tab end, said detachable portion being bounded substantially throughout its entire margin by the remainder of the closure, and adapted to serve as an

eating utensil when detached from said remainder; and a connection between the separable portion and the remainder, of sufficient weakness to permit said portion to be readily detached from the remainder by a pull of the fingers.

1,625,336. STEAM-POWER SYSTEM. BERNHARD SCHROEDER, Chicago, Ill., assignor to Sargent & Lundy Incorporated, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1924, Serial No. 720,728. Renewed Sept. 22, 1926. 8 Claims. (Cl. 60—95.)



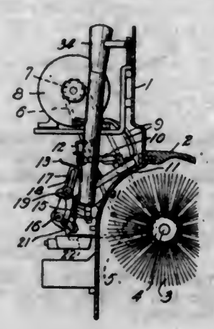
6. In a boiler system, a steam boiler having an induced draft fan, a make-up water heater and a pipe connecting the steam space of said heater with the inlet side of said induced draft fan.



8. In a steam power system, a steam boiler, a steam-driven prime mover connected to said boiler and having a condenser for the exhaust steam from said prime mover, a feed water tank, piping closed to atmosphere to lead the condensate from said condenser to said feed water tank and beneath the lowest water level therein, a make-up water heater, and a pipe connecting said heater with said tank and provided with a water seal to prevent the entrance of air into said tank when said heater is empty.

1,625,337. TRICYCLE. THOMAS W. SHELLEY, Los Angeles, Calif., assignor to Wallace W. Whitecotton. Filed Oct. 14, 1925. Serial No. 62,356. 4 Claims. (Cl. 208—42.)

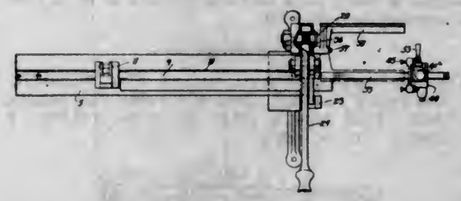
1. In a tricycle, a frame, wheels on which said frame is mounted, a steering post rotatably mounted on said frame, another wheel mounted in connection with said steering post, a body simulating an animal pivotally mounted on said frame, means in connection with said first mentioned wheels and said body for rocking the latter, said body being provided with a slot through which said steering post extends, and means in connection with said steering post and said body for covering said slot during the movement of said body.



1,625,338. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 25, 1924. Serial No. 728,075. 9 Claims. (Cl. 197—140.)

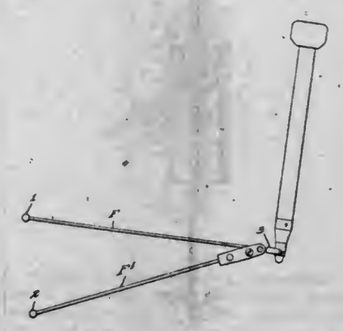
1. In a typewriting machine, in combination, a rotatable platen, a table for holding a work-sheet, a side gage for guiding the movement of said sheet, an end gage for positioning a work-sheet having a writing line occupying one position thereon, and another end gage for positioning a work-sheet having a writing line occupying a different position thereon, both of the two latter gages being movable into and out of effective position.

1,625,339. TIME-SWITCH MECHANISM. HAROLD DAVID THOMAS, New York, N. Y., assignor to Automatic Shoe Shiner Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,652. 6 Claims. (Cl. 144—9.)



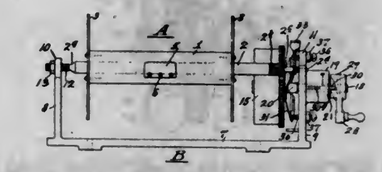
1. In a device of the character described, the combination comprising a knife switch, a motor in circuit with the switch, means for operating the switch and a coin-actuated means for starting the operating means comprising a two part element having its parts mounted on separate pivots, one part being adapted to be engaged by a coin and the other part engaging and controlling the switch operating means and means for limiting the movement of the two parts with relation to each other.

1,625,340. METHOD OF MAKING WELL POINTS. THOMAS C. THOMAS, Evanston, Ill., assignor to The Youngstown Sheet and Tube Company, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 13, 1926. Serial No. 94,564. 7 Claims. (Cl. 76—101.)



1. The method of forming well point heads which comprises upsetting the end of a pipe or tube so that said upset portion presents a greater diameter than the pipe, and then applying to the exterior surface of said upset portion increasing radial inwardly directed pressure to effect consolidation and progressive cross sectional reduction of said upset portion with resulting formation of an elongated tapering point, solid at its smaller extremity.

1,625,341. METAL CUTTER. DAVID TURTLE and MARK KLITENICK, New York, N. Y. Filed Mar. 25, 1924. Serial No. 701,816. 4 Claims. (Cl. 164—10.5.)

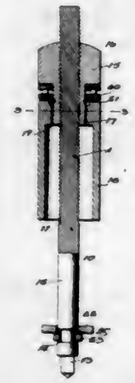


1. In combination with the serrated edge rulers of a metal cutter, an adjusting stop slidable on one of said rulers, said stop comprising a vertical body having a longitudinal slot in the bottom thereof cooperating with said ruler, a spring controlled lever pivoted to the body, the lower, inner face of said lever having serrated teeth adapted to engage the serrated edge of the ruler whereby said stop may be set at predetermined positions, and a micrometer gauging stop associated with the other one of said rulers.

1,625,342. TELAUTOGRAPH APPARATUS. ARLEIGH N. VAN NOSTRAND, Flushing, N. Y., assignor to Telautograph Corporation, Richmond, Va., a Corporation of Virginia. Filed July 24, 1925. Serial No. 45,732. 5 Claims. (Cl. 178—18.)

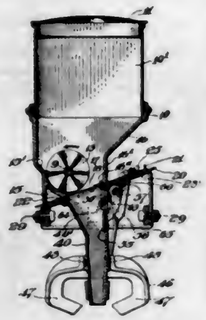
1. In a telautograph, the combination, with the two transmitter stylus-arms, of a stylus-holding yoke and a ball at one end of one arm, a connecting yoke at one end of the other arm, said connecting yoke having two resilient jaws provided with sockets to receive the ball on the first mentioned arm, said jaws being arranged to press yieldingly on the ball, means for preventing movement of the jaws away from each other, thereby preventing the release of the ball from said connecting yoke, and a stylus mounted in the stylus-holding yoke.

1,625,343. PAPER-WINDING MECHANISM. ARLEIGH N. VAN NOSTRAND, Flushing, N. Y., assignor to Telautograph Corporation, New York, N. Y., a Corporation of Virginia. Filed Jan. 21, 1926. Serial No. 82,671. 3 Claims. (Cl. 242—109.)



1. In a paper-winder, the combination, with a reel and a spindle provided with a pinion, a spring-motor having a gear wheel arranged to engage said pinion, whereby the spindle and reel are driven by the spring motor, a support in which the spindle is removably journaled, and manually operable means for locking said spindle against removal from its journals, of a braking device arranged to be brought into action to hold the spring-motor inoperative when the locking means is unlocked to release the spindle, and to free the spring motor after the locking means is locked to retain the spindle.

1,625,344. TOOL. LOUIS VINCHEROETS, Grand Rapids, Mich. Filed Aug. 21, 1923. Serial No. 658,621. 6 Claims. (Cl. 29—88.2.)



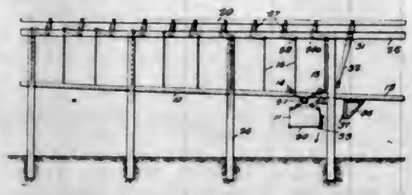
3. A tool of the class described comprising a guide sleeve having an interior shoulder formed at one end, a threaded bolt longitudinally movable through the said

sleeve, an actuating nut threadedly engageable with the bolt including a polygonal wrench receiving head adapted to bear against the adjacent end of the guide sleeve and

a cylindrical extension inserted through the shoulder of the guide sleeve, and a thrust bearing detachably mounted on the opposite end of the bolt.

1,625,345. SEED DRILL. SAMUEL H. YANCEY, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed Sept. 26, 1925. Serial No. 58,731. 4 Claims. (Cl. 221—120.)

1. A seed drill comprising a seed hopper having an opening in its bottom, a regulating slide also having an opening and an agitator wheel mounted for rotation within the hopper, said slide being adapted for movement to and fro with respect to the hopper whereby one part of the opening in the slide may be caused to register with one part of the opening in the hopper so as to provide a relatively small passage through both slide and hopper disposed closely adjacent the periphery of the wheel, or another part of the opening in the slide may be caused to register with another part of the opening in the hopper so as to provide another and relatively larger passage through both slide and hopper at a point more remote from the periphery of the wheel.

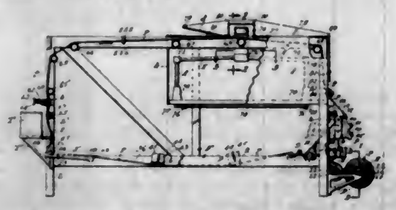


3. In a seed drill, a hopper and a non-flexible seed agitator wheel mounted for rotation within the hopper on a horizontal axis, a portion of the wall of the hopper conforming to the periphery of the wheel and lying closely adjacent thereto, the lower end of said portion terminating substantially in a vertical plane through the axis of rotation of the wheel and the upper end of said portion terminating substantially in alignment with a horizontal plane passing through said axis.

1,625,346. SHOE SHANK. CHARLES ZERGA, Philadelphia, Pa. Filed Oct. 9, 1922, Serial No. 593,230. Renewed Sept. 9, 1926. 2 Claims. (Cl. 36—71.)

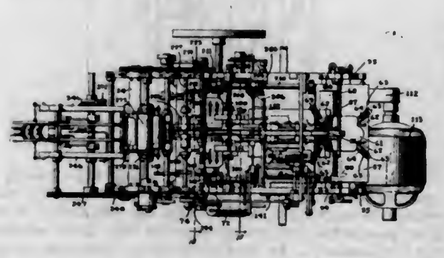
1. In combination with a shoe, a shank body interposed between the inner and outer soles, a shank wing projecting from one side of the body and adapted to underlie the side of the shoe arch and means on the wing for embedment in the outer sole.

1,625,347. CONVEYER. WILLIAM R. BANKSON, Pittsburgh, Pa. Filed May 8, 1925. Serial No. 28,938. 1 Claim. (Cl. 104—164.)



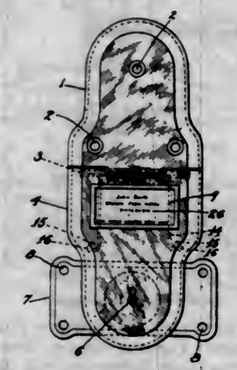
In combination with a tiltable track and a bumper rigid with and depending from the track, a carrier mounted for movement on the track including a swingingly mounted bottom, a catch pivoted to the body for engagement with the bottom and with one end portion arranged to strike said bumper, and a leaf spring arranged between said portion and the body of the carrier.

1,625,348. ROUND FABRIC BELT AND METHOD AND APPARATUS FOR FORMING THE SAME. WILLIAM W. BEWSICK, Shelby, Ohio, assignor to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 22, 1921. Serial No. 486,918. 17 Claims. (Cl. 270—93.)



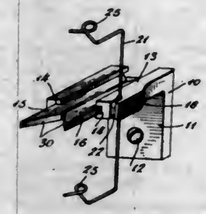
3. In a device of the character described, means for guiding the edge portions of a fabric strip, and means including said guiding means for rolling the intermediate portion of fabric about said edge portions so as to form a substantially round belt.

1,625,349. METHOD AND MEANS FOR SENSITIZING PRINT PAPERS. JOSE L. CAZARES, Los Angeles, Calif. Filed June 3, 1924. Serial No. 717,577. 9 Claims. (Cl. 91—69.)



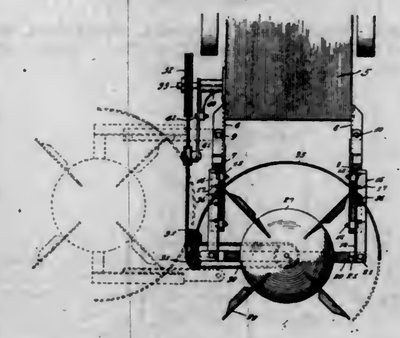
1. The method of sensitizing blue print paper and the like which consists in moving a strip of paper in a substantially horizontal plane for a given distance, and thereafter in a substantially vertical plane for a given distance, applying a film of sensitizing solution to the paper while it is being moved in a vertical plane, so that the solution will run downwardly over the surface of the paper for a given distance, collecting the surplus solution at a point below the horizontal portion of the paper in a suitable receptacle so that the horizontal portion of the paper will move into contact with the solution thus collected, at said receptacle, and thereafter moving the coated surface of the paper into contact with a friction element whereby the surplus solution will be removed and a uniform and regular coating will remain on the surface of the paper.

1,625,350. MACHINE FOR FORMING, PRINTING, AND ASSEMBLING ENVELOPES. EUGENE CONTI, Cliffside Park, N. J., assignor to Alexander Herz, New Rochelle, N. Y. Filed Sept. 30, 1921. Serial No. 504,446. 56 Claims. (Cl. 93—62.)



1. In a machine of the class described, a reciprocatory adhesive applying plunger, a reciprocatory adhesive carrying roll for supplying the plunger with adhesive, and means controlled by but supported independently of the plunger for holding an envelope blank in position to receive the adhesive.

1,625,351. TRUNK HASP. SAMUEL P. DARKINS, Pittsburgh, Pa. Filed Jan. 7, 1926. Serial No. 79,860. 2 Claims. (Cl. 292—281.)

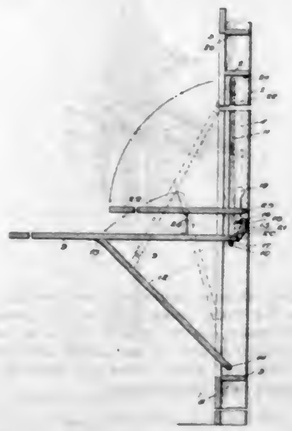


1. In a trunk-hasp, a stationary half and a movable half hingedly connected thereto, said movable half having an aperture cut in its face and having its outer edges bent inwardly to produce a hollow-space; an address-label-holder positioned within said hollow space, and means positioned within said movable half to secure said address-label-holder in proper relation to said aperture.

1,625,352. THREAD CLEANER. PETER DAUGERT, Wilkes-Barre, HENRY FREY, Kingston, and JOHN J. DUNLEAVY, Plymouth, Pa. Filed Apr. 9, 1926. Serial No. 100,789. 9 Claims. (Cl. 28—70.)

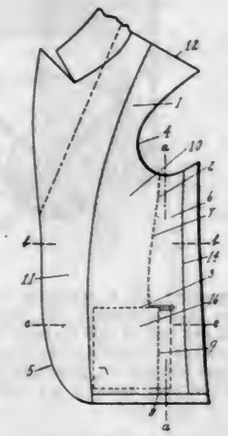
1. A thread cleaner including cooperating members arranged in the same plane and having means which, when said members are in certain positions relative to each other, present a slot of one width, and which form a slot of a different width when the relative positions of said members are interchanged.

1,625,353. STRAW SPREADER. THOMAS DUGAN, Wichita, Kans., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Apr. 20, 1925. Serial No. 24,437. 2 Claims. (Cl. 275—8.)



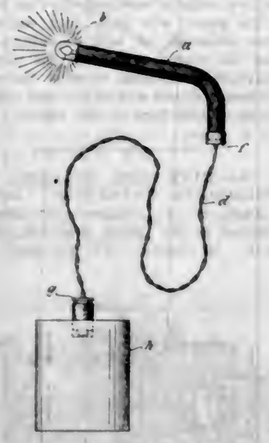
1. A straw spreader for a threshing machine, comprising a frame, a distributing fan thereon, pivotal means connecting one side of said frame to said machine, and removable means connecting the opposite side of said frame to said machine to permit said spreader to be swung alongside said machine for obtaining access to the interior of the latter.

1,625,354. IRONING-BOARD CABINET. GEORGE EVANS, El Paso, Tex., assignor to El Paso Sash and Door Company, El Paso, Tex. Filed Oct. 19, 1926. Serial No. 142,622. 1 Claim. (Cl. 68—10.)



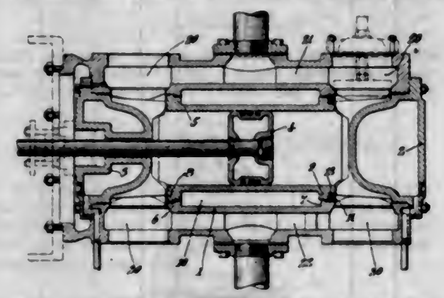
An ironing board cabinet adapted to be built into a wall and comprising top, bottom, and sides, the latter having vertical grooves throughout a portion of their length, an ironing board having means at one end adapted to slide in said grooves toward the upper end of the same as the board is moved to closed position, a brace pivotally connected to the board intermediate its ends and pivoted at its other end near the bottom of the cabinet, and means for holding the inner end of the board against movement when in operative position, said

means comprising a spring-pressed pivoted latch member adapted to normally engage a beveled portion at the rear end of the ironing board and a pivoted operating member mounted above said pivoted latch and



normally in engagement therewith, whereby movement of the operating member in one direction will cause the pivoted latch to be forced from engagement with the beveled end of said board.

1,625,355. COAT. ISRAEL FARBMAN, Philadelphia, Pa. Filed Mar. 6, 1926. Serial No. 92,872. 1 Claim. (Cl. 2—97.)

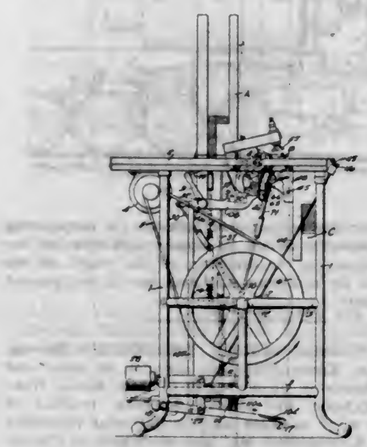


A coat comprising a body having an inturned fold, a downwardly extending shaping cut formed in the body, the opposing edges of the shaping cut being stitched together, and a pocket opening being formed in the body, a strip of material attached to the body of the coat along the downwardly extending shaping cut, around the pocket opening, and by stitches in the unexposed side of the body between the pocket opening and the bottom edge of the coat, a lining secured along the inturned fold, and the bottom edge of the coat, the other side edge of the lining, and the side edge of the strip being sewed together to form a closure, said edge of the lining being free of the body along its entire edge from the arm-hole to the bottom edge of the coat.

1,625,356. ASEPTIC LIGHTING TORCH. WILHELM GEULEN, deceased, Freiburg, Germany, by Klara Geulen, née Schreiber, executrix, Freiburg, Germany, assignor to Carl Herzog, Freiburg, Germany. Filed Nov. 9, 1925, Serial No. 68,008, and in Germany May 10, 1924. 1 Claim. (Cl. 128—23.)

An aseptic torch comprising a glass tube having a transparent end portion, an incandescent lamp in said portion to emit light therethrough, the remainder of the tube presenting opaque surfaces to the lamp whereby light transmission in the direction of the eyes of the observant is prevented, and means for connecting the lamp to a source of light.

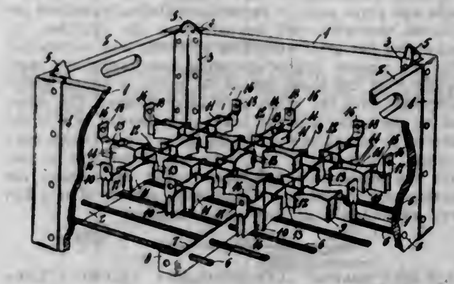
1,625,357. CYLINDER AND LINER CONSTRUCTION. HEWITT A. GEHRES, Mount Vernon, Ohio. Filed Aug. 27, 1925. Serial No. 52,743. 7 Claims. (Cl. 74—108.)



1. In combination, a cylinder body member and a liner enclosed thereby, said body member having seats slidably engaging the liner to support it, a clamping member overlying one end of the liner, and bolts engaging between said clamping member and the liner to draw the liner into proper position on said seats.

1,625,358. SELECTIVE ATTACHMENT FOR ADDRESSING MACHINES. ERWIN A. GEIGER, Ridgewood, N. J.; AUGUST F. SCHRAEGLE, Ridgewood, and HENRY T. JENNINGS, Glendale, N. Y., assignors to Rapid Addressing Machine Company, a Corporation of New York. Filed June 8, 1926. Serial No. 114,415. 52 Claims. (Cl. 101—48.)

1. In an addressing machine having mechanism for feeding a series of address bearing strips to and through a printing zone, a driving mechanism for said machine, a movable member adapted to disconnect said driving mechanism from said feeding mechanism, and a pedal

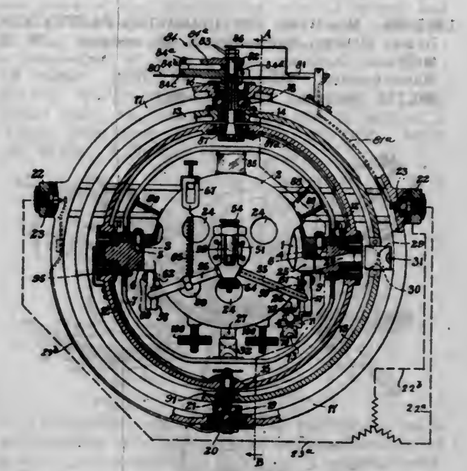


connected to said movable member, the combination, with said above described apparatus of means for automatically breaking said pedal connection whenever a strip of a predetermined character reaches printing position, whereby the operator has time to then examine said strip before again starting the machine.

28. In a selective device for use with a series of cards or similar objects being forced along suitable guides,

the combination of a series of independently pivoted fingers located above said cards, a common movable member adapted when in normal position to hold any of said fingers resting upon it slightly above said cards, and connections for moving said member into another position which will allow any finger resting on it to fall far enough to touch the card beneath and enter any recess in said card registering with such finger.

1,625,359. BOTTLE CRATE. HERBERT H. GERDING, Newport, and EDWARD A. GERDING, Fort Thomas, Ky. Filed May 19, 1926. Serial No. 110,150. 7 Claims. (Cl. 217—19.)



1. In a bottle crate, in combination with side and end walls, partition members each having segmental lateral extensions, each extension substantially less than ninety degrees in length and disposed substantially symmetrically to a center line at right angle to the length of the member, each member being relatively deep and transversely thin between said extensions and crossing each other between the extensions and having connections at its ends to respective walls of the crate.

1,625,360. MANUFACTURE OF PHYSIOLOGICALLY-ACTIVE SUBSTANCES FROM OVARIES, CORPUS LUTEUM, AND PLACENTA. MAX HARTMANN, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Original application filed Apr. 14, 1924, Serial No. 706,593, and in Switzerland May 8, 1923. Divided and this application filed Aug. 5, 1926. Serial No. 127,474. 4 Claims. (Cl. 167—7.)

1. A process for the manufacture in highly concentrated form of the hormones from female internal secretory organs by subjecting extracts of said organs obtained by any process to the action of basic lead acetate, thereby precipitating out the inactive matter.

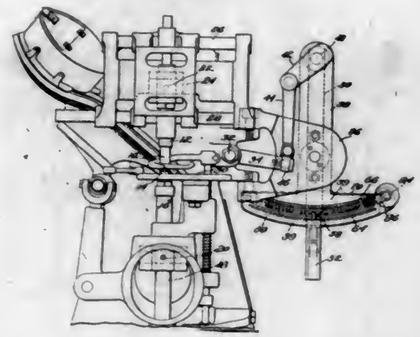
1,625,361. GYROCOMPASS. JAMES BLACKLOCK HENDERSON, Lee, England. Filed Aug. 29, 1919, Serial No. 320,681, and in Great Britain May 19, 1919. 33 Claims. (Cl. 33—204.)

2. In a gyro compass, a gyroscope, a follow-up element within which the gyroscope is mounted, fluid pressure means directly connecting the gyroscope and the follow-up element for causing the element to follow the gyroscope and fluid pressure means for damping the oscillations of the gyroscope.

13. In a gyro compass, a gyroscope consisting of an electric motor, a ring upon which the gyroscope is supported, a second ring upon which the first ring is supported in such a manner that it may be rotated completely around the first ring and gyroscope and circuit connections for conducting current to the motor in all positions of the second ring with respect to the first ring and gyroscope.

33. In a gyroscopic instrument, a gyroscope consisting of a rotating element and a casing, a member on which the gyroscope is mounted on a horizontal axis, a second member on which the first member is mounted for turning about a vertical axis, and means for causing jets of air produced by the rotation of the element within the casing to act directly upon the members to cause them to follow the movements of the gyroscope about their respective axes.

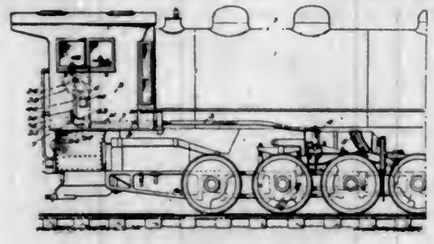
1,625,362. SANDING DEVICE FOR POWER VEHICLES. ERICH HESS, Dahlem, near Berlin, Germany. Filed June 2, 1926. Serial No. 113,348, and in Germany July 8, 1925. 6 Claims. (Cl. 291—3.)



1. A sanding device for power vehicles, comprising, in combination, a sand box and a sand outlet nozzle on the

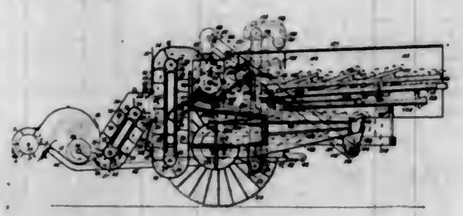
same, a motor exhaust gas pipe extending through the entire length of said box into said nozzle and being the continually used exhaust pipe proper of the motor of the

vehicle, and a shut-off device located in the said sand box nozzle and being so designed as never to close the orifice of said sole exhaust pipe.



1,625,363. MACHINE FOR INSERTING FASTENINGS. LUMAN HOLDEN, Manchester, N. H., assignor to W. H. McElwain Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1921. Serial No. 491,131. 8 Claims. (Cl. 218—15.)

1. In a fastener inserting machine of the type in which the fasteners are set successively in spaced relation and mechanism is provided to vary the spacing controlled by the position of an adjustable arm, a pin plate having a series of pin-receiving holes indicating the required position of the arm for the correct spacing of all the different styles and the sizes thereof of the work to be operated upon over which the arm is moved, a pin on the arm for entering said holes one at a time to adjust the spacing mechanism in position for the spacing indicated thereby, a templet having a series of pin holes indicating the required position of the arm for the different sizes of a single style, and means for securing said templet to the pin plate with its holes registering with the corresponding holes in the pin plate and closing other holes interspersed with said registering holes.



1,625,364. REVERSING GEAR FOR LOCOMOTIVES. JOSEPH B. HOLLAND, Baltimore, Md. Filed June 17, 1926. Serial No. 116,675. 4 Claims. (Cl. 74—27.)

1. In a gear reversing mechanism for locomotives, a rack bar adapted for connection with the reach rod of a locomotive, a housing having aligned openings in opposite walls thereof through which said rack bar extends, pairs of horizontal rollers rotatably supported within said housing adjacent to said opposite walls of the housing, the rollers of each pair respectively being in rolling contact with the upper and lower faces of said rack bar, the teeth of said rack bar being on the inner face of the rack bar, a vertically disposed rotary shaft within said housing having its lower end portion located adjacent to the inner side of said rack bar, a pinion secured to the lower end portion of said shaft in mesh with the teeth of said rack bar, and a vertically disposed roller in rolling contact

with the outer side face of said rack bar for cooperating with said horizontal rollers to support said rack bar for guided movement in the direction of the length of the rack bar and for retaining said rack bar in engagement with the pinion.

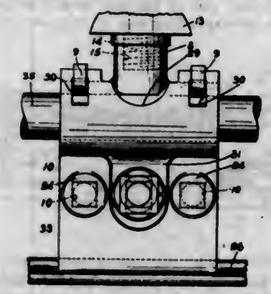
1,625,365. STANDING-GRAIN THRASHER. HOWARD T. INGHRAM, Kansas City, Mo., assignor, by direct and mesne assignments, of one-fourth to Louis Kraus, Howard T. Inghram, and George Schaefer, trustees of the Trust doing business as The Universal Harvester Company, Kansas City, Mo., and one-fourth to Universal Harvester Corporation, a Corporation of Colorado. Filed Aug. 27, 1921. Serial No. 495,890. 4 Claims. (Cl. 130—27.)

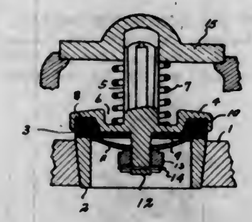
1. In a thrashing machine wherein is provided straw racks and grain pans; a thrashing cylinder, a concave associated therewith and located below the cylinder, an articulated flat grate extending upwardly and rearwardly from the concave, fingers extending downwardly and rearwardly from the upper end of the grate, a rotary beater associated with the grate at a place between the upper end of the grate and the lower end thereof, said grate adapted to permit passage of the grain therethrough onto a grain pan beneath, and said fingers adapted to deliver the straw onto the straw racks, and means for shaking said fingers and the adjacent portion of said flat grate substantially as shown and described.

1,625,366. CABLE AND TROLLEY CLAMP. LYNN JOHNSTON, Cincinnati, Ohio, assignor to The Electric Railway Equipment Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 9, 1926. Serial No. 134,525. 6 Claims. (Cl. 191—43.)

1. A cable and trolley clamp comprising a plate member having spaced grooves therein, integral hook members adjacent one of said grooves, a semi-cylindrical member having apertures therein for receiving the hooks on the first mentioned plate member whereby said semi-cylindrical member is suspended from the first mentioned plate member, an integral perforate lug carried by said

semi-cylindrical member, means extending through the perforation in said lug for clamping it to the first mentioned plate member and a third member comprising a





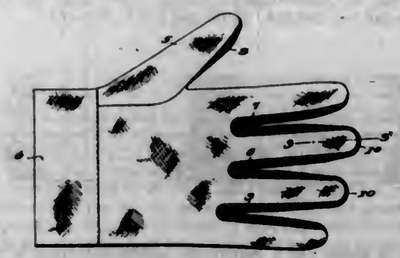


plate having a semi-circular groove therein adapted to be independently secured to the first mentioned plate member.

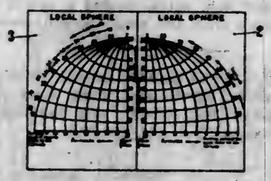
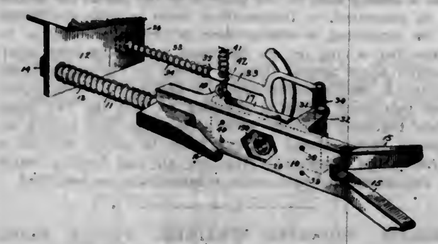
1,625,367. VALVE. LOUIS H. KENNON and LOWELL J. LANGDON, Houston, Tex. Filed Apr. 6, 1925. Serial No. 21,184. 2 Claims. (Cl. 251—144.)



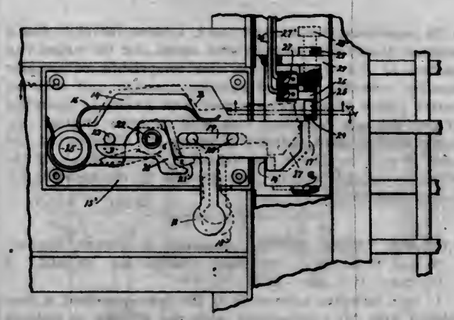
1. A valve including a central plate having an upstanding stem and a central depending stud, said plate having an annular groove around the stem forming a seat and having an annular marginal groove on its under side, a resilient disc having a central opening to receive said stud and having a marginal rib which fits into said last named groove and a resilient concavo-convex disc beneath the first mentioned disc for supporting said first mentioned disc.

1,625,368. HAND COVERING. GUSTAVE A. KURZ, Zanesville, Ohio. Filed Mar. 30, 1926. Serial No. 98,554. 4 Claims. (Cl. 2—169.)



1. In the manufacture of hand coverings, a straight continuous three-fold fourchette strip, comprising similar portions of unequal length and each of the portions tapering toward its extremities.

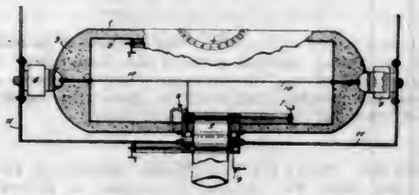
1,625,369. METHOD AND DEVICE FOR RAPIDLY SOLVING ORDINARY PROBLEMS IN ASTRONOMIC NAVIGATION. WILLIAM ARTHUR LOTH, Paris, France, assignor to Societe Industrielle des Procedes W. A. Loth, Paris, France. Filed Oct. 3, 1923, Serial No. 666,394, and in France Oct. 5, 1922. 11 Claims. (Cl. 33—1.)



1. In a system for rapidly solving problems of astronomical navigation, diagram plans of the local sphere, diagram plans of the corresponding celestial sphere, and means for movably supporting the plans with respect to each other and for superposing said plans.

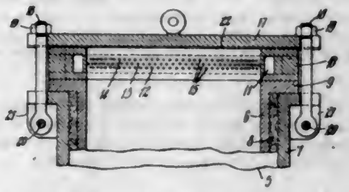
1,625,370. TRAIN-PIPE COUPLER. RICHARD T. LOWE, Cedar Bluff, Va., assignor of one-half to Ballard I. Payne, Cedar Bluff, Va. Filed May 23, 1925. Serial No. 32,520. 4 Claims. (Cl. 285—58.)

1. A train-pipe coupler comprising cooperating heads each consisting of a member extending longitudinally of the car, a pipe-coupling for each head, a coupling-carrying-block movably mounted on the head and being substantially parallel wtih said member, a lever to act upon the block to press the pipe-couplings together, and means to rock said lever in opposite directions automatically.



1,625,371. LOCK-ACTUATED SWITCH. JOSEPH B. MCLELLAN, Wichita, Kans., assignor of one-half to Herman F. Hoffman, Wichita, Kans. Filed Dec. 8, 1925. Serial No. 74,101. 2 Claims. (Cl. 200—55.)

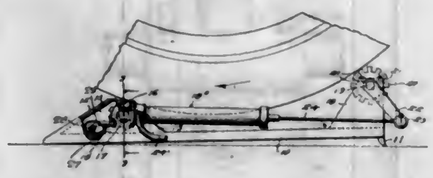
1. In a combined door catch and alarm system, a sliding door, a lock rigidly connected to said door, a pivotally mounted catch in said lock, a sub catch slidably mounted on said catch, a throw lever, a shaft and a knob for actuating said lever, a wing integral with said throw



lever, said wing engaging with a stud integral on said catch as actuating means by one way rotation of the knob, disengaging the hook of said catch, a second wing integral with said throw lever, said wing adapted to engage the end of said sub catch in an opposite rotation from first said rotation, sliding said catch outwardly to a determined distance and simultaneously elevating the free end of first said catch, closing a switch and disengaging the catch from the keeper simultaneously.

1,625,372. PNEUMATIC CONNECTING DEVICE. MENOTTI NANNI, Tivoli, near Rome, Italy. Filed May 5, 1926, Serial No. 106,991, and in Italy Mar. 27, 1926. 7 Claims. (Cl. 114—16.70.)

1. Pneumatic connecting device comprising in combination a sliding door in the interior of the one of the bodies to be connected, an intermediate room between the bodies to be connected, a sliding door in the other body to be connected, a ring on the one body, having an open semi-circular space formed therein, a ring on the second body, having a semi-circular space, a device for keeping the said two rings adhering together so that the two rings when fastened together form a complete ring having inside an empty closed circular space in which vacuum is formed, and pipes for extracting air and leading water to the interior of said space substantially as described.



1,625,373. DIGESTER STRAINER. PAUL R. PANZL, Shawinigan Falls, Quebec, Canada. Filed Apr. 19, 1926, Serial No. 102,898, and in Canada Dec. 14, 1925. 1 Claim. (Cl. 92—7.)

In combination, a digester tank, a cover therefor, and a strainer interposed between said cover and the upper end surface of the digester tank and comprising an annular member provided with an annular chamber and with an outlet orifice from said chamber and having a plurality of perforations extending into said chamber through the inner wall of said annular member, the diameter of the bore of said strainer being substantially the same as the diameter of the bore of that portion of the digester adjacent thereto.

1,625,374. TIRE PUMP. FRANCIS E. REEFE, Omaha, Nebr. Filed June 22, 1926. Serial No. 117,803. 2 Claims. (Cl. 230—27.)

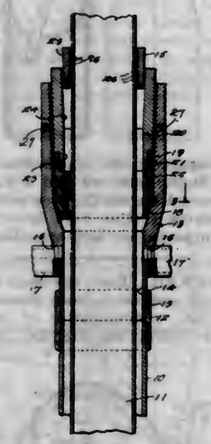
1. In a pumping apparatus of the type described, a base having lugs for engagement with the ground to prevent longitudinal movement thereof, an incline at one end of the base including standards arranged at the sides of the base, a shaft rotatably mounted in the inner ends of the standards and extending transversely of the base and projecting to one side thereof, similar standards arranged at the opposite end of the base, a second shaft mounted therein, a drum secured to the second shaft between the standards, a roller mounted upon the first shaft between the standards, a pump having a base rotatably engaged with the projecting end of the first named shaft, a crank carried by the corresponding end of the last named shaft,

a connection between the plunger rod of the pump and the crank, said roller having its surface transversely grooved and a spring-pressed pawl coacting with said grooves and preventing rotation of the roller in a direction such that the upper surface of the roller is moving away from the upper end of said incline.

1,625,375. ARTICLE OF JEWELRY. JOSÉ DE LARA REYES, Los Angeles, Calif. Filed Mar. 19, 1924. Serial No. 700,367. 1 Claim. (Cl. 63—1.)

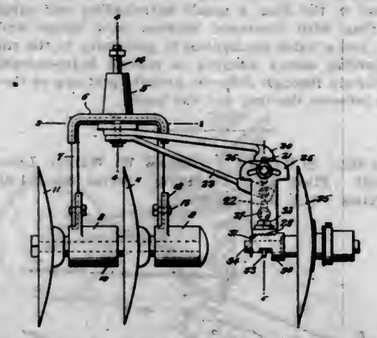
In an article of jewelry, an upper open ended vial for the reception of an odoriferous material, a perforated cap for the open end of the vial, arms projecting laterally from the vial adjacent its open end, chains connected to the arms, a fastening element attached to the chains for supporting the vial, and pendants hanging from the arms and adapted to strike the vial when the same is swinging from the chains attached to the fastening elements.

1,625,376. SCREEN FOR CENTRIFUGAL BASKETS. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Aug. 18, 1921. Serial No. 493,324. 3 Claims. (Cl. 210—76.)



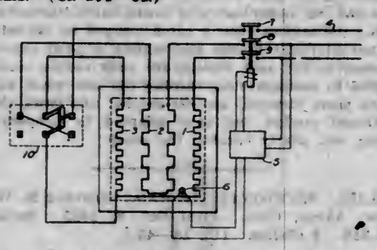
1. A screen for a centrifugal basket embracing in construction a plurality of circumferential sections having their opposite ends overlapping the adjacent ends of the next section and joined therewith to prevent lateral separation while allowing circumferential expansion, substantially as described.

1,625,377. BACKING FOR CENTRIFUGAL BASKETS. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Aug. 18, 1921. Serial No. 493,325. 3 Claims. (Cl. 210—76.)



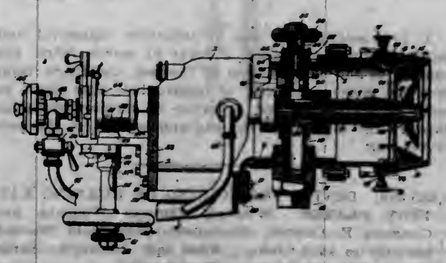
1. In a centrifugal basket the combination with a perforated circumferential basket wall, an interior finely perforated screen, and an interposed reticulated backing comprising a strip of reticulated material where opposite end portions are overlapped with the circumferential strand projecting a substantial distance beyond the reticulated or woven body and gradually reduced in thickness radially to avoid the formation of creases in the screen when the screen is forced against the backing by the centrifugal pressure of the interior mass of material in the basket, substantially as described.

1,625,378. CASING HEAD FOR OIL WELLS. JOSEPH E. SNODGRASS, Amarillo, Tex., assignor of one-third to Leon Victor Lienhard, Amarillo, Tex. Filed June 12, 1926. Serial No. 115,566. 4 Claims. (Cl. 166—14.)



1. In a casing head for oil wells embodying inner and outer casings, a body adapted to be attached to the outer casing and having a bore increasing in diameter toward its upper end, a sleeve to surround the inner casing and externally formed to fit within the tapered portion at the upper end of the bore, a packing carried by the lower end of the sleeve, slips for engagement with the inner casing and with the sleeve to lock the sleeve to the inner casing for downward movement with the inner casing and a forming shoulder at the lower end of the tapered bore of said body for directing the packing inwardly during downward movement of the sleeve to thereby force it into engagement with the inner casing.

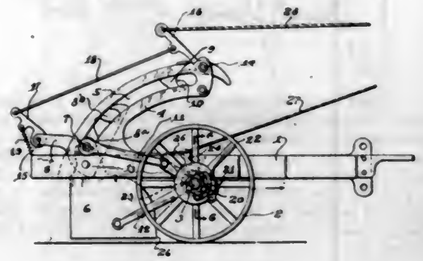
1,625,379. DISK HARROW. PATRICK SWEENEY, Wisner, Nebr. Filed June 9, 1926. Serial No. 114,769. 4 Claims. (Cl. 55—82.)



1. A disk gang including, in combination, a casting, means for mounting a gang of disks on the casting, a bar extending from the casting and having a depending extension provided with a pair of slots, a bracket having a pair of arms one of which is provided with slots, a pin piercing the slots for affording vertical adjustment of the bracket in relation to the extension, and means for journaling a single auxiliary disk on the other arm of the bracket.

1,625,380. ELECTRIC HEATING DEVICE. RANDAL E. TALLEY, North Irwin, Pa., assignor to George J. Hagan Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1926. Serial No. 90,296. 10 Claims. (Cl. 204—64.)

1. In a heating device the combination with a plurality of heating elements, of means for connecting the heating elements in star when using a three phase current or in series when only one phase of the current is to be used.



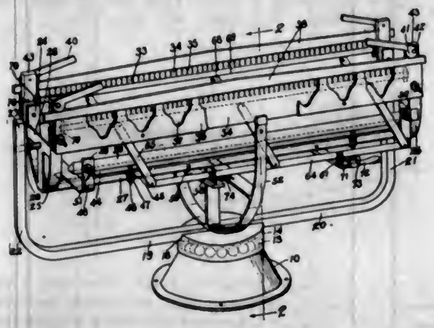
1,625,381. BURNER. LUDWIG WALLSTROM, Lima, Peru. Filed Nov. 17, 1926. Serial No. 148,917. 5 Claims. (Cl. 158—76.)

1. A burner comprising a casing, nested tubes within the casing and affording fuel passageways and providing atomizing means at their outlet ends, a plate supported

by and surrounding the atomizing means, a co-operating ring having a conical inner surface surrounding the plate, means for axially adjusting at least one of the tubes with respect to the ring, a nozzle surrounding and supporting the ring with clearance between said nozzle and said ring, and a valve mechanism in proximity to the ring and comprising means adapted to control independently the flow of air through different arcuate portions of the clearance between the ring and the nozzle.

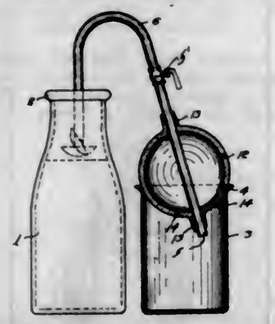
1,625,382. SCRAPER. WILLIAM W. WELCH, Livermore, Calif. Filed Mar. 11, 1926. Serial No. 94,017. 2 Claims. (Cl. 37—132.)

1. In a device of the class described in combination, a frame, an axle, a pair of wheels, guides attached to the said frames, slots in the said guides, a cross bar adapted to move in the said slots, a scoop supported by the said cross bar, an upper catch, a lower catch, means for releasing the said catches, a ratchet keyed to the said axle on the outer side of the said wheels, a pawl and spring attached to the said wheels, the said ratchet and pawl adapted to co-operate for turning the axle when the said wheels move forward, another ratchet and pawl, the last mentioned ratchet and pawl adapted to co-operate for raising and partly turning the scoop.



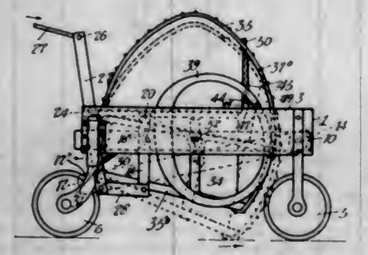
1,625,383. SECTIONAL AIR BAG. HERBERT K. WHEELOCK, Akron, Ohio. Filed Oct. 8, 1925. Serial No. 61,313. 8 Claims. (Cl. 18—45.)

1. In a sectional air bag, an inflatable, segmental body portion formed of rubber, a layer of woven fabric vulcanized to the body portion of the bag, the fabric being provided with a plurality of longitudinal slits about its outer circumference, and a flexible tie member extending through the interior of the bag and secured to the ends of the bag.



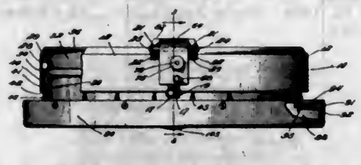
1,625,384. DEVICE FOR JOINING OR BURNING BATTERY PLATES. WILLIAM THOMAS WOODALL and CHARLES E. GIRTON, Cincinnati, Ohio; said Woodall assignor to said Girton. Filed July 23, 1926. Serial No. 124,537. 7 Claims. (Cl. 113—99.)

4. A battery plate burning jig comprising a frame adapted to be actuated in a horizontal plane, a second frame pivotally mounted on the first frame and adapted to be oscillated in a vertical plane, means associated with the movable frame adapted to hold battery plates in spaced relation, means carried by the movable frame for



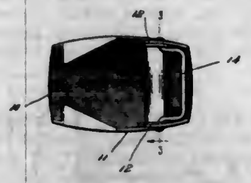
actuating the said movable frame about its pivotal mounting, and means for locking the movable frame in adjusted positions relative to the fixed frame.

1,625,385. CREAM SEPARATOR. CLIFTON E. BENEDICT, Spokane, Wash. Filed Apr. 9, 1926. Serial No. 100,902. 1 Claim. (Cl. 137—20.)



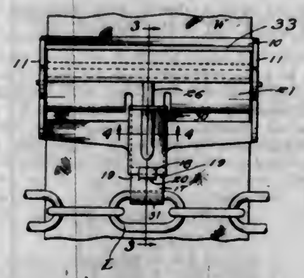
In a cream separator the combination with a siphon tube having a flaring inlet-end and a pair of trunnions having an intermediate attaching loop secured to said end, of a concavo-convex suction head below said inlet end and pivotally supported on said trunnions.

1,625,386. SHOCKER. BERT CLEMENT BERRY, Calgary, Alberta, Canada, assignor to Berry Shocker Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Aug. 20, 1919. Serial No. 318,738. 14 Claims. (Cl. 56—419.)



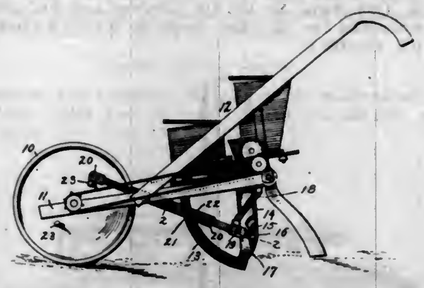
1. In a shocker, a supporting member adapted to be raised and lowered, a sheaf receiver pivoted in the supporting member, and a ground engaging member associated with the sheaf receiver and adapted to be brought into ground contact by the lowering of the supporting member to upend the shock.

1,625,387. BANJO. ARSENE J. BOUCHARD, Providence, R. I. Filed July 10, 1925. Serial No. 42,715. 12 Claims. (Cl. 84—272.)



1. In a banjo, a body comprising an outer sectional hinged tension ring having an annular recess with spaced-apart shoulders, an inner body rim, the said ring being movable relatively thereto, the said rim having a shoulder extended into said recess, and means engaging the shoulder of the said rim to assist in securing the rim in cooperative relation with said ring.

1,625,388. BELT BUCKLE. LEWIS S. CHILSON, Attleboro, Mass., assignor to J. M. Fisher Company, Attleboro, Mass., a Corporation of Rhode Island. Filed Mar. 2, 1925. Serial No. 12,564. 4 Claims. (Cl. 24—191.)



1. A buckle having a body portion, a clamping member having end ears, a bail member having outturned ends extending through said ears and pivoted in said body portion, said bail lying substantially in a single plane and being in proximity to the rear surface of said clamping member so as to exert a pressure thereon when under tension by the belt.

1,625,389. HARNESS BUCKLE. JAMES W. CRONAN, Portageville, Mo. Filed Apr. 22, 1926. Serial No. 103,909. 5 Claims. (Cl. 54—55.)

1. In a back band buckle, a plate formed with flanges at the side thereof, the plate having slots through which the back band may be threaded to place a portion thereof at the same side of the plate as the flanges, a locking member pivoted between the flanges and including a web engaging flange which, in the locking position of the locking member, is perpendicularly disposed to the plate, the pivotal connection of the locking member with the flanges permitting longitudinal movement of the locking member upon the plate, and a forwardly pressed portion on said plate confronting the flange of the locking member when in the locking position.

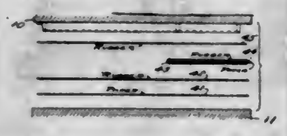
1,625,390. CORN PLANTER. JOHN M. RAY, Apollo, Pa. Filed Apr. 2, 1925. Serial No. 20,107. 1 Claim. (Cl. 111—51.)

A planter comprising a front wheel, a spout in rear of such wheel, a shoe situated between the wheel and the spout, a gate pivoted within the spout below the top thereof, a crank arm connected with the gate, a lever connected at its rear end with the crank arm and pivoted between its ends to the shoe, said lever reaching forward from its pivot alongside the wheel, means carried by the wheel to move said lever in one direction, and a spring connected with the crank arm acting to move the lever in the opposite direction.

1,625,391. TOOL FOR CUTTING AND REMOVING PIPE FROM WELLS. JOHN B. REILLY, Whittier, and CHARLES H. STONE, Brea, Calif., assignors to Kammerer Corporation, Santa Fe Springs, Calif., a Corporation of California. Filed July 19, 1923, Serial No. 652,511, and in Great Britain Oct. 8, 1923. 21 Claims. (Cl. 81—189.)

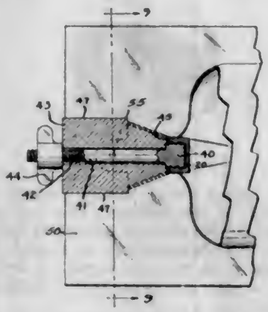
1. A tool of the class described comprising relatively movable members, pivoted cutter blades oscillatable from collapsed position into cutting position by relative movement between the members, yieldable arms on one of the members engageable with a shoulder on the pipe that is to be cut, and means connected with the other member to move said other member.

1,625,392. TOOL FOR CUTTING AND REMOVING PIPE FROM WELLS. JOHN B. REILLY, Whittier, and CHARLES H. STONE, Brea, Calif., assignors to Kammerer Corporation, Santa Fe Springs, Calif., a Corporation of California. Original application filed July 19, 1923, Serial No. 652,511. Divided and this application filed Jan. 20, 1925. Serial No. 3,642. 8 Claims. (Cl. 81—180.)



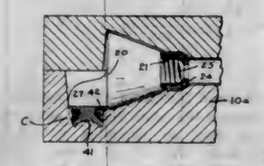
2. A tool of the character described comprising a tubular body adapted to slip over a pipe, slips inside of the body, means operated by upward movement of the body to force the slips into engagement with the pipe and means to thereafter cut the pipe below the slips.

1,625,393. TOOL FOR CUTTING PIPE IN WELLS. JOHN B. REILLY, Whittier, and CHARLES H. STONE, Brea, Calif., assignors to Kammerer Corporation, Santa Fe Springs, Calif., a Corporation of California. Original application filed July 19, 1923, Serial No. 652,511, and in Great Britain Oct. 8, 1923. Divided and this application filed Jan. 20, 1925. Serial No. 3,643. 2 Claims. (Cl. 81—189.)



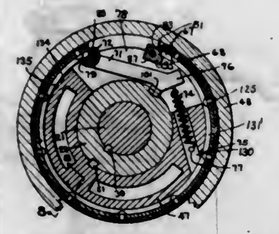
1. A tool of the character described comprising a tubular body having a longitudinally extending slot, a bowed spring, means securing one end of the spring in the slot, means shiftably mounting the other end of the spring in the slot, and a cutter blade on the spring.

1,625,394. METHOD OF MAKING HOLLOW RUBBER ARTICLES. FRED THOMAS ROBERTS, Yonkers, N. Y., assignor to Paramount Rubber Consolidated Inc., Tuckahoe, N. Y., a Corporation of Delaware. Filed May 12, 1924. Serial No. 712,505. 46 Claims. (Cl. 154—2.)



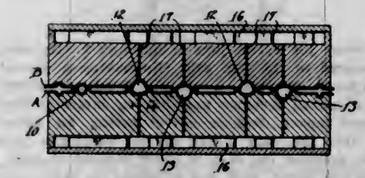
1. The method of making hollow articles of plastic material, comprising simultaneously forming marginal seams between different pairs of layers.

1,625,395. METHOD OF MAKING HOT-WATER BOTTLES, DOUCHE BAGS, ETC. FRED THOMAS ROBERTS, Yonkers, N. Y., assignor to Paramount Rubber Consolidated Inc., Tuckahoe, N. Y., a Corporation of Delaware. Filed Apr. 18, 1925. Serial No. 24,051. 16 Claims. (Cl. 18—56.)



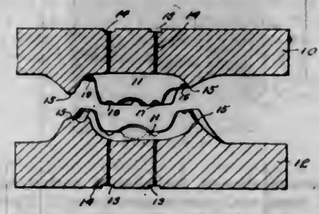
1. The method of making hot water bottles and similar articles comprising forming the body of the article about a ferrule embraced by a sheath of plastic stock with the body overhanging the ferrule, severing the portion of the body beyond the ferrule sheath, then applying material for a funnel at the end of the trimmed body.

1,625,396. METHOD OF MAKING HOT-WATER BOTTLES. WILLIAM E. ROBERTS, Yonkers, N. Y., assignor to Paramount Rubber Consolidated, Inc., Tuckahoe, N. Y., a Corporation of Delaware. Filed Dec. 8, 1924. Serial No. 754,499. 9 Claims. (Cl. 18—56.)



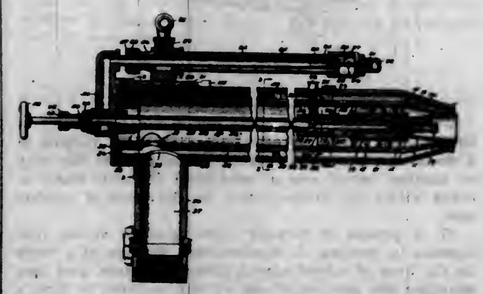
1. A method of making a hot water bottle comprising the seating of sheets of rubber within cooperating mold sections, bringing the sheets together upon an interposed ferrule having lateral projections associated therewith, and exerting pressure on the sheets to join them and clamp the projections within the seams.

1,625,397. FRICTION-CLUTCH MECHANISM. ALBERT E. ROBINSON, Cincinnati, Ohio, assignor to The American Tool Works Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 11, 1924. Serial No. 731,298. 3 Claims. (Cl. 192—77.)



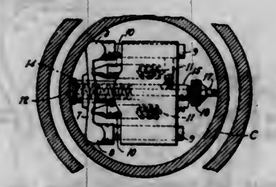
1. A friction clutch comprising an inner wall and an outer wall having an annular space therebetween, a friction-band received in said space, said friction-band comprising a resilient body and a preponderantly non-metallic friction-layer, the inner face of said resilient body provided with an annular groove forming annular resting faces at the respective sides of said groove for said resilient body on said inner wall, and tension-members fixing said friction-layer to said resilient body, said tension-members comprising enlargements located wholly within said annular groove and spaced from each other in said annular groove.

1,625,398. METHOD OF AND APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES. JAMES SCHAEFER, West Paterson, N. J., assignor to Paramount Rubber Consolidated, Inc., Little Falls, N. J., a Corporation of Delaware. Filed Apr. 16, 1923. Serial No. 632,231. 27 Claims. (Cl. 18—56.)



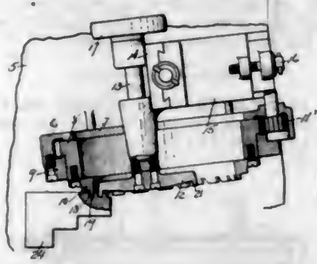
1. The method of forming hollow rubber articles comprising bringing together two parts with the meeting edges thereof lying in a single plane and then vulcanizing the parts with the meeting edges lying in a plurality of planes.

1,625,399. METHOD OF AND APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES. JAMES SCHAEFER, Yonkers, N. Y., assignor to Paramount Rubber Consolidated, Inc., a Corporation of Delaware. Filed June 28, 1924. Serial No. 722,986. 16 Claims. (Cl. 18—35.)



13. A mold for making hollow articles comprising a casting having a rectangular recess therein, a series of rectangular mold blocks side by side in said recess, resting on the floor thereof, a groove in said floor beneath the mold blocks, a passageway leading from said groove, a groove in the base of each mold block, a cavity in the face of each mold block, and a passageway in each mold block from the face cavity to the base groove thereof, said base grooves of the blocks being adapted to communicate with the floor groove of the basket.

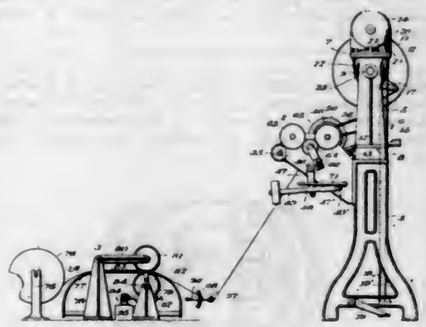
1,625,400. OIL BURNER. ISAAC M. SHARP, San Francisco, Calif. Filed June 21, 1923. Serial No. 646,758. 6 Claims. (Cl. 158—77.)



1. In a telescopically supported liquid fuel burner arranged so that it may be placed into active or inactive position by a telescoping movement, means for conducting a blast to the burner, means for conducting fuel to the burner, and means brought into operation by the telescopic movement of the burner from active to inactive position for interrupting both the flow of fuel and the blast comprising a valve actuated by the movement of the burner for interrupting the flow of fuel and an aperture through which the blast is admitted, adapted to be closed by the burner.

1,625,401. CYLINDER GAUGE. ROBERT J. O. SIMPSON, Athol, Mass., assignor to The L. S. Starrett Company, Athol, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1923. Serial No. 623,653. 10 Claims. (Cl. 33—178.)

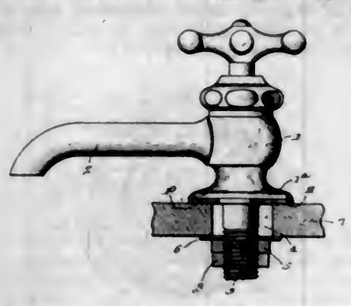
1. A cylinder gauge comprising a frame, a dial indicator having a pointer and yieldably mounted thereon for sliding movement relative thereto, a contact stud carried by said indicator and movable through said frame into contact with the cylinder wall, an intermediate member alined with said stud and slidable within the dial indicator, a spring interposed between said stud and the inner end of said member, a chuck mounted on the outer end of said member, a contact stem clamped within said chuck and adapted for contact with the cylinder wall at a point substantially diametrically opposite the point of said stud contact, and motion transmitting connections between said intermediate member and the pointer of the dial indicator for converting the reciprocation of said member into rotary motion applied to said pointer.



1,625,402. RACK-TOOTH-CUTTING MACHINE. HARRY E. SLOAN, Hartford, Conn. Filed Feb. 16, 1923. Serial No. 619,515. 17 Claims. (Cl. 90—3.)

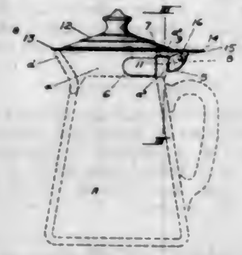
4. A tooth cutting machine comprising a plurality of cutters each having a row of teeth arranged thereon in a circle and of a radius different from that of the teeth of another cutter, one of said rows of teeth being located within the circle formed by the teeth of another row.

17. A process of forming teeth upon an article that consists in forming the opposite side surfaces of a tooth on the arcs of circles having different centers, and then changing the position of one of said surfaces to form a circle of a different radius.



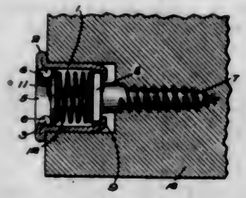
1,625,403. FLAP CUTTING AND MEASURING MACHINE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 6, 1922. Serial No. 592,777. 28 Claims. (Cl. 164—49.)

1. Mechanism for forming tire flaps from strip material comprising, means for cutting the strip, means for measuring the strip before it is cut, and means for feeding the strip with a slack therein to the measuring means said feeding means being adapted to vary the speed at which the strip is fed in accordance with the degree of slack in said strip.



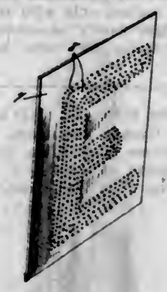
1,625,404. FAUCET. CHARLES N. WAGENSELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 27, 1924. Serial No. 746,074. 2 Claims. (Cl. 285—30.)

1. A faucet having a stem or shank, adapted to pass through an opening in a suitable support, a gasket surrounding the stem or shank, the aperture in the gasket being of greater area than the portion of the shank or stem extending therethrough, and means located at the periphery of the gasket permanently connecting the gasket to the face of the faucet body and preventing outward



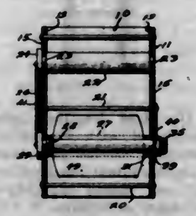
radial expansion of the gasket as it is compressed by securing the faucet in position on a support.

1,625,405. JUG COVER. WILLIAM H. WRIGHT, Pittsburgh, Pa. Filed June 26, 1924. Serial No. 722,505. 4 Claims. (Cl. 65—31.)



1. A cover for syrup jugs comprising a clip adapted to be secured to the jug, said clip having a curved inner elongated member, a strap extending rearwardly from the curved member and having laterally projecting spaced apart ears, a cover having an extension thereon over the ears, a lug on the extension projecting down between the ears, a pivot passing through the ears and the cover, said lug arranged to make contact with the strap and serving to limit the opening movement of the cover, beyond a point where it will be closed by gravity.

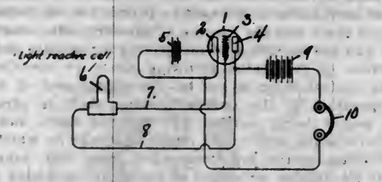
1,625,406. FASTENER. ANDREW G. ANDERSON, Wollaston, Mass., assignor to Carr Fastener Company, Cambridge, Mass. a Corporation of Maine. Filed Apr. 24, 1924. Serial No. 708,724. 12 Claims. (Cl. 24—211.)



1. A fastener element including a casing having a cylindrical inner end portion presenting a plurality of edge seats and a plurality of attaching prongs and an attaching member having one end thereof seated against said edge seats and held in fixed relation with said casing by said prongs.

1,625,407. MEANS FOR DIFFUSING AND COLORING RAYS OF LIGHT. HERMAN M. BIE, Lima, Ohio. Filed Sept. 1, 1922. Serial No. 585,720. 1 Claim. (Cl. 40—131.)

A sign comprising a flexible sheet of material adapted to be placed in front of a light, portions of said material being pressed out to form convexed bulged portions assuming the form of letters or symbols, said convexed portions being provided throughout with a plurality of apertures arranged in close proximity to one another, the material immediately adjacent the outline of said letters being imperforate to strengthen the apertured portion of the material, and material filling said apertures for diffusing the rays of light passing therethrough.

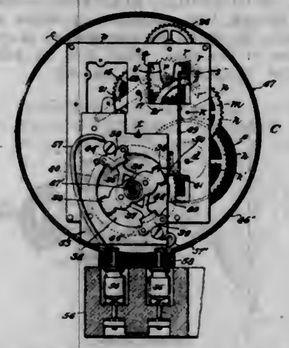


1,625,408. RAZOR-STROPPING DEVICE. VERNON L. CAPWELL, Clinton, Ind. Filed May 19, 1924. Serial No. 714,475. 1 Claim. (Cl. 51—63.)

A device of the character described comprising a casing, upper and lower parallel shafts journalled at their ends in said casing, said lower shaft being provided with an axial opening and a pair of diametrically opposite slots communicating therewith, a razor blade holder comprising a pair of sections adapted to be arranged against opposite sides of a blade, the axial opening in said lower shaft being adapted to slidably receive said holder with the outer portions of the blade projecting through said slots, said holder being provided with a portion of circular cross section projecting outwardly beyond said casing and provided with an annular groove, the ends of the holder sections projecting beyond the casing being pivotally connected to each other adjacent said groove, a latch pivoted at one end of said casing and having its opposite end normally arranged in said groove, a strop passed about said upper shaft and having its sides arranged parallel on opposite sides of said lower opening, and connections between said shafts for oscillating them simultaneously in opposite directions when said strop is operated.

1,625,409. LIGHT-REACTIVE APPARATUS. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed Jan. 11, 1923. Serial No. 611,979. 2 Claims. (Cl. 250—27.)

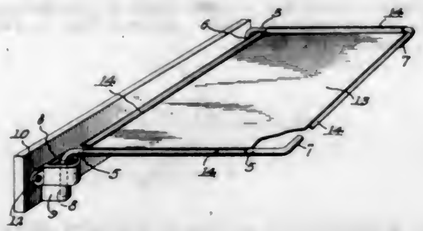
1. A light reactive apparatus comprising a three electrode electron discharge device, a circuit connecting the filament and plate of said device, a circuit connecting the filament and grid of said device and containing a



light reactive resistance, and a single source of potential common to both of said circuits and adapted to energize both of said circuits.

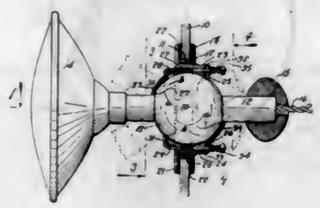
1,625,410. UNIVERSAL JOINT FOR SHAFTS. GEORGES HENRI ERNEST DE RAM, Boulogne-sur-Seine, France. Filed Mar. 5, 1923, Serial No. 623,000, and in France Mar. 23, 1922. Renewed Feb. 1, 1927. 4 Claims. (Cl. 64—91.)

1. A universal joint including in combination main and driven shafts, interengaging elements carried by the adjacent ends of said shafts, means confined by said elements for guiding the relative movement of said elements and shafts including a bearing member composed of a ring-like hub and arms slidably engaged with the elements, a spool shaped bearing member in which the ring-like hub is slidably arranged, and other bearing members extending from the inner surfaces of the elements and in alignment with the longitudinal axes of the corresponding shaft and engaged with said spool shaped bearing member.



1,625,411. TIME-CONTROLLED ELECTRIC-SWITCH MECHANISM. LOUIS T. FENNING, Jackson, Ohio. Filed July 18, 1923. Serial No. 652,348. 16 Claims. (Cl. 200—40.)

8. In a time-controlled electric-switch mechanism, the combination of a rotary electric switch with means controlling the operation thereof, said means including a time-train; a switch-throwing shaft; a driving mechanism by which the shaft is turned to actuate the switch; a verge-wheel; a verge-wheel-carrying shaft driven by said mechanism; a rock-shaft; a verge that is mounted on the latter and arranged to cooperate with the verge-



wheel; locking mechanism by which the oscillation of the rock-shaft is prevented; releasing mechanism which is controlled by the time-train and by means of which the locking mechanism is released to permit the oscillation of the rock-shaft and the turning of the verge-wheel-carrying shaft and the operation of the driving mechanism and the actuation of the switch-throwing shaft to operate the switch; interlocking means by the engagement of which the operation of the switch-throwing shaft is arrested, such means being carried by the rock-shaft and the switch-throwing shaft; and releasing means by which the interlocking means are disengaged from each other to permit the further actuation of the switch-throwing shaft by the driving mechanism and the further operation of the switch thereby through the last-named shaft.

1,625,412. ANTPROOF SHELF. FREDERICK W. FRENCH, Oakland, Calif. Filed Aug. 6, 1924. Serial No. 730,460. 1 Claim. (Cl. 211—27.)

In a device of the character described, bracket members having hollow portions, arms embodying lengths of wire material having right angled end portions, the right angled end portions extending in opposite directions, the right angled end portion at one of the respective ends of the arms being positioned in the hollow portions of the brackets, the opposite right angled ends extending in horizontal planes, a metallic shelf having side and end flanges, the side and end flanges adapted to rest over the arms and horizontal right angled ends of the arms to secure the arms against movement with respect to each other, said hollow brackets adapted to accommodate a fluid.

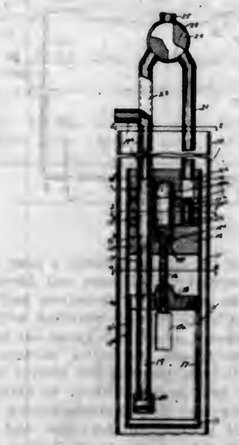
1,625,413. SPOT-LIGHT MOUNTING. ROBERT R. FREUND, Denver, Colo., assignor, by direct and mesne assignments, to Shot-Lite Corporation of America, a Corporation of Colorado. Filed Feb. 26, 1923. Serial No. 621,290. 7 Claims. (Cl. 240—61.)

1. The combination of an annulus adapted to be mounted within a suitably apertured support and provided with a pair of diametrically opposed-bearing seats that so protrude rearwardly, in offset relation to the rear face of said annulus, as to form wholly unobstructed annular clearance spaces between and at both sides of said bearing seats, a second annulus provided with a pair of diametrically opposed bearing seats that so protrude forwardly, in offset relation to the front face of said second annulus, as to form wholly unobstructed annular clearance spaces between and at both sides of said last mentioned bearing seats, which forwardly protruding seats are complemental to said rearwardly protruding seats, a ball wholly mounted by and in contact only with all of said bearing seats, a projector light fixedly associated with said ball, and means for adjustably connecting said annuli under resilient tension.

1,625,414. TOOL FOR CUTTING AND REMOVING PIPE FROM WELLS. GEORGE KAMMERER, Fullerton, Calif., assignor to Kammerer Corporation, Brea, Calif., a Corporation of California. Filed May 3, 1923. Serial No. 636,378. 14 Claims. (Cl. 81—189.)

5. A tool of the class described comprising a cutter blade, means connected with the cutter blade and engageable by a shoulder on the pipe that is to be cut to hold the cutter blade against longitudinal movement relative to the pipe, and means engaging the cutter blade and operating to turn said blade.

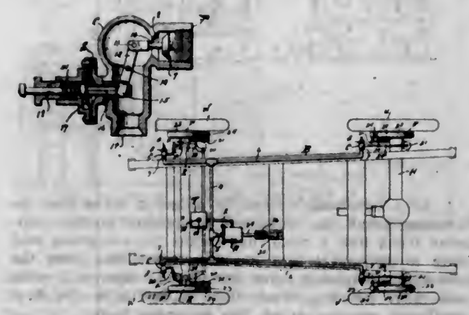
1,625,415. FLUORESCENT OIL AND PROCESS OF MAKING SAME. LEON LILIENFELD, Vienna, Austria. Filed July 23, 1924, Serial No. 727,810. Renewed Dec. 30, 1926. 16 Claims. (Cl. 196—40.)



12. A process which comprises distilling, in vacuo, soft resinous material including polymerized coumarone, while carrying the temperature up to substantially above 240° C., and collecting the distillate.

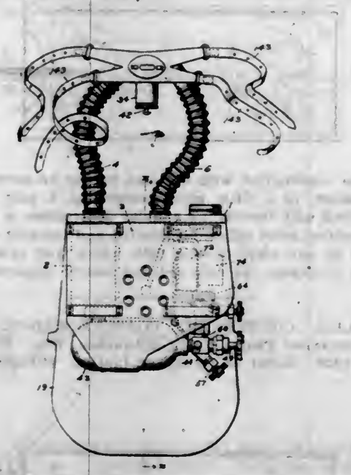
15. The herein described new oils, being highly viscous oils exhibiting a blue fluorescence, being somewhat heavier than water, distilling in vacuo between about 180 and 300° C., being miscible in all proportions with liquid aromatic and aliphatic hydrocarbons, and consisting essentially of soluble aromatic hydrocarbons.

1,625,416. PLASTIC AND PROCESS OF MAKING SAME. LEON LILIENFELD, Vienna, Austria. Filed Jan. 9, 1926, Serial No. 80,357, and in Austria May 15, 1920. 15 Claims. (Cl. 106—40.)



1. A process which comprises incorporating together (*a*) an oily product obtainable by treating an aromatic hydrocarbon material containing polymerizable material with sulfuric acid, removing the excess acid, distilling off the lower boiling products, distilling the residue in vacuo at above 150° C., such last distillate being the oily product in question, and (*b*) an ether of a carbohydrate of the empirical formula $n(C_6H_{10}O_5)$.

1,625,417. AIR PUMP. JAMES W. LOY, Long Beach, Calif., assignor of one-third to F. M. Fishback, Long Beach, Calif. Filed Oct. 23, 1923. Serial No. 670,248. 12 Claims. (Cl. 103—234.)



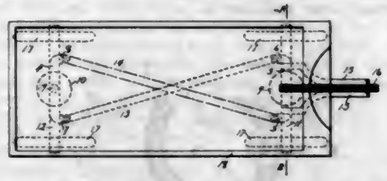
1. In a pump for a well casing in combination, a receiving member placed down in said well casing with valve controlled inlet port, a valve therein for controlling said port, cylinder and piston means therein for moving said valve to open and closed positions, an air supply pipe for supplying air to operate said piston and said valve, an air supply pipe for supplying air to said receiving member, a discharge pipe leading from said receiving member, a check valve therein to permit outflow therefrom, and an air-operated valve mechanism for controlling the admission of air under pressure from said air supply pipes to said cylinder and piston and to said receiving member.

1,625,418. HYDRAULIC BRAKE. CHARLES F. MATTINGLY, St. Louis, Mo., assignor to Mattingly Automatic Valve Co., St. Louis, Mo., a Corporation of Missouri. Filed Dec. 29, 1923. Serial No. 683,471. 1 Claim. (Cl. 188—152.)

In a fluid brake system, the combination of a set of brake cylinders and pistons, a master cylinder and a piston, connections leading from said master cylinder to said brake cylinders, a pressure valve interposed at each brake cylinder connection, means of maintaining said pressure valves in an open position, and means for automatically closing said valves upon reduction of the pressure below a predetermined degree in the master cylinder.

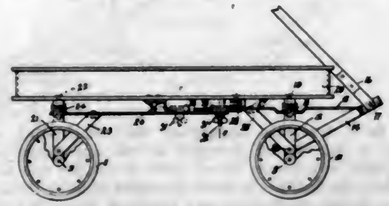
1,625,419. BREATHING APPARATUS. GEORGE S. MCCAA, Pittsburgh, Pa., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 12, 1922. Serial No. 581,374. 4 Claims. (Cl. 128—191.)

1. In a breathing apparatus, the combination of a frame, a regenerator attached to the upper portion of the frame and having an air inlet at its top and an air outlet at its bottom, a cooler arranged in said frame adjacent to the regenerator and having a laterally projecting portion extending below the bottom of said regenerator, said projection being provided with an air inlet registering with said regenerator outlet, a screw extending through said projection and detachably connecting said regenerator and cooler to each other an air outlet at the top of said cooler, and automatic means for supplying oxygen to the cooler.



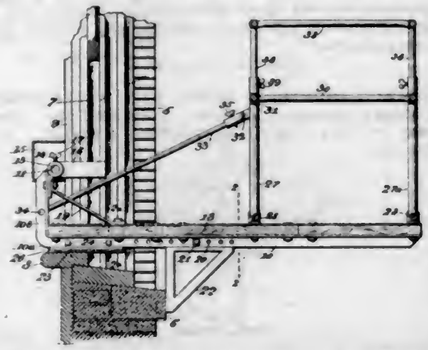
2. In a breathing apparatus, the combination of an air circulatory system, an oxygen bottle, means intermediate said bottle and system for automatically controlling the flow of oxygen at reduced pressure to said system, a manually operated main valve for controlling flow from the bottle to said flow-controlling means, a direct connection between said bottle and system by-passing said main valve and the entire flow-controlling means, and a manually-operated valve for controlling flow through said direct connection.

1,625,420. MOISTURE GUIDE FOR INCUBATORS. CHARLEY THOMAS PATTERSON, Springfield, Mo. Filed May 16, 1924. Serial No. 713,798. 3 Claims. (Cl. 73—24.)



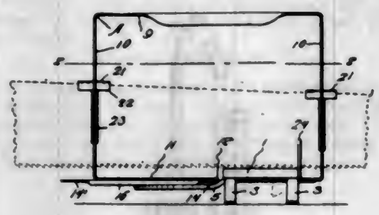
1. A moisture guide for use in incubators comprising a liquid container having upon it a guiding scale, the successive graduations of which are so spaced as to indicate the amount of evaporation that should occur from the container in correspondingly successive equal intervals of time to indicate the amount of evaporation that should take place as the incubation progresses.

1,625,421. COASTER-WAGON STEERING GEAR. FRANK ALEXANDER PEARL, Madison, Wis. Filed Feb. 26, 1923. Serial No. 621,469. 1 Claim. (Cl. 280—113.)



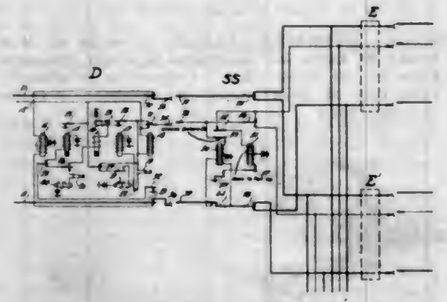
The combination with a wagon having an axle bed and a bolster, of a fifth wheel comprising a pair of discs provided with interfitting annular depressions, a plurality of angular arms oppositely located and integral with the sides of one plate of said fifth wheel, and ears on the discs to engage the axle bed and bolster respectively.

1,625,422. CONVERTIBLE COASTER WAGON. FRANK ALEXANDER PEARL, North Milwaukee, Wis. Filed Mar. 8, 1926. Serial No. 93,167. 2 Claims. (Cl. 280—87.5.)



1. In a coaster wagon having a box and a pair of pivotally mounted axles, a rear reach connected to the rear axle, a front reach connected to the front axle and overlapping the rear reach, a connecting member slidably and pivotally mounted on one of said reaches and removably engageable with the other reach, and a fixed bar depending from said box and adapted for engagement with said connecting member.

1,625,423. WINDOW PLATFORM. JOHN F. PECKENPAUGH, Cedar Rapids, Iowa. Filed July 21, 1926. Serial No. 123,900. 4 Claims. (Cl. 304—24.)



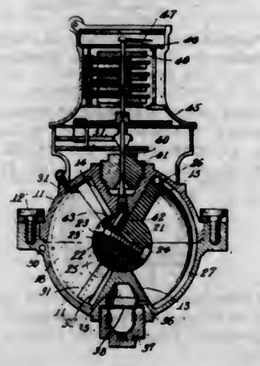
1. In a window-platform, the combination of a pair of sills, a connected flooring, uprights rising from the inner ends of the sills, a connecting tubular bearing, shafts carrying wall bearing blocks mounted adjustably in said tubular bearing, foot-blocks to rest on the window sill, and brackets secured adjustably to the sills beneath, the sills being pierced with series of bolt-holes, and the brackets being secured by said bolts.

1,625,424. MITER BOX. DOMINICK PELLETIER, Fall River, Mass. Filed Apr. 9, 1925. Serial No. 21,863. 2 Claims. (Cl. 143—89.)

1. In a structure of the class described, a base, a plate fixed to the under surface of the base and having portions adjacent its ends constructed therefrom and curved to form sleeves, said plate further provided with apertures adjacent said sleeves, an arcuate gauge bar having a series of notches throughout the major portion of its length and having its ends piercing the sleeves and the terminals of its ends bent perpendicularly to extend into the apertures, a rectangular shaped frame having its bottom longitudinal side pivoted adjacent one end of the base, an arm on said side of the frame having an end engageable with the notches of the gauged bar, the ends of said frame being slotted so that an ordinary hand saw may be reciprocated therethrough for cutting an article resting on the face at different desired angles.

1,625,425. TRUNK-SELECTING SWITCH FOR TELEPHONE SYSTEMS. CARL J. PRACHT, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 16, 1922. Serial No. 568,694. Renewed Sept. 23, 1926. 14 Claims. (Cl. 179—18.)

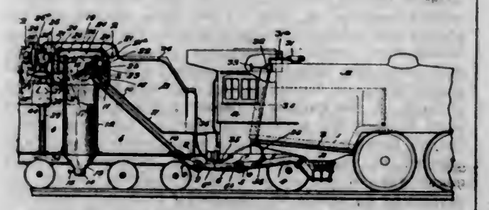
1. In a telephone system, an outgoing trunk line, an incoming trunk line connected therewith, another outgoing trunk line, a relay, and means for energizing said relay to disconnect said incoming trunk line from the first named outgoing trunk line and to connect it with said other outgoing trunk line responsive to the first mentioned outgoing trunk line becoming busy.



1,625,426. TARGET FOR X-RAY TUBES. HARVEY C. RENTSCHLER and JOHN W. MARDEN, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 21, 1920. Serial No. 432,326. 10 Claims. (Cl. 250—34.)

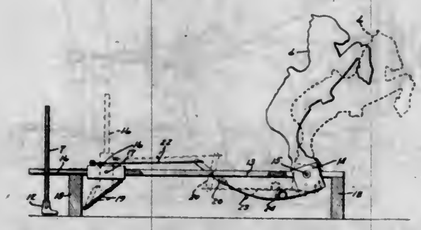
1. In an X-ray tube, a target of coherent metal having an atomic weight between 230 and 240.

1,625,427. TARGET FOR X-RAY TUBES. HARVEY CLAYTON RENTSCHLER and JOHN WESLEY MARDEN, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Original application filed Dec. 21, 1920, Serial No. 432,326. Divided and this application filed Nov. 17, 1922, Serial No. 601,649. Renewed Dec. 6, 1926. 8 Claims. (Cl. 250—35.)



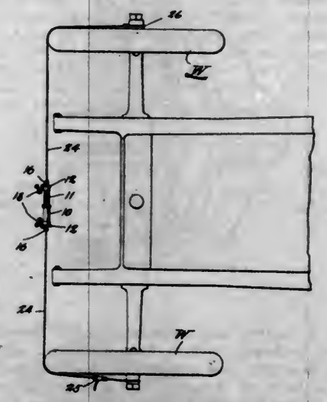
1. In an X-ray tube, a target of dense, coherent metallic uranium.

1,625,428. FLUID METER AND MOTOR. WALTER H. RICHARDS, New London, Conn. Filed Aug. 31, 1925. Serial No. 53,549. 6 Claims. (Cl. 73—98.)



2. A motor comprising a casing having oppositely-disposed conical bearings, a partition at one side of the center line and extending to said bearings and having wedge-shaped enlargements adjacent thereto, a nutating disc mounted between said bearings and slotted to co-act with said partition and its enlargements and means for tilting said disc as the edges of its slot engage said enlargements.

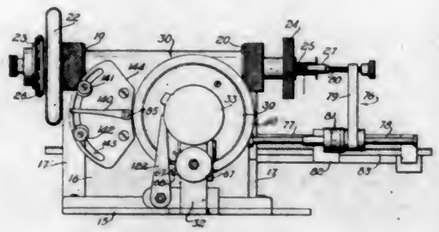
1,625,429. RAILWAY-VEHICLE ASH OR OTHER WASTE TRANSFER METHOD AND APPARATUS. SAMUEL S. RIEGEL, Scranton, Pa., assignor, by mesne assignments, of one-half to John H. Allen, Jersey City, N. J. Filed Apr. 28, 1925. Serial No. 26,440. 7 Claims. (Cl. 122—27.)



1. The method of transferring waste in vehicles, consisting in subjecting initially deposited waste comprising light weight and heavier constituents in partial confinement and exposure to the atmosphere, to the force of unbalanced gaseous fluid pressure and in thereby causing the initially deposited waste to flow to a place of temporary waste storage; in maintaining the flow of waste constituents, in partial confinement and out of contact with the atmosphere exterior to the path of flow, from the place of initial deposit to the place of temporary waste storage; in therein separating the light weight constituents from the heavy weight constituents; in causing the deposited light weight constituents and air from the place of temporary waste storage to pass through a liquid seal; in entraining the light weight constituents and air in a current of fluid and discharging the same quietly into the open air; and in temporarily confining the waste out of contact with the atmosphere surroundingly exterior to said place of temporary storage.

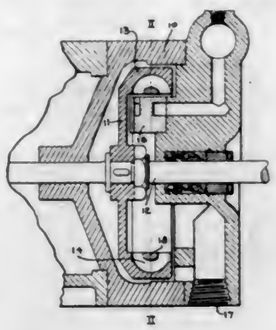
1,625,430. FIGURE PROJECTING TOY. ARTHUR ROBINSON, Minneapolis, Minn. Filed Mar. 8, 1926. Serial No. 93,051. 11 Claims. (Cl. 46—40.)

1. A toy comprising a relatively flat figure mounted in a vertical plane, a spring-actuated throwing member mounted for movement in said vertical plane, and a loose crotched figure adapted to be supported on said throwing member in a straddled position transversely of the movement thereof and thrown by said member toward the first noted figure, said loose figure when accurately thrown by said member being arranged to light on the first noted figure in a straddled position.



1,625,431. ALIGNMENT DEVICE FOR AUTOMOBILE WHEELS. WILLIAM S. ROSENFELD, Baltimore, Md. Filed Dec. 16, 1926. Serial No. 155,150. 3 Claims. (Cl. 33—203.)

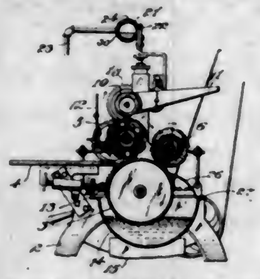
1. In a device of the kind described, a pair of tubes each having an open end and a closed end provided with a centrally disposed opening, the open ends of said tubes being telescopically connected one within the other, a coil spring in said tubes urging them to expanded position, wires, each having an eye on one end and extending through the openings in the closed ends of said tubes and through the tubes, said wires having their other ends bent to lie against said closed ends at the ends opposite the



respective eyes, and flexible strands each having one end connected to one of the respective eyes and having its other end provided with means for attachment to an automobile wheel hub.

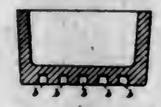
1,625,432. WINDING MECHANISM. JOHN WILLIAM SAGER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1925. Serial No. 19,461. 8 Claims. (Cl. 242—158.)

3. In a material distributing mechanism, a material distributing means, a pair of gears, means to rotate the gears in opposite directions, and means including a cam and a double pawl ratchet mechanism carrying a roller engaging the cam and operating at predetermined intervals for operatively associating the gears alternately with and thereby moving the distributing means in opposite directions.



1,625,433. TURBINE-BLADE SHROUDING. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1925. Serial No. 56,016. 9 Claims. (Cl. 253—93.)

1. In a turbine, the combination of a rotor having a series of U-shaped buckets formed therein and opening radially inwardly, and a shrouding for said buckets comprising a strip of material with a series of projections thereon fitting into the buckets and forming therewith a tubular U-shaped passage for the motive fluid.



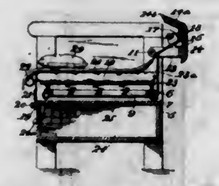
1,625,434. METHOD AND MACHINE FOR COATING LEATHER AND THE LIKE. JAMES T. SMITH, Newark, N. J. Filed Aug. 23, 1924. Serial No. 733,723. 7 Claims. (Cl. 91—27.)

2. In a machine of the character described, the combination with means for progressively supporting a piece of leather or the like and means for applying coating material to said leather or the like, of a rotatable hollow cylinder having longitudinal discharge means for feeding

the coating material to be applied, and means for turning said cylinder to start and atop discharge from it.

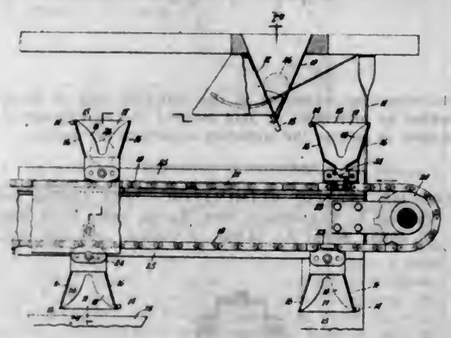
1,625,435. POT FOR GLASS-MELTING FURNACES. GERHARD STEIN, Neusornewitz, near Meissen, Germany. Filed June 24, 1926, Serial No. 118,256, and in Germany June 25, 1925. 3 Claims. (Cl. 49—60.)

2. Pot for glass-melting furnaces which consists in that the underside of the bottom is arranged with open grooves or passages running parallel from edge to the opposite edge of the pot.



1,625,436. DISPLAY STAND. JULIEN STRANDERS, London, England, assignor to Harry B. Kruger, New York, N. Y. Filed Feb. 7, 1924. Serial No. 691,085. 1 Claim. (Cl. 211—24.)

A display device made of a single blank comprising a main display surface portion, two auxiliary display surface portions in front of the main display surface portion and substantially parallel with the main portion, intermediate connecting members substantially parallel with each other each hingedly connected with the central part of the main display portion and with the inner ends of each of the auxiliary display portions, leaving the outer ends of the auxiliary display portions free and a bracket member hinged to the main display portion and adapted to engage the connecting members at right angles thereto and to be held in position thereby for supporting an article on the bracket portion between the connecting members and in front of the main display portion and in back of the intermediate auxiliary display portions and between the intermediate connecting members, said bracket portion holding the connecting members and auxiliary display portions in the aforesaid display position.

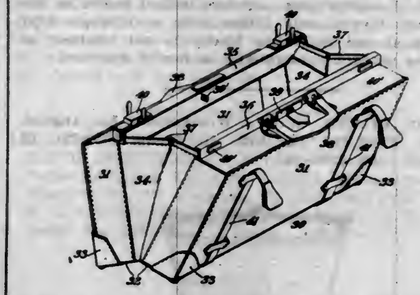


1,625,437. BED DAVENPORT. ERNEST A. VELDE, Cedar Rapids, Iowa. Filed Sept. 10, 1924. Serial No. 736,923. 9 Claims. (Cl. 5—12.)

1. A bed-davenport, comprising a pair of end-frames, a pair of side-bars connecting said frames, a cushioning bed or seat element, a headboard adapted to partially enclose the bedding, brackets connecting the headboard pivotally to the end frames, and a flexible sheet attached to said headboard, to enclose the rolled bedding, and held in place by a forwardly disposed portion of said headboard.

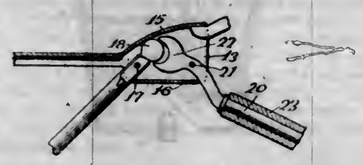
8. A bed davenport comprising a main frame, a seat element mounted thereon, and a flap and a sectional flap comprising a lower vertical part extending behind the seat lengthwise of the back, and an upper part hinged to the vertical part and adapted to fold forwardly, the two parts adapted to protect the seat at and near the back side.

1,625,438. SORTING MACHINE. EDWARD VOSBURGH, Passaic, N. J. Filed May 6, 1925. Serial No. 28,373. 8 Claims. (Cl. 209—89.)



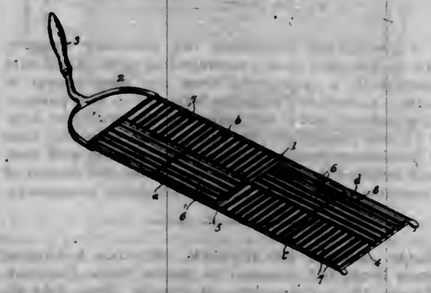
1. In a sorting machine the combination with an endless conveyor, of supporting tracks therefor, clamping jaws on said conveyor, said jaws comprising fixed and movable jaw members, means tending to close each pair of jaws, a projection on each movable jaw member extending to adjacent said supporting tracks, and means carried on said tracks for cooperation with said projections for opening said jaws in receiving, and for releasing said jaws in discharging, an object at the desired point of travel of the conveyor.

3. In a sorting machine, an endless conveyor having receptacles thereon for the articles to be graded, means for discharging said articles from said conveyor at spaced points in the conveyor travel according to one dimension of the articles, a plurality of second conveyors, means for supplying articles to the second conveyors from the first, and means for discharging said articles at spaced points in the travel of said second conveyors according to a second dimension of said articles.



1,625,439. ARTICLE OF LUGGAGE. OSSIP JOSEPH WALINSKY, Sea Gate, N. Y., assignor to White Luggage Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 19, 1926. Serial No. 89,290. 1 Claim. (Cl. 190—41.)

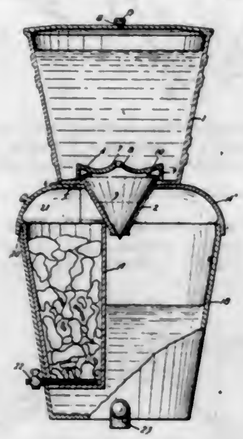
In a device of the character described, the combination of two similarly shaped oppositely disposed sections, a flexible bottom formed as a part of the sections, frame members secured to opposite top edges of said sections, toggle members connecting opposite corners of said frame members, substantially V-shaped flexible members connecting the ends of opposite sections and extending from the bottom to the top thereof and secured to said



toggle members, said toggle members being foldable within said frame members to cause said V-shaped flexible members to fold centrally upon the closing of said device.

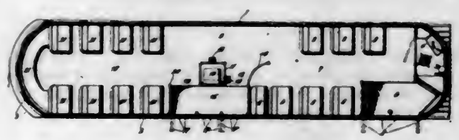
1,625,440. MARCELING IRON. CLAUDE E. WAGNER and BERT G. HOFER, Los Angeles, Calif. Filed Dec. 9, 1925. Serial No. 74,274. 3 Claims. (Cl. 132—32.)

1. A marceling iron comprising two clamping members, one member being rod-like in form and the other being in the form of an inverted channel disposed over the rodlike clamping member, a handle rigid with the inverted channel shaped clamping member, and a second handle disposed beneath the first handle and pivotally connected thereto, said rodlike clamping member being pivotally connected to the inverted channel shaped clamping member and being operatively connected to the second handle, so that when the second handle is moved downwardly from beneath the first handle, the rodlike clamping member will be swung downwardly from beneath the inverted channel shaped clamping member.



1,625,441. CHEESE-CUTTING DEVICE. FREDERICK THOMAS WHITMARSH, Blandford, England. Filed Oct. 15, 1926, Serial No. 141,804, and in Great Britain Oct. 20, 1925. 4 Claims. (Cl. 31—48.)

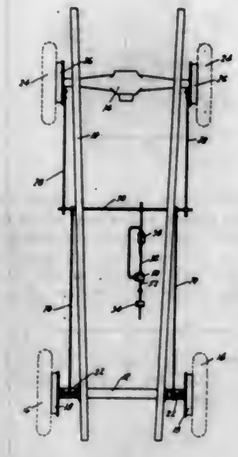
1. A curd knife for use in cheese making and for manipulation by hand comprising a lower cutting part adapted to be slidably drawn through the curd and an upper handle forming a fixed extension of said cutting



part, characterized in that the cutting part is constructed with a thin central longitudinal division which itself forms a cutting member, and with transverse blades on one side of said division and longitudinal blades on the other side thereof, said blades being so arranged that longitudinal and transverse blades do not intersect or cross one another, substantially as herein described.

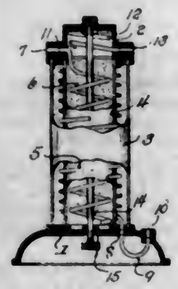
1,625,442. FILTER. GUIDO J. WIGGENHORN, Los Angeles, Calif. Filed Oct. 12, 1922. Serial No. 593,972. 12 Claims. (Cl. 210—103.)

1. In a filter comprising a receiving reservoir and a main receptacle separated therefrom, a renewable porous unit adapted to be interposed between said reservoir and said receptacle, said unit comprising a germicidal agent incorporated in a synthetic composition and surrounded by a pervious jacket adapting the same to be inserted in its entirety.



1,625,443. PASSENGER CAR. HERMAN ALBIN, St. Louis, Mo. Filed Apr. 21, 1926. Serial No. 103,439. 4 Claims. (Cl. 105—341.)

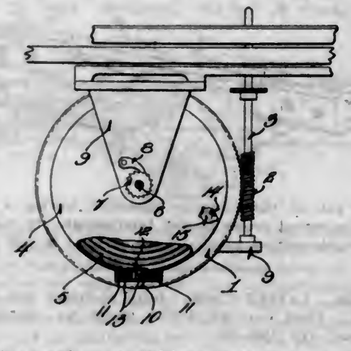
1. A conveyance comprising two passenger compartments, an entrance door communicating with one of said compartments, a passageway from one compartment to the other, a conductor's station adjacent to said passageway, a fare box under the control of the conductor adjacent to said passageway, an exit passage accessible from said first-named compartment without passing said first-named passageway, and a fare box under the control of the conductor adjacent to said second-named passageway.



1,625,444. BRAKE MECHANISM. WILLIAM J. ANDRES, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 25, 1925. Serial No. 46,039. 14 Claims. (Cl. 188—156.)

1. A vehicle having, in combination, brakes, a power device, a brake-controlling member, and connections from said member to the brakes including a controller for said device constructed and arranged to be operated by movement of said member in one direction to cause the power device to apply the brakes in an amount determined by

the extent of movement of the controller and to be operated by movement of said member in the opposite direction to reverse the operation of said power device.

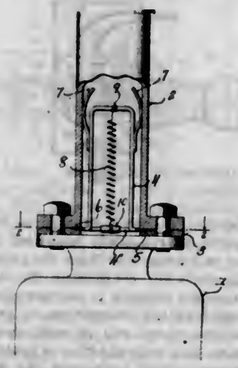


1,625,445. STATIC ELIMINATOR. JOHN ASTROM and VERNON L. TANNEHILL, Fort Wayne, Ind. Filed Mar. 16, 1925. Serial No. 15,865. 3 Claims. (Cl. 250—20.)

1. A static eliminator comprising an inner vertical cylinder and an outer concentric vertical cylinder, end members closing the ends of said cylinders, an inner helix located within the inner cylinder, a liquid conductor partially filling said inner cylinder, a second helix located above said liquid conductor, a third helix surrounding said inner cylinder and enclosed by said outer cylinder, and a liquid conductor carried within said outer cylinder.

1,625,446. PHONOGRAPH. STEPHAN BALDYZAR, Racine, Wis. Filed Mar. 4, 1926. Serial No. 92,224. 2 Claims. (Cl. 185—45.)

1. In a spring motor, the combination of a casing surrounding the spring, a winding shaft attached to one end of the spring, said casing having a slot therethrough, and having stops adjacent such slot, an auxiliary casing slidably mounted upon the outer side of said first mentioned casing and attached to the outer end of the spring, and

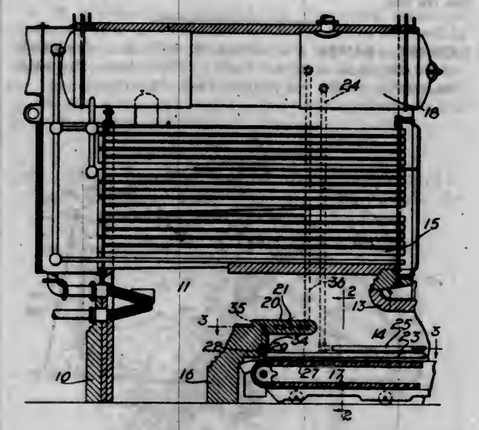


cushioning members carried by said auxiliary casing and abutting said stops.

1,625,447. EXERCISER. THEODORE S. BENICE, Los Angeles, Calif. Filed Jan. 19, 1926. Serial No. 82,228. 5 Claims. (Cl. 272—79.)

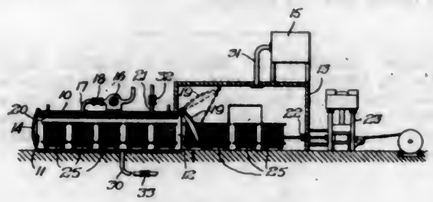
1. An exerciser comprising in combination, a frame, a shaft rotatably mounted therein, a clamping means to secure the shaft to the frame to hold same stationary, a drum rotatable on the shaft, a tension spring secured between the drum and the shaft, a rope connected to the drum and wound thereon, a handle on the rope, a pawl and ratchet device connected to the shaft and disconnected from the frame or other stationary structure, said pawl and ratchet device being operable to rotate the shaft relative to the drum on unclamping the shaft to vary the tension of the spring.

1,625,448. MANIFOLD ELECTRIC HEATER. WILLIAM BESSER, Wauwatosa, Wis. Filed Jan. 21, 1926. Serial No. 82,727. 2 Claims. (Cl. 219—38.)



1. A heating element for the intake manifold of an internal combustion engine comprising a rectangular relatively rigid wire frame having outwardly projecting spring arms adapted to contact with the interior of the manifold, an insulating sleeve carried by one portion of said frame, a heating element having one end secured to said insulating sleeve and having its other end grounded upon said frame at a portion spaced from said sleeve, said element having an outwardly extending part projecting from said sleeve, and an insulated member surrounding said outwardly projecting portion and preventing contact thereof with said manifold.

1,625,449. METHOD OF MOLDING PHENOL PLASTIC OR LIKE COMPOUNDS. HARRY EARLE BOHN and RAYMOND HOMER FAUQUIER, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1921. Serial No. 489,984. 7 Claims. (Cl. 18—55.)

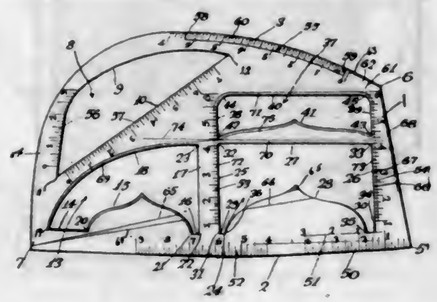


1. The method of molding phenolic condensation products into articles with a delicate or fragile insert or connection, which consists in partially treating some of the product to provide a support for the insert or connection, placing the insert or connection on the support, and then molding an additional product with the previously partially treated product to enclose the insert or connection and to complete the molding of the article into a homogeneous mass.

1,625,450. FURNACE. CHARLES BOLLINGER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 13, 1925. Serial No. 15,212. 3 Claims. (Cl. 122—292.)

1. In a steam boiler furnace having side walls, a grate, a bridge wall extending between the side walls of the furnace and adjacent one end of the grate, a baffle wall, and a sinuous chamber adapted to hold a cooling medium mounted in depressions formed in the bridge and side walls adjacent the top surface of the grate and also extended to and embedded within the baffle walls, the inlet and outlet ends of said chamber connected to a supply source of the cooling medium.

1,625,451. METHOD OF AND APPARATUS FOR DRYING AND STORING MATERIAL. ALFRED BRUCE BROWN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1923. Serial No. 653,838. 18 Claims. (Cl. 34—46.)



1. The method of drying material, consisting in depositing the material in an enclosure, circulating air of predetermined moisture content through the enclosure and in contact with the material therein, producing a vacuum in said enclosure and then introducing previously dried air into the enclosure to re-establish atmospheric pressure therein.
